Byzantium's ancient walls are to be demolished. The Municipality of Stambul intends to sell the ground and the material.

According to reports from Belgrade, the Italians in Dalmatia are carrying off all cattle and crops from the occupied regions.

A contingent of British troops from Constantinople reached Plymouth on October 30, including 54 officers and 1,241 men, most of whom were with the Salonika force before the operations against Bulgaria and Turkey ceased.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

FRIDAY, NOVEMBER 7, 1919.

THE DEVELOPMENT OF MESOPOTAMIA.

A somewhat fitful discussion of the future of Mesopotamia has probably left the public mind in Great Britain in a bewildered state. It has been asked to look upon the country on the one hand as the future granary of the world, on the other as a wilderness of unpopulated desert and swamp; the story of its military administration has been, according to one account, a masterpiece of organisation, according to another an orgy of reckless expenditure; Mesopotamia itself has been represented as the richest asset that Great Britain has acquired by the war, or again as a white elephant—and a bit of a rogue to boot. Whatever the truth may be—and it will not be a bad thing to start from the basis that there is a substratum of truth in all these assertions—the British public, it is to be hoped, will realise that chance or its traditional good fortune has, for better or for worse, placed responsibility for Mesopotamia upon its shoulders and will sternly resolve that it shall be for the better. In this spirit it will look upon past mistakes with a more lenient eye than upon present muddling and indecision. The considerations that govern war-time measures differ from those that are rightly expected to rule with a return of peace conditions. It is most likely that under the military administration there has been a complete absence of financial control; that orders were given regardless of expense, and that public works were inaugurated or planned which in any other circumstances would have been decried as the veriest wild-cat schemes. The same charges can be levelled nearer home, but Mesopotamia, it appears, had this advantage: that the wildest enterprises achieved something, whereas in England they have occasionally been without any concrete result. There had been two bad harvests in 1915 and 1916; the 1917 harvest was a poor one. It did not suffice to meet the requirements of the civil population, not to mention the ninety thousand tons of cereals needed for the Army north of Kut. It was decided, in view of the tonnage difficulty, that Mesopotamia must become, if possible, self-supporting, and a total of 250,000 tons of cereals was aimed at from the next harvest. A scheme was sanctioned in August, 1917, and the work of irrigation was taken in hand; by the end of January the seed was in the ground, and it produced 253,000 tons of crops. Success in one direction led to emulation in another. A million acres had been brought under cultivation; it was proposed to increase the total to a million and a-half. Agriculture alone could not be allowed to have things all its own way, and in other branches of the Administration a similar enthusiasm for concrete results manifested itself.

Because neither Mesopotamia nor Great Britain could stand this pace indefinitely is no reason why what has been accomplished should be decried. The measures taken were admittedly based on the exigencies of the war, although individual officers may have been carried away by the irresponsibility engendered by lack of adequate control. With the Armistice, the necessity arose for taking stock of the situation afresh, in the light of altered conditions. This, however, it is to be inferred, was never done. The War Office retained control, while the Civil Administration gradually asserted itself. No light or leading came from England or India, and it was left to the officials on the spot to work together or to pull different ways, as their fancy led them. Too often, it is to be feared, the latter course was adopted, and the inevitable watertight compartments established themselves in the Administration. Most probably it suited the Home Government to avoid coming to any definite decision on the subject, but this attitude was unfair to Mesopotamia, unfair to the War Office, and unfair to all associated with the divided control of the country. No doubt the situation has been complicated by the delay in the Turkish settlement, and Great Britain considered itself unable to declare its policy with regard to a country over which its mandate had not been formally recognised. On the other hand, the country had to be administered from day to day, and it was worth while to ensure that the policy adopted should be the same as that which would commend itself when the mandate had been confirmed. In the place of this common-sense course, however, Mesopotamia has been left largely to its own devices: it has been allowed to "carry on" much on the lines that could only be justified by war exigencies, and it is in danger of being victimised by the panic-cry of economy. By common consent the difficulties in the way of reconstruction are formidable; but for this reason, if for no other, they require to be considered carefully, in order that they may not be enhanced by the adoption of wrong policies at the outset. The most serious croakings would seem to amount to little more than a reminder that the development of Mesopotamia should be gradual and should not be continued at the pace set under the military occupation. No fault can be found with such a warning. The limited nature of the population imposes a policy of cautious development. The great schemes of irrigation devised by Sir William Willcocks may stand as the coveted goal; but they must naturally be carried out proportionately to the capacity of the inhabitants to benefit by them. It was not his main business to decide on the rival claims of navigation and irrigation; but it may well be the first duty of the Government charged with the control of Mesopotamia.

To-day it is almost impossible to consider the future of Mesopotamia apart from that of Persia. Great Britain's responsibilities to both countries and their inter-relation suggest at least the closest co-operation between the Government of Mesopotamia and those who will be responsible for advising the Teheran authorities on matters of administration. Trade development in the two countries should advance as far as possible hand in hand. Before the war three-fourths of the imports of Busreh went to Baghdad, and most of the goods, it is said, were destined for Persia. In Mesopotamia itself the progress of trade, after the ravages of war have been made good, must be regulated largely by the growth of a settled population; in Persia, on the other hand, the introduction of railways, roads, and irrigation will provide means for the exploitation of the country's considerable potentialities. Mesopotamia by then ought to be in a position to profit by any extra burden imposed upon her in meeting Persian needs. Both countries will look to India for the satisfaction of many of their requirements, and the provision of through railway communication can hardly be delayed indefinitely now that a line from India reaches South-Eastern Persia and Khanikin in the West is linked up with Baghdad. Whether India will be given administrative charge is another question. It is desirable, however, that it should be settled without delay, in order that an end may be put to the present policy of divided control. If the Foreign Office is no longer regarded as a claimant for the honour, it is because Egypt has established herself as the more formidable rival to India. Weighty arguments can be adduced on both sides. If the choice rested with Mesopotamia there can be little doubt that she would favour whichever of the two gave promise of the greater adaptability and the less inclination to remain hide-bound by old traditions and shibboleths.

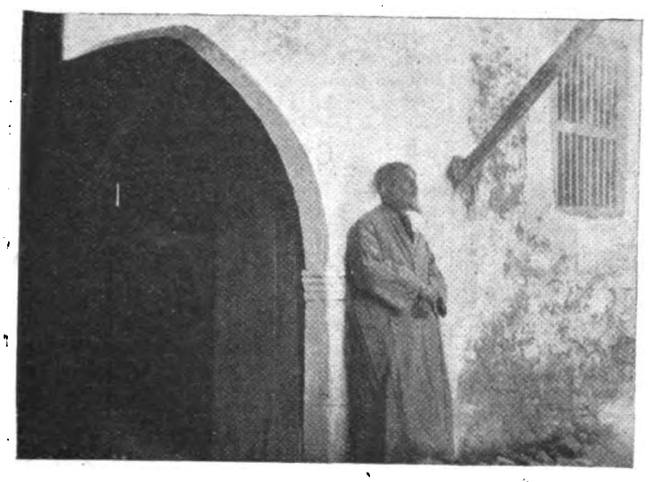
CYPRIOTE SHRINES.

By Lieut.-Comdr. H. C. LUKE, R.N.V.R.

IV.

I do not know if the Kirklar tekyé—its Greek name is *Ἅγιοι Σαράντα* — ever housed a dervish community of any magnitude; probably not, to judge from its limited accommodation. At the present time its only occupants are an old Sheikh of the Naqshibendi Order, and his elderly assistant; and it is rarely visited except on the one day in the year when pilgrims, mainly of the peasant class, come to venerate the tombs of the forty holy Sheikhs, which are ranged in two parallel subterranean corridors underneath the mosque. If history is silent as to the origin of its forty



THE SHEIKH OF THE KIRKLAR TEKYÉ.

Sheikhs, report is very full of their supernatural activities at the present day, activities which not only attract the pious Mohammedan, but also the Christian devotee. He who, waxen taper in hand, passes fearfully and devoutly from one green and turbaned tomb to another is regarded by them with tacit approval, whatever his religious convictions may be; but woe to the sceptic who has come to scoff and jibe. I have seen the sword which, wielded by no visible arm, cut off the head of an Orthodox priest who derided the powers of the Sheikhs. Firmly embedded in the rock at the extreme end of the left wing of the tomb-galleries is a spike which by similar means most severely goaded another doubter. Consequently the forty are regarded with awe by surrounding villages of either faith; and their wonder-working tombs provide ample material for the superstitions which are dear to the unlettered peasant of the Near East.

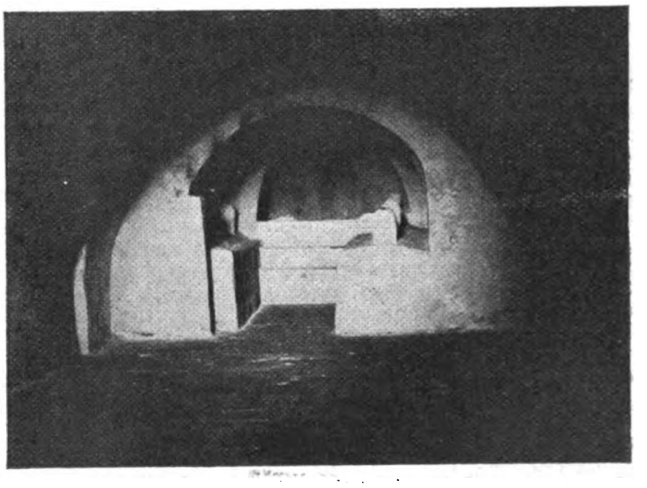
I first visited the shrine, not on the occasion of the annual pilgrimage, but on a day when the old Sheikh, el-Hajj Mohammed, had bidden certain fellow-dervishes from Nicosia to participate with him in a celebration of the *zikr* of their Order. *Zikr*, literally a "remembering," or "commemoration,"[12] is the name given to the peculiar ritual of dervishes, which, assuming different forms in the different Orders, is designed to divert the minds of the votaries from earthly things, bringing them into closer communion with the Divine. Thus, in the Mevlevi sect, it takes the form of dancing, or rather of whirling, round as far as possible on the same spot; in the Naqshibendi and Rufa'i it consists of the repetition of certain religious formulæ, which are persisted in until the requisite state of ecstasy, almost invariably followed by severe exhaustion, is brought about. The members of the two latter Orders are vulgarly known in consequence to Europeans as Howling Dervishes, and in the severer forms of their *zikr* they not infrequently, on attaining a condition of exaltation, inflict wounds upon themselves with swords, skewers, and other forbidding instruments of torture. The state of ecstasy appears to render them impervious to pain, and it is a remarkable fact that it is easily attainable not only by professed and practised dervishes, but by the numerous lay brethren who, drawn from every class of Turkish society, form an important addition to the official or permanent dervish ranks. It is also, I believe, true that if two or three Turks, believers, but in no special degree devout or acquainted with dervish practices, sit down together and, swaying their bodies from side to side, repeat with concentration the formula of some *zikr*, they very often arrive at the condition which such exercises produce in adepts.

[12] Koran, xxxiii., 41: "O Believers! Remember God with frequent remembrance, and praise Him morning and evening."

Old Sheikh Mohammed enjoys a high reputation among his brethren for the severity of the tortures which he is wont to inflict upon himself when stimulated by the *zikr*. Gaunt and old, with a shaggy white beard, wild eyes and a child-like smile, he looked his part to perfection, and entered with the utmost zest into the preliminaries of the service. The dervishes squatted in a circle on the floor of the mosque, and with marked and peculiar rhythm began in guttural unison to invoke the Almighty. "*Ya meded, ya Allah, ya meded, ya Allah!*"—"Help, O God!"—they repeated, swaying gently from side to side. Presently the invocation and the rhythm changed. Bowing their heads at the end of each sentence, they exclaimed, louder and more quickly, "*La ilaha illa'llah, la ilaha illa'llah!*"—"There is no god but God!"—laying heavy emphasis on the two final syllables. After a while they exchanged this exercise for the phrase "*Aayum Allah*"—"God is present"—and lastly for the mystic words "*Ya Hu!*"—"O He!" (i.e., O God!)—which they shouted with a guttural violence that closely resembled a bark. Their swayings were now very rapid, and had grown so agitated that they were able, without abandoning their squatting posture, to jerk themselves along the floor, the sweat pouring from their brows. Suddenly, with a wild shout, and with an unearthly look in his eyes, the old Sheikh jumped up and tore off all his garments except a pair of white cotton drawers and his green turban. He seized a sword which lay in readiness, and, pressing its sharpened edge against his naked body, endeavoured to run forward while two of his companions held him back by the extremities of the sword. He had attained the state of *hal*, or ecstasy, and was oblivious of earthly things. Still breathlessly shouting "*Ya Hu!*" while the spittle ran down his beard, he now possessed himself of a long skewer weighted at the top by a wooden ball from which dangled pieces of chain. He pulled the skin of his chest out to its furthest extent, and, after twirling the skewer several times in his hand, plunged it through the skin without drawing blood. Next, he licked a fire-iron which had meanwhile been heated in a *manqal*, or charcoal brazier, to the accompaniment of the shouts and heavings of his fellows. One of these, a negro, now lost all control of himself. Throwing off his turban, he beat his head repeatedly and violently against the hard mud floor, while the colour of his face turned from black to an ashy grey. His neighbour clasped him round the shoulders, and soothed him by blowing and spitting in his face. No sooner, however, had he done so than he himself caught the infection, to be calmed in his turn by the now peaceful negro.

By this time the climax of the performance had been passed, and the *zikr* ended ere long in a diminuendo of noise and movement. The invocations of the dervishes became less loud and rapid, their swayings gentler; eventually they subsided into weary but contented calm.

Less violent is the *zikr* of the Mevlevi or Dancing Dervishes, whose *tekyé* in Cyprus is situated just within the



IN THE TOMB GALLERIES, KIRKLAR TEKYÉ.

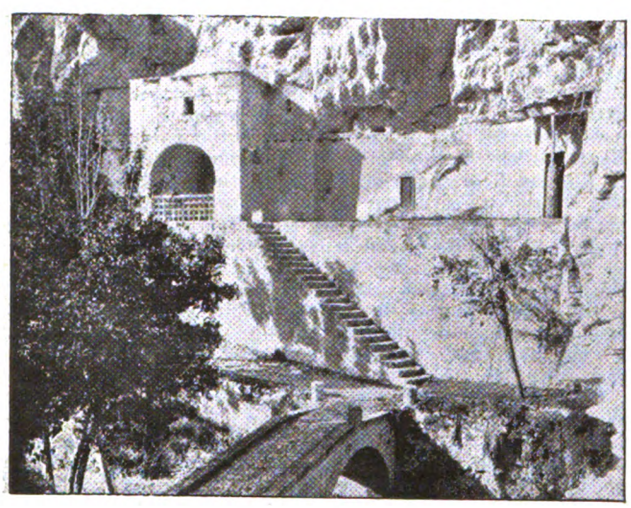
walls of Nicosia, by the picturesque Kyrenia Gate. The founder of this Order was a Sufi named Jelalu'd-Dîn, a native of Balkh, in Afghanistan, who settled in Konia in the thirteenth century. The purpose of all Sufi teaching is to enable the devout soul to return to and be reunited with God, with Whom it was once one, but from Whom it has become separated by its birth into the world. The return journey to God is made along a "way" or "road" (*tariq*), whereby one of the dervish Orders is to be understood, the stages of the "way" being represented by the *zikr*. The *zikr* which Jelalu'd-Dîn instituted in his Order to attain

Digitized by Google

this end consists, as we have seen, of whirling around to the music of flutes and drums; while his doctrines are set forth with much poetic feeling in his celebrated work, the *Mesnevi*. The love of music is a marked feature of the Mevlevi Order. Sir Charles Eliot remarks in "Turkey in Europe," that Jelalu'd-Din "was passionately devoted to music, and, like Luther, did not see why the devil should have all the good tunes." Jelalu'd-Din recognised in music Man's ally in his search for reunion with the Infinite; and with their flutes of seven holes his followers strive to lead the soul sorrowful to its goal.

If a *muqabilé* [13] of Dancing Dervishes in Constantinople and other great cities tends to degenerate into a show provided for the curious, the ceremony in Nicosia, although performed on a smaller scale and without much apparatus, is convincing and impressive as an act of devotion. The *tekyé* contains a mosque for the performance of the ordinary *namaz* (the five daily prayers obligatory on all Moslems), and a *sema-khané*, or dancing-room, where the ritual of the Order is performed. At one end of the *sema-khané* is the minstrels' gallery, and beyond it is a succession of domed chambers containing the tombs of the present Sheikh's predecessors from the time of the *tekyé's* foundation some time in the seventeenth century. The post of Sheikh here, as in most *tekyés* of the Order, descends from father to son, and it confers on its holder the privilege of encircling his bonnet of camel-hair with a green turban.

At the opening of the ceremony of dancing the dervishes are seated in a semi-circle on the floor, their Sheikh in the



THE ENKLEISTRA.

middle. Somebody up in the ministrels' gallery commences to intone passages from the *Mesnevi*, in the original Persian, and presently the Sheikh gives the signal for the dancing to begin. Two or three musicians in the gallery play plaintive melodies on reed pipes, another accompanies on a drum. The dervishes rise and defile past the Sheikh in order of seniority, kissing the hem of his sleeve in passing. They wear their high cap, a zouave jacket, and a long skirt pleated like that of a ballet dancer; their feet are bare. Once more they gravely perambulate the room, and each dervish, as he goes by the Sheikh, turns and bows to the man behind him. Then, with arms extended for balance, the right palm turned up, the left turned down, they proceed very slowly to rotate as far as possible on the same spot. The pleats of their skirts open with the movement, and the room seems to be filled with revolving peg-tops. As the exercise continues the look of abstraction on the faces of the performers becomes more and more marked; while to the imaginative onlooker, affected by the weird, unearthly music, the singular and mysterious spectacle seems as a vision from another world. From time to time, to prevent exhaustion, there is a brief interval, at the end of which the Sheikh bows to the musicians' gallery and gives the signal to resume. Should the occasion be one of sufficient importance for the Sheikh himself to take part, the musicians strike up a tune only played when he dances. With grave dignity he comes forward into the middle of the floor, and becomes, as it were, the pivot around which the others gyrate.

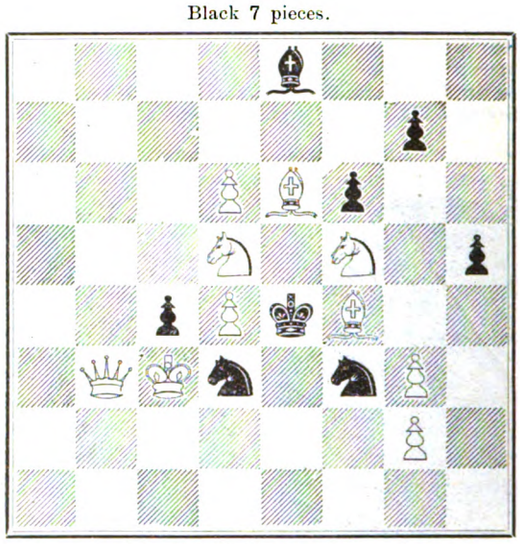
When all is over attendants hasten to throw cloaks over the dancers, who by this time are bathed in perspiration. For a few moments they still appear as in a trance, then slowly come back to earth. Again they defile past the Sheikh and kiss his hand, which he raises to his lips; and, in returning to their places for the prayers wherewith the service is concluded, embrace one another in token of the brotherhood which unites them within the Order.

(13) Lit. "a meeting"; the name of the *zikr* in the Mevlevi Order.

The shrines which have been described above are but a selection from the great number in which the island rejoices; an account of them all would fill a volume. If to be rich in places which attract the veneration of men is a cause for happiness, then Cyprus amply merits one of the names she bore in antiquity, that of Macaria, "the blessed."

CHESS.

Black 7 pieces.



White 10 pieces.
White to mate in two moves.

It is now announced that it will not be possible to hold next year's congress of the British Chess Federation at Cambridge.

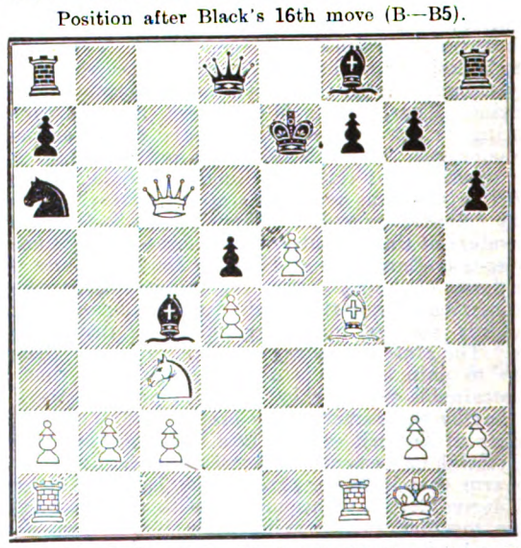
I am indebted to several readers for useful suggestions regarding this column. One of them I am adopting this week in the introduction of a problem which will henceforth be a regular feature. Solutions will be given the following week, and solutions sent by readers will be duly acknowledged. While on this subject I would express the hope that readers in the Near East and India will send me some of their games from time to time for publication.

Out of twenty simultaneous exhibitions by Señor Capablanca, the Cuban has won 624 games, losing 19, and drawing 44.

The Metropolitan Chess Club is holding two tournaments this year, and will, it is stated, make a strenuous effort to retain the championship of the London League. This the club should succeed in doing provided it can turn out its strongest team, for it numbers among its members a large proportion of the leading players in London.

I recently gave a game from Mr. P. W. Sergeant's "Charousek's Games of Chess." Here is another, played between Charousek and Tchigorin in the Budapest Congress of 1898, for which the two players tied, Tchigorin winning the tie match. Opening, bishop's gambit; white, Charousek; black, Tchigorin:—1, P—K4, P—K4; 2, P—KB4, P x P; 3, B—B4, Kt—QB3; 4, P—Q4, Kt—B3 (1); 5, P—K5, P—Q4; 6, B—Kt3, B—KKt5; 7, Q—Q3, Kt—KR4; 8, Kt—KR3, Kt—K5; 9, Q—QB3, Kt—R3; 10, 0—0, B—K7 (2); 11, B—R4 (ch.), P—B3; 12, B x P (ch.), P x B; 13, Q x P (ch.), K—K2; 14, Kt x P, Kt x Kt; 15, B x Kt, P—R3; 16, Kt—B3, B—B5;

Position after Black's 16th move (B—B5).



17, P—K6 (3), R—B; 18. B—B7, P x P; 19, B x Q (ch.), R x B; 20, Q—Kt 7 (ch.), R—Q2; 21, R—B7 (ch.), K x R; 22, Q x R (ch.), B—K2; 23, R—K, R—K; 24, P—QKt3, K—B; 25, P x B. Resigns.

1. Q—R5 (ch.) would have been preferable. 2. A futile excursion after the Queen. 3. Bringing the end within sight.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Cables received from the representative of the Federation of British Industries give most satisfactory accounts regarding the progress of the Athens Exhibition. On the opening day, despite the fact that the weather broke during the afternoon, there were over 2,000 visitors between 3 p.m. and 9 p.m., while during the first seven days 15,000 paid for admission in spite of the continuance of unfavourable weather. On October 26 the weather improved, and the attendance on that day rose to 7,000. Most favourable notices of the Exhibition have appeared in the Press, and it is stated that its success is now completely assured. Evidence of this is to be found in the substantial business that has already been transacted. At the private opening of the exhibition one firm sold their exhibit and took £1,500 worth of orders; while in the latest cable it is stated that practically all exhibits have been sold many times over, and that there has been an especial demand for machinery and textiles of all descriptions.

***

It is interesting to note the rapid extension of the activities of the Abyssinian Corporation. Following the acquisition of the important business of Messrs. J. D. Nicholas and Co. in Abyssinia, it is now announced that a cable has been received from the general manager at Adis Abeba, stating that he has acquired for the corporation the business of the Indian firm, Badroo, Din and Co., exporters on a large scale of hides and native produce, and also having a close association with the Lancashire cotton trade. Those who read Lord Wolmer's speech at the recent statutory meeting will have been fully prepared for this and other developments.

***

The returns of the Greek revenues for August show a further satisfactory increase, though it is to be noted that the ratio of increase is declining owing to the fact that the comparison is now being made with a period when the returns were approximating to the normal. There was an increase for the month on monopolies, tobacco, stamps, and Naxos emery of 733.686 drachmæ, or roughly 19 per cent., while the increase from the Piræus Customs was 492.702 drachmæ, or over 13 per cent. For the first eight months of the year there was an increase of 6,442.990 drachmæ, or 26 per cent., in respect of monopolies, tobacco, stamps, and Naxos emery, and of 9,390.500 drachmæ, or 43.8 per cent., from Piræus Customs.

***

A prominent member of the Greek community in London, who has just returned to the City, after a prolonged stay in Greece, has given me his impressions of present conditions in that country. "Speaking broadly," he said, "the position in Greece to-day could scarcely be more satisfactory. The country has been so fortunate as to come through the great war without suffering the misfortunes which were the lot of other Balkan countries, and, thanks to favourable circumstances, to-day she stands in a unique position economically in the Near East, a fact to which the exchange rates bear witness." Turning to the question of finance, he pointed out that there are now in Greece from fifty to sixty million pounds more than before the war, and a large part of this amount, he explained, would be available for commerce and development.

***

Discussing the question of the development of commercial relations between the United Kingdom and Greece, my informant laid stress on the need for a commercial bank. "The lack of such an institution," he said, "is a great obstacle to the growth of trade between the two countries. What is needed is a bank with its directors partly British and partly Greek, which would give facilities for trading operations. The ordinary bank will not do. It must be an institution with a commercial as well as a banking side. It is my firm impression that a bank such as I have indicated must be founded if British traders are to enter the Greek market successfully."

***

I have often emphasised the great scope for British contractors in connection with the vast schemes of construction in Greece, at Salonika and elsewhere, and in the course of our conversation the subject came up. My Greek friend said he was rather afraid that there was a very strong chance that the large part of the work in connection with the rebuilding of Salonika would be taken up by an important French group headed by the Banque de Paris et de Pays Bas, of Paris, and that only a small margin would be left for British manufacturers and contractors. If that is the position as regards one of the outstanding works of reconstruction before Greece, it merely emphasises the necessity for more enterprise on the part of British capital.

***

Hitherto the British Industries Fairs have been held under conditions which compelled their restriction to a few industries, but next year it will be possible for all industries to be represented, and the arrangements that are being made promise that the coming Fair will be on a scale commensurate with the importance of British industry. The Fair is to be held concurrently in London, Birmingham, and Glasgow, and each centre will be restricted to certain industries, so that buyers interested in particular industries will not be compelled to go to more than one place to inspect the exhibits. The Fair has so far had its home in London at the Agricultural Hall, the Victoria and Albert Museum, the Imperial Institute, and the docks, but this time it is to be held at the Crystal Palace, in view of the great floor space that will be required, and though the Crystal Palace is the largest exhibition building in the world, it is thought possible that it will not meet requirements unless additions are made to the building.

***

At the Crystal Palace the exhibits will comprise such commodities as cutlery, silver and electro plate, glassware, china, paper and stationery, fancy goods, toys, sports goods, scientific instruments, optical goods, and furniture; in other words, very similar exhibits to those that were on view at previous Fairs in London. At Birmingham, where the Fair will be held in several buildings, the trades represented will include lighting fittings, cooking stoves and utensils, hardware, tools, metal furniture, firearms, machinery belting, motor cycles and aeroplanes, sanitary appliances, tiles in copper, lead, brass and steel, and architectural and ornamental work, etc., while the exhibits at the Fair at Glasgow will include textiles, ready-made clothing, carpets and upholstery materials, foodstuffs and beverages, and chemicals.

***

The question of the provision of shipping facilities between this country and Morocco was the subject of a statement by Mr. J. W. Clark, of the R.M.S.P. Co., at last week's annual general meeting of the British Merchants' Morocco Association. The small steamers suited for the Morocco trade were very scarce, he said, at the present time. He had hoped that they would have been able to secure some of the German ships, but he understood that arrangements had been made between the British and German Governments by which the Germans would be allowed to retain vessels of that class. There was only one alternative, he pointed out, and that was to build ships. "If you will have patience," he added, "I think we shall be able to give you a better service—a service such as you ought to have." Proceeding to discuss the question of freights, Mr. Clark said that he could not hold out much prospect of a reduction at the present time, seeing that the Government had decided "that the British shipowner shall be charged about twice as much for his coal as the manufacturer."

***

Opportunities for British traders in Yugoslavia are instanced in our advertisement columns this week, where the Export and Import Company, Limited, of Zagreb states its wish to enter into relations with British commerce, and announces an opening for an English correspondent to organise its British department.

Egypt's Foreign Trade.

(From Our Own Correspondent.)

Cairo, October 16.

The Egyptian Customs statistics for the six months ended June 30, which have just been published, show a considerable falling off in both imports and exports. Imports amounted to £E19,488,180, exports to £E22,952,870, compared with £E25,631,082 and £E26,953,753 respectively during the same period of the preceding year. There is thus a diminution of £E6,142,902 in the former and of £E3,980,883 in the latter.

Imports.

Under imports the chief items were :—Meat, £E807,607 (9,916 tons); wheat flour, £E407,927 (12,314 tons); tea, £E55,065 (495 tons); coffee, £E258,698 (2,562 tons); wine in casks, £E113,916 (3,371 tons); olive oil, £E85,581 (645 tons); coconut oil, £E98,105 (1,424 tons); kerosine, £E956,760 (68,341 tons); benzine, £E316,235 (13,155 tons); mineral lubricating oils, £E149,842 (3,426 tons); stationery, £E589,729; wrapping paper, £E109,269; cigarette paper, £E113,761; coal, £E1,801,810 (348,914 tons); natural indigo, £E87,529 (125 tons); nitrate of soda, £E413,930 (15,002 tons); ammonium sulphate, £E75,284 (1,269 tons); household soap, £E215,730 (2,781 tons); cotton yarn, £E206,784 (713,355 kilos); sewing cotton, £E186,408; grey piece goods (cotton), £E410,886; bleached cotton piece goods, £E765,425; cotton piece goods, printed, £E789,970; cotton piece goods, dyed in the piece, £E1,067,125; ditto, dyed in the yarn, £E484,356; mixed textiles, £E164,288; woollen and worsted cloths, £E256,397; silk yarn and thread, £E109,161; silk cloths, £E301,639; jute piece goods, £E71,611; sacks, £E199,114; hosiery, £E274,741; ready-made underclothing, £E152,644; ready-made clothing, £E171,163; iron or steel hoops, £E101,380; ironmongery, £E152,650; tinplate for petroleum tins, £E199,962; leaf tobacco, £E1,434,897 (3,634 tons).

Exports.

Under exports the main items were :—Untanned hides, £E136,275; heavy leather, £E241,810; rice, £E384,275 (16,193 tons); cotton seed, £E1,211,680 (1,262,169 ardebs); onions, £E377,752 (39,176 tons); refined sugar, £E250,336 (5,000 tons); cigarette paper, £E118,803; gum, £E215,568 (3,579 tons); cotton, £E18,283,929 (2,254,496 cantars); grey cotton piece goods, £E77,559; wool, £E88,126; flax, £E24,753; and cigarettes, £E464,271 (253 tons). Under re-exports, which during the six months increased to £E2,647,373, as compared with only £E369,981 at the end of June, 1918, the main items were :—Hides and skins, £E27,910; general agricultural produce, £E72,810; refined sugar, £E51,432; vegetable oils, £E85,261; cotton piece goods, £E1,405,333; woollen and worsted cloths, £E101,049; hosiery, £E126,798.

Increases.

The principal increases were under imports :—Meat, £E327,241; wheat flour, £E108,959; oranges and mandarines, £E105,337; sugar, £E106,732; kerosine, £E5,0,099; and leaf tobacco, £E102,921; and under exports :—heavy leather, £E177,171; rice, £E282,044; onions, £E223,356; cigarette paper, £E107,738; and cigarettes, £E203,675. Decreases were recorded under imports in :—Tea, £E145,226; coffee, £E125,395; coconut oil, £E150,380; benzine, £E551,319; coal, £E1,098,810; cotton piece goods, £E3,516,836 (or 50 per cent.); mosquito netting, £E132,242; woollen and worsted cloths, £E241,379; silk yarn and thread, £E157,174; sacks, £E593,143; ready-made underclothing, £E103,148; tinplate for petroleum tins, £E371,237; and under exports in :—Cotton seed, £E620,649; refined sugar, £E128,532; cotton, £E4,617,216. The increase in re-exports was due to sugar, agricultural produce, and yarns and textiles, the latter of which accounted for £E1,757,847 alone.

Turning to the share falling to the various countries trading with Egypt, we find under imports that the United Kingdom, whilst heading the list with £E8,322,878, has fallen off by over 40 per cent.; that India has similarly reduced her sales by 70 per cent.; but that Australia has doubled its share. The most important items from the United Kingdom were :—Stationery, £E208,000, coal, £E1,444,883; medicinal preparations, £E74,343; household soap, £E106,814; sewing cotton, £E160,000; grey cotton piece goods, £E364,000; bleached cotton piece goods, £E757,000; printed cotton piece goods, £E778,000; cotton piece goods dyed in the piece, £E1,025,000; cotton piece goods dyed in the yarn, £E333,000; mosquito netting, £E67,000; woollen and worsted cloths, £E248,000; iron and steel hoops, £E101,380; tinplate for petroleum tins, £E197,408. From India came coffee, £E50,630; tea, £E25,000; indigo, £E87,328; jute piece goods and sacks, £E263,000; whilst Australia's share was made up of :—Meat, £E784,528; and flour, £E403,267. Of the other countries, France increased by about 20 per cent. and America from £E176,726 to £E1,098,953 (kerosine, £E725,919; light leather, £E67,274). It is interesting to note that Palestine sent goods to the value of £E570,000, or ten times the amount during the corresponding period of 1918 (oranges, £F155,774; olive oil, £F46,000; soap, £E97,191). It is also to be noted that, although the total sent by Japan fell off by about 25 per cent., she increased her share of the imports of sulphuric acid and textiles.

Under exports, the share of the United Kingdom fell from over 70 per cent. to 50 per cent., whilst that of France quadrupled, those of Japan and Switzerland practically doubled, and that of Italy increased by over 50 per cent. The purchases of the United Kingdom were :—Eggs and cotton seed, all; onions, 80 per cent.; gum, 14 per cent.; cotton, 50 per cent; wool and flax, all; and cigarettes, 25 per cent. Of the balance of the cotton, 18 per cent. went to France and 15 per cent. to the United States. Of the gum exported 70 per cent. went to France, and of the refined sugar over 60 per cent. went to India. Under re-exports, 70 per cent. of the cotton piece goods went to Palestine, which took 70 per cent. of the ground nuts exported.

Trade With the Sudan.

Trade between Egypt and the Sudan during the period under review was, on the whole, not so good as the previous year. Imports into Egypt fell from £E1,391,857 to £E841,822, whilst exports to the Sudan rose from £E1,090,182 to £E1,296,183. Animals imported into Egypt fell by £E162,000 to £E261,000; hides and skins from £E68,000 to £E38,000; maize from £E155,800 to practically nothing; and gum from £E226,000 to £E79,000 (the quantity, however, only diminished by about 60 per cent.). On the other hand, sesame, dates, and groundnuts rose somewhat Under exports to the Sudan, cereals rose from £E34,600 to £E92,400; sugar from £E289,000 to £E360,000; cotton textiles from £E241,000 to £E422,000.

EGYPTIAN FINANCES DURING MAY.

(From Our Own Correspondent.)

Cairo, October 14.

The State accounts for May just published do not show much improvement in the situation. Revenue during the month amounted to £E2,429,205, and expenditure to £F2,678,008, with the result that at the end of May there was a deficit of £E963,044, as against one of £E82,823 only on the same date last year.

The chief items of revenue during the month were direct taxes £F641,735, Customs £E320,335, tobacco dues £F287,918, railways £E434,690, ghaffir cess £E173,253, interest on funds £E106,753, and domains £E106,249 The only items which at the end of May showed any appreciable improvement on the previous year were tobacco dues, which increased by £E88,622 and interest on funds, which rose by £E89,776. Important decreases were shown in practically every other head of revenue, e.g., Customs £E364,137, excise £E42,672, legal fees £E156,149, railways £E363,080, military exemption £E40,220, and post office £E26,172. On the expenditure side railways increased by over £E140,000, war gratuities by over £E110,000, and ghaffirs by £E41,000. On the other hand, irrigation was reduced by £F57,000, war expenditure by £F63,000, prisons by £E33,000, and public health by £E14,000. We can, it is to be feared, expect little improvement in the general situation of the State accounts until those for September are published, for the intervening months are bound to be affected by the troubles of last spring.

OIL OUTPUTS.

Anglo-Egyptian.—Week ended October 26.—Gemsah, nil (previous week, nil). Hurgada, 5,808 tons (previous week, 6,245 tons).

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

For further information apply to the following agents of the Line :

At LONDON : J. E. Hyde & Co., 1, Lime Street Square.
„ SMYRNA : „ PIRÆUS : „ ALEXANDRIA : W. F. van der Zee.
„ SALONICA : Cauchi Brothers.
„ CONSTANTINOPLE : Theo. Reppen.

Or to the Head Office :

SWEDISH ORIENT LINE, GOTHENBURG.

Conditions in Persia.—II.

Need for Railways.

Below is the continuation of Mr. C. A. Walpole's address to the Persian Society on "War and Post-War Developments in the Persian Gulf," the first part of which was given last week.

It had been said by some that there was a convenient outlet for the produce of Central Persia via Baghdad to the Persian Gulf, but this was not so. The freight by that route to-day from, say Hamadan to Busreh, would, at the very least, amount to £10 per ton—which was more than the normal price of wheat delivered in this country, but by a direct railway to the Gulf it would not amount to more than £2 or £3 per ton—a rate which compared favourably with the cost of rail transport of much of the grain shipped from India. Moreover, railways were a necessity for efficient administration, and for the economical distribution of oil and other merchandise, and also for the development of industries generally both for internal consumption and for export. In Southern and Central Persia, at any rate, fuel was practically non-existent, the little there was being wood collected from the scrubby growth along the Karun and Diz rivers, a purely local supply and insufficient even for local requirements, besides being prohibitive in cost. For the proper development of agricultural and commercial industries, a cheap and plentiful supply of fuel was, of course, essential, and in this respect Nature had come to the rescue of Persia with oil. The transportation of oil by caravan was, needless to say, most expensive both in the cost of transport and in the heavy leakage consequent upon this method of carriage, nor was distribution by lorry or cart any more satisfactory in either of these respects—leakage frequently amounting to as much as 8 per cent. Transportation by railway was far cheaper than either and much more satisfactory, as had been proved in India, where leakage, even with two transhipments, only averaged about half per cent.

Motor Services.

It had been suggested that a good motor service, say, from Ispahan to the Persian Gulf, was all that was required to bring about the much-desired commercial and industrial development of Persia, and there were even some people who professed to consider that the present caravan system was sufficient for the purpose. He would like to take this opportunity of insisting most emphatically, on the basis of his extensive knowledge of the country and of its transport problems, that this was not so—he had already indicated the prohibitive cost of transport by motor-lorry, rail, and river to Busreh via Baghdad. To emphasise further the point, he would like to give them the respective costs from Mohammerah to Ispahan; these were as follows:—(a) By river to Ahwaz and on to Ispahan by caravan, about £20 per ton; (b) by river to Ahwaz and on to Ispahan by motor-lorry, £15 per ton; (c) by rail, Mohammerah-Ispahan, about £3 per ton. The river caravan figure was the only one of the above figures actually available, but it must not be thought that those for lorry and rail were mere guesswork on his part. For a lorry road he had excellent data from a new road which the Anglo-Persian Oil Company had just completed between Dari-Khasineh (12 miles from Shusyar, on the Upper Karun River) to their oilfields, and for the railway he had certain estimates actually compiled when the survey of which he spoke was made by the Persian Railways Syndicate.

That it would take some little time to construct railways could not be denied, whereas, as pointed out by Lt.-Col. Napier recently before the Royal Geographical Society, a rough motor-lorry service could be introduced much sooner; but he would like to point out that the construction of suitable roads through any part of the mountainous ranges which separated the seaboard from the rich provinces of Central Persia would be costly and take time. In favour of this suggestion as a temporary measure, however, was the fact that the military in Mesopotamia would no doubt be ready to supply a certain number of lorries on the spot; petrol was all ready at hand from the Anglo-Persian Oil Company, and perhaps some of the existing caravan routes could, with a certain amount of patching up, be made sufficiently passable for this kind of traffic. That the experiment on a commercial basis would be tried in the near future there was little doubt, and as a temporary measure, pending the completion of railways, it would doubtless be of value in carrying on the existing trade. He was convinced, however, that for permanent development on a large scale Persia must have railways, and when these were built, any lorries which had meantime been employed in maintaining the existing trade of Persia could no doubt be used to great advantage as feeders for the railways.

The Labour Problem.

One of the greatest difficulties which would have to be faced, whether the work in hand be road-making, irrigation, or any other constructional work, would be that of labour. The position in this respect, even before the war, was none too easy, and it was now one of the acutest problems of the day. The Persian was, taken all round, a good labourer, but he had many irons in the fire, and could not be relied upon to remain with them throughout the entire year, especially when the date and grain seasons came round: nor to-day, with the big demand for labour in Mesopotamia, did there appear to be sufficient to meet the demands of all. Of skilled labour there was practically none, and even before the war artisans such as fitters, riveters, engine drivers, etc., had mainly to be imported from India, the possible exceptions in this respect being carpenters and masons, but here again the demand far exceeded the supply. Experience in other countries had, however, shown that, with the serious opening up of the country, more native labour would come forward, although during the war, when the wages offered were at record height, and when, owing to famine the shortage of food, clothing, etc., was acute, there was considerable difficulty in obtaining labour; this was no doubt, however, due in a great measure to the large demands of the M.E.F., and the unsettled conditions generally. The Persian Government were quite naturally extremely keen that local labour should be encouraged and utilised to the utmost extent, and every effort in this direction was being made in both official and commercial circles. It would, however, interest them to know that the artisans who had been imported from India (and the Anglo-Persian Oil Company had during the past ten years imported many thousands of such workmen) had on the whole been quite satisfactory—the men stood the climate well, and their intercourse with the Persian was quite friendly: many had, in fact, married Persian wives and settled down. The war had done much to draw Persia and India together—not only had the respective peoples, as it were, been "introduced" to one another, but the trade relations between the two countries had been very much strengthened. Many commodities which before the war were obtained exclusively from Europe had, through necessity at first, to be obtained from India, when it was discovered that quite a number of these articles could be purchased as well and as cheaply as from home. Instances of this were chemicals, cement, and boxwood—especially could he speak of the article last mentioned, of which the Anglo-Persian Oil Company imported from India alone approximately half a million boxes for the casing of petrol for the M.E.F.

The Anglo-Persian Oil Company.

A short review of the Oil Company's operations during the war would, he was sure, be of interest to them. The company's refinery, as they were doubtless aware, was situated at a spot called Braim, on Abadan Island, some nine miles below Mohammerah, on the Shat-el-Arab river. Here the company employed some sixty Europeans, a large number of Persian subjects, as well as some 2,000 Indians, apart entirely from a further large staff of Europeans, Persians, and Indians at Mohammerah, on the oil fields and on the route of the pipe line. In 1909 the village consisted of possibly over 10,000 inhabitants. The declaration of war with Turkey found Abadan particularly well equipped to render assistance to an expeditionary force to the Persian Gulf. The works were in a position to supply any quantity of petrol, kerosene, and fuel oil; there was a particularly well-equipped workshop, foundry, slipway, and a number of river steamers and motor boats. All were, needless to say, at once put at the disposal of the expeditionary force, and later, when it was decided to construct a fleet of light-draft gunboats, tugs, and barges, this work was undertaken at Abadan. Throughout the entire campaign the company supplied the total oil, petrol, and fuel oil requirements of the Mesopotamian expeditionary force, and at the same time were shipping large quantities of oil home for the British Navy. On no occasion was there any hitch in the working of any of these supplies. Moreover, it was from one of the company's ships that hostilities against the Turks commenced, naval guns being mounted on the steam tug "Sardar-i-Naft," which bombarded and demolished the fortress of Fao. This was on November 6, 1914; two days later the original expeditionary force under General Delamaine landed on Turkish soil almost immediately opposite to the company's refinery at Abadan. Here the Turks made their first attack on the British a week later but were repulsed. Three days later the British attacked the Turks, advancing along the right bank of the Shat-el-Arab river to a point almost immediately opposite to Mohammerah. The enemy were severely defeated, and fled towards Busreh, which they, however, evacuated on November 21 without firing a shot. An amusing incident of those operations was the attempt by the Turks to block the river below Busreh. A large Hamburg-American liner named the Ekbatana and two small Turkish ships were scuttled by the Turks. These proceedings occupied fully a fortnight, and were carried out with the utmost care. From Mohammerah he could obtain a fair view of the operations, and could not help admiring the painstaking methods of the Turks. A small gap had, however, inadvertently been left between the Ekbatana and the right bank of the river, and when, three days after the battle last referred to, news came down from Busreh that the Turks had deserted the town, and that the Arabs were looting it, H.M.S. Espiegle and one of Lynch's river steamers made a dash for the gap, which was passed through without mishap. This effort to block the channel was in fact entirely futile, and it was found later that two ocean-going steamers could even pass one another without difficulty.

(To be concluded.)

MOROCCAN FISHING CONCESSIO

H.M. Representative at Tangier states that a new company, which has been formed for a period of 99 years by certain Franco-Portuguese interests, has received a concession for fishing in the Tangier zone. The head office is in the French zone, and the company is to be governed by French law. Half the directors are of French and half of Portuguese nationality. The company takes over the stake net concession and the sardine-canning business of Tangier, and can extend its operations in fisheries and allied industries elsewhere in Morocco. The capital is fixed at 1,200,000 francs, of which 697,500 francs (6,975 shares) are assigned to the Portuguese and French companies in payment of the stake net fishery, the sardine factory, etc., the balance having been subscribed by eight persons and a company which is not named.

Mr. Gerald Campbell, H.M. Consul at Adis Abeba, is now home on leave, and will be glad to see any British firms interested in Abyssinia. Interviews can be arranged by the Department of Overseas Trade.

Sir Henry Babington Smith, K.C.B., C.S.I., has been elected a director of the Bank of British West Africa.

Sir Ian Malcolm, Sir Edmund Wyldbore-Smith and Sir Owen Philipps have been appointed to the board of directors of the Suez Canal Company.

Near East Coal Resources.

II.—Russia.

By John Kirsopp, M.I.M.E., F.G.S.

According to a report prepared by M. Th. Tschernyschew, the Director of the Geological Committee of Russia, with the assistance of the various authorities on the respective coalfields of Russia, the coal resources of this country may be summarised as follows:—

The coalfields of Russia may be divided into thirteen distinct areas, viz.: (1) The central part of European Russia (the Moscow basin); (2) the Dombrova basin; (3) the Donetz basin; (4) the brown coals of the south-west part of European Russia; (5) the coals of the west slope of the Urals; (6) the coals of the east slope of the Urals; (7) the Caucasus and Trans-Caucasus; (8) Turkestan; (9) Kirghiz steppes; (10) the Kuznetz basin, and its extension to the north and north-west; (11) the fields of the province of Yeniseisk (Minusinsk district and the basin of the River Yenisei); (12) coalfields of East Siberia (provinces of Irkutsk, Trans-Baikal, and the Amour-Brimosski); and (13) Sakhalien. Only the first eight mentioned need be taken into account as having any likelihood of bearing upon the interests of the Mediterranean, or of the Near East.

1. The Moscow basin ranks fourth among the coal districts of Russia in Europe. The mining industry in this district began about fifty years ago, and expanded to a yearly production of about 600,000 tons, which has, however, gradually decreased since 1890, and is now only half this quantity, owing to the partial replacement of coal by petroleum, and to the increased use of the superior Donetz coal. The coals occur in one of the lower divisions of the carboniferous system, a belt extending in the form of an arc through the Governments of Riazan, Tula, Kaluga, Smolensk, Tver, and Novgorod, and situated about 90 miles south of Moscow, the coal in the middle part of the coal-bearing series being principally of a boghead quality, occurring in lenticular seams, and extending over a length from east to west of 270 km. (267 miles) and with a width of 165 km. (102 miles). The coal seams vary in thickness from about 0.36m. up to 2.00m. (1 ft. 1 in to 6 ft. 7 in.).

The present principal operating mines are Petroski (Kaluga), Brussova-Buda (Iizdrinski district), Bobrinski sugar refinery mine, Tovarkova, Levinskaya, Bobrik-Donski near Sizran-Viazma railway station, in the Government of Tula, Obidimo, near the border of Tula and Alexin, Yasenki, and the Murævna and Povedinka (Verda River) mines in the Government of Riazan. Average analysis of the coal (smoky and boghead varieties) gives 4,000-4,500 and 6,000 calories respectively, running from 62.63 up to 76.07 per cent. of carbon, and 26.02 down to 10.26 per cent. of ash. The Murævna area has produced 20,000 tons per square km. (247.1 acres), and it is estimated that the whole area, 30,000 square km. (11,582 square miles), of the southern (or richest) part of the Moscow basin contains 1,500,000,000 tons.

(2) The Dombrova basin, which forms the north-east end of the Upper Silesian basin is situated in the districts of Bendin (Petrokoff Government) and Olkurz (Kiel Government), and roughly about 140 miles south-east of Warsaw, the productive coal deposits being estimated to extend over about 800 square km. (309 square miles). The productive deposits can be divided into six series, viz., (*a*) comprising thin coal-seams running irregularly, and of inferior quality, friable, and high in ash. The lowest and thickest forms a comparatively regular bed in the eastern part of the basin 1.50 m. to 2.50 m. thick, and in the western part between 3.00 and 5.50 m. (*b*) Coarse-grained sandstones or conglomerates predominates in this series, in which lenses of coal have been worked by open cuts in the Paryz, Korzelew, Reden, and Mortimer mines. (*c*) This is the most important series, including the thick seams of the "Reden" group. In the eastern part of the basin the series consists of one thick seam known as "Reden," having a thickness in the Paryz mine of only 0.50 m., but thickening to the west and south-west, attaining 2 m. at the Korzelew mine, and in the Count Renard mine 8.00 m. to 12.00 m. In the western part of the district it is divided into three seams, known as Fanny, Gluck, and Karolina. The coal is good flaming and containing little ash, the average analysis giving specific gravity 1.320, carbon 60-70 per cent., ash 2-5 per cent., heating power 6,300-6,900 calories, and coke 56-58 per cent. The thickness of the series in the west (Saturn mine) is 38-59 m.; in the central part of the basin (Count Renard mine) 20-25 m.; and in the east (Kasimir mine) 10-18 m., the rock series having a thickness of 440 m. in the Flora mine in the centre of the basin, but diminishes to 270 m. (886 feet) in the eastern part. (*d*) Contains thin irregular seams, the Andrea, 2 m. thick, being the most important. (*e*) Coal-seams from 1 m. to 2.50 m. occur in this series contained in a thickness of 240 m. (*f*) in the eastern part of the basin there are only barren sandstones, but in the western part they contain a few thin seams of coking coals.

The structure of the basin presents two folds running parallel in an east-west direction, the southern anticlinal one beginning in the west part of the Upper Silesian basin, near Zabjre, entering the southern part of the Dombrova basin, terminating to the east of Count Renard and Nivka mines. In the north wing of this fold the Saturn, Czelady and Milovice mines are in operation near the western boundary of the basin, and to the eastward are the Count Renard and Klimontow mines. In the south wing of the fold the mine Nivka is situated, the top of the fold being eroded, and the Sub-Reden beds cropping to the surface. In the synclinal fold, which extends more to the north than the anticlinal, the south wing coincides with the north wing of the latter. The following mines are situated in the north wing: New Grodziec, Korzelow, Paryz, Reden, Mortimer, and Kazimierz, they all working the Reden seam. All the mines working the coals of the Sub-Reden measures, viz., Stzyzovitze, Old Grodziec, Antoni, Yan and Flora are also situated in the north wing. The dip of the measures throughout the field is very varied, from 2 degrees to 8 degrees to as high as 45 degrees, and numerous faults further complicate the structure of the field. The total coal reserves of this basin were in 1911 estimated to be as follows:—Reden seam, 988,900,000 tons; Over-Reden seams, 299,365,000 tons; Saturn seams, 363,977,000 tons; Flora seams, 747,243,000 tons; Stezyzowice seams, 125,760,000 tons; or a total of 2,525,245,000 tons.

The production of coal in this basin in 1901 was 4,140,439 tons, and in 1910 5,468,762 tons. Beds of lignite of Keuper (Triassic) age near the northern end of this basin in the district of Bendin, range in thickness between 0.75 m. and 2.00 m. Six mines are now working these deposits, viz., Kataczyna, Nerada, Kasimierz II., Teodor, Helena and Elka, the total annual output amounting to about 115,000 tons. The area of the productive beds will occupy about 70 square kilometres, this additional reserve amounting to 63,000,000 tons.

(3) The Donetz basin, the greatest coal area of European Russia, of carboniferous age, outcrop in the southern part of the Government of Kharkoff, in the eastern part of Ekaterinoslav, and in the western part of the province of the Cossacks of the Don, stretching in a W.-E. direction for a length of 230 miles, and with a maximum breadth of ten miles. The coal-bearing area can be divided into three divisions: Central, West, and East. The largest is the central division, and is a continuous field of coal deposits outcropping at the surface, extending between latitude 47.5 and 49.5 North, and between longitude 7.26 and 10.52 East (Petrograd). To the west and east of this central field groups of separate, island-like outcrops of coal deposits occur, almost exclusively in the valleys of the rivers.

The exposed coal deposits occupy an area of approximately 22,660 sq. km. (874,888 sq. miles). Mining in the basin began about 1789, but developed very slowly, and in 1860 the output only amounted to 100,000 tons. In 1890 it was 3,004,079 tons; in 1900, 11,010,684 tons; and in 1911, 20,283,00 tons. Between the years 1860-1911 the total production was 250 million tons. In 1909 the output might be classed as being steam coal 16.92 per cent., gas coal 12.43 per cent., smithy and coking coal 55.15 per cent., thin anthracite 2.05 per cent., anthracite 13.45 per cent. The total thickness of carboniferous age in the basin in places may be reckoned at 10,000 to 12,000 metres (32,800 feet to 39,370 feet) composed of alternating sandstones, slate, limestones (Upper Devonian) and coals, and may be divided into Lower, Middle, and Upper. The principal mining districts in the basin are in Uzovski region, Tschistyakovskaya district situated to the east of the Uzovski region, connected to the railway at Serditaya, and Tchistakovo, and contains several large anthracite mines, including those of the Alexiev Mining Co., the Prokhoroff manufactory, Eialkovski, and others. To the north of a line connecting the stations Sadki and Debaltsevo is situated the Gorlovski, one of the largest industrial regions in the Donetz basin. The mines of this region work the coal seam of the north and south wings of the west part of the principal anticlinal, the principal mines of the south wing being Verovski and Sophievski mine, the mines of the South Russian Coal Industry, Urpenski mine, Novo-Nikitovski mine, and the Nelepovski and Sherbinovski mine. On the north wing are Novo-Nikitovski (north) and the mines of the Gosudarivo-Bairakh Coal Mining Company. The Debaltsevo-Lugansk and Debaltsevo-Lopasnaya railway serves the large industrial region known as Almazni. Among the numerous mines of this district are the mines of the Alexiev Mining Company, the Brianski Coal Mines and Pits Company, the Seleznevski Company, the Gilovski Company, the Umenski Company, the Krivorogski Company, the South Russian Dnyeprovski Metallurgical Company, the mines of the Gotubovski-Berestovo-Bogodukovski Company, and others.

The Lisichanski region is situated in the north-west corner of the basin, one of the first coal mines started in the basin being near Lisichansk.

The Bokovo-Khrustalski anthracite region lies along the Ekateriinsk railway, between Chernukino and Kartushino (Uskino), in which are operating the mines Bruno-Bender, Ischenko Yakovenko, "Karl"-Vogau, Tchecha, Kolberg, Krasselchikoff, and others.

The Bokovo-Khrustalski region to the east joins the Doljansko-Sulinovski, and is situated or the axis of the principal syncline of the ride, the mining of anthracite being concentrated near Doljanskaya (mines of the Princess Ussopova, Messrs. Valliano, Otto, Ignatieff, and others), and near Sulin on the S.E. railway (mines of the Sulinovski works "Ekaterinienski," "Nasledishevski" mine of Umasheff, and others). The Grushevski anthracite district to the south of the Doljansko-Sulinovski region contains the oldest and largest anthracite mines in the country, among which are the mines of Paramonoff, the Russian Company of Navigation and Commerce, the Gruchevski Anthracite Company, Azovski Coal Company, Tschureelin, and others. In the northern and eastern part of the basin coal also occurs near the village of Uspenskoye in the district of the Kamenka river, but it is not worked at present owing to the absence of railway facilities; and it is also found near the Likhaya-Tsaritsine, and near Ekaterinyensk on the North Donetz river.

The Donetz basin supplies the only coal in European Russia which gives metallurgical coke. Analysis of smoky coals run 68.27 per cent.—67.28 per cent. carbon, 2.77 per cent.—4.69 per cent. ash, with 54.30 per cent.—84.40 per cent. yield of coke. Of anthracite 90.17 per cent.—90.86 per cent. carbon and 2.29 per cent.—3.30 per cent. ash. If the loss of coal in mining is taken at 20 per cent. of the total output, then the amount of coal taken from the Donetz basin will total 327 million tons, leaving a reserve (in 1911) of 55.613 million tons. The output of anthracite is about 15 per cent. of the total yearly output of coal from this basin.

CREDIT NATIONAL OTTOMAN

(Established by Imperial Decree dated January 1, 1917.)

Subscribed Capital	-	*£T. 4,000,000*
Paid-up Capital	-	*£T. 2,000,000*
Reserve Fund	-	*£T. 140,000*

HEAD OFFICE: 50, Voivoda Street, Galata, Constantinople.

Branches: STAMBOUL and SMYRNA.

Correspondents in the principal cities of Turkey and Abroad.

Chairman: His Ex. DAMAD CHERIF PACHA
(late President of the Council of State).

Managers: FERID BEY. SOUBHY ZIA BEY.

Transacts every kind of Banking Business and undertakes Commercial, Industrial, Mining Enterprises, Public Works, etc.

THE HELLENIC COMPANY OF MARITIME ENTERPRISES

(PALIOS LINE.)

Head Office - PIRÆUS.

A. P. PALIOS, Founder. M. P. PALIOS, General Manager.

REGULAR MAIL, PASSENGER, and FREIGHT SERVICES from PIRÆUS to MEDITERRANEAN PORTS, GREECE, SEA OF MARMORA, BLACK SEA, SEA OF AZOF, ASIA MINOR, SYRIA, and EGYPT.

26 PASSENGER and CARGO STEAMERS.

85 AGENCIES in Greece, Sea of Marmora, Black Sea, Sea of Azof, Asia Minor, Egypt, Mediterranean and principal Ports of the World.

Coaling Yards and Repair Shops.

GENERAL AGENTS for the High Commission of Sea Transports; for all Passenger Steamers requisitioned by the Greek Government.

Cable Address—Navigation Palios.

Codes used—Scott's (1905) 10th Edition; A.B.C. (1901) 5th Edition.

MARITIME BANK of GREECE

AUTHORISED CAPITAL FULLY PAID DR.10,000,000.

Founder—A. P. PALIOS.

Head Office: PIRÆUS, GREECE.

Cable Address: "Maritime Bank."

Codes Used:
Scott's 1906 - 10th Edition. A.B.C. 1901—5th Edition. Palios 1919.

Branches and Agents in the Principal Cities of Greece and the Levant.

The Bank undertakes every description of Banking Business, and by reason of its connections, throughout Greece and the Levant is in a position to offer to the trade exceptional facilities.

Advances and Collections of B/Ls., Shipowners' Remittances and Disbursements to and from all parts of the World, by cable or mail. Loans on Vessels and other hulk. Bills of Exchange Negotiated. Letters of Credit and Drafts issued on the Principal Cities of Greece and Foreign Countries. Confirmed Credits at Home and Abroad. Loans on Government and other Securities. Loans on Goods and Warrants of Bonded Stores.

AGENTS AND CORRESPONDENTS:—
For the U.K.—LONDON COUNTY & WESTMINSTER & PARR'S BANK, London.
BANCO NACIONAL ULTRAMARINO, London.

FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

Engineering.

NEW STEEL ALLOYS.

During the past few years enormous advances have been made by metallurgists, particularly in connection with steel and alloys of iron with other metals for steel-making. By the employment of one or other of a series of what were once known as rare metals, it is possible to give almost any required characteristic to steel, and we are consequently able to specify steels for different purposes which possess exceptional toughness, hardness, softness, wear-resisting qualities, marked cutting properties, and resistance to acids and corrosion.

One of the metals most used in steel-making is tungsten, and as a few years ago the production of tungsten was not carried out to any extent in either Britain or America it was necessary to pay special attention to the matter, and within a few months big refineries had been erected and adequate quantities of tungsten were forthcoming. In making use of this metal in steel-making as much as from 14 to 19 per cent. can be alloyed with the steel, and the alloy thus produced is now almost indispensable in industry.

Vanadium is another metal which can be alloyed with iron and used in steel-making, and it produces a steel which is not only tough and durable, but which has a great resistance to the effects of vibration. By its use a great saving of weight can be effected, as by reason of its great strength smaller sections of vanadium steel are required for a given purpose. In modern engineering practice only a fractional part of vanadium need be added. The usual proportion is about 0.25 per cent. of vanadium to steel, which is to say that in 100 lb. of vanadium steel there would only be used one-quarter of a pound of the rare metal.

Chromium is another metal which has come largely into use in steel-making, and chromium steel is used for tool-making, armour plating, and projectiles. Molybdenum, when added in certain proportions to steel, increases the hardness and toughness of the metal, and machine tools made of molybdenum steel retain their edge and their cutting properties even when raised to a high temperature. Tools of this material can consequently be used at high speeds and to carry out work which could not be done by tools made of any other steel alloy.

A PAPER CONTAINER.

The scarcity of glassware for packing preserves, honey and syrups, dried milk and other foodstuffs has led to the designing and manufacture of a number of machines for making containers of paper and paper pulp. The machines have proved successful, and literally hundreds of millions of paper vessels have been manufactured both in Western Europe and America. In the great majority of cases the machines were designed for producing food containers from paper sheets or strips, which, after being rolled to shape, were impregnated with paraffin or other wax to render them damp and greaseproof and non-absorbent.

Paper packages of a new kind are now being made by special machinery which deals not with manufactured paper, but with paper pulp of a kind inferior to that hitherto used for the production of low-grade pasteboards and coarse wrapping sheets. The pulp is made in bulk, and supplied to the machine in liquid form, each half-pound of pulp being mixed with two quarts of water. A metal mould, collapsible, is first made of the container, this mould being made with an inner and outer shell. The machine drives the mixture of pulp and water into the mould, and the two shells are closed together by pressure, a big jet of air heated to a very high temperature being made to play on the shell of the mould as soon as this pressure is applied. This hardens the pulp sufficiently to allow of the newly-formed container being removed and the mould opens and closes twice every minute, thus allowing a new container, ready for use except for a little further drying, to be delivered from each machine every thirty seconds.

Users of the machines declare that the number of moulds and their shape and size is unlimited, and containers suitable for any purpose and of practically any size can be made at this high rate of speed. Further the machines can be made of any size, so as to hold as many moulds as required. The usual size is one which holds five moulds, and which, consequently, has a capacity of ten containers a minute. The machinery now being manufactured will turn out moulds of various thicknesses, so that practically any weight of container required can be produced by this process. Provision in new models now being designed has been made for colouring and waterproofing the containers by mixing materials for that purpose with the pulp when the water is added to it in the first place.

It is claimed that the container-manufacturing business will be revolutionised if for no other reason than the extreme cheapness with which the articles can be produced. A number of comparative tests have been made as to the cost of producing containers by this and other methods, and it is confidently asserted that no other machine on the market can compete with the new design. As a matter of fact, experiments have shown that 1,000 milk bottles, holding each one pint, can be made from material valued at about two shillings by the new machinery, and in connection with this it may be mentioned that the mere cost of handling 1,000 glass one-pint milk bottles made in the usual way, between the actual making and the delivery to the packing room, costs about two pounds sterling, British currency.

MISCELLANEOUS TOPICS.

Labour in the Near East.

According to a recent telegram from Washington, employers of labour and bankers in America are greatly alarmed over the heavy emigration of aliens, and fear serious consequences unless the movement is checked. Since the Armistice was signed emigrants have been crowding every outgoing ship, the only limit being the capacity of the vessels. The bankers are perturbed because of the drain it is making upon the cash resources of the country. The American Bankers' Association has sent a circular letter to savings banks throughout the country urging them to use their influence to dissuade aliens from emigrating. An alarming proportion of the 14,000,000 foreign-born aliens, says the circular, are drawing their money from the banks, selling their Liberty Bonds and houses, and returning to Europe. The New York Custom House authorities announce that emigrants are carrying with them from £400 to £3,000 each in United States currency. The astounding statement is made in the circular that 1,300,000 aliens cannot be stopped from going, and that they will carry with them nearly £800,000,000, or four-fifths of the total currency in circulation and in reserve in the United States before the war. And it is estimated that unless vigorous action is taken over six million aliens may be lured abroad, taking with them cash equal to the total present currency resources of the United States. In the meantime the Greek papers in the Near East declare that about 70,000 Greeks are now waiting day after day in New York for steamers to take them to Greece and the newly liberated provinces. A reason for this extraordinary emigration, as given by those who were fortunate to find a ship and return, is that the majority of them have made some money, whilst others are very rich, and with the new order of affairs in Greece, as well as in the Levant, they hope to do much better at home than in America. Most of them intend to buy farms and work them in accordance with the most modern systems; others to establish manufacturing businesses of various kinds; others to buy houses and land, etc.; and others—the majority—to work on the fields and in the factories. The effect of this return of experienced and apparently satisfied labour is obvious.

Agriculture in Serbia.

Serbia, as she was before the war, might have been considered a small country, more or less uncultivated, and very likely few manufacturers of this country knew that she had very modern and well-organised agricultural methods, flourishing agricultural co-operative societies, hundreds of agricultural credit and savings banks, granting loans and otherwise assisting the farmers, so that the country was quite equal to sending her surplus agricultural products and stocks across Europe, competing with the British producer in his home markets; and that to do all this she used the necessary modern agricultural machinery and implements which the farmer, the stock-breeder, the poultry and pig-keepers, etc., were compelled to obtain from Germany or Austria, more or less, it must be admitted, because of the political influence, but to a great extent owing to the indifference of their British competitors.

The Serbian Farmer.

The Serbian farmer is a straightforward and very honest buyer. So honest and such a good payer is he, indeed, that before the establishment of the agricultural credit and savings banks, to which reference is made above, the towns swarmed with money-lenders, who, in the guise of shopkeepers, were fleecing him; for, before anything else, he must pay his debts. The credit and savings banks, however, rescued him from the clutches of these harpies, for they provided him with an easy system of agricultural credit. These banks not only receive deposits and make loans to the farmers, but they themselves will see to the buying of cattle, seeds, fertilisers, implements, and other things, thus serving the purpose of a supply association. They procure the agri-

TRADE ENQUIRIES.

ENGLISHMAN (30), demobilized officer now in the East, big organising and local experience, speaks French, Arabic, own motor car, desires to represent British firms in EGYPT, PALESTINE, SYRIA, &c. Address, Represent, care of Editor, NEAR EAST.

MR. JOHN KIRSOPP, M.I.M.E., F.G.S., Offers his services, home or abroad, on Mine Management, Supervision of Prospecting or Diamond Boring Operations or Mineral Reporting work; practical experience Northumberland, Durham, Yorkshire and Lancashire coalfields, and extensive experience in coal, oil, etc., Canada, Alaska, United States, West Indies and Spain. First-class colliery manager's certificate endorsed with Surveyor's qualifications. Mr. Kirsopp will undertake technical or research work anywhere.—Address, 36, Gladstone Terrace, Gateshead-on-Tyne.

GENTLEMAN with considerable experience (Mesopotamia) as Political Officer, who contemplates travelling (would leave end December) in Asia Minor and Caucasia, where is prepared transact any business relating commercial development or report on conditions for such, is, nevertheless, open to offer employment now by firm controlling or about have interests in Near East. Sound business man. Organiser. Small salary acceptable provided good prospects held out.—Write to Box No. 146, THE NEAR EAST, Devonshire Square, London, E.C.2.

A LEADING YUGOSLAV CONCERN wishes to engage a young first-class English Correspondent, introduced in the British trade, to organise and lead its British Department.—Address offers to the Export and Import Company, Ltd., Zagreb (Yugoslavia), Frankopanska ulica 1.

EXPORTNO I IMPORTNO DIONICKO DRUSTVO

(Export and Import Company, Ltd.

HEAD OFFICE:

ZAGREB (Yugoslavia).

Founded by most of the Southern Slav banking houses and some of the pre-war exporters, with branches to be opened in all the commercial centres of the new Kingdom of Yugoslavia. The Company is very desirous to enter into business relations with the British trade, buying goods for own account and accepting agencies.

Digitized by Google

cultural machinery which local associations hold in common; they undertake the sale of produce, and they also arrange for various forms of insurance, including insurance against sickness, etc. How soon the conditions in rural Serbia were substantially improved is shown by the fact that from one bacon factory alone there came to England in the course of a single year 19,750 cwt. of bacon obtained from 16,120 pigs, though up to quite recently the Serbian farmers paid little attention to pig-breeding. Of poultry, too, Serbia supplied us with considerable quantities, especially for our Christmas markets, and she was also doing a good trade with us in eggs, judging from the fact that a consignment despatched to London some time before the war filled five railway wagons.

With the extension of her territories, Serbia will be in the very near future one of the most desirable markets for industrial and agricultural machinery.

Suction Gas Producers for Wood Refuse.

For large estates, and for sawmills and similar factories, suction gas producers are now made which make gas for gas engines from sawdust and other wood refuse. One large sawmill in England has the whole of its power supplied in this manner, and no trouble whatever is experienced in its use. It has thus made itself independent of town gas supply, and is, of course, unaffected by coal strikes. The engines are of ordinary type, of a well-known make. There is, of course, great economy in working, no skilled attendance is required, and the apparatus is simple and reliable. As chippings and bark are used up as well as sawdust, this plan of producing power should prove invaluable on large timber estates.

Petroleum of Zante.

According to recent information from Greece, a contract has been signed between a group of French capitalists and engineers and the owner of the oilfield in the island of Zante. M. For, who represents the French group of capitalists, is, it is said, chairman and director of various companies and banks. The new arrangement has created great interest in Greece, where the belief prevails that Zante will prove a steady and rich oilfield.

MOROCCAN SHEEPSKINS.

According to a notice recently published in the French press, Moroccan sheepskins possess certain qualities which make them superior to those of other countries. The closeness of the pores gives them a fineness of grain, suppleness and firmness which render them particularly suitable for the leather-dressing industry. The best qualities come from the mountainous regions of Morocco. The skins are sold with or without the wool. The unshorn skins are either unbleached or salted, and are in three grades:—(1) Long wool, of which the wool measures more than 6 centimetres, and of which the average weight is 40 kilos. to the dozen. (2) Half wool, of which the wool measures from 2 to 6 centimetres, and the weight is about 20 kilos. to the dozen. (3) Quarter wool or "rasons," of which the wool measures less than 2 centimetres, and the weight is about 20 kilos to the dozen. The shorn skins are of three qualities:—(1) Skins of the best quality, undamaged in the skinning, and weighing about 8 kilos. to the dozen. (2) Skins slightly damaged and with other defects, weighing about 6 kilos. to the dozen. (3) "Ecarts" or skins of inferior quality. In spite of the importance of the consumption of sheepskins for native industry, such as the manufacture of bags, harness, etc., the export trade of sheepskins in Morocco is always very active, and in 1914 amounted to 1,216,000 kilos. valued at 1,500,000 frs.

ROUMANIA'S COMMUNICATIONS.

The Reconstruction Problem.

(FROM A CORRESPONDENT.)
BUCHAREST, October 23.

One of the chief needs of Roumania to-day is the reconstruction of the lines of communication, railways, rivers, and canals throughout the country. At first sight this seems simple enough, and a glance at the map shows what first-rate possibilities Roumania offers in this respect. There are the new provinces to be considered, Ardeal, Bukovina, Bessarabia. The latter two have, for instance, merged their railway systems completely into that of Old Roumania, whereas Ardeal still retains its separate administration directly under the Ministry of Railways; but this is a small matter which will adjust itself in time. The important thing is the conception and execution of an entirely new policy; the whole of the traffic of Ardeal has to be deflected from its former natural tendency west and south-westward to the Danube and the sea at Fiume, towards the Roumanian section of the Danube and the Black Sea. There are a number of lines running up to the old frontier of Roumania from both sides of the Carpathians, and one or two of these lines will no doubt be connected up so as to reduce the traffic already too heavy on the through lines Sibiu-Turnu Bosu and Braso-Predeal-Ploesti, and to bring Ardeal and Bukovina in close touch with the Danube and the Black Sea.

Here, then, is a fine chance of reconstruction—work which should brace all good Roumanians to the uttermost efforts. There are some who appreciate the greatness of the work before them, but they are in danger of being outnumbered by those who also see the difficulties and are perhaps inclined to exaggerate them: and some of these difficulties are personal as well as technical. To make the railway system of Great Roumania run smoothly two distinct systems, not only of working but of thought and up-bringing, have to be merged into a working whole. There is the old Roumanian State Railway, which before the war worked quite well, though understaffed even in those days. The deficiency of trained staff is more marked than ever owing to various causes—the losses by the war, the fact that business concerns offer higher wages (which is also the case at home), and according to some of the heads of departments, the disinclination to work, which also affects the youth of other countries. The Transylvanians are handicapped by the following difficulties:—The present directing staff is composed mainly of Transylvanians who were formerly in the service of the Hungarian Government, in which they were, on account of their nationality, not allowed to rise to any but quite subordinate positions. They therefore lack the experience and the numbers to control adequately the large staff of subordinates whom they took over with the Ardeal sections of the Hungarian State Railways. They did wisely in this, as it was quite impossible to replace these men, mostly Magyars, by Roumanians; it was also as well not to leave them unemployed. The Magyars do not seem to take kindly to their new masters, albeit the latter show them much consideration: there appears to be an under current of dissatisfaction which expresses itself for the moment on economic lines; the pay is undoubtedly inadequate to meet the demands of the present cost of living. But against this, the "Valuta" cannot better itself without exports, and the railways are not up to dealing with anything like the traffic to set matters right. They are busy carrying coal but not in sufficient quantities to meet the demands of other enterprises, such as the waterways and ports, and so the vicious circle closes.

The railways are also carrying a good deal of the spoils of war from Hungary, against which practice the Great Five launched their thunder. Things are viewed differently in the East: when a business expedition to a neighbouring country results in the acquisition of valuable movables, locomotives, saloon-coaches, agricultural machinery, and so on, such goods are not left behind at the end of the expedition; it is not done in these circles.

One local paper, referring in adverse terms to the state of railway administration, suggests that the management of the State Railways should be entrusted to an outside expert, a foreigner, but this would not be received with general satisfaction. It would moreover be impossible to secure the services of a good man at the standard of pay obtaining in this country, and equally impossible to give such an one adequate remuneration—the state of the national finances does not admit of such expenditure, apart from other considerations. However, with sufficient goodwill and desire to work, there is some hope of things coming right in time, but it is likely to be a considerable time before the varying interests will be brought to agree. The leaders of the Roumanian people on either side of the Carpathians have yet to adapt themselves to the wider perspective which their success in war or revolution has opened out to them, and also to lead their people from worrying over local politics to the glorious prospects of a really Great Roumania.

In the meantime, Roumania has to keep an eye on her neighbours. Of these the majority are at present too fully occupied with their own affairs to look far beyond their borders. The Yugoslavs are having internal misunderstandings among themselves, though perhaps not more pronounced than those between Cis- and Transylvanian Roumanians. On the Eastern front Roumanian opinion is inclined to favour Petliura against Denikin: the latter is considered too reactionary, too Old Russian, and therefore a possible menace to Roumania—surely a remote danger as yet, but thinking Roumanians seem to have the fear of Panslavism constantly before their eyes, and see the spectre not where it would be most likely to appear, in the steady and purposeful direction taken up by the Czecho-Slovaks, but in turbulent Russia and troubled Yugoslavia. The Poles, too, have their hands full; the Magyars are at present quiescent, but it is realised that they nourish a deep and fervent hatred against the Roumanians and that this hatred may well endure throughout two generations.

There is no space to deal with any other point of view but that of the immediate reconstruction of the lines of communication on which depend the future of Roumania. The Czecho-Slovak Republic have taken this matter in hand with their customary vigour. We see Presburg developing into a place of increasing importance, with extensive harbour works projected, and we hear of plans to join up the Central European waterways, Elbe and Danube, Oder and Danube. These projects, with the works already existing, such as the Rhine-Danube canal (viâ Straubing) suggests a serious attempt at the settlement of the economic centre of the concatenation of new states, with the Czecho-Slovaks leading. This should give food for reflection to others than those who live by the banks of the Danube.

SHIPPING INTELLIGENCE.

Shipping at Malta.

(FROM OUR OWN CORRESPONDENT.)
MALTA, October 1.

Shipping has been brisk during the past week, to the manifest advantage of the various ship-chandlers, who are beginning to get glimpses of old times with crowded harbours. The most recent movements chronicled are as follows:—Arrivals: British s.s. Glendhu, from Antwerp, and H.M.S. Honeysuckle, from Constantinople. Departures: H.M.S. Bryony, for sea; British s.s. Celtic Prince, for Aden; and the Norwegian Avona, for Port Said.

Mariners have been informed that the two green lights erected at Skoll Tal Gazzenan, St. Paul's Bay, have now been removed.

The Brussels branch of the Royal Exchange Assurance, under the management of Mr. C. E. Fair, is now open at the following address: Royal Exchange Assurance, 224, rue Royale, Brussels. Major A. A. Gordon, C.B.E., M.V.O., at present a local director at the West End branch, has also been appointed a local director attached to this branch.

Near East Markets.

LONDON PRODUCE REPORT.

Currants and Sultanas.

The market is practically bare of supplies. It is expected that the Government distribution of fruit will take place within a few days.

Coffee.

A steady tone has been maintained for raw and refined. 5,015 packages were offered at auction this week. Costa Rica bold palish for export brought 135s., while fine bold greenish for home consumption made 140s. 6d. Nairobi bold greenish for export was done at from 139s. 6d. to 142s. 6d., while the same for home consumption brought 139s. to 140s. The futures market has been somewhat quiet. Quotations, December 123s. 6d., March 117s. 6d., May 113s. 3d., July 111s., and September 109s. 6d.

Sugar.

The demand for raw has been on the increase, and prices have shown a rising tendency. The predominant feature in the position is the world's shortage of supplies, and it is fortunate that the cane crops are so satisfactory. The shortage is the subject of emphasis in last week's Restriction of Delivery Order, which takes over the control of the delivery of sugar arriving in the United Kingdom after December 27.

Oilseeds.

The general tendency has been to firmness. Linseed has been in special favour, and the Argentine quality for January shipment has been done at 32s. 6d. per cwt. Calcutta-London, November-December is quoted 46s., and Calcutta-Hull 46s. 9d. Bombay-London is 47s. Rapeseed is steady with Toria afloat at 37s. A shilling more is quoted January-April. Cottonseed is in demand. Egyptian f.a.q. has been done at 23s. to 23s. 6d. according to position, while Sakellarides is 22s. Indian shipments of cottonseed from January 1 to October 31 amounted to 155,000 tons.

Oil Cakes, etc.

Linseed cake has been dull and the price has declined, transactions having taken place at 24s. Soya bean cake is in firm demand at 25s. Arachis nut has been done at 22s. while decorticated ditto has come to business at 24s. Common cottonseed cake is quoted 18s. to 19s., while palm kernel cake is weak at 16s. There has been a firm demand for linseed oil at 94s. ex-store, while it has been done at 84s. for January, 80s. for April, and 79s. for August. Rapeseed oil has risen to 103s.—108s.; while cottonseed oil has been done at 80s.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended October 18:—

We have to report again a very active market, with sales amounting to 105 cases of all grades manufacturing material ranging from 12s. to 17s. 6d. per lb. c.i.f. port of destination. We regret to say, however, that we are experiencing a serious dearth of rain this autumn in almost all our opium-producing districts, and, coupled to this, we have the Greco-Turkish disturbances, which prevent growers of the drug from continuing autumn sowings, which are the backbone always of a plentiful and rich crop the following year. Under these conditions we cannot entertain any hopes of a lower market in the future, but, on the contrary, we may again return to the abnormal high prices which prevailed both here and on the consuming markets shortly before the armistice. The Exchange was slightly better—cheque on London is now Ps340 per pound sterling and dollar cheques stand at 1.25 dollars per Turkish paper pound. The arrivals to date are 782 cases of 160 lb. per case, against 18 at same date last year.

STRANGERS' HOME FOR ASIATICS,

WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.

"I was a stranger and ye took me in."

CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 4 LOMBARD STREET, E.C.

SUDAN PRODUCE.

The following particulars are given in the C.E.B. report for August:—

Dura and Dukhn.

Kordofan Province.—Three ardebs of 420 rottles (169 kilos) of dukhn were sold in El Obeid market during August at an average price of £E4.40 mms. per ardeb.

Halfa Province.—The grain merchants have fair stocks of wheat, but the dura stock failed absolutely. At the end of the month about sufficient dura was again on the market as a result of assistance from the Governor, Assuan, and negotiations with Assuan grain merchants. The sale of Government dura relieved the situation.

Dates.

Halfa Province.—Excellent reports are being received as to the size of the crop. As a whole, quality seems good, though in places the dates have suffered from lack of water. The prospects for the moving of the dates are not very bright at present. Few merchants have arrived from Egypt to date, and it is probable that the demand from Egypt will be less than during the last few years, and, further, it is expected that prices will range lower.

Sesame.

Kordofan Province.—63 ardebs of 330 rottles (148 kilos) were sold in El Obeid market during the month at an average price of £E5.720 per ardeb.

Kassala Province.—The approximate market price per ardeb of 300 rottles was £E4.350 at Gedaref.

Livestock.

Berber Province.—The following animals were sold in Damer market during the month:—69 head cattle, average price £E6.920 per head; 1,542 sheep and goats, average price £E1.640 per sheep.

Red Sea Province.—23 head of cattle and 372 sheep and goats were exported via Port Sudan during the month.

Sennar Province.—171 head of cattle were imported from Abyssinia via Kurmuk during the month, of which six were sold locally, 27 were sent to Kosti, and 138 to Renk.

Cultivation.

Halfa Province.—The dura crop in the majority of the villages, which were sown late, have suffered from the ravages of "worm." Much land has had to be replanted. On the whole, the prospects of the flood crop are fair to moderate. There have been many deaths amongst sagia (water-wheel) cattle, due chiefly to lack of forage and food. Cattle in places have been kept alive on dates and palm branch. The cultivators were very anxious on account of the falling of the Nile, and stopped planting late dura. During the third week, with the Nile again rising, a moderate amount of grain was sown and much resown. Good flood crops either in quality or quantity are not anticipated.

Kassala Province.—The Gash Flood has continued well. A record rise was experienced. Crops on irrigated lands are promising, and it is hoped that grain may come into the market by the end of the month.

Halfa Province.—Business continues good, and the merchants are doing well. Petroleum is coming on the market, and oil is, in consequence, cheaper and the measure much better.

Darfur Province.—The markets have been poor owing to the majority of the people being busy with their cultivation. 375 kantars of tobacco were exported during the month. Export trade has been seriously hampered by the dearth of camels.

The Board of Trade will be leaving Whitehall Gardens for their new offices in Great George Street within the next few days.

The traffic receipts of the Egyptian Markets, Ltd., for the week ended October 23 were cotton markets, £611; general markets, £570; total, £1,181; total for year, £45,886. The figures for the corresponding week in 1918, ended October 24, were cattle market, £685; general markets, £538; total, £1,223; total for year, £41,906.

CINCHONA PLANTATIONS OF BENGAL.

From the beginning of 1875-76, the year in which factory products began to be issued, to the end of 1918-19, a period of forty-four years, 219,200 lbs. of cinchona febrifuge have been issued from the Government cinchona plantations and factory in Bengal, according to the report for the year 1918-19. Up to the end of 1886-87 this drug was the only, and up to the end of 1889-90 the main, product of the factory, but from 1890-91 onwards its issue steadily declined until 1914-15, when the scarcity and high cost of quinine brought cinchona febrifuge again into medical fashion.

During the eighteen years 1901-2—1918-19 the total quantity issued was 79,390 lbs., of which 36,842 lbs., or over 46 per cent., were sold during the last four years. From the beginning of 1887-88, in which year quinine began to be issued, to the end of 1918-19, a period of thirty-two years, the total quantity of quinine issued was 577,490 lbs. 15 ozs. Of this quantity, 242,296 lbs., or almost 42 per cent. of the total, were issued during the last four years.

These figures are eloquent of the strain thrown on the Department by the demands of the war years. The immediate brunt fell upon the quinine reserve which the Department was fortunately enabled to build up at very low cost, and just in time, and which stood at over 163,000 lbs. when war broke out. The reserve, however, could not meet indefinitely such a drain, and as during the latter half of the war period it was impossible to purchase either bark or quinine to supplement it, or even to foretell when such could be purchased, recourse was perforce had during the last two years to the otherwise undesirable expedient of increasing the immediate plantation harvest by cutting out immature acreages. Thus, the average age of the Munsong acreage cut out in 1918-19 was 6.7 years, with an average total yield per acre of about 2,000 lbs., against a yield of 3,260 lbs. per acre from Mungpoo, where the average age of the acreage cut out was nine years. In the circumstances the sacrifice of bark increment paid well, for the price of such quinine as could be got in the market ranged from Rs. 28 to Rs.60 or more per lb., as against Rs.7, the cost of manufacture from plantation bark.

Still, the fact has to be faced that 2,270 acres of the 2,600 now under cinchona are under seven years of age. To allow of these acreages gaining a normal amount of bark increment, only a normal amount of "thinnings" should be harvested for the next few years. It should be possible to arrange for this as the demand for quinine should now sink to a more reasonable level, and there is likely to be available from outside sources bark to be purchased by the Government of India, which bark, with the harvest normal to the ages of the acreages of the plantations, should suffice to keep the factory output up to a normal demand. All the cinchona on the plantation, except forty-eight acres, has been planted since 1909-10. The total expenditure on the entire Department for the last ten years, exclusive of the Rs.13 lakhs, is Rs.27,30,806, and the total revenue, exclusive of the Prison Departments' share, is Rs.71,79,916. The surplus, Rs.44,49,110, is equal to a return of 28 per cent. per annum on each year's total expenditure during the period from the year of expenditure to the end of the period.

CATALOGUES AND SAMPLES FOR BULGARIA.

Firms desirous of having their goods advertised in Bulgaria are invited to send price lists, marked with current prices, and, where possible, accompanied by samples not exceeding 1 lb. in weight, to Capt. W. B. Heard, c.o. British Legation, Sofia, Bulgaria. These will be available at the Sofia Chamber of Commerce, where Bulgarian merchants can view them. If desired, further consignments of catalogues and samples not exceeding four in number may be sent for distribution amongst the chief provincial Chambers of Commerce. A strong demand for goods exists in Bulgaria at the present moment. The market is depleted, and there is a strong desire to do business with the United Kingdom.

Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area (1914), 25,128 square miles. The cultivated area amounted to 5,746,300 acres, of which about 2,253,100 were under cereals, 518,900 under grapes and currants, 376,600 under oak trees, 296,500 under olives, and 2,273,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,00 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,500,000 from Germany and Austria-Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 23·12 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16 33 imperial gallons, kilo = 0 11 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

POSITION IN ABYSSINIA.

Prospects for British Trade.

The British Legation at Adis Abeba reports as follows :—It is difficult to give reliable information as to the prospects of trade in Abyssinia as the market is upset by the rapid rise in the dollar exchange, and the Abyssinians continue to expect a general and immediate decrease in prices, even to pre-war rates, in view of the termination of hostilities. Since January 1 the dollar has risen from 7 to 5.82 to the £ sterling, with a tendency to a further rise to 5.50 or higher in the near future. Exchange has been influenced by the franc exchange, the rupee exchange, the raising of the prohibition to export dollars, and the granting of promiscuous permits resulting in the export within the last six months of some half-million dollars, exclusive of those smuggled out of the country. The price of silver enters presumably into all these contributory causes. The Abyssinians are buying absolute necessities, and for those they are willing to pay a high price. But their "absolute necessities" are few and are mostly confined to clothing. In other branches they are influenced solely by the cheapness of articles and disregard quality. Thus they purchase Japanese padlocks or knives, which break in no time, solely on account of their cheapness. The padlocks in demand here are bought wholesale at nine rupees per gross. There is little chance, therefore, for British manufactures at the present moment, except in better-class cotton goods, such as twills, which always hold the market.

Three lists of goods are appended :—List A denotes those in general and constant demand without much regard to price. List B denotes those for which demand is general and likely to increase, but dependent on price. List C denotes those in demand chiefly by Europeans, who pay attention to price and quality. Trade is restricted as the European community is not large, but will increase in the near future with the greater influx of foreigners.

List A.—Aboujedid (trade cloth), cotton yarns, cotton blankets, khaki drill, soap, sugar, common salt, canvas water bags, petrol, wire nails, corrugated iron sheets.

List B.—Scents, razors, knives, padlocks, felt hats (black and grey), hair oil, coconut oil, castor oil, Epsom salts, sardines, olive oil, wall lamps (¼, ½, and 1 in. burners), lamp glasses and wicks, enamel tumblers and plates, velvet, silk, and silk handkerchiefs, prepared leather, Persian rugs, crystals for dyeing (blue, green, yellow, red and black are the most popular colours), glass decanters for native drinks (formerly supplied by Austria), better-class soaps, imported alcoholic drinks, iron files.

List C.—Cloth, woollen goods, hats and helmets, boots and shoes, waterproofs, saddlery, saddle soap, boot polish, jams, confectionery, starch, various tinned provisions other than meat or vegetables, medicines, wines and spirits, canvas, glass, cement, oil plants, linseed oil, turpentine, putty, wall papers, tumblers, crockery, enamelled ware, cooking utensils (aluminium, enamel, or iron), wall paper, stationery, better-class cutlery, plated ware, shot gun ammunition.

PROPOSED PIPE LINES AT GROSNY.

H.M. Vice-Consul at Rostov-on-Don states that owing to the complete disorganisation of railway transport, and the consequent impossibility of conveying to the seaboard the enormous stocks of naphtha products which have accumulated at Grosny, there are projects on foot for the construction of three separate pipe lines :—1. Grosny to Novorossisk, distance 506 miles. 2. Grosny to Petrovsk on the Caspian—100 miles. 3. Grosny to Astrakhan—240 miles. The line from Grosny to Astrakhan would serve as an outlet to the Volga, and would enable Grosny oil to compete with Baku products in Central and Northern Russia. Moscow merchants, temporarily residing at Rostov are interested in this scheme, and the capital will probably be subscribed locally. As regards the other two projects, it is understood to be the intention to seek capital abroad. It is claimed that the production at Grosny can be raised to 40,000,000 poods per month, but the railway company at the present moment can only cope with about 2,000,000 poods. The necessary pipes for the lines could be manufactured in Russia but all the pumping machinery, etc., would have to be imported.

LANCASHIRE COTTON.

Advance in Prices.

(From Our Own Correspondent.)

Manchester, Wednesday.

Prices in all quarters of the market have again advanced, and the tone has been stronger than ever. It has been quite impossible to purchase except at full rates. The majority of producers have been very indifferent as to booking fresh contracts. A substantial rise has to be recorded in Egyptian cotton prices. There has been a little uneasiness as a result of the industrial unrest abroad. The crop is doing fairly well, but the demand for the article is increasing. Stiff advances have had to be paid for all kinds of yarns made from Egyptian cotton. Some spinners have withdrawn quotations for the time being. Engagements are very extensive, and it is quite impossible to secure early delivery. In cloth for Egypt inquiry has been on broad lines, and in spite of difficulties in arranging sales, an encouraging turnover has taken place. The outlets of the Levant have also been active. Favourite makes of sized shirtings are fully sold up to the end of next July. Makers of printing cloths are extending their engagements very rapidly. An increased demand has been met with in piece goods suitable for India. Many Calcutta bids have been impracticable, but more has been done for Bombay and Karachi. Steady buying has transpired for China, Java and Singapore. Printing and finishing cloths have been in healthy request for South America. Most manufacturers are doing better than ever before in the history of the trade. American yarns have hardened in price from day to day, the undercurrent of demand being healthy, but the turnover has been affected by the difficulties experienced in obtaining stuff. Export numbers have been in encouraging request for Eastern markets. Coarse counts have been wanted for the Levant, but many producers are fully sold up to the middle of next year.

INDIAN INTELLIGENCE.

Crop Forecasts.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated October 29 :—

Weather dry, except in North-Eastern and in Southern India.

During the week ending October 15 preparations and sowings spring crops continued. Harvesting autumn crops continued Bombay, Central India, North West Frontier Province, United Province of Agra and Oudh and Bihar and Orissa, neared completion Rajputana. Transplanting winter rice crops completed Upper Burma. Harvesting has commenced in Burma, Orissa, and at Chota-Nagpur; progressed Punjab, Central Provinces, and in Southern India. Plucking tea continued Assam. Steeping and washing jute almost finished Bengal. Cotton-picking commenced parts Bombay; progressed Burma, in Northern India, and Central India. Gathering groundnuts progressed Burma. Wheat sowings progressed Punjab. General crop conditions good, but rain wanted West Bengal and parts Bihar and Orissa and badly needed Punjab.

First groundnut forecast, 1,274,000 acres (last year's corresponding forecast, 1,147,000 acres). First rice forecast, 73,233,000 acres, excluding 938,000 acres reported for the first time by Feudatory State in Central Provinces (last year's corresponding forecast, 70,952,000 acres). Second Sesamum forecast, 2,170,000 acres (last year's corresponding forecast, 1,589,000 acres). Second sugar cane forecast, 2,729,000 acres (last year's corresponding forecast, 2,590,000 acres).

Bombay cotton market irregular. Fully good broach, April-May, Rs. 512. Piecegoods market strong, with encouraging demand and improving prices. Calcutta jute market inactive. Gunny market steady. No change in bank rates.

NEW COMPANIES.

Roumanian Road Transport

The Roumanian Road Transport Co., Ltd., has been registered with a nominal capital of £105,000 in 100,000 preferred ordinary shares of £1 each and 100,000 ordinary shares of 1s. each. The objects are to carry on in Roumania or elsewhere the business of runners of motors and steam lorries and other vehicles, etc. The first directors are :—A. Rutherford, director of Roumanian Consolidated Oilfields, Ltd., and Oilfields Finance Corporation, Ltd.; G. R. Bloxcidge, J.P., chairman of Samuel Thornley, Ltd., Dean, Brown and Co., Ltd., and Chiciura Oilfields of Roumania, Ltd.; R. W. Barnett, director of Baku Consolidated Oilfields, Ltd., Ketch Taman Oilfields, Ltd., Oilfields Finance Corporation, Ltd., Roumanian Consolidated Oilfields, Ltd., Chiciura Oilfields of Roumania, Ltd., and Venezuela Oilfields Exploration Co., Ltd.; P. Cuthbert Quilter, M.P., director of Blaenavon Co., Ltd., Bolivar Railway Co., Ltd., Dorada Extension Railway, Ltd., La Guiara and Caracas Railway Co., Ltd., and Roumanian Consolidated Oilfields, Ltd.; Sir Wm. W. Rutherford, director of Roumanian Consolidated Oilfields, Ltd., Oilfields Finance Corporation, Ltd., Robert Cain and Sons, Ltd., and Liverpool Assets, Contract and Property Corporation, Ltd. Secretary, C. F. Bird. Solicitors, Rutherfords, 48, Cannon Street, E.C. The registered office is at 48, Cannon Street, E.C.

Near East Development.

The Near East Development, Limited, was registered as a private company on October 29 with a capital of £10,000 in £1 shares. Objects: To carry on the business of miners, explorers, metallurgists, promoters, constructors and owners of public and private works, including railways, tramways, bridges, sidings, stations, depots, ships, barges, lighters, harbours, piers, and docks, etc. Power is also taken to carry on the business of rolling stock manufacturers, mechanical apparatus manufacturers, and suppliers of balloons and flying machines, team owners, lightermen, electric engineers, electricians, suppliers of electricity, etc. The subscribers (each with one share) are:—B. P. Webster, 65, Coleman Street, E.C., solicitor; D. W. Cherry, 65, Coleman Street, E.C., secretary of public company. The first directors are to be appointed by subscribers. Solicitor: Jackson, Elewell and Curran, 65, Coleman Street, E.C.

Levant Stevedoring.

The Levant Stevedoring Co., Limited, was registered as a private company on October 29, with a capital of £900 in £1 shares, to carry on at Constantinople and elsewhere the business of stevedores, lightermen, tally clerks, ships' chandlers, towage and pilotage contractors, etc. The Board of Trade has authorised this company to acquire parts of the undertakings of J. W. Whittall and Co., Limited, Salisbury House, E.C., and of Gilchrist, Walker, and Co., Limited, of 8, Serjeants' Inn, E.C. The first directors are:—E. Rizzo, Constantinople, agent for Wilson Line, Hull; G. Doros, Constantinople, agent for Papayanni Line, Liverpool; W. C. Seager, Constantinople, agent for Cunard Steamship Co.; J. E. La Fontaine, Constantinople, agent for Ellerman Lines; R. La Fontaine Whittall, Constantinople, agent for Moss Steamship Lines, Liverpool; H. C. E. Whittall, Constantinople, agent for Westcott and Lawrence Steamship Line, London. Registered office: 8, Serjeants' Inn, Fleet Street, E.C.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1875

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. Fletcher Matron

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank.

Imports.

STAMBOUL, October 18.

Manufactures.—Demand is increasing for Odessa, where the first importers have made considerable profit on the prices obtaining at Constantinople, notwithstanding the continued fall in value of Russian paper-money. Several sales for Anatolia are reported. Prices are well maintained. Important stocks are in hand.

Produce.

Sugar.—The upward movement recorded last week, following on the demand for Russia and Roumania, has been further accentuated this week, and prices have risen from £2—£3 the ton. Prices are £66 disposable (the ton), £66—£67 afloat. In our market £T36—£T37 the 100 kilos. One notes also a similar rise in centres of production. Offers have completely ceased, and the present tendency is upwards.

Coffee, Petrol.—Situation unchanged. No arrivals this week.

Rice.—Weaker. Offered for sale, but no buyers. Price Ps. 47-48 the oke.

Exports.

Opium.—Sales this week have risen to :—70 cases at Ps. 715-720 New Karahissar druggist, and Ps. 750 Karahissar druggist. No business in fine opium, of which the price remains at Ps. 975 nominal.

Mohair.—Arrivals of the week, 900 bales. Sales, 135 bales.

Wool.—Arrivals, 375 bales. Sales, 400 bales at Ps. 46 the oke.

Silk.—The recovery noted last week continues. Thirty bales Broussa have been sold at £T13.85 the kilo Prices are likely to rise. Syrians are ignored. Buyers at £T10 the kilo cannot be found, owing to the difficulty of reeling.

Cereals.—Arrivals this week have amounted to only 10 wagon loads, of which 7 were from Anatolia and 3 from Roumelia (the first arrival of the new crop). This diminution has caused a rise in the price of American flour, which has advanced from £T10 to £T11 the sack. Corn has closed at Ps. 12-14 for hard, Ps. 11-13 for soft. Barley has closed at Ps. 7 the oke.

PANDERMA, October 14.

The present situation, although not differing from that noted in our preceding report as regards the unsettled state of local conditions, is, nevertheless, slightly modified owing to continuous arrivals on the market, and the following goods have been shipped from here :—500.000 kilos of corn, about 120.000 of which went to Smyrna; 600.000 kilos of beans, about 450.000 to Smyrna; barley, 400.000 kilos, of which about 250.000 were shipped to Smyrna; oats, 600.000 kilos, about 200.000 of which were sent to Smyrna and about 200.000 to Constantinople.

The remaining disposable stocks and their respective prices (approximate kilos and present price per kilo) are as follows :—Wheat, 400.000, Pts. 8½-9½; beans, 150.000, Pts. 4-4½; barley, 100.000, Pts. 3-3½; oats, 250.000, Pts. 4; maize (old crop) 100.000, Pt. 4. The wheat, bean, and barley harvest commences in September and the maize in November and December.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

IMPERIAL OTTOMAN BANK

Capital - £10,000,000

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Offices of the Bank at 26, Throgmorton Street, London, and 25, Pall Mall, Manchester, can now enter into transactions with all the above-mentioned places, subject to British Government regulations and local restrictions where in force.

Manufacturers, Traders and others are invited to correspond with the Bank, where all possible facilities will be afforded for the re-opening of business.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

COMPANY MEETING.

EGYPTIAN HOTELS.

The twenty-second annual general meeting of the Egyptian Hotels, Ltd., was held on October 30 at the registered offices, 11, Ironmonger Lane, London, the Right Hon. Lord Claud Hamilton (the chairman) presiding. The notice convening the meeting and the report of the auditors having been read, the chairman said:—"The accounts for the year ended April 30, 1919, which are in your hands, show that whilst the result of the year's trading at Shepheard's Hotel has not reached the high-water mark of 1907, the improvement disclosed by the 1918 accounts has been maintained. The plant, fixtures, and fittings have been written down in accordance with past practice. The stocks on hand have been valued by the hotel manager, and proper reserve has been made for doubtful debts. Our expenditure in connection with the Semiramis Hotel, which belongs to the Société Egyptienne des Hotels, but which is under Shepheard's Hotel management, has been written off in the accounts. The directors have paid off during the year some £14,600 of the first mortgage debenture loan, and have provided in the accounts for the usual charges for debenture interest, depreciation, etc. The balance of profits shown by the accounts is £25,204 1s. 1d., which, with £2,928 9s. 6d. brought forward from last year, leaves a balance to be dealt with of £28,133 4s. 7d., and the directors recommend the payment of two years' dividend—that is, for the years 1918 and 1919—to the holders of the cumulative preference shares, which will absorb £11,500. The directors also recommend the payment of a dividend to the holders of the ordinary shares at the rate of 5 per cent. for the year covered by the accounts. This will absorb a further £6,250, and will leave a balance of £10,383 4s. 7d. to be carried forward. In conclusion, the thanks of the board and of the shareholders are due to the members of the local board and the hotel staff for the admirable success of their management and working of the hotel under difficulties of an exceptional character during the past year, which is so well reflected in the accounts.

"I have only to add that at a board meeting held this morning it was unanimously decided to consider favourably an offer which the board had received for one of the assets of the company, viz., the Ghezireh Palace Hotel and land adjacent thereto. Your board have come to the conclusion that some considerable time would have to elapse before the Ghezireh Palace could be reopened and run profitably as a hotel. The existing state of affairs in Egypt does not warrant the company running another hotel besides Shepheard's at the present time. Your board are further influenced by the fact that their technical adviser informs them that it would be necessary to spend £30,000 at least before the asset referred to could be put into the position to earn revenue for the company. The offer to which I have referred, and which your board hope will mature, is a cash offer. I now move that the directors' report and accounts for the year ended April 30, 1919, as submitted to the shareholders, be received and adopted."

Sir William B. Peat seconded the motion, which was carried unanimously.

The chairman then proposed, and Sir William B. Peat seconded, that the dividends as recommended should be declared, and this was unanimously agreed to.

The retiring director, Sir William B. Peat, was re-elected, and Mr. H. M. Snow was also elected a director of the company.

Messrs. Turquand, Youngs, and Co. were re-appointed auditors, and votes of thanks to the chairman and the local board in Cairo terminated the proceedings.

COMPANY NOTES & REPORTS

Caledonian (Ceylon).

The report of the Caledonian (Ceylon) Tea and Rubber Estates for the year ended June 30 last states that the crops harvested were as follows:—Tea, 610,775 lb., rubber 146,128 lb., and the net prices realised were: tea 8.93d., rubber 1s. 5.9d., as compared with 8.13d. and 1s. 9.04d. respectively the previous year. Cost of production f.o.b for tea was 7.03d., and for rubber 11.63d. Estimated crops for current year are as follows:—Tea, 695,000 lb., rubber 175,000 lb. The net profit, after writing off £1,000 for depreciation, is £7,326, to which must be added balance brought forward of £2,436, and excess profits duty refunded £2,058, making £11,820. Deducting interest on debentures £3,050, dividend on cumulative preference shares £1,920, and interim dividend of 5 per cent. on ordinary shares £1,750, there is left £5,100. The directors propose a final dividend of 7½ per cent. on the ordinary shares, less income-tax at rate of 6s. in £, to transfer to credit of coast advance reserve account £1,000, and to carry forward £1,475. Rubber in bearing comprises 647 acres, and tea in bearing 1,190 acres. Meeting, Winchester House, E.C., November 13, noon.

Empire of India and Ceylon Tea.

The report of the Empire of India and Ceylon Tea Co. for the year ended December 31, 1918, states that owing to the delay in receiving the audited accounts from India it was not possible to submit them at an earlier date. The rainfall in Assam was excessive from June to end of September, but generally favourable to growth. A long drought followed, and the season came to an early close. While in the Dooars conditions were unfavourable throughout the year, they were normal on the whole in Ceylon. The European staff in Assam escaped any serious case of illness, and a further improvement in the health of the labour force was general until the serious outbreaks of influenza, first in August and again in October and November, caused long sick lists and a heavy death-roll. Tasati, in the Dooars, suffered from an outbreak of cholera. In India the yield was practically level with the previous year, the increase of 69,993 lb. coming mainly from Ceylon. Contracts with the Ministry of Food were again concluded on practically the same basis as in 1917, but only for 66 per cent. of the total crop. A small percentage was disposed of in the Calcutta market, and the balance was sold ex warehouse. The average of the whole crop works out at 8.10d. per lb., compared with 9.14d. in the previous year. Local garden costs were as follows:—Assam, 5.23d., against 5.37d.; Dooars, 4.99d., against 4.81d.; Ceylon, 7.24d., against 7.42d. In Assam the total labour force fell from 8,420 to 7,608 coolies, or only 1.37 coolies per acre. In the first half of 1919 this shortage was made good. The balance brought forward was £53,540, after deduction of £1,000 for war donations, to which is now added £62,294, the net profit of the year, or together £115,835. The shareholders will be asked to confirm the payments already made of the dividends of 5 per cent. on the preference capital and 22½ per cent. on the ordinary capital, absorbing £63,825, and after transferring £38,500 to reserve, leaving a balance to be carried forward of £13,510. It is proposed to transfer £38,500 to the general reserve fund, bringing it up to £94,000, and to capitalise this sum by a distribution of bonus shares in the proportion of two new shares for every five old shares. For this purpose shareholders will be asked to sanction the increase of capital to £650,000 by the creation of 50,000 new ordinary shares of £1 each. Meeting, King William House, 2a, Eastcheap, E.C., November 12, noon.

COMPANY RESULTS, Etc.

BENGAL PRESIDENCY BETTIAH RAJ STERLING LOAN.—The numbers are announced of 205 debentures of £100 each which have been drawn for repayment on January 1 next, when interest thereon will cease.

Coupons of the Imperial Government of Persia 5 per cent. Sterling Loan of 1911, due November 15, will be paid on and after that date at the Imperial Bank of Persia, 25, Abchurch Lane, E.C.4, or at their bankers, Messrs. Glyn, Mills, Currie and Co., 67, Lombard Street, E.C.3.

The next ordinary general meeting of the South Indian Railway Company will be held at the offices of the company, Finsbury Pavement House, E.C.2, on November 12. Transfer books will be closed from December 7 to 31, inclusive, for preparation of half-yearly warrants. Warrants, payable on and after January 1 next, will be forwarded on December 31.

The directors of the Wanarajah Tea Company of Ceylon announce a second interim dividend of 10 per cent.

Messrs. Cox and Co. (France), Limited, have opened a branch at Algiers, 6, Rue de la Liberté, and they will shortly open an office at Nice.

THE LAND AND MORTGAGE COMPANY OF EGYPT, LIMITED.—The debenture interest coupons and also the debenture bonds drawn for redemption due November 11, 1919, will be paid on or after that date by the bankers of the company, Barclays Bank, Limited, Lombard Street, E.C.

CALCUTTA ELECTRIC SUPPLY.—The directors announce an interim dividend at the rate of 8 per cent. per annum, less tax, on the ordinary shares for the half-year, payable November 15.

LAND BANK OF EGYPT.—The general meeting will be held at Alexandria on December 9.

The estimated traffic receipts of the Smyrna-Aidin Railway for the week ended October 18 amounted to £11,155.

The traffic receipts of the Suez Canal for the ten days ended October 29 amounted to 5,960,000 francs, as against 2,340,000 francs.

The announcement is made in the Egyptian *Journal Officiel* that the system of notification of the arrival of wheat and flour is abolished, and that all wheat and flour cleared from Customs before June 1, 1920, will be free of import duty.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a fairly active business doing this week without any very material change in prices.

In Government stocks Egyptian Unifieds are about ¾ better at 76¾ x.d. Egyptian 3½ per cent. Prefs. are unchanged at 63¾. City of Alexandria bonds are about 2 points down at 76. There are several buyers about, but business has been restricted owing to the lack of securities.

In Bank shares Nationals are ⅛ easier at 19¾ and Agriculturals have dropped a like fraction to 5 11-16, but there has been some good quiet buying going on. Agricultural Prefs. are 1-16 firmer at 7 1-16, and Bank of Abyssinias have risen ⅛ to 37s. 6d. Anglo-Egyptians, on the other hand, have receded ⅛ to 17⅞. There has been a demand for Land Banks both ordinary and founder shares. The former are closing 3-16 better at 6 9-16, whilst some business has been done in the latter in the neighbourhood of 43.

In Railways Delta Lights have become a dull market again, and are quoted ⅛ down at 6½, but business for the time being has been stopped by the threats of a strike on the other side.

In Land shares Aboukirs, although showing a drop of 1s. at 31s., are still an active market with a good undercurrent. Allotments and Béhéras have remained quite firm, and there is no change to report in any of the other land shares, with the exception of Sudan Plantations, which are closing 3-16 higher at 8 3-16. There has been a good business passing in New Egyptians, and some business has also been done in Union Foncières.

Amongst Miscellaneous descriptions Alexandria Waters are ¼ down at 11¼, but Salts and Sodas are 1-32 firmer at 21 31-32. A large business has been put through in the latter shares.

In Oils, Anglo-Egyptians B have fallen again under 5½, and close 9-32 lower at 5 19-32. Roumanians are fractionally firmer at 24s. 9d., but Traians are 2s. lower at 10s. 6d.

In Greek securities, owing to Continental sales, there is a further general decline. The 1881 and 1884 loans are both 1½ points down at 62½. Monopolies have receded ½ point to 55½, as also Rentes at 52½. The 1890 loan is 2 points down at 62½. The Funding 1893 loan is 2 down at 62, and the 1902 loan has also dropped 2 points to 62. A fair amount of business has been done in the 1914 loan, which was closing a point lower at 71½. "Currant" bonds remain a firm spot at 94, with buyers but no sellers. The 1910 loan has dropped 4 points to 56, but without business resulting. Bank of Athens shares have likewise been affected by Continental sales, and are ¼ down at £3.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31, 1919. (New Style. January 14 to September 13, 1919):—

		Monopolies, tobacco, stamps stamped paper and Naxos emery.	Piræus Customs.
Gross receipts August 1919		Drachmæ. 4,607,474	Drachmæ. 4,161,70[illegible]

NOTES OF THE WEEK.

As fresh light is thrown upon it, the handling of the Near Eastern problem by the Paris Conference is shown to be even more mischievous than could have been conceived possible. It is now reported from Paris that the Supreme Council has drafted a note to M. Venizelos which lays stress on the temporary character of the Greek occupation of Smyrna. The statement must be accepted with reserve until it receives official confirmation, as, if true, it means that further trouble has been gratuitously stirred up by the Paris Conference. There could be only one justification for the despatch of Greek troops to Smyrna, and that was that it had been decided to give the Asia Minor littoral to Greece, and the Conference had argued that, as the occupation had to come sooner or later, it was better that it should take place while Allied troops were in Turkey and an Allied fleet in Turkish waters.

If the purpose of the Supreme Council had been to impose nominal Allied occupation upon Asia Minor, a corporal's guard from the British Army or a British midshipman with a handful of bluejackets would have sufficed to maintain order and to be sure of the hearty co-operation of the Turks throughout the greater part of Asia Minor. On the other hand, if the Council had been at pains to discover the most effective way of embroiling Asia Minor and stirring up afresh murder and bad blood, they could have adopted no better course than to send Greek troops to a country where Turks and Italians were already in occupation. To insist now that the Greek occupation is only temporary is to add fuel to the smouldering fires, and to prejudice the position of M. Venizelos in the eyes of his countrymen. Much could have been urged against the Greek occupation of the Aidin vilayet—the uselessness from a trading point of view of Smyrna without a considerable extent of the Turkish hinterland, the improbability of the Turks remaining under Greek jurisdiction, the nervousness of foreign capital, which is the main factor in the prosperity of Smyrna—but the Paris Conference had no right to authorise Greek troops to occupy the vilayet, if it was not intended to confirm Greece in her possession of the territory.

On Saturday the Shah concluded his visit to this country, and crossed to the Continent on board the Royal yacht, escorted by British destroyers. Although the weather was not so favourable as might have been wished while he was with us, it is to be hoped that his Majesty enjoyed his first acquaintance with Great Britain, and that he will have found the visit pleasant enough to repeat. He certainly received a warm welcome from the people wherever he went, and achieved the feat—not altogether easy for any foreign Prince or Ruler—of fixing himself clearly in the public memory.

In connection with the Shah's visit, it is pleasant to note that Persia has certainly made a good beginning in setting her house in order. We referred some weeks ago to the capture and execution of two famous robber chiefs: the letter which we publish to-day from our Ispahan Correspondent shows that these twain have been by no means the only ones of their kind to meet the fate that such gentry so richly earn in Persia. Moreover, from a statement made on Monday in the House of Commons by Mr. Harmsworth, it seems that real progress is being made in the direction of rendering Persia able to defend her own frontiers. The Commission of military experts, which was arranged for in the Anglo-Persian Agreement, has been appointed after close consultation with the Persian Government, and the members' experience should guarantee that the preliminary portion of the work they have to perform will be quickly and thoroughly done. After that the responsibility for success or failure will rest chiefly on the Persians themselves.

Speaking at the Guildhall banquet on Saturday evening, Mr. Lloyd George expressed the hope that "soon we shall have signed a peace with all our enemies." The pious aspiration will assuredly find an echo in the hearts of all Englishmen who are interested in the Near and Middle East; but it would perhaps have afforded them more satisfaction if the Prime Minister had been rather more specific in regard to the matter. They would like to know, for instance, how far the process of drawing up the terms for Turkey has advanced, and whether the Allied—we dare not add the Associated—Powers have made up their minds about any of the details of the settlement that is to be. But Mr. Lloyd George only "thought" that he "could venture to say" that there was complete agreement among all the Allies on the fundamental principles of a settlement. That is excellent news as far as it goes, but it hardly seems to go far enough at such a late stage of the proceedings. It is something to be told quite definitely that Turkish misgovernment is to come to an end in all lands populated by Greeks, by Arabs, and by Armenians; but that has been understood for some time, and what the world wants to know to-day is what is to be substituted for the Turkish misgovern-

Digitized by Google

ment. Turkey has no monopoly of misgovernment, and the Arabs, Greeks, and Armenians are more interested in the positive aspect of the case than in the negative. Again, it is satisfactory to be told once more that the Black Sea must be free to all nations; but who is to keep it so? The decision is easy enough to take, but very much less easy to carry out.

On the subject of the Adriatic the Premier was hardly less vague, but in view of the extreme delicacy of the question his vagueness is more easily forgiven. He expressed himself as confident that a solution of the problem could be found, and paid tribute to Italy, our "gallant Ally who came to our help, let us never forget it, at a critical moment in the war." He also declared himself "certain that justice will be done to the nationalities emancipated from the Austrian yoke." The wording is worth careful attention, as it may afford some indication of the lines of the settlement anticipated by the speaker. It will probably be more admired in Italy than in Yugoslavia. But it would be easy, no doubt, to read more into the words than they were intended to convey. Mr. Lloyd George finds it difficult at times to convey what he really does mean to his audience. At least it seems charitable to suppose so.

The Egyptian Council of Ministers having decided to prohibit public demonstrations, the situation in Alexandria has shown a distinct improvement during the past week, while Cairo also seems to be benefiting by the tightening of the bonds of discipline. It was high time to abandon the policy of the velvet glove in Alexandria, where British troops had been repeatedly attacked without provocation, and the European communities were becoming seriously alarmed and talking of a repetition of the events of June, '82. However natural they may have been, such fears were, we trust, quite unnecessary; but it is none the less satisfactory to find the authorities stiffening their backs somewhat. The situation with regard to the schools has also improved. The Government closed one or two secondary schools, and though pupils in some other establishments went out "on strike" once more as a protest, the hint has not been entirely thrown away, since the extremist Press is reported to be now advising the scholars to avoid politics, and stick to their books. Finally, the attitude of the Railway Administration towards the threatened strike and the fine response made to the appeal for volunteers to "carry on" in case of need have evidently had a further steadying effect. The firmness shown by some private employers in dealing with Syndicalist attempts to coerce them is also reported to have had most favourable results.

Developments in Egypt have been followed with increasing attention at home, and some very interesting letters on the subject of the unrest have appeared in *The Times*. It is significant that two men with such long experience of the country as Coles Pasha and Sir Walter Miéville take diametrically opposite views as to the advisability of dispatching the Milner Commission at once. Coles Pasha hopes that the British Government will not be influenced by any threats of resignation or boycott, and is sure that the longer the Commission's departure is delayed the more difficult it will be to solve the problem; Sir Walter Miéville would have the departure postponed until Egypt's status has been confirmed by Turkey. The former also suggests that if Mohammed Said Pasha and Rushdi, Zaghlul and Adly Yeghen Pashas were invited to join the Commission we should hear less about its being boycotted. The suggestion is certainly a daring one, and with regard to Zaghlul, to put it into practice would admittedly be risky, in view of the extreme attitude he has recently taken up; but apart from his inclusion the suggestion seems to be worth consideration. The great thing to do at the present time is to avoid any act that can be construed as a sign of weakness by the agitators and their dupes. Lord Allenby, who arrived in Cairo on Tuesday, may be trusted to steer clear of that risk, if left to choose his own course.

The prophecy on which we ventured some months ago, that we must expect further troubles with the Kurds, has received fresh confirmation. A statement issued by the War Office announces the murder of two British political officers near Akra by Kurds of the Zibar tribe. The victims—Mr. J. H. Hepburn Bill, an officer with twenty years' service in Persia, the Persian Gulf, and North-West India, and Captain K. R. Scott, a temporary A.P.O.—were returning from an inspection of the Kurdish gendarmerie posts on the Amritsa frontier line; and the assailants, who are stated to have numbered about 100 and to have been assisted by some of the local Kurdish gendarmerie, are reported subsequently to have compelled the retirement of the gendarmerie from Akra. As further details are lacking, it is impossible to say whether the incident is a fresh example of unadulterated treachery, such as the murders of Captain Willey and Captain Macdonald, in the same region, last July, or whether it was in what the Kurds would regard as fair and open warfare. Akra is a picturesque town, on the side of a very steep hill, at the entrance to a rather difficult pass. The country around it is less rugged than that around Amadia, and this should make the work of any punitive force that may be despatched less difficult. The Zibar Kurds were described by Sir Mark Sykes as careful farmers, good builders, hospitable to strangers, but incredibly quarrelsome among themselves. He adds that their chiefs "are generally being besieged unless they are besieging someone else." The picture thus presented hardly leads us to expect them to act treacherously, though they are evidently hot-headed. It is possible, of course, that they are being credited with a crime which may have been committed by some other tribe.

The situation in Turkey continues chaotic. The General Election has begun, but, as far as it is possible to make out from the telegrams, it is being conducted under such conditions that it can have no real value. Many important political groups are standing entirely aloof, and the fact—reported by the *Morning Post's* Constantinople correspondent—that in one region out of 1,200 votes cast over a thousand were found to be printed shows how the electors are, or are not, exercising their privileges. Relations between the Government and Mustapha Kemal Pasha are seriously strained, and the former has sent the Nationalist leader what is in effect an ultimatum—declining to remain in office if the Nationalists continue to meddle in politics instead of devoting their energies to national defence. According to one report, the Grand Vizier has actually tendered his resignation; and it is said that Ahmed Riza Bey, ex-President of the Chamber, has been summoned to return from Europe to Constantinople, with the idea that he may be able to rescue the country from the risks and troubles that beset it. Another report says that Prince Salah-ed-Din has been recalled by the Sultan, and will shortly endeavour to form a Government representing all parties.

The great project of Indian Reform has now reached the stage of more or less intelligent anticipation; the members of the Joint Committee have been busily engaged in digesting the evidence and reaching provisional conclusions, and in the somewhat narrow circles which are interested in these matters practically everyone has his own version of the outcome. It would not be worth while to reproduce these conflicting versions, which are dependent largely on the individual fancy, but more respectful treatment is due to a forecast published in *The Times*, which contains strong internal evidence of inspiration. The main point of this forecast is that the principle of dyarchy in the provinces will be accepted and made clearer, and most people seem now to have made up their minds that this is unavoidable; this fundamental feature being settled, the rest is a matter of machinery, and the chief development is, we are told, to be looked for in the establishment of a Select Committee of both Houses of Parliament charged in particular with the duties of a *deus ex machina*.

Two concrete functions are assigned to the Select Committee in this forecast. In the first place it is to serve as a check on the Secretary of State, deciding what

Digitized by Google

matters may be left to his discretion and what must be brought before Parliament. In the second place it is meant to provide an alternative solution for possible deadlocks in regard to "essential legislation," as a substitute for the system of Grand Committees, which has secured very few friends. We may at once agree that the machinery originally proposed required amendment in both respects, and we may concede that Parliament is in theory the proper tribunal to deal finally with such matters; we may even go further and say that if a Federal Constitution for the Kingdom and the Empire should materialise, an Imperial Legislature, acting through a Committee or otherwise, might be able to deal with them effectively; but we confess to some hesitation as to the practical working of the scheme under the Parliament which now exists. A Select Committee will ordinarily reflect the nature of the body by which it is appointed, and Parliament's recent record in regard to Indian affairs does not, to put it mildly, inspire confidence.

The handling of the Afghan treaty is a case in point. As we have already pointed out, the public has been seriously misled by the concealment of the most material stipulation, and concealment has, as usual, engendered suspicion, with innuendoes regarding individual officers, and hints that something worse remains behind. The air could, we believe, have been cleared by an effective debate in Parliament, but the Commons are busy and apparently uninterested, while in the Lords there is no trace of an active opposition, and Lord Sydenham presented the case in such a way as only to furnish an opportunity for a dialectical triumph for his opponent. In consequence the air is not yet cleared, perhaps it is thicker than before; and if the proceedings of Parliament in regard to India are to be characterised by apathy and ignorance, we may be pardoned for looking critically at the functions, and still more the constitution, of any Select Committee which it may appoint. At the same time we must recognise that the period of transition to responsible government will in any case be difficult, and the problem is not to devise perfect machinery, but to get something that will work for a while; perhaps even a Parliamentary Select Committee may be found to comply with this condition.

The forecast to which we have referred is silent regarding the future of the Secretary of State's Council, but it is obvious that this question is closely connected with the project for a Select Committee. The abolition of the Council as recommended in the Crewe Report, and its replacement by an amorphous advisory body, have been opposed strongly on the main ground that the Secretary of State would have too much uncontrolled authority, but this objection would lose its force, so far as measures of Reform are concerned, if the limits of his authority were to be determined by the Select Committee, which would become for this purpose a new and vigorous Council. Whether it would be a really useful Council is, as we have said, a different question, and in any case it could scarcely cover the whole ground; but the proposal certainly suggests that the old Council is to go. Mr. Montagu will then have had his way, but we fear that when the Select Committee is at work he may have occasion to recall the old fable of King Log and King Stork.

The announcement that a peerage has been conferred on Sir James Meston, nominally Financial Minister, but actually representing the Government of India in the discussions on Reform, would in other circumstances have been acclaimed by nearly every school of thought, for he is deservedly popular, and the very unusual distinction is a tribute to a great personality even more than a distinguished record of achievement. Gratification will, however, be merged in regret that the announcement marks the close of Sir James' Indian career, and that considerations of health impose on "the busiest man in the country" the necessity of seeking that leisure which he has always shunned. We can only express the hope that in the House of Lords he will be able to watch and serve the interests of India for many years to come.

THE WEEK AT HOME.

A Quiet Political Interval.

Politically the week has been quiet and as dull as the November skies, which means that the House of Commons has attended to business, and actually discussed seriously a certain amount of legislation. All the storms have been external, but they have not done any particular damage outside the daily Press. Some of the newpapers have worked themselves up to a fury because Mr. Lloyd George does not spend the bulk of his time at the House, and are attempting to depict him as a dictator and a tyrant who conceals himself within the cynical and autocratic shades of Downing Street while faithful slaves do his business, or rather, don't do it, on the Treasury Bench. But the theory does not match the known facts sufficiently to be even plausible, and it is a very open question in the present Cabinet whether the tail wags the dog, or the dog the tail. Sometimes it appears to be one, sometimes the other; but it is not of such stuff that tyrannies or personal despotisms are made.

The Russian Policy Again.

A rather graver portent is the attack on the Government for having again changed its Russian policy. At the Lord Mayor's banquet, Mr. Lloyd George uttered his now customary denunciation of the Northcliffe Press. Nobody took this very seriously, for when the Prime Minister attacks anybody as an anarchist or a conspirator or a snake in the grass it usually only means that he has had a slight disagreement with an old friend, and will have forgotten all about it in a week's time.

The Prime Minister hinted, in fact, at a new orientation of attitude to Russia. The Bolshevists have threatened that if he does not make peace with them they will turn to Germany, and he is represented as having given way to that threat. (As a matter of fact, the Bolshevists have long been in close relations with Germany, and they have always hated England as the foe of revolution far more than Germany even in its autocratic days, because they admired the German discipline and minority rule.) But it is the fact that Mr. Lloyd George appears to contemplate opening up relations with the Bolshevists now that Denikin and Yudenitch have definitely failed to crush Lenin and Trotsky.

Pure Opportunism.

Dark and sinister influences are, of course, suggested for this change; the tentacles of international finance are openly hinted at. But the critics cannot have it both ways. When we invaded Russia, finance was said to be at the bottom of it on account of the holdings of Russian securities which the Bolshevists have repudiated; now that we have evacuated Russia, finance is again said to be concerned, on account of the friendship between Jewish bankers and Jewish revolutionaries. If such friendship exists, it is usually concealed with some success.

As a matter of fact, the Government's Russian policy is one of pure opportunism. They are ready to back any horse that wins; the trouble is that every horse makes brilliant running for a time, and then collapses. None can stay the course out; and the result is that the British Government, like the coalition of which it is formed, is sometimes Conservative and ready to attack the revolution, and sometimes Liberal, and ready to stand aloof with a policy of no-intervention. Mr. Lloyd George's political principles were once unkindly and not altogether accurately described as those of the last man who sat next him at dinner; in the matter of Russia, the taunt appears to be at least partly true. Probably in his innermost soul he has got his eyes more on the pending by-elections at home than on Petrograd.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

Four more defeats in the constituencies would make things difficult at Westminster.

The Liberal Split.

Meanwhile, the troubles in the orthodox Liberal camp, which were alluded to last week, have gone from bad to worse. The Liberal Party headquarters recently put forward a declaration of policy. Designed to bring back the Coalition Liberals into the true fold, it was a colourless document that might have been subscribed to by anybody. It does not appear to have been successful in producing a change of heart among the Coalitionists, who have a reasonable preference for the sweets of office, and are apt to deride their brethren in the wilderness; but it has evoked a strong protest from Manchester, which was, and perhaps still is, the headquarters of intellectual Liberalism. Manchester demands not only a fighting Liberal policy, which is easy enough to produce, but also fighting Liberal politicians, which is a far more difficult matter. They are openly discontented with Mr. Asquith; Sir Donald Maclean is too much of a pussyfoot for their instincts; and Mr. Lloyd George is, like Mr. Winston Churchill, considered a heretic of the worst description. The upshot of these recriminations remains to be seen.

Ecclesiastical Affairs.

The Church of England appears likely to be successful with its Enabling Bill, which is designed to give it a measure of self-government under State control. The Nonconformists were unexpectedly benevolent when the Bill came on for second reading in the Commons after an uneventful passage through the Lords. Labour held aloof from the discussion, although it appreciated the valiant effort of Lord Robert Cecil—who, as an ancient Tory, is very popular in Labour circles—put up on behalf of the cause which is nearest his heart; and ecclesiastical opinion on the whole is favourable. High Churchmen are ardently in favour of the measure, and have no fear of the taunt that it may involve Disestablishment; Low Churchmen are rather less cordial, but are ready to try the experiment; only the Broad Churchmen are really suspicious, on the ground that anything which tends to lessen the control of the State may make for intolerance and promote sectional feeling, which would tend to reduce the scope of the Broad Church position.

The latter seem to the onlooker to be an excellent party which never quite pulls its weight in the Anglican boat. The High Church has far more energy but less intellectual distinction; it knows where it wants to go, and usually gets there. The Low Church concentrates on foreign missions and the projected accommodation with Dissent, which in these days does not dissent very violently. The Broad Churchmen claim to represent culture and modern scholarship, and they desire a reinterpretation of Christianity, or at least of Church doctrine, in the light of modern thought. Their head, so far as they can be said to have a definite leader, is Bishop Hensley Henson, and they would like to see a revision of the creeds and of the Prayer Book generally, contending that many things in it have outlived their usefulness, while some statements are frankly unjustifiable in the light of modern knowledge. Their real difficulty is that of all modern restorers—they cannot agree as to how much of the old fabric to pull down, or what to put in its place. That fact probably explains their ineffectiveness.

The Einstein Theory of Space.

The whole scientific world has been discussing this week the theories of light put forward by Professor Einstein, of Prague. This theory held roughly that light was deflected as it travelled through space, and did not always travel in an absolutely straight line. As this theory invalidated one of the fundamental laws of Newton, it was naturally received with very considerable scepticism, but the observation of an eclipse early in the present year is admitted by astronomers and physicists to have confirmed the Einstein theory. There appears some doubt as to whether the observations confirmed it wholly, or whether part still remains unverified, or whether the dispute ranges merely over the deductions which Einstein has drawn from his hypothesis. On these matters, of course, the only judgment that counts is that of experts.

But the matter will not end with the experts in physics, for it is bound to have a repercussion on general metaphysics. Hitherto, it had been generally assumed, by most schools in philosophy, that space had absolute value. Einstein's theory, if upheld, as it seems likely to be, shows that space is relative, not absolute. This may in turn affect our conception of time. If time, as some schools teach, is conditioned by space, then time also can hardly be held to have absolute value. What there is left it would be difficult to say. The few followers of Schopenhauer—does anybody read Schopenhauer to-day except Lord Haldane?—might perhaps follow that master of pessimism in his pathetic suggestion that beauty is the ultimate reality; but metaphysicians who have proved space and time to be figments of the imagination would have no difficulty in analysing beauty into nothingness. The Einstein theory, on the whole, will tell against the materialist school of thought in the school.

Remembrance Day.

The first anniversary of the Armistice was very affecting. All England stopped its work for two minutes at eleven o'clock to think of the glorious dead. The celebration was universal and heartfelt, and by no means confined to the great centres like St. Paul's or Westminster. The writer of this note happened to be in a side-street at the moment of commemoration; only two other figures were visible, a grocer's boy on a bicycle and a dustman. The lad, who wore his medal, dismounted and stood at the salute; the dustman stiffened himself to attention at the side of his cart. The churches everywhere were crowded, and in many places the spirit of peace had even broken down the aloofness of the sects, and ministers of all denominations joined in a common service. A few bigots seem to have objected to this course, but the overwhelming sense of the community was against them.

The Drama.

While everybody is urging upon everybody else the need for increased production, one industry at least is doing its best in that direction. More theatres are being built, and fresh plays are produced almost every night. Few of these are of much note, and the drama is by universal consent at a deplorably low level. Better things were once expected of Mr. Arnold Bennett, who, as part author of "Milestones," achieved a brilliant success, but his latest play "Sacred and Profane Love" has disappointed the critics. Sacred love appears to be the matrimonial variety, profane love the more gregarious kind, and the heroine of the piece is the embodiment of both, falling in love with a musician, whom she does not marry, and a publisher, whom she does. As the lady is a successful novelist, it is permissible to suggest that the publisher only marries her to avoid paying royalties, which is practical rather than sacred or profane love. Mr. Bennett has it in him to do better work, but, like Sir Hall Caine, he is sacrificing quality to quantity in these days. The artist is the one person who should sometimes disobey the demand for increased production.

Premium Bonds or Capital Tax?

The flood of new issues continues, and the City, which is busy enough over these and the gamble in oils and rubbers, is taking a mild interest in the controversy over Premium Bonds. It is suggested that the small investor will come forward in his thousands to subscribe to an issue of Government Premium Bonds; the Press on the whole is favourable. But high finance and the Nonconformist conscience are for once in concord, the latter because it detests the very idea of anything remotely resembling gambling, the former on the practical ground that it does not believe the issue would be sufficiently successful. The Government cannot make up its mind, and is asking the House of Commons to decide for it—an attitude tantamount to that of an ardent but timid lover asking the lady to propose. Meantime the parallel controversy as to a capital tax appears to be going steadily against those who favour that idea. The fact that it has been introduced in Germany, which is quoted in its support, has naturally told against it.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, October 30.

Serious Demonstration in Alexandria.

The usual Friday demonstration at Alexandria assumed very serious proportions, and developed into a riot. There had been warnings that the demonstration would be larger than usual; in fact, there had been references to it in the vernacular press; so the authorities were fully prepared, but they certainly had no idea that it would develop, as it did, into such a serious affair. The Egyptian police were deputed, as usual, to watch the demonstration and prevent it from extending from the Gomrok quarter, where it always starts, outside the Morsi Abou El Abbas Mosque, to the other quarters of the town. When, on the conclusion of the midday prayer, it was seen that the crowd was forming up for a demonstration, they were warned by the police officer in charge that this would not be permitted. No attention was paid to this, and the crowd pushed on and at once came into contact with the police, who were soon powerless to cope with the situation. The crowd, which contained a large leavening of riff-raff, attacked them with broken "goullas" and stones, which, it appears, had been held in readiness, and the police were very much mishandled.

As the demonstration had developed into a riot, and, in addition, Europeans were threatened, the assistance of the military authorities had to be asked for. Some British troops were sent down, and they were received, like the Egyptian police, with stones and other missiles. Part of the demonstrators were dispersed, but the others adopted such a menacing attitude that the troops had to fire on them. This firing, it may be mentioned, was not carried out indiscriminately on the crowd, but was directed particularly at those who appeared to be the ringleaders, or who were active in throwing missiles. Comparative order was restored by the evening, and the troops were withdrawn to a distance.

During the night there was considerable excitement in the quarter, and next morning it was found that the paving-stones had been pulled up and had been piled in the roads, together with broken carriages, shutters, etc., to form barricades, so that the troops and armoured cars would find it difficult to proceed. The troops, who had again been called on to the scene, were violently assailed by the mob, which by now consisted of all the low characters who are always to be found in this part of the town, and as the mob again began to attack Europeans and threatened to loot, the British troops had to occupy the quarter. By the late afternoon comparative quiet had been restored, and the barricades had been removed; but the district was not pacified until Sunday morning, since when there have been no more troubles.

Advantage has been taken of this incident to circulate stories of atrocities committed by the soldiers, as was done after the repression of the outbreak in the provinces last March, and the usual telegrams on the subject have been despatched to Paris and Washington. The fact that only 7 persons were killed and 21 wounded as a result of the firing, and that 47 of the forces were wounded, including ten British police officers, would serve to show that the violence was more on the side of the rioters than of the troops. Indeed, the latter behaved with great moderation, and their intervention, against which the extremists and their organs protest so much, undoubtedly saved not only the Egyptian police but also the Europeans in the quarter. There seems to be little doubt that the whole affair was prearranged, in the sense that it was intended to bring about a demonstration of such proportions as would attract to it the hooligans of the Gomrok and Labban quarters, and necessitate the intervention of the military authorities, which would then afford the extremists valuable material for propaganda purposes.

As a natural consequence of the troubles in Alexandria, there have been several demonstrations in Cairo, which have, however, been dispersed without incident. The affair has excited the students both in the capital and in the provinces, and in a great number of the schools they have struck either for an hour or for a day, as the case might be, as a protest against the intervention of British troops; while the Prime Minister and his colleagues have again been inundated with telegrams on the subject.

The Railway Strike.

The threatened railway strike, of which I informed you last week, came off, after all, but it was of short duration. The State Railways were informed that unless the demands presented were immediately granted a strike would be declared as at midnight on Friday, 24th. Naturally, no notice was taken of this ultimatum, except that the Administration took steps to put into effect the scheme for "carrying on" which it had prepared in anticipation of an emergency of this nature. The strike duly took place at the time indicated, but it was only partial, in that only the signalmen and some of the traffic men ceased work. Even then, it was confined to Lower Egypt, for, except in the Fayoum, Upper Egypt was not affected, whilst the services also worked normally on the suburban lines.

The strike of the signalmen naturally made the running of trains somewhat difficult; but, thanks to the excellent arrangements made in advance, a train each way to Alexandria and Port Said was got through in the morning and in the afternoon, and the goods traffic necessary to the feeding of Cairo was maintained. By noon some of the strikers began to dribble back, and by Sunday morning the strike had been broken, and the normal service had been resumed.

The trouble is, however, by no means over, and a strike on a very much larger scale is threatened for the early days of November, when the men will have drawn their pay and the arrears of war bonus, etc., due to them. The ostensible reason for the men's attitude is that their demands as to improved conditions of service

have not been granted, to which they have now added a demand that the ringleaders in the recent strike, who have been suspended by the railways, shall immediately be taken back.

With regard to the question of pay and conditions of service, the men have really little to complain of. Where it has been found that any real hardship has been suffered the grievance has been immediately remedied. Indeed, so liberally have the railway authorities treated their officials, especially those in the lower grades, that the wages bill has suffered an increase of no less than 130 per cent. on the 1915 figure. In the latter year the bill amounted to £E1,000,000; to-day the total is £E2,300,000, and this figure will be further increased by certain regradings which have been granted, the cost of which will possibly come to another £E100,000. By far the greatest share of this 130 per cent. increase has gone to the subordinate grades.

When one considers that the Government has satisfied its employees with an increase and bonus amounting in the aggregate, in the case of the lowest paid, to 92 per cent. of the pre-war rate, it becomes fairly evident that there must be something more than economic aims behind this unrest; and what would seem to confirm this is the fact that the men who went out on strike on Saturday last are just those who have received the greatest consideration from the railways administration, and whose grievances are really trivial ones, having nothing directly to do with their economic situation.

The general demands on which the men base their threatened action are either by their nature impossible of acceptance or, where they are reasonable, they are such as could not possibly be admitted without very careful consideration and investigation. None of them is made because the men are not receiving a living wage and the railwaymen have no economic justification for the cessation of work which they now threaten.

As a matter of fact, their insistence on immediate acquiescence is really due to the pressure of outside political influences, who have made up their minds to force an issue, and who would, even if these demands were agreed to, find another excuse for carrying out their plan of a general cessation of work as a national demonstration against the Protectorate, which has been decided on at headquarters.

It being clear that the cause is political, the railway authorities are justified in taking disciplinary measures against those of their staff who are ringleaders. The railway system of Egypt is the most vital line of communications which the country possesses, not only from the military but also from the economic point of view, and such being the case, discipline must be maintained as well from the standpoint of the general interests of the country as from that of the safety of the travelling public. In the railway administration politics can no more be allowed to interfere with the service than they can be tolerated in the Army and police, and the Administration should have the support of all the thinking public. The precautionary measures concerted by the Administration are still being taken and all arrangements have been made to cope with the general strike which is now threatened for either November 5 or 10.

YUGOSLAVIA.

BELGRADE, October 28.

The Political Situation.

An absence for a short time has prevented me from following in detail some interesting events which have recently been taking place in Belgrade. On the 24th I met M. Pashitch in Paris, where he had just returned with the Serbian Delegation, but unfortunately Dr. Trumbitch had not yet arrived. The veteran's presence in Paris was an indication that the "crisis" had at last come to an end. It appears that on the Regent's refusal to accept the mainly Radical Cabinet proposed by M. Trifkovitch the Radicals saw that they could not hope for success, and the Prince called upon Dr. Davidovitch to carry on.

M. Pashitch said that it was quite uncertain whether this Government would be the one which would carry out the forthcoming elections, but admitted that the crisis had been brought on mainly by those personal antipathies which play so large a part in Serbian politics. He stated that the Radical party was determined upon a thorough programme of agrarian reform, with due compensation to the landowners bought out. For, he said, Serbia spent twelve million dinars in compensating Turkish owners in Southern Serbia, and so they could hardly dispossess brother Serbs, such as the aghas and beys of Bosnia and Herzgovina, without adequate compensation. Even the large owners, such as Dr. Bogdan Medakovitch, were not opposed to such a policy.

A Pact with the Narodny Club.

Consequently Dr. Davidovitch's Cabinet is again directing the country's destinies, but what he will be able to do when Parliament meets remains to be seen. He is strongly supported by the Socialists—in fact, it is a Social-Democrat Government—and he can count on the Montenegrin deputies for support, but the fact remains that the two groups are so evenly divided that there can be a working majority only if any substantial contingent crosses the floor. The Radicals have staked upon the crisis and lost, and it is quite likely that a number will support the Cabinet for the sake of unity and government, especially as M. Probitch has published his pact with the Narodny Club, by which he secures support of the Croatian Nationalists by the promise of so large a measure of Home Rule that strong feelings have been raised among the partisans of centralisation. Even if the published version of this pact is accurate, it is sure to alienate a large number of votes from the Radical party, and its publication evoked great excitement in Belgrade.

Meanwhile, at a meeting of the Democratic party at Zagreb, M. Pribitchevitch has outlined the Government programme as follows: Agrarian reform on the basis that each man is to have as much land as he can work: complete union of the country, in contrast to the ideas of the Narodny Club; solution of the currency problem by the replacement of the kruna by the new coinage, at a rate soon to be announced: the improvement of transport, and the suppression of corruption. Finally, this prominent Croatian patriot and politician expressly stated that in direct opposition to the Narodny Club, there could be no distinction between Croat and Serb in the S.H.S., and that it is unthinkable to give the Croats any special position at Belgrade, such as they had at Budapest, when they were in name, though not in fact, a twin kingdom with Hungary.

A Radical Set-Back.

Another incident has occurred to the detriment of the Radicals, though the direct cause is economic rather

All genuine, in pots like this.

YAGHOURT.

THIS HEALTH-GIVING FOOD SHOULD BE TAKEN BY ALL.

Digitized by Google

than political, and that is the municipal changes. The *Opshtina*, or Town Council, of Belgrade, has been in the hands of a group of members of the Radical party. Whether they underrated the difficulties in front of them or were overcome by circumstances, the fact remains that a storm of criticism has been raised at their failure to provide sufficient stocks of coal and wood, till the discontent manifested itself in an adverse vote at a municipal meeting on October 13. M. Marianovitch reported to the Minister of the Interior for instructions, with the result that a new mayor and staff will be elected on Thursday. As M. Marianovitch and his colleagues are Radicals, this is interpreted as another blow to the party.

The Treaty of St. Germain.

The question of the signature of the Treaty of St. Germain is still agitating the public. Dr. Trumbitch has declared that the country cannot adopt a self-denying policy, and that he is convinced that the Peace Conference will accede to the very reasonable demands of the Serbs as soon as they really understand what is the true objective; and the Press Bureau has issued a statement that their delegates in Paris have no instructions to sign. It is certainly to be hoped that the wording of the obnoxious clauses will be so edited as to eliminate the territories of the former kingdom of Serbia.

In the same way there is a feeling that Paris will not allow vital Yugoslav interests in Fiume and Dalmatia to be sacrificed; but the Serbs realise that the illness of their champion, Mr. Wilson, is a disaster for them. There is a feeling of relief at the reported withdrawal of Italian troops from the Bocche di Cattaro, but in Montenegro things are getting worse. Italian soldiers as far inland as Crmnica are reported to have been looting and to have fired upon the Montenegrins who tried in exasperation to protect their property. Apart from the question of looting, one wonders what is the justification for the presence of Italian soldiers there at all.

Croatia's Liberation.

To-morrow is the anniversary of Croatia's liberation from the Hapsburg yoke. On October 29, 1918, the National Council proclaimed the complete severance of Croatia from the Austro-Hungarian monarchy, and voted for the union of the country into the triune kingdom of the Serbs, Croats and Slovenes. There are official celebrations at Zagreb, which almost coincide with the similar anniversary held by their friends and allies, the Czechoslovaks, at Prague, for these kindred nations worked their emancipation in sympathy and collaboration.

Japan has appointed a permanent military mission to Serbia. Chief of the mission is Captain Yasvi, who has spent the past two years in Russia.

PERSIA.

ISPAHAN, September 8.

A Bad Time for Brigands.

A short time ago no one at home seemed to have any news about Persia, but during the last month or so it would seem that events in this part of the world have been a good deal in the public eye. What with the new Anglo-Persian Agreement and its attendant loan—which latter item provides the topic of chief interest amongst the altruistic circle of Persian merchants—and the visit of the Shah to Europe, that country is at last emerging from the mystery in which it has been wrapt for some considerable time.

It would appear, too, that the Powers that be have at last really made up their minds to put their house, more or less, in order. They have, at any rate, given a fairly good earnest of better times to come by successfully "roping in" and hanging a number of the most noted highway robbers. It is not many weeks ago that one Jaffar Ghuli was captured and met the fate he deserved, in spite of the halo of romance which usually surrounds men of his profession; and in the past two weeks Reza Khan Judzani has been caught and, after a somewhat protracted trial, hanged in Ispahan; while in Teheran, Mashallah Khan and five of his followers have paid the penalty for their crimes on the scaffold.

Mashallah Khan was one of the sons of Naib Hussein, the "Father of Persian Bandits," in more senses than one, who promptly fled on hearing of his son's death. Naib Hussein himself has now been captured in the Koh Rud together with two other sons, and it remains to be seen what will be his end. One wonders whether the scaffold will provide the setting for the last scene in the life of this old man also, whose life story, could one but put it down on paper, would make a most thrilling and entertaining biography.

To look at events in a more practical light, there is no doubt that the bringing to book of these bad characters will have a most salutary effect on the condition of the country in the North, not only from the fact of having removed all the chief disturbers from the lines of communication between some of the chief towns of Persia, but also by reason of its excellence as an example to other evil-doers. It has been made clear that malefactors cannot do as they will with impunity in Persia, and this should act as a deterrent to some promising pupils of this profession; while it will take some little time for another leader to arise and collect such a following, even if no obstacle be placed in his way meanwhile.

The Fluctuating Exchange.

Perhaps we are at the dawn of better days. If so, the peaceful trading classes will not be slow to take advantage of them, judging by the frequent enquiries now being made as to reductions in the rates for insurance. Let us hope that times are not far distant when the rates of exchange will give more cause for anxiety to our peaceful friends than horrid thoughts of bandits. As a matter of fact, the said rates do even now give rise to no little anxiety; and not without reason. Fluctuations of ten to fifteen per cent. in the course of a few days do not lend themselves to the stabilisation of trade, whatever they may do for the lucky ones who "get in on the ground floor"; but, after all, when were not the vagaries of the kran one of the charming uncertainties of Persian life?

In many ways, however, things are settling down to a more normal state, and the outlook in Persia to-day is more hopeful than it has been for some years.

ASIA MINOR.

SMYRNA, October 28.

Turco-Greek Fracas.

On Saturday, October 25, a fight occurred between Turks and Greeks around the Smyrna prisons. Two Greek officers and one soldier were killed. It is not known what loss the Turks had, as they were in carriages and got away. It appears that the Turks were the aggressors, and attacked a Greek sentinel outside the prisons, hoping to release the Turkish prisoners who have lately been sentenced to terms of imprisonment by the Greek court-martial.

Flag Ship for Smyrna.

At last the old depôt ship H.M.S. Europa has left her moorings at Mudros, after being there for over four years, and has arrived in Smyrna to be once more the flagship of Commodore Maurice Fitz-Maurice. Her place at Mudros has been taken by H.M.S. Co[illegible]

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary ob ect of which is to help the India Bishops to carry on religious and educational work among these classes, upon whom so much depends.

CYPRUS.

The Great National Day."

The Greek Press is filled with echoes of "the great national day" when Nicosia embraced the whole island, assembled to voice its aspirations. Many persons came on foot from remote villages. Some could not find rooms in which to sleep, but spent the night awake on chairs, deeming this discomfort of no account and disregarding the cold of night, "being warmed with the sacred fire of their patriotism." Everything was done to rouse enthusiasm: bells rang; churches, municipalities, banks, and clubs were decorated with Greek and British flags. The papers also have articles on self-determination, the rights of nations, and on "England and Cyprus," with long quotations from the London Press.

The Deputation to London.

It has been decided by the Central Committee of Aid that a further sum of £500 shall be remitted to the Mission, the contributions being allotted as follows:—From the Archbishop's fund, Nicosia, £110; from Papho, £80; Limassol-Larnaca, £150; Kyrenia, £80; Famagusta, £50; and Kykkou Monastery, £30.

The Turkish community has preserved complete calm and self-possession, and maintains its entire confidence that its interests are in safe keeping. Definite promises made, and repeated, by the Home Government have sufficed to sustain the feeling that loyalty observed during the forty-one years of British administration will not be disregarded in any settlement of island affairs.

The Greek Church.

The Holy Synod has been considering two matters: (1) Whether the autonomous Church of Cyprus shall take part in the Pan-Christian Congress to be shortly convened on the initiative of the Episcopal Church in America; and (2) a letter received from the Synod of the bishops of N.W. Russia, which contains a tragic recital of the terrible ordeal which is being suffered from Bolshevism by the Russian Church. As regards (1), the Synod has decided that while agreeing in principle to take part in the Congress, it will await the return of the Archbishop to Cyprus, and the reference of the matter to the theological authorities for consideration with a view to the choice of a representative. As regards (2), it has decided to send a consolatory letter to the Russian Church.

General News.

October has been exceptionally hot. Greeks call such late heat "the summer of the lazy folk," and this year the "lazy" have had a record season.

Small-pox unfortunately still finds fresh victims. The Government is wisely taking the strictest measures to restrict communications without interfering unduly with the work of the peasantry. In one case a field labourer fell ill while working near an isolation hospital. Vaccination proceeds with "feverish haste." The Press, however, comments severely on the failure of Government to do enough. It also continues to make sarcastic remarks on the subject of the *personnel* and the manner in which, owing to the shortage of officials, individuals of one department have been pitchforked into others in which they have no experience. It is certainly true that the state of suspense is doing a good deal of harm, to say nothing of the interference with trade and business, and, to say the least of it, opens the door to severe and undesirable criticism.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

"From the indomitable Sinn Feiners of Ireland, from the Red Flag, which in Egypt unites the Crescent and the Cross, all insurrections levelled against the devourers of raw flesh are about to blaze up, lighted by sparks flying from us to them." These words are reported to have come from D'Annunzio, rightly or wrongly I do not know. But assuming that this poet, for whom I have a very real respect, did say such things, I think it does show into what absurdities a man may fall when he thinks the fire of the world depends upon his petty pair of bellows. Of his reference to Ireland I will say nothing, except to remark that his adjective "indomitable" seems to be literally accurate; but when he speaks of the Crescent and the Cross being united in Egypt, he is merely talking against himself. A few weeks ago I was extremely pleased to read of his attack on cosmopolitan finance in the matter of Fiume, and now we have him defending such a gang of international and denationalised ruffians as is unknown outside Egypt! It simply will not do. What is sauce for Fiume is sauce for Cairo, and if unscrupulous cosmopolitans try to force a decision in either case they should be condemned. If D'Annunzio is going to take as bedfellows the Egyptian crowd, he will have strange experiences!

***

Mr. Walpole's lecture on Persia, a report of which has appeared in THE NEAR EAST, contained a most amusing yarn, which I do not think any other papers have reproduced. This is how the report runs: Before leaving the subject of the war, he trusted he should be excused if he related a rather amusing episode, which was said to have occurred in Mohammerah just prior to the official declaration of hostilities by Turkey on Great Britain. Notwithstanding the friendly relations professed towards us by Turkey up till almost the eve of war, great tension had existed for some time between the two nations in the Persian Gulf, at any rate. The only protection afforded to British interests in Mesopotamia at this time was H.M.S. "Espiegle" and "Odin," the former being particularly detailed to watch over Abadan and Mohammerah. She took up her position at Mohammerah just inside the mouth of the Karun river, this being Persian, and therefore neutral water, of course, though the Shatt-el-Arab, into which the Karun runs, was Turkish water. The commander of the Turkish river flotilla seemed to think it his business to warn the "Espiegle" that in lying in this position she was committing a breach of international law, and, with this object in mind, he proceeded to issue daily ultimatums, which, however, as they were systematically ignored by the "Espiegle," he very obligingly extended. Finally, he decided to warn the British commander in person, and, with this intent, he one morning called on the British gunboat. During the interview, which was of a most friendly kind, the British commander offered the Turk some liquid refreshment, which the latter accepted, observing, however, that his creed precluded his indulging in anything stronger than, "Sherbet."

***

My readers, I hear, smack their lips, and not in vain. Mr. Walpole continues: This though it might surprise them, was not a very popular beverage in His Majesty's Navy, but the order was at once (though somewhat dubiously) given by the British commander to his Indian servant to bring sherbet for his Turkish guest. Somewhat to his surprise the servant (a resourceful fellow, as will be seen later, and moreover one who felt his responsibility in maintaining the hospitable reputation of the British Navy) shortly returned with a sparkling, frothy, cool pink drink. It was a hot day and the Turkish commander's eyes glistened with pleasure as he raised the glass to his lips and drank it down. The all-important interview continued some little time longer, when it was observed that the Turkish commander was becoming "restless." The British commander suggested another sherbet, but this was hysterically refused, and the Turk took a hurried farewell. The commander of H.M.S. "Espiegle" was nonplussed. What could account for the sudden and extraordinary change in the attitude of his Turkish colleague? It occurred to him to query his servant as to where he had procured the sherbert. "Oh! master," replied that faithful worthy, "we have no such drink as sherbet on board, so in order to maintain the reputation of the ship, I manufactured the sherbet." "How?" inquired the commander. "I mixed a little rosewater with a lemon-squash, and then, to make it fizz, I added some of that white powder which master keeps in his cabin." "Fetch me the bottle," replied the commander. The servant brought it—it was Eno's fruit salt!

CORSAIR.

PRESS ON THE NEAR EAST.

Mesopotamia.

In a leading article, *The Times* of November 8 takes a very serious view of the problem of Mesopotamia. It says:—

"It has been said that we drifted into the control of India in a fit of absence of mind, but the position is now too involved to permit us to undertake vast new responsibilities in Mesopotamia and elsewhere in a similar blind and casual manner. Our present information leads us to believe that the Government are contemplating huge designs in Mesopotamia without sufficient consideration and without accurate and impartial knowledge. The issue is so weighty that, in our view, nothing of a definite and permanent nature should be settled until the whole problem has received full examination at the hands of Parliament. The time is past when any Government could commit the nation to the acquisition of a considerable new empire—for that is what the Mesopotamian project really means—without first making an exhaustive public statement of their intentions. The Mesopotamian enterprise is full of pitfalls, and, on the grounds both of finance and of military risk, our people are entitled to know what is being done.

It then remarks on the fact, noted by one of its correspondents, that the people of Mesopotamia do not desire the presence of the British:—

The notion in Great Britain is that we have been hailed as deliverers from the oppression of the Turk, but our correspondent takes a contrary view, and gives cogent reasons for his assertion. The Turkish rule was bad, but, on the whole, not oppressive, partly because the province was far from Constantinople, the garrison was small, and the Turkish officials as few and as isolated as British civil servants in India. Eastern peoples do not love good and efficient government, and principally desire to be let alone and to be taxed lightly. Already the people of Mesopotamia are surprised at our exactitude in collecting taxes and enforcing regulations, and it may readily be conceived, for example, that the owners or tenants of the 700 houses in Basra, which have long been commandeered as billets, are not too well disposed towards us. Our correspondent further points out that the rigid application of law on European lines may result in handing over the desert Arab to the lawyer and the moneylender. We may add in this respect that, on a previous occasion, we have expressed fear that an unwise alienation of land has already begun.

It enumerates other difficulties in the situation, and concludes by stating the enormous problem presented by Kurdistan:—

To these considerations we may add an expression of concern in regard to the huge area which it is proposed to include in the Mesopotamian mandate. . . . The region of which Great Britain is invited to take charge extends for considerably more than 300 miles north of Baghdad, into the fringes of the mountains of Kurdistan, which bound the Armenian plateau. It also includes the mountainous region of Southern Kurdistan, from a point on Turkish territory opposite Lake Urmia in Persia. Apparently the idea is that we are to occupy the whole country right up to the Persian frontier. It will be clear, when we publish the information in our possession, that the control of the tribal territory on the North-West frontier of India is child's play compared with the problems which may confront us in Southern Kurdistan. As for Northern Kurdistan, or Kurdistan proper, Great Britain is only really concerned with the portion which lies south of Lake Van, and is therefore just outside our proposed boundary. There we have recently been engaged in mountain expeditions exactly in the style of Indian warfare. While a quarter of a million men were mobilised in India against the Afghans, we were simultaneously organising little thrusts in these wild regions of Asia Minor in the most approved Indian fashion. British officers were murdered in Amadia and elsewhere, far to the north of Baghdad; and straightway, without the knowledge of the public at home, tiny punitive columns were mobilised. There were Gurkhas scaling the heights, villages destroyed, small towns occupied, all the usual episodes of a frontier war with which we have been familiar in India for the last seventy years. In short, as we shall show, in the marches of Mesopotamia we have got a new and infinitely bigger frontier problem on our hands. It is idle for Mr. Churchill to talk of holding Mesopotamia with a few police and armoured cars and aeroplanes. The Kurds alone are an almost insoluble problem. Our special correspondent insists that the Armenians can never hold Northern Kurdistan, even with the aid of a European Power. He says that the only chance for an Armenian State is to confine it to the vilayets of Erzerum and Trebizond. The Kurds themselves are beginning to talk of an independent Kurdistan, but the Young Turks are also intriguing among them.

Serbia and Bulgaria.

Writing in the *Manchester Guardian* recently, Mr. James D. Bourchier comments upon the Bulgarian Treaty. Taking in turn Bulgaria's various territorial losses, he examines the justice of the proposed resettlements. In speaking of the relations between Serbia and Bulgaria, he says:—

The cession of the Tsaribrod district cannot be defended on the plea—invoked in other cases—that the Bulgarian frontier approaches too closely the lines of Serbian military communication. The statement cannot be taken seriously, except, perhaps, as regards Strumnitza, where the frontier is only nine kilometres distant from the nearest point on the Nish-Salonika Railway. The town and district, the only fragment of Macedonian territory which her enemies allowed Bulgaria to possess, are now to be taken from her, and the thousands of refugees from Greek and Serbian rule who are congregated here will receive the order to "move on." Where they are to find shelter it is hard to say, for the only regions where settlement was possible—Western Thrace and the Dobrudja—are to be taken from Bulgaria. It is difficult to understand the alarm with which Serbia professes to regard the prospect of future Bulgarian aggression. With her military forces intact and with an enormous increase of territory and power, she asks protection against a neighbour who, under the present treaty, is rendered not only incapable of aggression, but totally defenceless. The only conceivable annoyance she may experience may arise from the formation of Macedonian bands in Bulgaria; these will inevitably assemble so long as the maltreatment of the Bulgarian element in Macedonia continues. The remedy lies in her own hands, and is not to be found in an extension of her frontier, which, indeed, will only increase the danger. The frontier line which the Congress proposes to alter in deference to Serbian claims lies along a series of mountain-tops. The populations which will be included in Serbian territory will, in winter at least, be practically cut off from all sources of supply and condemned to isolation.

NEAR EAST BOOKSHELF.

WAR AND HOME.*

These verses, dedicated to the British Salonika Force, deal chiefly with the experiences of war. They are inspired either by the normal incidents of war or by love of home (which happens to consist of Scotland and Cambridge). The sentiments expressed are good and clean, and the style of writing is finished; but the book lacks vitality. There is no sense of passion, no effort of interpretative visualisation, and the verses are as undistinguished as they are indistinguishable. However common the subject of Mr. Macleod's verse may be, it is one of infinite possibilities: here, unfortunately, its treatment is neither coloured nor original. These poems are fit for a University magazine, but they never rise above that monotonous level.

NON TALI AUXILIO.

A pamphlet, entitled "Ex-King Nicholas of Montenegro and His Court," has reached the office of THE NEAR EAST, with nothing to indicate its authorship or provenance except the words, "Edition 'Glas Naroda,' Serajevo." Its purpose is indicated in the first few lines of the Introduction: "In these pages we propose to give a sketch in a few outlines of a little-known personage, an adventurer of the first water, a surviving specimen of the almost extinct race of mediæval despots, a man who, by the refinement of his cunning, his total lack of scruple and straightforwardness, resembles certain of the more corrupt Asiatic potentates." Four pages of unmeasured and unsubstantiated abuse follow—it is a matter for regret that anyone whose mother tongue is English should have lent himself to translate the polemic—and prepare the reader for the main part of the pamphlet. Presumably, a menial has been bribed to steal some of the correspondence of the Montenegrin Court, and the letters have been handed to the personal opponents of the King. Extracts have been cut out of their context, they have been reproduced in facsimile, and an English translation is given. In each case the extracts are prefaced with derogatory remarks on King Nicholas or members of his family, ostensibly based on the extract. In no single instance, as far as can be seen, does the extract substantiate the allegations of the preface, although there is often some faint connection, but hardly enough to satisfy the most uncritical mind. If King Nicholas were to be arraigned as a common criminal in an English Court of Justice, nothing in the pamphlet based on what the pamphlet contains would be accepted as evidence against him. The pamphlet, however, reveals one thing: whatever the rights and wrongs of the Montenegrin controversy, King Nicholas has some personal opponents whose standard of intelligence, morals, and methods are sufficiently debased to prejudice any cause with which they may be associated.

No one will imagine for a moment that such a publication has in the least degree official sanction in Serbia; but it is obvious that, unless it is immediately repudiated, it will lend colour in Great Britain and the United States to any and every charge that may be levelled against the Serbian régime in Montenegro since the Armistice.

BOOK NOTES.

Messrs. Allen and Unwin announce a comprehensive work on "Dalmatia," by Count Louis Vojnovitch.

The author of "Banked Fires," of which a review was given in our last issue, is E. W. Savi, not Sair, as there stated.

"Persian Tales," written down at first hand in Persian and then translated by Major D. L. R. Lorimer and Mrs. Lorimer, will be Messrs. Macmillan's Christmas gift-book.

Messrs. Longmans have in the press a volume of "Letters of Oswin Creighton, C.F., 1883-1918," edited by his mother, Mrs. Creighton. Earlier letters in the book cover experiences of teaching in Smyrna.

Through the firm of John Lane are being published "A Kut Prisoner," by H. C. W. Bishop, and "The Last Crusade," a book on the Palestine campaign, by Donald Maxwell.

Mr. F. W. Thomas, Librarian to the India Office, has in preparation for the Cambridge University Press a translation of "Bhāsā-paricchedа," or "Kārikāvali," by Visvanātha Pañcānana, with the author's commentary, the "Nyāyā siddhāntā muktāvāli." The translation has been made with the assistance of Miss C. M. Ridding, and of notes by the late Professor E. B. Cowell.

White 8 pieces.

Black to play; what result?

The solution to last week's problem is:—1. P—Q7, any move; 2. Kt—Q6 mate. This week I give a simple end game.

Senor Capablanca is giving a lecture on "Some Principles of Play and their Application" at the School for the Blind, opposite Swiss Cottage Station, on November 22.

I am told by a Cambridge undergraduate who has joined the University Chess Club that the game is remarkably popular there just now, and that at the initial meeting of the season over seventy members were present. That is in striking contrast with pre-war days, when, if I remember rightly, the club was fortunate if it had twenty-five to thirty-five members, most undergraduate chess players preferring to confine their activities to the college clubs.

TURKISH SELF-TAUGHT

(In Turkish and Roman Characters.)

Revised and re-edited by

Prof. G. HAGOPIAN & Prof. A. GEORGIUS, B.A.

Containing ALPHABET and PRONUNCIATION, Classified Vocabularies, Necessary Phrases and Conversations, Elementary Grammar, Tables of Money with illustration of Turkish Coinage, Weights and Measures.

ENGLISH & TURKISH DICTIONARY.

Red Cloth, 4/- net; Blue Wrapper, 3/- net. Postage, 3d. extra.

Sold by all BOOKSELLERS.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moham.	Jewish.
1919.	1919.		1338.	5680.
November	November		Safar.	Marheshwan.
14	1	Friday	21	21
15	2	Saturday.....	22	22
16	3	Sunday	23	23
17	4	Monday	24	24
18	5	Tuesday	25	25
19	6	Wednesday	26	26
20	7	Thursday	27	27

Lord Inchcape has returned to London from Paris.

The Raja of Pudukota has arrived in London from India.

General Mangin will shortly leave Marseilles for Morocco.

The Aga Khan has arrived from Paris and is staying at the Ritz Hotel.

The Raja and Ranee of Sarawak left Liverpool on November 8 for Sarawak.

M. Nano has been appointed an Attaché to the Roumanian Legation in London.

M. Kyriakos Venizelos, Secretary to the Greek Legation, has left London for Athens.

Lord and Lady Byng of Vimy have arrived at 52, Lennox Gardens, S.W.1, for the winter.

Dr. Burrows is reported to be progressing favourably. His next operation will take place on November 18.

Col. Arion, Equerry to Prince Nicholas of Roumania, returned to London on November 7 from Paris.

Prince Bibesco, Secretary to the Roumanian Legation, arrived in London on November 7 from Bucharest.

Sir William Soulsby, C.B., C.I.E., has been reappointed private secretary to the Lord Mayor for the forty-fifth time.

M. Cuigureano, Bessarabian Minister in the Roumanian Government, arrived in London on November 6 from Paris.

Sir Gerald Strickland and the Misses Strickland have left Sizergh Castle, Westmorland, for Rome and Malta for the winter.

M. George Bonesco has resigned the post of Commercial Attaché to the Roumanian Legation, and is returning to Bucharest.

Lieut.-Col. Norman Coates, M.C., has arrived at 36, Langham Street, Portland Place, W., from Egypt, having been invalided home.

With the exception of M. Venizelos and M. Politis, all the members of the Greek delegation to the Peace Conference have left Paris for Athens.

Prince Faisal of Central Arabia, who arrived in Dublin on November 9, was received on the following day by the Lord-Lieutenant and entertained at luncheon.

The King has been graciously pleased to confer the dignity of a Barony of the United Kingdom upon Sir James Meston on his resignation of his appointment.

Viscount Allenby, with Lady Allenby, arrived at Malta on board the Himalaya on November 7. They reached Alexandria on November 11, and, after Lord Allenby had called upon the Sultan, proceeded to Cairo.

Sir C. Alban Young was received in audience by the Prince-Regent on November 6, when he presented his credentials as Envoy Extraordinary and Minister Plenipotentiary to the King of the Serbs, Croats and Slovenes.

M. Venizelos, the Greek Premier, left Paris yesterday for Rome on his way to Athens. On his arrival in Athens the Greek Parliament will be immediately summoned for the purpose of ratifying the treaty between Bulgaria and the Allies.

The Rt. Hon. Sir Maurice de Bunsen's lecture before the Central Asian Society on the "New Levant Company" will be given on November 17.

Sir Arnold White and Mr. W. D. Sheppard, Members of the Council of the Secretary of State for India, had the honour of being received by the King on November 8.

Prince Sabah-ed-Din, leader of the Liberal Opposition in Turkey, is leaving Montreux for Constantinople. It is believed that he has been recalled to form a Government.

The engagement is announced of Princess Sabiha, the Sultan's youngest daughter, to Prince Eumer Faruk, the eldest son of the heir to the Throne, Prince Abdul Medjid.

Dr. Dragoutine Koyitch left London on November 7 for Belgrade. Pending the arrival of the new Minister, M. Svetislav Djoritch will act as Chargé d'Affaires in London.

Mrs. Percy Stout is convalescent after an operation, and will not return to Egypt this winter. Count Sambuy, the Italian Military Attaché, has taken her place at Moadé, near Cairo, for the season.

General Booth has, in rearranging Salvation Army work in India and Ceylon, made three promotions to the rank of Commissioner. The promoted officials are Commissioners Bullard, French, and Blowers.

Plans are being formulated for the campaign in London and the provinces in aid of the national memorial to Dr. Elsie Inglis. The work which her Hospital Unit for Women did in Serbia will never be forgotten.

Sir Krishna Gupta, who was a member of the Moderate deputation, has left for India in the s.s. Egypt, which has on board the majority of the members of the various Indian deputations on the Government of India Bill.

The marriage arranged between Miss Isabel Fisher, of Drumard, Barrow-in-Furness, and Capt. Michael R. Roberts, 113th Infantry, Indian Army, will take place on November 27 at St. Paul's Church, Barrow-in-Furness.

Mr. Laurence Binyon's English version of the Indian classical play "Sakuntala" will be performed this afternoon and on the afternoon of November 21 at the Winter Garden Theatre. The performances have been organised by the Union of the East and West.

The Secretary of the War Office announces that Gen. Lord Byng, G.C.B., K.C.M.G., M.V.O., has been permitted to retire from the Army with a view to his assumption of the position of chairman of the United Services Fund, which has been appointed to administer the fund formed out of the accumulated profits of Army canteen trading during the war.

Lieut.-Col. Arthur M. Berkeley and Major Frederic Carpendale, whom his Majesty invested with the Insignia of Companions of the Most Eminent Order of the Indian Empire, and Lieut.-Col. E. V. Gabriel, whom the King invested with the Insignia of a Commander of the Most Excellent Order of the British Empire, Military Division, had the honour of being received on November 6 by his Majesty.

Dr. Watson Smith, director of the Lebanon Hospital, with his wife and family, left for Beyrout last week via Marseilles to take up his work once more after furlough.

Dr. and Mrs. Webster, of the American Protestant College, Beyrout, left this week on their return, via Genoa. Dr. Webster is also chairman of the Beyrout Committee for the Asfuriyeh Hospital.

A new head attendant for the hospital has been chosen, and is ready to proceed to Beyrout as soon as a passage is forthcoming.

The King has been pleased to approve the appointment of Mr. William Malcolm Haily, C.S.I., C.I.E., I.C.S., Chief Commissioner of Delhi, to be an Ordinary Member of the Executive Council of the Governor-General of India in succession to Sir James Meston, K.C.S.I., I.C.S., who has felt obliged on medical advice to resign his position as Finance Member of the Council with effect from November 1, as the state of his eyesight will not permit him to return to India to complete his term of office. The Secretary of State and the Viceroy have accepted with the greatest regret Sir James Meston's enforced resignation of the office he has held with conspicuous success since the early part of 1918. They have expressed to him their high appreciation of the eminent services which he has rendered to India in the course of a career extending over thirty-four years, and their sympathy with him in its premature ending.

Digitized by Google

The Warden and Fellows of All Souls College, Oxford, at a meeting held on November 6, elected Mr. Thomas E. Lawrence, formerly a Scholar of Jesus College, and subsequently Senior Demy of Magdalen College, to a Research Fellowship. Lieut.-Col. Lawrence obtained a First Class in the Modern History School in 1910, and afterwards was engaged in archæological research work in Syria, Palestine, and Arabia. He served during the war in the Near East with very great distinction, and holds the D.S.O.

Dr. and Mrs. Franklin Evans Hoskins, of the American Mission at Beyrout, Syria, announce the engagement of their daughter, Jeannette Ives, to Lieut. Donald W. Campbell, of the United States Coast Artillery Service. Miss Hoskins has been a war worker at the American Legation at Berne, Switzerland, the American Red Cross in Paris, and the League of Red Cross Societies at Geneva. She is to spend the winter with her parents at Beyrout, and will be married in the spring when Lieut. Campbell is released from service with the U.S. Army in France.

Mr. N. Sokolow, Member of the Zionist Executive and Zionist Delegate to the Peace Conference, was on November 4 received at the Foreign Office by Earl Curzon, with whom he discussed various questions relating to the British Government's declaration of policy in favour of the establishment of a Jewish National Home in Palestine. Mr. Sokolow has also had an interview with Viscount Milner, who was one of the British representatives on the Supreme Council of the Peace Conference, which, last February, heard the statements of the Zionist Delegation.

OBITUARY.

The death occurred on October 27 at Coonoor, Nilgiri Hills, South India, of Colonel Alfred Henry Anthonisz, A.M.S.

The death occurred on November 6 of Lionel Craigie Daunt, of North Lodge, Battle, Sussex, and Haipatha, India, aged 58.

The death occurred on November 5, at Aveland House, Crieff, Perthshire, of Colonel Frederick Jervis Home, C.S.I., R.E., in his eighty-first year.

The death occurred on October 19 at Maymu, Burma, of pneumonia, of Charles Burnby Bell, C.E., eldest son of Charles Bell, architect, Sticklepath, Okehampton, Devon.

Brigadier-General G. F. Young, C.B., late Indian Army, died suddenly on November 8, at Reading, in his seventy-fourth year. He served in the Afghan War of 1879-80, and in the Mahsood, Wuzeeree, and Hazara Expeditions.

Colonel D. A. Grant, formerly of the 3rd Dragoon Guards and of the 85th Shropshire Light Infantry, died at Lausanne, Switzerland, on October 28. He served in the Afghan War of 1879-80, when he was mentioned in despatches, receiving the medal with the brevet of major.

The death is announced, in his fiftieth year, of his Highness Sir Bure Singh, K.C.S.I., K.C.I.E., Raja of the Himalayan State of Chamba, which was founded some fifteen centuries ago. He was Prime Minister for some years to his elder brother, who abdicated in his favour early in 1904. He was the main creator of the modern town of Chamba.

The death occurred on October 28 at St. George's Hospital, as the result of an accident, of Captain William Studholme Clarence Hamley, I.A.R., attached 20th Deccan Horse, dearly-loved and only son of W. W. Hamley, late rector, Royal College, Mauritius, and of Mrs. Hamley, The Orchard, Horley, and grandson of the late Major-General W. G. Hamley, R.E.

NEWS IN BRIEF.

The Pope has recognised the kingdom of the Serbs, Croats, and Slovenes.

The transport Huntsend landed at Plymouth on November 4 about 2,000 troops from Mesopotamia, India, Egypt, Fiume, Marseilles, and Gibraltar.

The Emir of Bokhara has informed General Denikin that, in case of necessity, he is prepared to assist Russia against the Turkestan Bolshevists.

On Monday, November 24, a *matinée*, under the patronage of Princess Marie Louise, will be given at the Globe Theatre in aid of the Serbian Relief Fund.

Mahomed Bagouri Bey, chief of the Egyptian Conservative Party, has telegraphed his appreciation of *The Times* leading article of October 20 on the work of Sir Reginald Wingate.

Small Advertisements (Situations Vacant, Wanted, etc.) will be found on Page 535.

An Algerian named Medioni, who embezzled French National Defence Bonds worth £40,000, has been sentenced to ten years' imprisonment with hard labour. His two accomplices were sentenced to penal servitude for life.

General Franchet d'Esperey has conferred the Croix de Guerre with palm on Colonel Stavtianopoulos, Commandant at Salonika, especially for his share in the operations which led to the defeat of Bulgaria and to Turkey's request for an armistice.

Dr. Galippo has informed the French Academy of Science that in Egyptian papyrus twenty centuries and more old he had found living micro-organisms. These microbes, subjected to the usual test of heat, remained as active as ever.

The Ivan Mestrovitch Purchase Fund is now closed. The relief in wood, "Deposition," has been purchased, and it has been accepted by the Trustees of the National Gallery, British Art, for the Modern Foreign Collection to be formed at Millbank.

From a Polish source Reuter's Agency learns that the representatives in Azerbaijan, Northern Caucasus, Georgia, the Kuban Republic, Esthonia, Latvia, and the Ukraine have sent a new joint Note to the Peace Conference asking for the recognition of their independence.

The *Morning Post* states :—' Though not officially announced, it is known locally that Mr. Noel Buxton, until the last General Election Liberal member of Parliament for North Norfolk, will at the next election contest the division as a Labour candidate." Mr. Buxton is well known to our readers for his interest in Balkan problems.

The War Office states that since October 25 eight vessels have sailed from Busreh, Bombay, and Karachi carrying 464 officers and 6,901 other ranks from India, and 40 officers and 1,078 other ranks from Mesopotamia. The total number of troops evacuated since July 26 is 892 officers and 20,645 others ranks from Mesopotamia and 1,811 officers and 15,118 other ranks from India.

An Army Order announces that the Civil Service Commissioners will hold an examination in European and Oriental languages for Regular officers in London, commencing on January 20. At the same date the Commissioners will, if necessary, hold an examination at Zeitoun, Cairo, Egypt, for first and second-class interpreters in Arabic, Italian, and Greek. Applications to attend must be submitted through the usual channels in time to reach the Secretary (S.D. 4), War Office, on December 1.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,
Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant,
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON—
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troödos.
For Tickets and further Particulars, apply to
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troödos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores: LIMASSOL.
All arrangements for Transport, &c., are made by the above Firm.

FRIDAY, NOVEMBER 14, 1919.

MONTENEGRO, SERBIA AND THE ALLIES.

On two occasions this week the House of Commons has devoted some time to the subject of Montenegro; first by means of questions and answers, and on the following day by the matter being raised by Mr. Robert M'Neill on the motion for the adjournment of the House. For two years or more the British Government, under one plea or another, has contrived to keep the Montenegrin question at arm's length. It has regarded it as an inconvenient subject, and in his *apologia* on Wednesday the Under-Secretary of State for Foreign Affairs implied that the Entente Powers still found it too embarrassing to admit of anything like a free discussion. This admission in itself is the strongest possible condemnation of the Allied policy, or lack of policy, in regard to Montenegro. Perhaps the most regrettable feature of the case is the inexplicable absence of candour on the part of the British Government. Montenegro is admittedly the smallest of the Allied nations; her fate and her affairs can only claim a proportionately minute share of the Powers' attention in view of the weighty problems that have had to be dealt with. In these circumstances, if it was found that the Allies as a whole were inclined to adopt an attitude towards Montenegro with which the British Government could not agree, a very simple course was open to the latter; it could have stated that it did not approve of the treatment meted out to Montenegro, but it recognised that some of its Allies were more intimately concerned with the country, and for this reason it did not feel justified in running counter to their policy, which would continue to bear the *imprimatur* of the Paris Conference as a whole, but without that of Great Britain. Such a course would have been honest and dignified, if not heroic. The actual course adopted by the British Government has been to connive at a morally indefensible and intellectually impossible policy, while all the time refusing to face the music at home, under the plea that the solidarity of the Great Alliance would not allow the subject to be mentioned in any detail. Mistakes in the handling of very intricate questions can be excused and forgiven; but we doubt very much whether the British public would be equally complacent towards conduct which, if it could appreciate the situation, it would have to term un-British.

The Montenegrin question, as a matter of fact, is in its main outline a wonderfully simple one. The two "sides" are the Serbian and the Montenegrin, but in the use of the word "Serbian" it must be understood that, as far as the public is aware, there is no authority for associating the Serbian, still less the Yugoslav, Government with propaganda and actions that are Serbian in origin or character. The Serbian side of the Montenegrin question is that King Nicholas is the quintessence of undesirability, that he is a traitor to his country and to the Allies, that he has been formally and constitutionally deposed, and is, therefore, no longer a ruling Sovereign, and that, the Montenegrins having of their own free will declared for union with Serbia, Montenegro as a separate unit no longer exists, but is part of Serbia. The "case for the defence" is a denial of all these statements, with a counter-charge that Serbians have illegally taken possession of Montenegro, and are starving, imprisoning, or murdering those of the inhabitants who will not declare for the absorption of Montenegro in Serbia. In the face of these charges and counter-charges the Entente Governments have turned their backs on the disputants, and, holding up a warning finger to their own countrymen, have whispered, "Hush! Not a word, for fear of weakening the solidarity of France, Great Britain, and the United States." In the meantime, statesmanship has been vindicated by paying intermittently a subsidy to the King, who is denounced as a traitor to his country and to the Allies, and by ignoring the appeals that have been made against the policy of starvation, imprisonment, and murder alleged to have been carried out against the people of Montenegro. The record of the Paris Conference in this respect is hardly credible. At the eleventh hour the British Government appears to have had sufficient misgivings to cause it to send Count de Salis to inquire into the situation in Montenegro. According to a report—the accuracy of which we have had no opportunity of testing—Great Britain's representative during his investigations was subjected to a petty assault in Cettigne, and to obstructions of a more official character outside the capital. He succeeded, however, in carrying out his mission, and in due course presented his report to the British Government. To the demands now made for the publication of this report, the British Government oppose a decision "reached at Paris"—neither Mr. Bonar Law nor Mr. Cecil Harmsworth specifically state that the conclusion has been arrived at by the Supreme Council—"that it would be undesirable that the report should be published at present." This decision may be a sound one, but it ought not to prevent the adoption of the precedent set in the case of the Women's Royal Air Force inquiry. At the conclusion of that Inquiry, the Chairman announced that "Grave accusations have been hanging for months over the heads of several persons. They are entitled to have our conclusions upon them at the earliest possible moment," and he delivered at once those conclusions. Great accusations have also been hanging over the heads of many people in connection with the Montenegrin question. King Nicholas has been accused of being a traitor, and is said to have been constitutionally deposed at Podgoritza. Serbian troops and Serbian officials are accused of starving, imprisoning, and murdering Montenegrins. Are these charges true, or are they not? Both Serbians and Montenegrins are our Allies; they are entitled, as the other Allied countries are entitled, to know at once whether there is any truth in any of these statements.

From the nature of the case the Montenegrins, whether King Nicholas and his Government in France or the people in the country, are passive agents in this controversy. It is only to the Serbian authorities, or to the Yugoslav Government, that an appeal can be addressed urging them, as they value their proud name, to insist upon the fullest light being thrown upon the charges now being bandied about concerning Serbia and Montenegro. The curious attitude adopted by the British Government in regard to Count de Salis's report is calculated to convey the very worst impression. If it were true that King Nicholas is a traitor and has been deposed, there would be no reason for concealing the fact and for maintaining the fiction that he is still an honoured Allied sovereign. On the other hand, if Count de Salis had established beyond controversy that the Podgoritza Assembly was a bogus gathering under compulsion, and that Montenegrins are being starved, imprisoned or murdered for no other reason than that they still cling to their independence as a nation, it is not difficult to understand why the British Government would be reluctant to publish Count de Salis's report until the Yugoslav Government had made it clear that it had had nothing to do with and repudiated all that had taken place in Montenegro since the Armistice. Only some public announcement on the subject, notifying the withdrawal from Montenegro of every Serbian subject or Serbian-paid Montenegrin and insisting upon a full inquiry into the state of feeling in the country can now clear the Serbian name. We feel confident that, if the Yugoslav Government can find time to consider the subject, it will at once adopt this statesmanlike course.

ARABIA AND THE ARABS: THEIR FUTURE.

By SAFAR.

At the inauguration ceremony of Field Marshal Sir Edmund Allenby as Freeman of the City of London, the Emir Faisal of Hejaz was present, and more than one allusion was made to his own and the Arab troops' services in the Great War. The entry of the Hejaz into the war needs no further elaboration, as the question has been treated at length in the Press. There is one point, however, which has been constantly overlooked. The Palestine campaign has been frequently alluded to as a crusade; this inters a warring of Christianity against Mohammedanism. In view of the fact that many thousands of Hejaz Arabs and Indian Mohammedan troops took part in the Palestine campaign, it is not in the best taste to use the word "crusade." It should always be borne in mind that the British Empire contains more Mohammedan subjects than Christian, and special care should be exercised to avoid everything that is likely to wound their susceptibilities.

Knowledge of Arab countries, Arabs, and Arabian politics is not sufficiently widespread in England, or for that matter in Europe either, in view of the importance of the questions which must be decided in the near future owing to the collapse of the Turkish Empire. In this article a few features of Arab life, customs, and thought are presented, with a view to helping those who are interested in the subject to a more sympathetic understanding of the questions involved.

In order to understand present Arab politics it is necessary to go back to the period when there was an Arab Empire. About the tenth and eleventh centuries it comprised Arabia proper, parts of Spain, all Northern Africa, Egypt, Palestine, Syria, Mesopotamia, Persia. Civilisation within this Empire was superior in many respects to the Western development of that period; geography and mathematics were much studied; architecture was well understood; the famous Mosque El Omar in Jerusalem, in perfect repair after about a thousand years, and of beautiful execution and design, bears witness to the Arab architects' skill.

This great Empire was loosely bound together, and though possessing the great advantages of common language and religion, it finally collapsed. With the exception of Spain, the language and religion endure, but all the above countries became incorporated in European Empires except the greater part of Arabia proper, which alone has remained Arab in government, and Persia, which achieved independence. Turkey took as her share of the spoils Tripoli, Egypt, Palestine, Syria, certain parts of Arabia proper, and Mesopotamia. The first two are already disposed of, but the remainder have still to be dealt with.

The Arab language is Semitic in origin, very rich in synonyms, and difficult to learn in its classic form. As a diplomatic language it is most expressive. Arabic literature is well worthy of study, but a very extensive knowledge of the language is necessary.

Mohammedanism, with some exceptions—*e.g.*, Jews, Syrian Christians, certain Armenians, Druses, etc.—is the religion of the Arab-speaking peoples. The popular conception of Mohammedanism scarcely does it full justice. The Mohammedans themselves are largely responsible for this, as their lapse from religious ideals has contributed to these misconceptions. The Koran, which is practically Islam embodied, enjoins on believers all the virtues generally described as "Christian." It lays great stress on sobriety; in fact, all intoxicating liquors and drugs are unlawful; gambling is forbidden. Mohammedan law is much better than its reputation allows; it also has been "let down" by its administrators. The status of women as defined by the Koran is not satisfactory, but improvement in this respect has begun, though progress is too slow. Divorce is easier of accomplishment and more generally practised than in most parts of the world. Public opinion is inclined to improve this state of affairs, though, again, improvement is too slow. The veiling of women was not an ordinance of the Prophet, but crept in later as an abuse. The practice, however, does not prevail except among townspeople of some standing, hence it is the exception, not the rule.

The present-day characteristics of Arabs in Arabia proper (and this will be found to be applicable to other Arab countries) must be considered under individual headings, namely, the city Arab and the country Arab, the latter comprising tribesmen and Bedouin. The city Arabs, again, must be sub-divided into educated and labouring classes.

"Education" in Arabia formerly indicated those well versed in the Koran, but latterly a class has arisen whose education embraces a much larger sphere. Egypt and India have been the sources of this development. Among the educated class, which is chiefly comprised of merchants, traders, and enlightened sheikhs, European ideals are rapidly gaining ground. It is among this class, also, that the ideal of a second pan-Arabic Empire has gripped the Arab imagination. Any practical movement in that direction is, however, probably far distant, save among the Hejaz supporters.

The labouring classes of cities are very depressed, and have few or no ideas beyond their personal affairs. The tribesmen and Bedouin are very different. They are formed into tribes and tribal confederations and live a very self-contained existence. Their politics are tribal, religious, and local. "Weltpolitik" does not concern them. All able-bodied men are armed with rifle and dagger. Blood feuds and tribal wars are carried on to-day with undiminished enthusiasm. Casualties are, however, usually slight, and a certain type of chivalry is not unknown. It has been said that fights have been broken off owing to one side complaining that their ammunition was finished, which is certainly very magnanimous on the part of the side better supplied. Travelling in tribal areas can be arranged through the local sheikhs on payment of sums of money in proportion to the size of the party.

The political leaders are the tribal sheikhs and Seyyids (*i.e.*, descendants of the family of the Prophet). They are well versed in diplomacy and are born intriguers. Tribal taxes are paid to the sheikhs, who appropriate for their own use the major portion, though a distribution among relations and supporters takes place in order to consolidate their positions. It is a melancholy fact that Arabs are extremely avaricious.

The people of Arabia follow pastoral, agricultural, and trading pursuits. Camels, horses, sheep, goats, and cattle are plentiful. Millet (the staple food of the country), maize, coffee, and dates are largely grown. The Arab trader is enterprising and prosperous. The labouring population is hardy and industrious.

The Peace Conference will find deciding the fates of the Arab countries no simple problem; but a favourable factor in the situation is the now almost universal desire of the Arab peoples for peace and stable government. The King of the Hejaz' claims have never been made public, but it is probable that he has hopes of obtaining considerable territorial acquisitions. Government under the Hejaz will probably not be beneficial to the peoples governed unless, to begin with, it is conducted under constant European supervision. The Hejaz, for many years to come, will not be able to produce administrators capable of ruling, and politically honest enough to rule large districts. The Oriental ruling defects, such as favouritism, avarice, distrust of progress, and fanaticism, will be painfully in evidence. The present state of development of Arab peoples does not promise to produce better administrators than were the rule under the Turkish Empire.

If the King of the Hejaz and other would-be governing Arab bodies could be content for the present with a share of the taxation only, and meanwhile European experts could be given time to formulate some system of government suitable to the districts concerned, and which would guard against the Oriental administrator exercising his national proclivities towards despotism—then, and only then, can it be hoped that the natural and desirable spectacle of Arab countries governed by Arabs, prospering and progressing as their great natural resources demand, may be presented to the approving eyes of civilisation.

The British Consul at Novorossisk has telegraphed that ten days' quarantine has been imposed on all ships arriving from Constantinople, Smyrna, Salonika, and Egypt, owing to plague at those places, and that Russian merchant vessels are forbidden to proceed to Constantinople. A further telegram sates that four cases of bubonic plague have occurred at Athens, and four cases at Piræus within a fortnight.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Middle East (International Mission). Nov. 10.

Mr. A. HERBERT asked the Prime Minister whether the International Mission appointed by the Peace Conference at Paris, including the names of Sir Henry McMahon and Commander Hogarth, would proceed to the Middle East?

Mr. HARMSWORTH: I understand that the proposal to dispatch an International Commission has been abandoned. The American delegates have, however, made a separate tour on the instructions of their own Government, and have, I believe, reported to the latter.

Montenegro.

Mr. R. M'NEILL asked the Prime Minister whether he proposed to lay upon the table of the House the report of Count de Salis on the treatment of Montenegro by the Serbians.

Mr. BONAR LAW: In a matter of this kind the Government must act in concert with our Allies, and in view of the situation in that part of the world it would be undesirable that the report should be published at present. For the same reason I do not think it desirable to have a discussion in the House.

Mr. R. M'NEILL: Is the right hon. gentleman aware that for more than two years past some of us have been putting questions on this subject to the Government, and have refrained from pressing them because they were told that it was not in the national interest during the war? Is that state of things to continue indefinitely after the war, and are the country and the House not to know even the facts as they exist in South-East Europe.

Mr. BONAR LAW: Certainly, it would be very wrong that the state of things to which the hon. member refers should continue, but it is not a matter that we can decide by ourselves. It was considered in Paris, and there it was unanimously agreed that it would hinder negotiations.

Assistance to Persia.

Mr. HARMSWORTH informed Lieutenant-Commander KENWORTHY that British and Indian troops were required in Persia in order to protect her frontiers from external invasion and to secure internal tranquillity. Neither of these menaces had as yet altogether disappeared, but the House might rest assured that the troops would be withdrawn as soon as it was found possible. The date at which Persia would be able to look after her own interests would depend upon the degree of rapidity with which the provisions of the recently concluded agreement were put into effective operation, and on neither side was there the least desire for delay.

Colonel YATE asked who were the officers appointed to form the joint commission of military experts to estimate the needs of Persia under the terms of the recent agreement.

Mr. HARMSWORTH: The names of the officers in question are Major-General W. E. Dickson, Colonel Moens, General Huddleston, Lieutenant-Colonel Fraser, Major J. B. Steele, Brevet Colonel J. W. Lamont, Acting Lieutenant-Colonel Irvine Fortescue. General Dickson has spent much time in Persia, and has a proficient knowledge of the language. All have been selected in consultation with the Persian Government, who attached much greater importance to general attainments than to previous service in Persia.

Topics in Parliament.

The subjoined headings are those given in the official report:—

RUSSIA: British Troops, Batoum. MESOPOTAMIA EXPEDITION (TROOPS DETAINED IN INDIA). CAPTAIN SIR DERRICK J. WERNHER (COURT-MARTIAL). ROYAL AIR FORCE: Persia. DEMOBILISATION (SALONIKA). DEMOBILISATION: Troops in the East. NURSING SERVICES, MESOPOTAMIA (PAY). INDIA: Indian Services General Provident Fund. (November 4.)

INDIA: Army Pay (Egyptian Expeditionary Force).—3rd Bedford Regiment (Exposure to Sun).—Nursing Service.—Civil Service (Nomination of Indians).—Railway and Harbour Schemes.—Telegraph Department.—Punjab (Relief Services).—Military Accounts Department. BURMA (CONSTITUTIONAL REFORMS). DISORDERS IN EGYPT. ASIA MINOR. SUEZ CANAL COMPANY. AFGHAN FORCES (NORTH-WEST FRONTIER). TROOPS IN INDIA. (VOLUNTEERS). INDIA: Afghan Campaign (Allegations).—Married Officers (Moving Expenses).—Vernacular Press, Burma. (November 5.)

SMYRNA LANDING COMMISSION. DEMOBILISATION. Troops from India (Marseilles). INDIA: Government Appointments (War Service).—Transports (Indulgence Passengers).—Army Order 325, 1919 (Departmental Warrant Officers).—Indian Officers (Travelling Privileges). (November 6.)

EGYPT (HIGH COMMISSIONER). BRITISH TROOPS, BATOUM. GOVERNMENT OF INDIA BILL (JOINT COMMITTEE'S REPORT AND EVIDENCE). (November 10.)

In the Court of Appeal on November 10 leave was granted to the ex-King Ferdinand of Bulgaria to appeal against judgments by Mr. Justice Eve and Mr. Justice Lawrence affecting certain property of which the Crown took possession at the beginning of the war.

In the Near East.

Absolutely Without Food.

Our Agents assure us that in the battle areas of Asia Minor the retreating Turkish armies have destroyed the Armenian village homes and burned their crops—leaving the country absolutely without food. The greatest distress prevails—many of the poor Refugees have even been stripped of their clothes and left naked to die.

Their Ghastly Sufferings.

Thousands of adults and children have not tasted any normal food for weeks, but have existed on roots and leaves and dandelions. The olive-green colour of their skin and deep sunken eyes testify to their ghastly sufferings.

Shall We Remain Inactive?

That these poor people—mad with hunger—have in many cases eaten the flesh from the bodies of their dead comrades needs no further proof than the Reports which have reached us from our own representatives in Armenia.

Shall we remain inactive whilst these people die? We have not known what starvation means in England, so let us gladly give what we can to help these unhappy people.

For the Honour of England

send help to save the remnant of the Armenian Nation. £20,000 is needed this Autumn to continue our work at Adana, at Ismid, and at Erivan.

Subscriptions and Donations should be sent to the Hon. Treasurer, Col. Gregory, V.D.

ARMENIAN REFUGEES (Lord Mayor's) FUND

96, Victoria Street, London, S.W.1

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The topic of the moment in financial circles is the prospect of a further increase in the bank rate to 7 per cent. The indications point to the fact that the 6 per cent. rate merely checked speculation for the moment, so that unless the banks unite among themselves to curtail financial facilities the higher rate would appear to be inevitable.

***

Our Belgrade Correspondent briefly reports what he rightly terms "a commercial event of considerable importance" in the imposition of a "stiff" tax on exports from Yugoslavia. I shall await with interest further information regarding this surprising step. No very precise particulars are available as regards the position of Yugoslavia in respect of food supplies, and it may well have been taken with a view to restricting exports for a period. That is really the only feasible explanation, for it is inconceivable that the authorities should have been capable of such a short-sighted policy as would be entailed in an attempt to raise revenue by a tax on exports.

***

The notable articles on "Britain in Mesopotamia" in *The Times*, in which the writer seeks to show that the addition to British responsibilities of the administration of Mesopotamia would be to the advantage neither of the inhabitants nor of ourselves, raise an important issue. The writer's arguments may be right or may be wrong—personally, I have little doubt that many of them must be subject to revision—but the most he would seem to have achieved is to establish a case for inquiry, to prevent the launching of wild-cat schemes. It is essential now to be certain of the position. What the writer has to say will no doubt have surprised many good people who have hitherto been under the impression that everything favoured the continuance of our occupation of the country. Under the writer's critical examination, however, the pleasant vista vanishes, and in place of a land with a friendly and welcoming people, and with unlimited resources, we are shown a country where we are not desired, and with resources much more doubtful and difficult to develop than is believed.

***

That is, in brief, the summary of the case for the opposition, and as I have already said, I believe that inquiry will prove that it is subject to very considerable modification. On one aspect, at any rate, it should not be difficult to arrive at a correct view of the position, and that is in regard to the country's potential resources. During the war, much notable work was accomplished in the development of the country, and large crops were raised. But during a war it is possible to undertake projects that would be out of the question at another period, and particularly at one like the present, when economy is the first thought of almost every country. The question is to what extent further development can be undertaken at a cost commensurate with the results. The writer, who revives the very plausible theory of "salted" lands to explain the position in Mesopotamia, is very dubious regarding the prospects for irrigation, while he lays stress on the points that the grain yield compared with the seed rate is astonishingly small, and that there must be for many years a great shortage of labour. Leaving other questions aside, I will only say that, assuming him to be right on the question of irrigation, it might still be possible to solve the problem by undertaking limited irrigation projects.

***

A very timely reference was made by Sir Auckland Geddes in a speech at Liverpool last week to the need for enterprise on the part of British manufacturers. One of the hindrances to the development of the export trade, he pointed out, was the fact that manufacturers said that they were doing so well in home markets that they need not bother about exports, "because home markets were soaking up at any price all they could produce." It cannot be too strongly urged that nothing could be more fatal than to neglect foreign markets merely because the market at home is at the moment in a position to absorb unlimited supplies of commodities. I believe that the fear of giving foreign competitors an opening in the home market is partly responsible for this attitude, but there is no danger on this account, for this market can be regained at any time without difficulty; the real danger is that the opportunity presented to British firms abroad, and especially in the Near Eastern markets, will not be taken advantage of now, for the opening will not be likely to recur.

***

An interesting account of a curious project brought forward by a Norwegian civil engineer for the establishment of power-stations in Palestine appeared recently in a Norwegian trade contemporary. The engineer's idea is to utilise the level variations between the Mediterranean and the Dead Sea by constructing a tunnel 37 miles in length from the Mediterranean to the Dead Sea, passing under Jerusalem. Water would be carried by the tunnel from the Mediterranean to the western slopes of the lower end of the Jordan, and there it would flow through pipes down to the level of the Dead Sea where there would be a plant to produce electricity from the water power for the distribution of electric light and power throughout the country, and for other purposes. It is estimated that the cost of a double tunnel mainly without masonry and with a maximum area of 135 square feet would be about £8,000,000. Of course, to this would have to be added the cost of the power plant and other enterprises, such as salt works, which form part of the scheme. It would, in short, be an exceedingly expensive undertaking, and for that reason alone, even if the enterprise is practicable, which is very far from being clear, I think it extremely unlikely that it has much chance of adoption. Apart from anything else, there are so many things that must be done in Palestine in the way of the construction of ports and communications, that projects such as this cannot fail to appear at the moment as somewhat superfluous.

***

The South Indian Railway Company's report shows that during the past year there was a further increase in the gross receipts, the figures being £2,375,700, or £18,000 more than the previous year. This was more than counterbalanced, however, by the increase in working expenses, due in part to the increased cost of fuel, but mainly because of the rise in salaries and wages, and with the expenditure amounting to £1,068,700, or £57,800 more than for 1917-18, the net earnings of £1,307,000 show a decrease of £39,800. The share of the surplus profits falling to the company was less by Rs. 33,500 than a year ago, but as against this the transfer of the amount to this country was made at an exchange rate of 1s. 7 31-32d. per rupee, as compared with 1s. 5 31-32d., with the result that the total realised in sterling showed an increase of £3,600 at £59,600.

***

Owing to the conditions brought about by the war, works of construction have been restricted on this line, in common with all other Indian railways; and while pointing out that a satisfactory balance is shown by the surplus profits account, the directors draw attention to the fact that the profits of the company during the war period have been increased by this cause, and state that it will be necessary to make provision in the future for the arrears of work that have been allowed to accumulate. But, despite this factor, the position of the company is sufficiently satisfactory to enable the declaration of an increased final dividend of 3 per cent., as against 2 per cent. last year, making the distribution for the year, with the guaranteed interest, 7¾ per cent., as against 6¾ per cent.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
P. NAVILLE, Esq.

Bankers. BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Digitized by Google

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,74[illegible],300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The MINERALS of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 23·12 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

Conditions in Persia.—III.

Germany and the Persian Gulf.

Below will be found the continuation of Mr. C. A. Walpole's lecture on "War and Post-War Developments in the Persian Gulf," the previous instalments of which were given in the issues of THE NEAR EAST of October 31 and November 7.

This paper would scarcely be complete, Mr. Walpole added, were he not to touch on one of the most important questions of the day in regard to Mesopotamia and Arabistan, namely that of dredging the Shatt-el-Arab Bar. This bar, which commenced at Fao, and which is some seven miles in extent, was a severe thorn in the side of all shipping entering the ports of Busreh, Mohammerah and Abadan. No vessel whose draft exceeded 18 ft. 6 ins. could at all times with certainty negotiate the bar, with the consequence that practically every ocean-going vessel, both inward and outward, required to be lightered, a most expensive, slow and sometimes dangerous business.

As matters stood at present, it was no exaggeration to say that a 6 8000-ton cargo ship was delayed anything up to ten days, or roughly one-third of the time it would take for such a ship to perform the entire journey from Busreh to a United Kingdom port, if no bar existed. This, they would readily understand, during the war, when tonnage was so scarce, was a most important matter to the British; nor to-day, with acute competition for trade supremacy among the nations of the world, could it be regarded in a much lesser light. He would not weary them with statistics and figures, but would only say that, calculating on the number of ships loaded and discharged during the war at Abadan, the time saved, had no bar existed, would have been equivalent in the case of cargo boats to about 15 per cent., and in the case of oil tank steamers, to 9 per cent. of the total shipping which had to be employed. As regards the difficulties in the way of dredging, this question has been very thoroughly gone into by more than one expert, and the work has been pronounced as likely to be neither unduly costly nor lengthy. The bottom was soft, there were apparently no rocks, the current of the river was swift, and the tendency of the banks suitable for training.

German Penetration.

He now dealt with a subject which he knew would be of the greatest interest to all of them, whether their interests vis-a-vis Persia were of a political or of a commercial nature. He referred to the position of Germany in the Persian Gulf prior to the war. Prior to 1900 German interests were scarcely, if at all represented in the Persian Gulf. Early in that year a certain Robert Wönckhaus, a Hamburg merchant of no particular status, and with little if any capital, opened a business in Lingah; he appeared to prosper exceedingly, and some five years later the firm of Wönckhaus and Co., were represented in most of the more important Gulf ports, including Busreh, Mohammerah, Bushire and Bahrein. They traded in all kinds of goods, both import and export, and were employed as agents of the Hamburg-Amerika line. At first, very few of this line's ships visited the Gulf, only about one every five or six weeks in 1909, but these gradually increased, till in 1913, their ships were calling on an average of once a fortnight. That they were heavily subsidised by the German Government was pretty certain, though latterly, at any rate, he should not think any subsidy was necessary, as their outward freight (from Europe) was assured, in that they had obtained the contract to carry out the material required for the laying of the Baghdad railway line northward from Baghdad; and as regards return freight, favoured by their irregular methods of dealing and by good harvests they were able to fill their ships with grain for Hamburg.

Enterprising but Unscrupulous.

Their methods were enterprising as well as unscrupulous; they seemed always ready to buy grain, even when the advice received by British firms indicated falling prices at home; but this may be explained by the fact that the Germans were none too "particular" in their dealings with the Persian Customs. There was an export duty on cereals from Persia of 7 per cent., and this the Germans were experts at "dodging." On a large bulk-shipment of grain this was not difficult, as the amount declared by the shipper was difficult to check; it could, in fact, only be checked by the draught of the steamer, which method the Persian Customs authorities found it difficult to carry out. The matter was brought to the notice of the British Chamber of Commerce in Mohammerah, figures of the declared quantities of shipments made by the Germans were obtained, and it was decided to write to the British Consul at Hamburg requesting him to endeavour to procure the out-turn figures at the latter port; war, however, broke out about that time, and the matter dropped.

Though their German competitors had these two big advantages over the British—namely, a subsidy and evasion of Customs duties, or at least a large portion thereof, there was no denying that they owed some of their success to their enterprise and industriousness as well as to the unscrupulousness of their methods. The representatives of Messrs. Wönckhaus were, one and all, from the partner in charge down to the most junior assistant, extremely keen; they all seemed to know their business thoroughly, and, more important still, they made a careful study of the native, not only from the commercial point of view, but also from the social. All spoke the language fluently, and they would go out of their way to meet and to entertain the more influential local merchants and others. In these respects, though not in the others to which he had referred, the British trader might copy the German to advantage. The object of this was amply demonstrated, after the outbreak of war, when Messrs. Wönckhaus' staff, led by the notorious Wassmuss, exchanged the commercial for the political cloak, scattering over Southern Persia, and spreading anti-British propaganda with such success and with the gravest possible injury to Persia. Apropos of Wassmuss, he would like to mention a story which was little known, and which further illustrated the well-known characteristics of the German race, both high and low. Some two years prior to the Armistice, Wassmuss was taken and held captive at Kazvin; he was treated with the greatest consideration, and was allowed some freedom on giving his parole, but German-like—he broke his parole almost as soon as it was given.

Outlook for British Enterprise.

In concluding, he would give them his personal views on the prospects of British enterprise in Southern Persia. With Russian influence removed (the Persian "man in the street" never could understand why the British, whose characteristics are so widely different from those of the Russian, should associate themselves with the latter, whom they (the Persians) most cordially disliked), and with the disappearance of dishonest German competition, there was, in his opinion, in Persia an exceptionally fine field for British trade. Heretofore, even with her resources little known, her abominably bad communications, her lack of establishment of law and order, trading with Persia had developed, and now that these deficiencies were about to be remedied by means of the understanding arrived at under the new British-Persian agreement, a period of great development for Persia and mutual prosperity might be anticipated. The personal relations between the Englishman and the Persian had always been most friendly; at least, that had always been his own experience. Their business methods were straight, and their friendships were sincere; the working classes were loyal and honest (he might say that during his entire stay in the Persian Gulf he had had the same Persian servant, and never wished for a better one), and there was plenty of evidence to show that they were quick to appreciate and adopt modern methods. They had trained quite a number as engineers, riveters, motor drivers, and also, on the clerical side, as book-keepers and cashiers. He saw no reason why the Persians should not in due course become fully as competent in all these respects as Europeans.

The estimated traffic receipts of the Smyrna-Aidin Railway for the week ended October 25 amounted to £9,417.

At a court of directors of the Royal Exchange Assurance held in November, Sir Robert Walker, Bt., was appointed a local director attached to the Hull branch.

The receipts of the Egyptian Markets, Ltd., for the week ended October 30 were:—Cattle markets, £730; general markets, £592; total, £1,322; total for year, £47,208. The figures for the corresponding week in 1918 ended October 31 were:—Cattle markets, £788; general markets, £520; total, £1,308; total for year, £43,214.

SMALL ADVERTISEMENTS.

LADY SECRETARY desires post. Shorthand, Typing, good French; able to drive car £4.—G.B., The Ladies' League, 118, New Bond Street, W.

LADY SECRETARY desires post. Expert Shorthand and Typing, fluent French, German, knowledge of Italian, excellent references.—K.R., The Ladies' League, 118, New Bond Street, W.

THE LADIES' LEAGUE (under Royal Patronage), 118, New Bond Street, W., successfully recommends Secretaries, Lady Housekeepers, Companions, Governesses, Nursery Governesses, Lady Nurses, Nurse Companions, etc.

A LEADING YUGOSLAV CONCERN wishes to engage a young first-class English Correspondent, introduced in the British trade, to organise and lead its British Department.—Address offers to the Export and Import Company, Ltd., Zagreb (Yugoslavia), Frankopanska ulica 1.

EXPORTNO I IMPORTNO DIONICKO DRUSTVO
(Export and Import Company, Ltd.
HEAD OFFICE:
ZAGREB (Yugoslavia).
Founded by most of the Southern Slav banking houses and some of the pre-war exporters, with branches to be opened in all the commercial centres of the new Kingdom of Yugoslavia. The Company is very desirous to enter into business relations with the British trade, buying goods for own account and accepting agencies.
FIRST-CLASS REFERENCES. CORRESPONDENCE INVITED.

AYAHS' HOME,
26, King Edward Rd., South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entir ly off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER Matron

The Cawnpore Woollen Mills.

Model Village for Employees.

Very little is known in Great Britain of the position of the industrial centres in India, and recent symptoms of unrest may have given the impression that conditions are unsatisfactory.

In congested areas they may be open to improvement, but it is not so of life elsewhere, and notably in the Cawnpore Woollen Mills, one of the oldest factories in India. From a small blanket factory it has, under the able and far-seeing management of Sir Alexander McRobert, grown to be one of the largest woollen and worsted factories in the world, and it has not only been eminently successful in a business sense, but the welfare of the workers has ever been kept in the foreground, and nothing has been left undone that could in any way conduce to that end. Most important among the schemes for the benefit of the worker is the model village which was begun in 1902, at a time when it may be pointed out that the provision of houses for workers even in England was somewhat of an innovation.

Housing Plan.

In the housing scheme referred to, in all 946 houses have been provided already on an area of 39 acres. In the main the courtyard plan has been adopted, and back-to-back erections are rigidly excluded in order to secure satisfactory ventilation. The courtyards are paved with stone flags, and each measures 108 ft. by 45 ft. There is a standpost in the centre with municipal water laid on. Twenty-four houses are built round each courtyard, on to which they open. The courtyard, being paved, can be readily flushed clean, and a tree is planted so as to give shade over and round about the standpost. A drain along the edge of the verandahs runs round the courtyard. The floors of the rooms and the verandahs are of concrete finished with cement. The masonry is all pucca, i.e., of first-class bricks and lime mortar, while the roofs are of red Allahabad tiles, carried on steel purlins and rafters, and in case of need can be stripped off in a few minutes to let in the sun. There is nothing combustible in the construction, and the outlay for repairs is inconsiderable. The rooms are mostly 12 ft. by 10 ft. each, with a verandah 6 ft. by 10 ft., which the tenants often convert into another room by erecting partitions of matting, etc. For ventilation there are honeycomb spaces in the walls, but the tenants usually plug up these openings. Fortunately currents of air can readily pass through the tiled roof, and the atmosphere is always reasonably sweet. Rows of trees are planted between the blocks and on both sides of all the roadways. There are two hospitals, one apart being used as a segregation ward for infectious diseases. The other hospital block consists of two wards, an operation room, and a dispensary on one side of a paved enclosed courtyard and doctor's quarters on the other.

One central block is reserved for shops, which are run by the Lalimli Co-operative Society, Limited, an institution managed by a committee of the workers themselves, and which also performs the functions of a Co-operative Credit Bank with considerable acceptance and satisfactory results financially. The shares can be held by workers only, and shareholders alone are entitled to purchase at the society's shops and to obtain loans. The annual dividend has been steadily 10 per cent., after allocating a fair proportion of the profit to the reserve. Recently a butcher's shop has been built at the request of the community on a convenient site within the settlement, with wire gauze fitments for protecting the meat from flies.

Types of Houses.

The houses are of four different types, and the rent varies from eight annas per month to Rs.15 per month. The cheapest house is the most popular. Very few of the workers will take a 12-anna house if an 8-anna one is available, although the former has a private courtyard at the back, which is usually a strong attraction. A house with roof of double tiles, two rooms 12 ft. by 12 ft., verandah 6 ft. by 24 ft., and private courtyard 24 ft. by 11 ft., with cookhouse, is preferred by Indian Christians, who are charged a rent of Rs.2.8.0 to Rs.4.8.0, according to their pay, the rule being that no one pays more than 10 per cent. of his wages for house rent. The Rs.15 houses are occupied by higher paid Indian Christians, whose standard of comfort approaches that of the European. The accommodation is four rooms, 14 ft. by 10 ft., a verandah 7 ft. by 21 ft., and a courtyard 24 ft. by 21 ft., equipped with cookhouse. Some of them have also a stable and a coach-house, for which luxuries Rs.5 per month extra is charged. The tendency is for caste fellows to group themselves together in blocks. Much care is taken to prevent overcrowding, and all the better houses have ground for gardens. Most of these are well cultivated, both flowers and vegetables being raised. Some of the tenants have planted fruit trees as well. The gardens are quite a feature of the Indian Christian quarters. Gardeners are employed by the company to attend to the trees and shrubs of the settlement, and they maintain a miniature nursery for trees, etc.

The Village "Panchayats."

The company has a small force of its own chaprassis to keep order in the village, as it considers it eminently undesirable to invoke the aid of the police except as a last resort. Each group of five blocks elects five of the residents (one from each block) to constitute a panchayat for dealing with disputes and offences not of a gravely serious character arising in the group. A court of appeal designed to handle cases the panchayats fail to settle is made up by drawing one member from each panchayat; but so far no case has been taken to appeal. The panchayats are called upon to give judgment in about twelve cases a year on the average. The system appears to work well, for the settlement is singularly free from disturbance. The fines imposed by the panchayats and recovered are accumulating in a fund to be used for the benefit of the village generally. The company also makes itself responsible for the conservancy of the village area.

The first blocks—about 300 houses—were ready in 1902, but only eight of the houses were occupied up to the end of that year. The offer of the houses made the workers suspicious of an attempt to get at them in some way, and this prejudice was only broken down by slow degrees. By December, 1903, the number had risen to 69, and thereafter the demand steadily increased until in December 1904, the figure was 240. Now 946 houses are fully occupied, with nearly 200 on the waiting list. Application is being made to the municipality for more land for the construction of 300 additional houses. It was the first severe epidemic of plague in Cawnpore that put the seal on the success of the housing scheme. This drove the workers from the bazaar to the village as a sanctuary. Many returned to the city when plague subsided, and the firm learned to discourage this tendency in subsequent years. It is believed that the workers do appreciate the features of the houses provided, although they have never said so in so many words. There are no earthern floors, and the courtyards can be swept and flushed without trouble, so that the whole environment is sanitary. This is exemplified in the comparatively low death-rate—the mortality figures for the past three years being :—

	Average Population.	Deaths.	Rate per 1,000.
1915	2,670	81	30·33
1916	3,174	68	21·42
1917	3,369	87	25·82

The highest figure in previous years was 32.62 and the lowest 18.72. It may be noted that the death-rate in Cawnpore municipal area as a whole was 35.97 in 1916—an unusually healthy year. It is a remarkable fact that no case of plague has ever originated in the village. There have been a few plague cases, but in every instance they have been found to be imported.

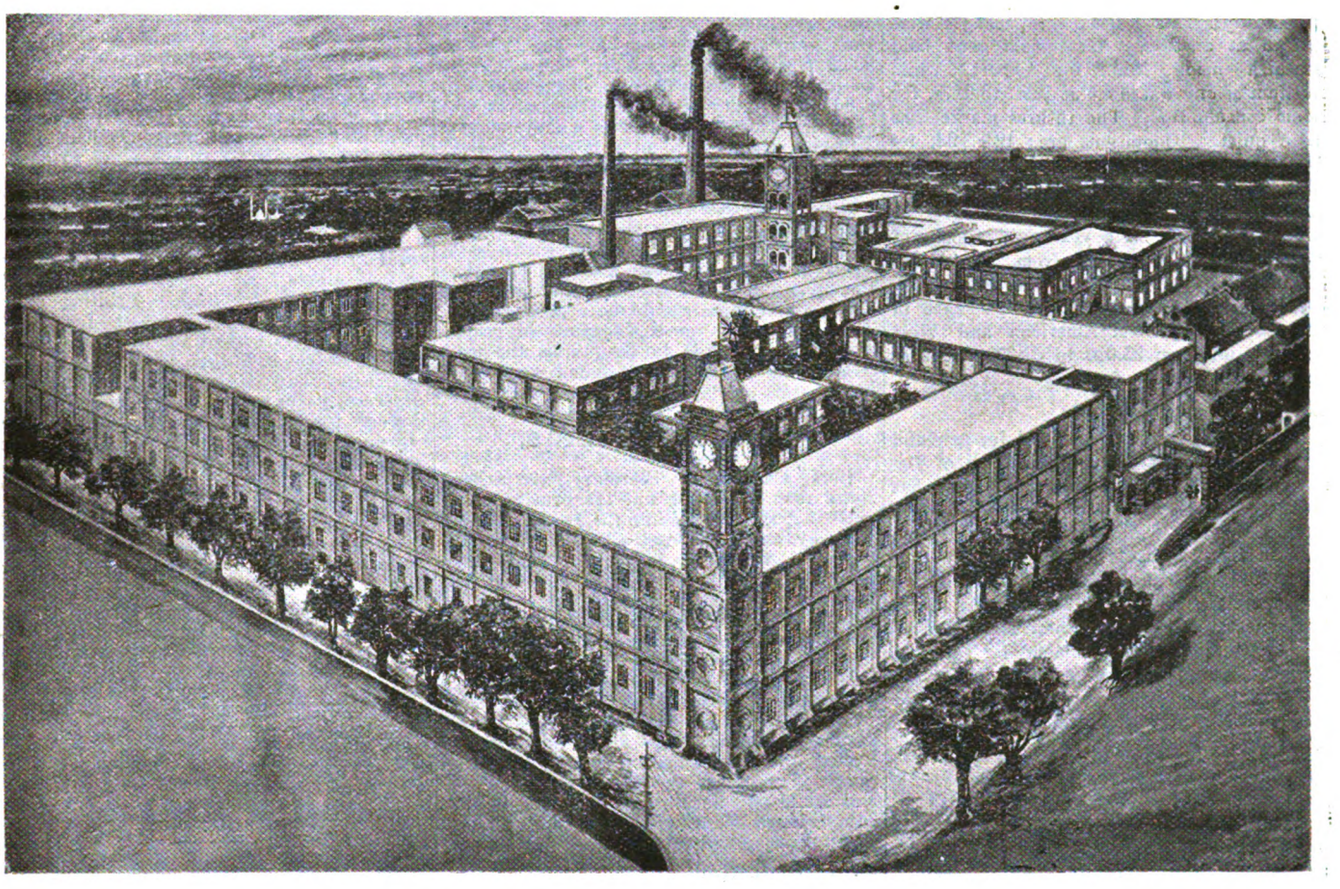
A word may be added as to the financial aspect of the housing scheme. It has no attractions as an investment, but it is thought to have indirect advantages. Its tendency will be to raise the standard of comfort among the employees, and thereby make them more valuable as workers. Instinctively they will try to live up to their improved environment, and they may be expected to produce better work and more of it. (Leaving out of account depreciation, which is estimated at Rs. 8,000 per year, the return is less than half of 1 per cent. on the outlay after paying land rent, taxes, repairs, watching, and conservancy.)

Schools.

At the very outset, a primary school was established for the village children. It is entirely free. There are no fees, and books, etc., are provided. Everything has been done to induce the workers to allow their children to attend the school, but it has never been possible to get on the roll more than about sixty (with average daily attendance of 50) out of

Digitized by Google

say, 135 boys between six years and fourteen years, residing in the village. The usual excuses for not sending boys to school are that they are required to mind the baby and help their mother generally, and that a boy who goes to school is more likely to die than one who is kept at home. Every year five or six of the senior boys proceed to higher-grade schools where English is taught. There are 97 girls of school-going age—six to fourteen years—in the village, and 32 of them are on the roll of a school—the rooms and current outlay provided by the company—run by the ladies of one of the local missions. The subjects taught are Hindi, Urdu, arithmetic (simple addition and subtraction), and needlework. The average daily attendance is 25. This girls' school is very promising, and a kindergarten section is now being organised and equipped. If a qualified teacher were available, the firm would be glad to introduce the kindergarten system in the boys' school, too, so as to interest the younger children, a development that has always been desired.



The Cawnpore Woollen Mills.

Provident Funds.

Regularity of attendance of workers is all important. It has been found that on the whole the residents in the village are less irregular in their attendance than those who live elsewhere. The difference is not great, but it is noticeable. Regularity of attendance is made the supreme test of merit, and the scheme of rewards is based upon it. Any worker who has not been once absent without leave during the year, nor over a certain number of days—depending on length of service—absent with leave, is qualified to participate in the annual bonus distribution. Those so qualified are then classed in three groups, according to their departmental record. Those placed in the first class receive three months' pay, those in the second class two months' pay, and those in the third class one month's pay. They receive half the bonus in cash up to a limit of Rs.50. The balance is credited to them in a superannuation fund account, which is paid to them when they leave the service. They don't like any part of the bonus to be withheld, and at first a number of the workers refused to have anything to do with the pass-books showing how their superannuation account stood. Now they appear to be more satisfied that the amount is there all right, and that it is safe. Interest on these balances is paid at the rate of 5 per cent. per annum, and credited half yearly. In 1917, 445 workers—rather less than 10 per cent. of the number on the attendance registers—qualified for good attendance bonus and Rs.18,138 were distributed among them. All fines and forfeited wages are credited to a fund which is used for making grants to workers who retire on account of health or old age, and to the families of such as die in the service of the company leaving a record of meritorious service. A compassionate allowance is usually made when the circumstances seem to warrant it, even when the deceased worker had no claim on the ground of length of service.

Such is the scheme as it applies to workers drawing less than Rs.50 per month. Those drawing Rs.50 per month and over, and who are members of the Provident Fund, receive the good attendance bonus wholly in cash. In 1917, Rs.20,820 were distributed among 122 of such employees. If members of the Provident Fund—and they are practically all members—they contribute one anna per rupee of their salary monthly, and the company does the same, adding interest on both amounts at the rate of 5 per cent. per annum. In recent years the company has doubled its contributions to the Provident Fund so that in effect the employees have been compelled to save 18¾ per cent. of their pay in addition to any bonus they may have received, and many of them have now large sums at their credit in Provident Fund account. These sums are paid to them when they leave the service, or to their heirs if they die in the service.

The members of the superior establishment are rewarded for good work under a bonus scheme which, under present conditions, may almost double their pay, and they have the privilege of membership of the Provident Fund as well.

Co-operative Society.

The function of the Lalimli Co-operative Society has already been indicated. Its operations have been distinctly beneficent. It is managed by a committee of the workers themselves. It has largely freed the workers from the Bania. Any member can get a loan on easy terms for such purposes as the marriage of a daughter, on producing two approved guarantors, and the price of bazaar supplies is effectively controlled. The workers are paid fortnightly, so that they are able to make most of their purchases on a cash basis.

A suitable piece of ground is laid out for games, and cricket, football, and hockey are played regularly. Year after year the Lalimli team—as it is called from the name of the trade mark of the company—has carried off the challenge trophy competed for by all the games clubs in Cawnpore. The European members of the staff play in all the games along with the Indians, so that a healthy *esprit de corps* is maintained, and an atmosphere of camaraderie is created. The football field is also the school playground for drill, as well as for games.

Near East Markets.

LONDON PRODUCE REPORT.

Currants.

There are a few shipments of currants on their way to this country. In another column will be found references in the House of Commons to the retail price of this commodity. It is interesting to note that the cultivation of currants is being taken up seriously in Australia. That there is an opening in this direction is admitted.

Sultanas.

There has been a distribution to the trade. Supplies available here are small, and the position in the principal producing centres is not such as to encourage an optimistic view of the position.

Coffee.

There has been a fair demand, and prices are steady. This week 3,927 packages were offered at auction. Guatemala good bold greenish made 151s. for export, while medium colony was done at 126s. to 127s. for home consumption. The futures market has been quiet. Quotations are: 124s. 9d. for December, 121s. 6d. for March, 117s. 3d. for May, 115s. 9d. for July, and 114s. for September. Stocks total 354,000 packages, or roughly the same as a year ago. Stocks of Brazilian have decreased from 205,000 to 107,000 packages, but there has been an increase from 127,000 to 165,000 packages in the stocks of Central American and West Indian, and from 23,000 to 82,000 packages from other sources of supply.

Sugar.

There is an increased demand for raw and refined as a result of the Restriction of Delivery Order. The retail price of sugar has been advanced by one penny per lb., it being pointed out that while the beet sugar production in Europe has fallen by 4,200,000 tons since 1914, the cane sugar production of the world has risen by only 1,800,000 tons. It is further stated that in America prohibition has led to an increased demand for sugar in various forms, and that in this country the high price of sugar has not led to decreased consumption, and that these factors make the position more acute.

Oilseeds.

Linseed is very firm, and Indian has been done at 44s., while La Plata crop is quoted 36s. 6d. for January shipment. Rapeseed is firm, but there has been little doing. There are large supplies on the way. Toria has come to business at 40s., and is quoted 39s. January-April. The market in Egyptian cottonseed has been stronger, and transactions have been effected at 22s. 6d., f.a.q.

Oil Cakes, etc.

There has not been much doing in oilcakes, buyers holding aloof from fresh commitments. Linseed cake has been done at 25s., while transactions have taken place in rapeseed cake at 18s., cottonseed cake at 18s. to 19s., Soya bean cake at 25s., and palm-kernel cake at 16s. Linseed oil is firm at 91s. spot and for future delivery. Rapeseed oil is steady at 100s. to 105s., while cotton oil is firm with Egyptian refined at from 97s. to 105s.

CYPRUS CROPS.

(From a Correspondent.)

Late market fluctuations have been most disappointing to Cypriot producers. The price of locust beans (carobs), which had reached 35s. the kantar, has dropped suddenly to 25s. for unknown reasons. The last outgoing cargo fetched 30s. (October 18). During the war carobs were requisitioned and prices controlled. They are now free as regards price, but can only be exported to the United Kingdom or Egypt, a restriction which is much resented, especially as the demand from England is said to be very limited. Wine-producing villages are doing exceedingly well. "Black" wine is sold at from £4 to £5 the load. A "load" in Cyprus is the quantity carried by two mules or two asses—viz., 128 okes (or 16 kouzas). This would work out at present at about 2s. 6d. a gallon for the bulk of the better class of "black wine," or, roughly, 5d. a bottle for wine which not long ago cost about 1d. a bottle. Raki, the spirit from grapes after pressing for wine, sells at 20-22 piastres the oke, a very large increase on pre-war prices. Thrifty villagers have a good opportunity of shaking themselves free of their burdensome debts to moneylenders.

There is a scarcity of potatoes. Cultivation has been very disappointing, in view of the efforts of the Agricultural Department, which holds that there should be a very lucrative market for early Cyprus potatoes, both locally and abroad. At present in lands irrigated by the mountain torrents, now that the rainy season has set in, farmers are busy sowing, and there should be a good supply. There have been good shipments of grapes and autumn fruits to Egypt by the mail steamers, and these have found very good prices.

TRADE OF CHIOS.

H.M. Commercial Secretary at Athens states that before the war the principal proportion of the imports into the Island of Chios came by way of Trieste, either from the interior of Austria or in transit from other countries. The port of Chios was well frequented by European vessels, chiefly Austrian, Italian, Greek, and Russian, with an occasional German caller. The articles imported included sugar, flour, coffee, rice, nutmeg, pepper, seed potatoes, ironwork, glass and glassware, furniture, machinery, white metal, steel, nails, enamelled goods, tanning material, dry and salted skins, alcohol, beer, matches, porcelain, silk and pins. Roumania, the Black Sea districts, and Syria, sent flour, grain, semolina, barley, oats, brooms, and livestock: and Russia, sugar, flour, salted fish, caviare, and alcohol.

Chief Products.

Almonds, mainly exported to India, though also to France, Egypt, the Black Sea, etc., are the leading product of Chios, the annual harvest yielding about 1,300 tons. The harvest of gum mastic amounts to 500 tons per annum, exported chiefly to Germany, Austria, Italy, and Turkey, and latterly to America. Of the annual yield of 600 cases of tangerines, Russia formerly took two-thirds and Roumania, Turkey, and Austria the bulk of the remainder. The yearly production of 100,000 cases of oranges were taken mostly by Russia and Turkey. The 3,800 tons of olive oil produced each year went to Egypt, Turkey, Roumania, and Italy. The Black Sea countries and Syria took the annual production of olives, some 800 tons. Turkey, Bulgaria, Syria, and the rest of Greece, absorbed 3,200 tons tanned hides produced each year. The cultivation of tobacco is a more recent undertaking. Its development promises well, and last year some 800 tons were produced.

LANCASHIRE COTTON.

Manchester, Wednesday.

The market has been a difficult one for buyers to operate in during the past week. Inquiry in all quarters has again been of large dimensions, and the quotations of producers of yarn and cloth have again gone against buyers. The feature of interest in connection with the Egyptian crop has been the estimate of the yield by the Alexandria General Produce Association, the figure of 6,000,000 kantars confirming previous private forecasts. The total last year was 4,821,000 kantars. The plants are said to be making good progress. The industrial situation in Alexandria is causing some uneasiness, but latest advices indicate that the position is improving. Values in American cotton in Liverpool and New York have again appreciated, although fluctuations have been met with. Weather advices from the Belt have again been disappointing. An extensive business has been done in piece goods for Egypt and the Near East generally, in both grey staples and miscellaneous fabrics. Fine yarns made from Egyptian cotton have been purchased freely, but buyers have had to give extended delivery as spinners are so deeply engaged. Prices have been advanced stiffly. A healthy turnover has transpired in cloth for India, the volume of trade showing a broadening tendency. For China further substantial contracts have been booked in various makes, and the Straits Settlements have booked useful lines. Printing cloths have been in steady request for South America, and in home trade descriptions substantial orders have been placed. Some very fair sales have been arranged in home American yarns; and a big inquiry has come through for export numbers, a large portion of which has found its way on to the order books.

SMYRNA FRUIT CROPS.

H.M. Commercial Secretary at Constantinople reports that the crop of figs this year in the Smyrna vilayet is considered very poor, and that as a result of the large number of pickers who left the district owing to military operations it is probable that the yield will not exceed 9,000 tons. The crop of raisins is expected to be 60 per cent. of normal, and of cereals 40 to 70 per cent. less than in 1914.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows for the week ended October 25:—

We have to report a very active market with an advance of 4d. per lb. all round. The sales in all amount to 98 cases, all of which have been bought for export to the States and Japan. The Exchange keeps steady, as reported last week, viz., Ps.340 per pound sterling, and 1.25 dollars per Turkish paper pound. The arrivals are 830 cases, against 20 last year at same date.

The Greek Minister in London has notified the Foreign Office that the Greek Government has decided to prohibit the importation into Greece, until October 3, 1920, of sulphur and copper sulphate. This decision has been taken on account of the stocks existing in Greece largely exceeding the needs of the country.

OAKEY'S
The Original Preparation for polishing Cutlery.
Canisters, 1d., 2d., 3d., 6d., 1s., 2s. 6d., and 4s. each.

Engineering.

Competition in India.

The strenuous efforts of the American and Japanese engineer manufacturers to capture during the war as much as possible of the British machinery trade in India have often been emphasised in these columns. There is no doubt that they had considerable success, and the advice of the British Trade Commissioner is that the British manufacturer must bring his costs of production to a competitive level, maintain his unexcelled quality, and take a much more active interest in the distribution of his products than hitherto. Industrial expansion in India undoubtedly offers increased opportunities to British machinery manufacturers.

Indian Tractor Trials.

A competitive trial of motor-tractors and motor-ploughs will take place on the Nagpur Farm, C.P., India, early next January, about the time of the meeting of the Science Congress. Medals and prizes of the value of 2,000 rupees will be given to the successful competitors; the points to be taken into account by the judges being the construction of the machine, the nature and quantity of the work done, and the suitability for Indian conditions.

Machinery for Morocco.

A large estate owner in Morocco has given to an agricultural engineering contemporary his views of the kind of cultivating machine required in that large expanse of territory lying to the south of the Atlas Mountains, where the clayey soil is baked in the dry and hot summer to the consistency of bricks, and it is nevertheless necessary to till to a depth of 18 in. for the vines that are largely grown in that region. This subject has at various times been dealt with in these columns, and we were glad to see that the views of this estate owner verified the views and suggestions expressed here. At present the work in that region can only be done with infinite labour by the natives with implements that pick the soil or by steam ploughing, but the latter is rarely employed on account of the difficulty of getting the machines there and of procuring sufficient supplies of water. In the opinion of this agriculturist the mechanical method of cultivation should resemble as much as possible the manual system of breaking up the soil with pointed implements, and a most suitable machine would be a modification of the type of rotary mechanism, although it would have to be of very robust construction. Another difficulty lies in the scarcity of fuel and water, but an abundance of charcoal is available, and the solution therefore appears to lie in a machine obtaining its energy from a charcoal gas producer.

Palestine.

It is evident that the Zionist Organisation is pursuing right, and very practical, lines since, in its praiseworthy efforts to assist in the development of the natural resources of Palestine it has established a trade bureau department in London to act as intermediary between the prospective Palestine buyer of British and other European manufactured goods, and the possible European purchasers of the products of Palestine. It is stated that the efforts of the Zionist Organisation will be primarily and extensively directed to the colonisation of Palestine as soon as the exigencies of the military and domestic situation permit. It is calculated that for some time there will be about 30,000 emigrants to Palestine every year, chiefly from Eastern Europe, and that the bulk of these will undertake agriculture as a means of livelihood. The Zionist Organisation, therefore, will try to bring to the notice of British makers of agricultural machinery and implements the great agricultural possibilities and the relative requirements of the country. It is admitted that at present the position cannot be clearly defined, but it is expected that ultimately Palestine will furnish an exceedingly big market for the agricultural engineer, and, conversely, be a large supplier of certain foodstuffs to Britain and Europe generally. The natural resources of the country are very rich, and cultivation will be of an intensive character, with the most up-to-date machinery used. A probable development will be the harnessing of the River Jordan for the generating of electric power. It is asserted that this historic waterway lends itself admirably to such a scheme, and that it has many waterfalls capable of producing hundreds of thousands of horse-power of electric energy.

Electric Lighting Installations.

Many people imagine that electricity generated by a small independent plant is necessarily very expensive and unreliable. This is quite a mistaken notion, as by the introduction of the internal-combustion engine the cost of generating electricity is comparatively so small that a complete lighting installation may now be considered a sound investment rather than an expensive fad. In addition to providing light, electricity can, of course, be utilised for cooking and heating, for charging accumulators for motor-cars, or for light power work, such as pumping water, driving a lathe, ventilating fans in the houses, or light machines in barns, etc. The approximate cost of an electric light installation, with 50 to 100 16 candle-power lights, comprising engine, dynamo, tanks, pipes, shunt, regulator, accumulators, switchboard, and accumulator stands, may be from £80 to £200. Almost any existing out-house, stable, or barn that is weather-tight can be adapted to serve as an engine-room, and can be partitioned off for the accommodation of accumulators. The only foundation to be provided is a concrete base for the engine and dynamo. The engines can be made to work with either petrol or paraffin, but for reasons of economy and convenience to users in the East we would strongly recommend paraffin as a fuel. The oil consumption may be taken at three-quarters to one pint per brake horse-power. Roumanian, Russian, or Baku oil is better than American for the purpose. To charge the accumulators the engine would run on an average four to six hours a week (according to consumption of light), which would require about fifteen minutes' attention at starting, and, while running, one or two visits to see that all is in order.

Feed-Water Heaters.

If there is an accessory of the steam engine known to steam users in the East more than any other, it is the feed-water heater. They know its value, since the high price of coal often discourages the use of steam as a motive power in those regions. Therefore, this or any other device that conduces to economy in coal consumption is of great interest to them, as well as to would-be buyers of steam engines. There is a variety of feed-water heaters on the market, but the majority of those supplied with the engines, or those that are sold by various engineering stores in the East, though quite efficient, are of more or less complicated design, and, handled as a rule by unskilful mechanics, are soon put out of use, and condemned by them as "no good." Of course, the ignorance of the mechanic is more often responsible for such results than any inefficiency in the apparatus. Therefore, a feed-water heater, simple in design, easily handled and repaired, should accompany engines, and especially traction and portable engines, that are destined for the East. Such a feed-water heater attracted our attention in a recent show. It consisted of a stout rectangular cast-iron body or frame, mounted on a cast-iron base, shaped to suit the boiler barrel to which it was attached. The upper end is closed by a domed cap, fitted with a relief valve. A battery of tubes passing up into the body is expanded into a tube plate, which is inserted between the base and the body. The exhaust steam entering one side of the base passes through the tubes and emerges at the other side, the feed-water meanwhile circulating within the body around the tubes externally. The water is pumped in cold, and comes out at the same temperature as the exhaust steam; thus an economy of fuel is effected, which is estimated at from 20 to 25 per cent.

COMPANY RESULTS, Etc.

The directors of the Dunlop Rubber Company announce that the issue of the report and accounts for the past year will be unavoidably delayed, and that, in consequence, they have declared a second interim dividend on the ordinary shares of 3s. per share, free of income-tax, payable on December 1.

The directors of the Bengal-Nagpur Railway Company recommend a final dividend of 15s. per cent. and a bonus of £1 10s. per cent., making a total distribution of £8 (8 per cent.), less tax, in respect of the year ended March 31.

The directors of the India General Navigation and Railway Company have declared interim dividends of 2½ per cent. on the preference shares and 4 per cent. on the ordinary shares, free of income-tax, payable on November 28.

The transfer books of the Aboukir Co., Ltd., will be closed from November 25 to December 1, both days inclusive, for the preparation of interim dividend of 3 per cent., payable on December 1, less income tax at 6s. in the £. Coupon No. 16 should be lodged at 134 and 135, Palmerston House, Bishopsgate, E.C.2, three clear days for examination, and will be received on or after November 18.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

OLYMPIA.

London's First Post-War Motor Show.

(By a Near Eastern Visitor.)

If the exuberance of the daily Press, the uncomfortable packing of the most populated metropolis in the world, and the yet more uncomfortable packing of a famous exhibition-house furnish a verdict, then the first Olympia Motor Show since 1913 may be accepted as the most successful in the history of the horseless carriage. No attempt will be made here at a technical description of the exhibition—that will be done elsewhere and continuously in The Near East—but merely at an appreciation of the industrial and social effort as it appeals to an Englishman temporarily resident in the capital of the Empire. The story is one of praise and blame, and the blame may as well come first.

Olympia is much too small for the extraordinary industrial effort here exhibited and for the enthusiasm of a people victorious in the Great War. Apart from the exhibits, at most periods of the morning, afternoon, and evening, there has been "standing room." Buyers and mere sightseers have been hard put to it to attain their object. Admirably organised and staged as the exhibition is, Olympia has proved itself much too small for the day and the endeavour. Three weeks ago no one would have ventured to foretell this fact, but an every-day visit shows that three times the floor-space would have proved inadequate for this post-war British motor-industry boom.

One pities mostly the manufacturer and his sales artists. Want of space must be anathema to the one, and crush to the other. It would seem almost certain that different arrangements must be made for the motor show of 1920. All records of public attendance have apparently been broken this year, one testy old visitor declaring epigrammatically that "it is a queue to get in, a queue to get about, and a queue to get out."

On the other hand, although called upon to exhibit the sweat of the factory and the lathe, Olympia conveys the impression of a jeweller's showcase. The effect is amber and white; the electric lights suggest a fairy tale; precision, luxury, enthusiasm, and economy—and over all a very pleasing modesty—make this a characteristic London show. The ground hall, with its lengthy avenues, is reserved for motor-cars, chassis, tyre-exhibits, and the coach-builder; the four-sided gallery for the manufacturers of every accessory for car and driver, even to the suggestions of the motorist's tailor. The present week, it should be said, is the Owner-Drivers' Show; the motor-cycle and the other motor world come into their own at Olympia later in the month. There are 354 stands, more than one hundred of these exhibiting cars, and among them several representative American, French, and Italian cars, the German article being conspicuous by its absence.

Luxury, perhaps, is the first impression afforded by a cursory view of most of the complete cars—luxury in chassis and body design and in upholstery and colour-scheme. Prices range from under £200 to upwards of £2,500, but cars above £1,000 seem to predominate.

And the public! That can be fittingly described as a British post-war motor public. Khaki has shed its universality, but a physiognomical study in the mass answers the question why we won the war. Three faces out of four are fighting faces—your motorist develops that aggressive countenance and casual athletic poise—and the great majority of the visiting public impresses one as experienced and bent on business. And there is but one verdict as to this latter point; the business being transacted at this sumptuous show is unprecedented.

DRIED FRUITS.

Distribution and Price.

In the House of Commons on November 6 Mr. Raper asked the Food Controller whether, seeing that under normal trade conditions dried fruits of the new crop commenced arriving here early in September and were distributed to the trade during that month and early in October, he was aware that in the present year, under the control, not a single package of Government fruits had yet reached the retailer?

Mr. Roberts: Under normal trade conditions the new crop of dried fruits does not reach this country in any appreciable quantity before the end of September. Owing to climatic and labour conditions in the countries of origin, it was impossible for the shipment of the new crop to be begun this season until the end of September, and the bulk of the dried fruits purchased did not, therefore, reach this country until the middle of October. Delivery has been further delayed by difficulties of discharge and transport at the docks, but the dried fruits will reach the retailers' shops during the present week. No delay has been occasioned by the fact that importation has been carried out on Government account.

Mr. Raper asked the Food Controller whether he was aware that when the Government announced their intention to re-impose control of dried fruits early in August the Greek market for new season's currants for autumn delivery was such that the new currants could be landed in this country at a net duty-paid price of from 80s. to 85s. per cwt.; whether the Ministry purchased as cheaply as 71s. per cwt., and, on the average, at not more than 84s.; and, in this event, why the Ministry's net price to the retailer had been fixed as high as 107s. 6d. per cwt. delivered, and the price to the public at 1s. 2d. per lb.?

Mr. Roberts: The answer to the first part of the question is in the affirmative. As regards the second part, it is estimated that the lowest net duty-paid price paid by my Department for Greek currants landed in this country will amount to approximately 74s. per cwt., and that the average price will be 83s. 8d. per cwt., provided that the estimates of landing charges and other expenses are not exceeded. The price of 107s. 6d. per cwt. to the retailer was fixed after careful investigation by the Costings Department of the Ministry, and covers expenses of distribution, which include brokerage, primary and secondary wholesalers' margins of profits, draft and carriage. A further allowance is made for the cost of cleaning the currants before they reach the consumer. The retailer's margin of profit on the maximum price of 1s. 2d. per lb. is not more than 2d. per lb., and I do not think that, in all circumstances, this figure is an excessive one.

Mr. Raper: Is he aware of the fact that the onus and cost of cleaning the currants, according to the regulations of his Department, are put upon the wholesaler and not on the retailer, that all the costs to which he refers for primary and secondary brokerage charges amount to only 11s. per cwt., and that this will show over 12 per cent. profit to his Department; furthermore, that the cost to the Department is 9d. per lb, and to the public 1s. 2d. per lb., or equal to more than 50 per cent. profit?

Mr. Roberts: An allowance is made for the purposes of cleaning, whether carried out by wholesalers or others. I am aware that the profit appears to be excessive, but after full investigation by the Department I do not think we can fix the retail price lower. We might possibly, by incurring a loss, have reduced the price by 1d. per lb., but I do not think the retailers would benefit, and a loss would have been incurred by the Department.

Mr. Raper: Do they require a margin of over 50 per cent. to handle goods before the public receive them?

Mr. Roberts: I am afraid that this occurs. I can only say that my Costings Department is a very efficient body, and I have to be largely guided by what they tell me in this matter.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta dated November 5:—

Weather dry everywhere except in Southern India.

During week ending Saturday, October 25, preparations and sowings spring crops continued. Harvesting autumn crops continued. Transplanting winter rice crops completed Lower Burma and Southern India. Sowings progressing Madras. Plucking tea continued Assam. Cotton picking continued Bombay, Central Provinces, United Provinces of Agra and Oudh, Punjab and Upper Burma. General crop conditions good, but rain wanted parts Burma Valley, parts Mysore and parts Bihar and Orissa. Urgently wanted Punjab, where crops suffering drought.

All India second cotton forecast, 18,822,000 acres (last year's corresponding forecast, 15,814,000 acres).

Bombay cotton market irregular. Fully good broach, April-May, Rs.532. Piece-goods market active. Calcutta jute gunny market dull. No change in Bank rate.

BULGARIAN IMPORT AND EXPORT RELAXATIONS.

The issue of the Bulgarian *Official Gazette* for October 16 contains further lists of articles which may be imported into or exported from Bulgaria without the previous consent of the Department of Social Insurance having to be obtained. In issuing these lists the Direction of Social Insurance state that in future no more special permits for the importation or exportation of articles not included in the "free" lists will be granted except in very exceptional circumstances or in respect of articles which may be recognised as indispensable for the repair of machinery or industrial installations for the production of articles of prime necessity. The list of articles which, in virtue of the publication referred to above, will be exempt from the requirement of *import* licences, as from November 16, is as follows.

Supplementary List of Articles, the Importation of which into Bulgaria is now permitted without the previous permission of the Direction of Social Insurance :—(1) Seeds and bulbs not specially mentioned in the Bulgarian Customs Tariff (*i.e.*, those classed under No. 86 of the Tariff); (2) hops; (3) seeds of plants used as fodder for animals (clover, lucerne, etc.); (4) soap powders, soda or ash, used for laundry purposes; (5) gum arabic, in powder, granulated or liquefied; (6) petroleum and other mineral oils employed for lighting purposes, crude or refined; (7) heavy oils and residues from refined petroleum or other mineral oils; (8) sodium hydrate (caustic soda), and bicarbonate of soda; (9) petrol, gasolene, benzine; (10) carbide and medicinal dips for cattle; (11) corkwood in blocks or sheets; bottle corks and other cork products; (12) buttons for dresses or for boots or shoes; combs; (13) school slates; (14) bottles, flagons and demijohns, with or without coverings; (15) prepared leathers—box-calf (chrome), kid; (16) india-rubber erasers for school use; (17) plain flannels, without ornamentation, of wool, cotton, linen, hemp, or mixtures (but not of silk); (18) boot laces, excepting those of silk; (19) fabrics of horse-hair or other hair and cotton for dressmaking (dressmakers' linings); (20) cotton fabrics—sateens, zephyrs, calicoes, madapollams, "milino," cotton linings, muslins, "tenzuchs," and "seyashpurs" (only those specified); (21) cotton velvets and plush of all kinds; (22) metal stoppers with cork lining (crown corks); (23) pens (for writing), and sewing needles of all kinds; (24) spare parts of all kinds for agricultural machines and instruments; (25) springs for carriages or carts; (26) all kinds of yeast; (27) waste paper and wood pulp for paper-making.

SHIPPING SERVICES TO MOROCCO.

Complaint is made of the defective communications between Tangier and France, which it is stated places French trade in a position of inferiority, and it is urged that every facility be afforded for the transport of goods between those countries, says a report from the British Agency at Tangier. The first requirement is the improvement of the ports, which is the business of the Protectorate Government. This matter is in hand, though the war naturally affected the progress of the work. The second desideratum is tonnage, and this is the affair of the home Government and of private initiative. An appeal is therefore made to French capital, there being a good opening for vessels to be placed under the Moorish flag. A beginning has already been made, a few vessels being now seen flying that flag, and it is probable that their number will be increased as soon as circumstances admit. These vessels will probably confine their trade to the ports of France, Morocco, Algeria, and Tunis. British trade is not likely to derive any benefit from them, unless it be indirectly by the transhipment of goods. Though there is much room for improvement in the shipping services between Morocco and France, they are very much better than those between Morocco and the United Kingdom.

The British-India liner "Fazilka," 4,152 tons, went ashore off the Nicobar Islands (Indian Ocean) in thick weather, and is reported to be unsalvable. All the 650 passengers have arrived at Penang.

COMPANY NOTES & REPORTS

Oriental Gas.

The report of the Oriental Gas Company for the year ended June 30 last states that the gas rental is higher by £884 than the preceding year, while on the other hand the cost of coals, purification and wages is less by £1,946. The amount yielded by the sale of residual products, although not equal to the corresponding return for 1918, the market prices during which period were abnormally high, is fully up to expectations. The item of exchange, £5,580, represents the profit on the company's remittances from Calcutta to London, and is due to the extraordinary rise in the value of silver which raised the exchange value of the rupee from 1s. 4d. to 1s. 8d. on June 30, and ultimately to a figure slightly in excess of 2s. In result, the balance of revenue account carried to credit of profit and loss, after allocating £10,000 to renewals suspense account, is £26,193. The after effects of the war continue in a high degree to affect trade and commerce detrimentally, and the directors have not been able to maintain the requisite material to enable them to carry out all the operations they designed, but the position now promises to become easier. The expenditure upon all operations, whether properly assignable to capital or otherwise, has been defrayed out of revenue. To safeguard the company's position in regard to coal, the directors have entered into a contract for a two years' supply. The directors recommend the payment, on November 20, of a dividend at the rate of 4½ per cent. less income-tax, making 8 per cent., less tax, for the year. Meeting, Finsbury House, Blomfield Street, E.C., November 19, noon.

South Indian Railway.

The report of the South Indian Railway Company for the year ended March 31 last states that the capital expenditure remained practically at a standstill, the only outlay of importance being £22,579 for land required for the Madras Beach station and £3,920 on quarters for the staff at Villupuram. On the other hand, there were further credits to capital amounting to £59,024, received from Government on account of rolling stock supplied by the company for military purposes connected with the war, and also a credit of £9,397 for value of materials from the South Marine Pier, at Dhaneshkodi, which has been dismantled; the net result being a credit to capital works of £13,618. The gross earnings were £2,375,742, working expenses £1,068,726, leaving net earnings £1,307,016. Compared with the previous year there was an increase of £17,964 in gross earnings, an increase of £57,780 in working expenses, and a decrease of £39,816 in net earnings. The increase in working expenses was due partly to the higher cost of fuel, but chiefly to increases in salaries and wages of the subordinate staff, whose position has been improved by permanent as well as temporary additions to their pay, in order to enable them to meet the increased cost of the necessaries of life. Owing to the continued difficulty in obtaining materials required for repairs and renewals, expenditure remained restricted to works necessary for the maintenance of an efficient service. Compared with the previous year, coaching traffic increased by £49,450 and telegraph and sundry receipts by £1,099, but goods decreased by £31,466 and steamboat earnings by £1,119. The differences between the company and the Ceylon Government Railway in regard to the working of the route between India and Ceylon via Dhaneshkodi and Talemanaar still remain unsettled. The matter is now under correspondence between the Board and the Secretary of State for India, with the view of arranging the terms for a reference to arbitration. The company's share of the surplus profits amounted to Rs.7,64,444, from which Indian income-tax was paid, amounting to Rs.47,777, leaving Rs.7,16,666, which was remitted home on May 19, 1919, by telegraphic transfer, at exchange of 1s. 7 31-32d. per rupee, realising £59,629. There is, however, a liability against this for Indian super-tax, the amount of which has not yet been ascertained. The company's share of the surplus profits was Rs.33,460 less than in the previous year, but, owing to the higher exchange value of the rupee, the amount realised was £3,623 more. The balance at credit of surplus profits account on March 31, 1919, was £84,046. Since that date various sums have been received and expended, and the account as at end of October, 1919, stands as follows:—Balance as at March 31, 1919, £84,046; surplus profits for the year 1918-19, £59,629; interest received on investments, £2,306; making the total receipts £145,981. Interim dividend of 1½ per cent., less tax, paid on July 1, 1919, absorbed £9,531, and Indian super-tax, including cost of telegrams, £1,587, leaving a balance to the credit of the surplus profits account as at October 31, 1919, of £134,862. The account is liable to charges for English income-tax and excess profits duty, as well as for Indian super-tax, for which demands have not, however, yet been made. The surplus profits account exhibits a satisfactory balance, but, as pointed out by the Board in previous years, the profits of the railway have, during the war, been enhanced by inability to spend money on necessary capital and revenue works owing to the impossibility of obtaining materials, and provision will require to be made in future years to meet the arrears that have accumulated during the war. During the current year provision has been made for capital expenditure of £726,665, as against a credit of £13,333 in the year 1918-19 and for revenue renewals expenditure amounting to £280,000, as against £33,333 in 1918-19; but, in view of the industrial situation in this country, it is doubtful whether these sums will actually be spent in the time. The results of these operations on the capital and revenue accounts of the undertaking may, of course, have an effect on the surplus profits account. The Board, however, considers that the position warranted the payment of the above interim dividend, and it now recommends a final dividend for the year 1919 be paid from surplus profits on January 1, 1920, of 3 per cent., making, with the guaranteed interest of 1¾ per cent., a total payment for the half-year of 4¾ per cent., less tax. The total distribution for the year will then be 7¾ per cent.—4¼ per cent. from surplus profits and 3½ per cent. from guaranteed interest.

Bengal Iron and Steel.

The directors of the Bengal Iron and Steel Co., Limited, announce that it is in the best interests of the shareholders that the existing company be reconstructed, and for that purpose that its undertaking be sold to a new company, to be called the Bengal Iron Co., Limited, in which the authorised capital would be brought more into line with the value of the assets than is the case in the existing company. It is proposed that the nominal capital of the new company shall be £2,500,000, divided into 750,000 7½ per cent. cumulative preference shares of £1 each, equal to £750,000, and 1,750,000 ordinary shares of £1 each, equal to £1,750,000, and that these shares be allocated as under:—150,000 7½ per cent. cumulative preference shares of £1, to be offered for subscription at par to the holders of preference shares in the existing company, in the proportion of ten new £1 shares for each £10 6 per cent. preference share at present held, any of such shares not so subscribed to be offered for subscription in the same manner as the 350,000 preference shares next hereinafter mentioned. 350,000 7½ per cent. cumulative preference shares of £1 each, to be offered for subscription at par, preference being given to existing shareholders. 500,000 to be issued at once; 250,000 to be held in reserve. To the extent that any existing preference shareholder does not elect to subscribe for the preference shares in the new company to which he is to be entitled to subscribe his capital will be paid out in cash. It is proposed to issue to each holder of the 262,350 ordinary shares of £1 each in the existing company five fully-paid ordinary shares in the new company in respect of each ordinary share in the existing company held by such holder, together with the right to subscribe for one ordinary share of £1 in the new company at par. This will absorb 1,574,100 shares, leaving for future issue 175,900 shares. In the event of the scheme going through, the debenture stock of the present company will become repayable at 102 plus interest accrued in date of repayment. The date of repayment will probably be December 31, 1919. A meeting has been called for November 18 to consider the proposal.

Assam-Bengal Railway.

The report of the Assam-Bengal Railway Company for the year ended March 31 states that the gross receipts, including the Mymensingh Bhairal Bazar Railway, amounted to Rs.86,91,986, and the working expenses to Rs.66,26,670, the ratio of working expenses to receipts being 76.24, compared with a ratio of 74.22 in the previous year. The usual half-yearly dividends at the guaranteed rate of 3 per cent. per annum were paid on January 1 and July 1, 1919. Lieutenant-Colonel G. Huddleston, the managing director, has been deputed to proceed to India again in connection with several important questions now under consideration. Meeting, 80, Bishopsgate, E.C., November 18, 12 p.m.

SERBIAN EXCHANGE.

Owing to the continual fluctuation and systematic depreciation in the value of the crown in its country of origin, and the abundance of crowns in the Triune Kingdom, where the dinar is the legal currency, says a Reuter message from Belgrade, dated November 11, the Minister of Finance ordains: (1) That in those countries where the dinar is the legal currency crowns may not be exchanged for dinars by State establishments. (2) That the payment of exports to other countries of the Triune Kingdom stipulated to be made in dinars may be effected in crowns, at the rate of exchange periodically fixed by the Minister of Finance. (3) That in cases where the State is obliged to make payment in crowns instead of dinars, payments shall be made at the rate laid down in paragraph 2 of the present order. The present order explains a previous order issued by the Minister of Finance on the currency of dinars and crowns.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

In Egyptian securities this week the tendency has been distinctly better, and there is a fairly general rise in prices to be recorded, thanks to a big revival in demand from Egypt; but business has been rather restricted by the lack of sellers on this side.

As regards Government securities, there is no change to record in prices, but there have been persistent buyers at the current level, with only very small sellers.

In Bank shares, Nationals have risen 3-16ths to 19 15-16 and Agriculturals 1-16th to 5¾, on Egyptian buying. There has also been a sharp rise of 3-16ths in Agricultural Pref. to 7¼, with a good many unsatisfied buyers. Anglo-Egyptian Banks have been exceptionally dull, and are ⅛ down at 17¾. Land Banks had a sharp move, changing hands in a small way as high as 7 at one time and finishing 5-16ths up at 6⅞.

In Railways there is no change to record.

Amongst Land shares the feature has been the demand from Egypt for Béhéras and Union Foncières. The former have risen ½ to 14½, and the latter ⅛ to 3¾, but there are practically no sellers here round current levels. Aboukirs, on profit-taking, receded at one time to 29s. 6d., but are closing only 9d. lower at 30s. 3d. Consolidated Lands have dropped 3d. to 2s. Delta Lands have been quietly picked up round the current level, and Foreign Trusts have improved 6d. to 14s. New Egyptians, although unchanged, have been quite an active market, and Egypt has also effected some purchases at the current level. There has been a renewal of inquiry for Egyptian account of Sidi Salems, which close 1-16th higher at 2¾, at which price some few hundred shares changed hands, with further unsatisfied buyers. Gharbiehs are also 1-16th firmer at 2¼, but Sudan Plantations, which entirely depend on local buying and selling, have receded 3-16ths to 8.

In Miscellaneous descriptions Alexandria Waters have recovered ¼ to 11½, but Salts and Sodas have been under constant pressure, and, although a fairly substantial business has been done, the shares close 1-16th lower at 2 29-32. Khedivial Mails are unchanged, but there are practically no transactions owing to the lack of buyers.

Amongst the Oils, Anglo-Egyptian B, after improving to 5 11-16, receded at one time to-day to 5¼, and are closing at 5 5-16, a decline of 5-32nds. Roumanians have dropped 1s. to 23s. 9d., but, on the other hand, Traians have improved 1s., to 11s. 6d.

In Greek securities the 1881, 1884, and 1890 loans have recovered 1½ to 64. Monopolies have risen half a point to 56, and Funding one point to 63. The 1902 loan is also half a point firmer at 62½. On the other hand, the 1914 Loan has been pressed for sale for Continental account, owing to the depreciation in exchange, and closes 2½ down at 69. Some small transactions have taken place in "Currant" bonds at 94. Bank of Athens shares were done in a small way round the current price of £3.

BRITISH COMMERCIAL COMMISSIONER FOR BULGARIA.

It is announced that Captain W. B. Heard has been appointed Commercial Commissioner for Bulgaria.

Captain W. B. Heard joined the Levant Consular Service in 1900, and served in a Vice-Consular capacity at Sofia from 1909 to October, 1914. He was then promoted Consul, and after service at Port Said, was appointed Intelligence Officer of 29th Brigade, Central European Expeditionary Force. He was wounded, and after a period in England was appointed Consul at Serres. Later he was employed by the Enemy Propaganda Department, and subsequently in 1919 was sent on a special mission to Bulgaria, on which country he furnished a report. Captain Heard is proceeding to Sofia very shortly.

ANGLO-EGYPTIAN OILFIELDS.

Anglo-Egyptian Oilfields: Gemsah production for week to November 9, nil (nil); Hurgada, 5,987 tons (5,925).

NOTES OF THE WEEK.

On Monday, very nearly two years after it was presented to the Government, the Final Report of the Dardanelles Commission was made available to the public. In some ways it is a disappointing document, leaving us still in doubt in regard to many points on which we should like to be not only enlightened, but aided in forming judgment; and from whatever angle it be regarded it must be admitted that its effect is depressing. To the lay mind it appears that almost every blunder that it was possible to commit was committed in the course of the operations. Neither the War Office nor the Admiralty appears in a favourable light; though, on the whole, the sailors on the spot seem to have formed the clearest idea of what the undertaking involved. The chief blame for failure, however, is in effect awarded to the politicians at home. The Government, for instance, when it was decided to embark on the adventure, did not give "sufficient consideration. . . . to the measures necessary to carry out such an expedition with success"; the difficulties were "much underestimated"; after the failure of the attacks there was undue delay by the Government in deciding on future action; and the operations were hampered by insufficient artillery and munitions.

The Commission holds that the plan of attack from Anzac and Suvla in the beginning of August was open to criticism; that the failure at Anzac was due chiefly to the difficulties of the country and the strength of the enemy; and that the failure to press the attack at Suvla (on August 7 and 8) must be attributed in great measure to a want of determination and competence in the Divisional Commander and one of his Brigadiers. Sir Ian Hamilton's personal gallantry and energy, his determination to win at all costs, and his optimism receive recognition; but the Commission is of opinion that it "would have been well had he examined the situation as disclosed at the first landings in a more critical spirit, impartially weighed the probabilities of success and failure . . . . and submitted to the Secretary of State for War a comprehensive statement of the arguments for and against the continuance of the operations." It is also remarked that Sir Ian appears to have regarded Lord Kitchener as a Commander-in-Chief rather than as a Secretary of State—in which, we may add, he was not singular. Finally, the decision to evacuate is approved. Many of the details of the Report, such as those dealing with the water supply and the medical arrangements, will well repay reading in the original, but lack of space forbids further reference to them here.

The situation in Roumania has not been clarified by the result of the elections. M. Take Jonescu and General Averescu persisted in their refusal to participate in the elections, and this abstention on the part of the Conservative-Democrats and League of the People is said to have reduced the poll by 70 per cent. M. Bratiano's party is reported to have secured a hundred seats, while one hundred and twenty members of the Nationalist, Peasants', and other independent parties were elected. The Conservative group, following the Germanophil, M. Marghiloman, has only five seats. Even if the Liberals should be able to secure a majority in the Chamber, M. Bratiano's position can hardly be regarded as secure enough to warrant the King in entrusting him with the formation of a Cabinet. The new Parliament ought to include representatives of Greater Roumania, and, according to all indications, these, to a man, are likely to swell the opposition to M. Bratiano, if only because they stand for a complete break with political traditions in the old kingdom and a fresh start on an altogether higher standard of politics. It is to be hoped that, whatever steps are taken, there will be no undue delay in straightening out a tangle which has already lasted too long, to the prejudice of Roumania at a time when she needs to be concentrating all her attention and energies on the problem of reconstruction.

A letter from the Serbian Society of Great Britain, which is printed elsewhere in this issue, sets out the two suggestions that have been put forward for the settlement of the Fiume controversy. The Italian frontier as drawn by the Secret Treaty of London (1915) was a thoroughly bad one, if only for the reason that, while leaving Fiume outside Italian territory, it placed part of the railway connecting Fiume with Slovenia under Italian jurisdiction. Such an arrangement, with the best of goodwill prevailing between the Italian and Yugoslav Governments, could not fail to be provocative of constant friction in the everyday relations between the two peoples. The Wilson line gives Italy the railway running down the Istria Peninsula and connecting Trieste and Pola, but leaves the line from St. Peter to Fiume in Yugoslav hands. The latter port the Yugoslavs are prepared to see made a Free State under the League of Nations—a solution which, however simple it may seem on paper, may well prove more difficult in practice. A municipal administration will have to be formed, and, with Yugo-

Digitized by Google

slavs and Italians more or less equally balanced, the Council might comprise equal representation for the two nationalities under a neutral chairman. The chief crux will be the police force, which ought preferably to be homogeneous; but if it is to consist of Italians and Yugoslavs, the officers ought to belong to a third nationality.

Whatever may be the effect on the League of Nations of a refusal on the part of the United States to join it, there can be no doubt that their delay in coming to a decision on the subject of a mandate has added enormously to the difficulties of the Allies in dealing with Turkey. To this delay may be attributed to a large extent the increasing truculence shown by the Turks. The mere fact that the Allies could have no policy in regard to Turkey has emboldened the adherents of the Committee of Union and Progress to play for their own hand, with the result that Mustapha Kemal is now in a position to cause infinite trouble, if he decides to ignore the terms of the Turkish settlement. Unless steps are taken at once to reinforce the Allied troops in Asia Minor, the outlook for the handful of British troops there is precarious, and the doom of further thousands and tens of thousands of Armenians is sealed. The republic of Erivan has so far been able to hold its own against the Tartars: but any substantial accession of strength to the latter will probably enable them to put the whole country to the sword, and to massacre the Armenian refugees, who, to the estimated number of 200,000, are waiting there for an opportunity to return to their homes at Erzerum, Van, Kharput, and elsewhere.

The American attitude towards the question is, that as British troops had already been sent to Asia Minor, it was a simple thing to keep them there until a final settlement could be agreed upon. That may be so; but Great Britain cannot be blamed for supposing that behind the embarrassing idealism of the American President lay, if not altruism, at least a resolve to practise a modicum of what had been preached from the housetops. The crushing financial burden imposed on Great Britain by the war compelled the British Government to reduce at once its heavy military expenditure, and it was thought that a definite announcement that British troops would have to be withdrawn by a certain date would bestir the United States to throw themselves into the breach. They have not done so, contenting themselves with an undertaking to victual Armenia till next August; but the British garrison has been considerably reduced, and we are now confronted with the prospect of Turkish regulars or irregulars being left to their own devices, with the inevitable massacre of a population that has remained faithful to the Entente throughout the worst experiences of the war.

Speaking in the House of Commons on Tuesday, for the first time since his return from Paris, Mr. Balfour made a statement of the highest importance regarding Egypt and our relations with that country. After referring to what Egypt, like most other countries, suffered, directly or indirectly, in consequence of the war, and to the rumours and strange legends current in the East regarding the Government's policy, he continued:—"Let me say, very shortly, that in our view the questions of Egypt, the Sudan, and the Canal, form one organic and indissoluble whole, and neither in Egypt, nor in the Sudan, nor in connection with the Canal does England mean to give up any of her responsibilities. British supremacy exists; British supremacy is going to be maintained; and let nobody either in Egypt or out of Egypt make any mistake upon that cardinal principle of his Majesty's Government." The cheers with which these statements were received showed that the House still appreciates plain speaking on the rare occasions that it is fortunate enough to hear it; and that it is not likely yet to be led away by the handful of faddists who mistake licence for liberty, and are incapable of realising that the "gift of the gab" does not necessarily imply that its possessor is fit to govern himself—to say nothing of others.

Mr. Balfour very properly went on to say that "we desire in every way to associate the Egyptian native population with the government of the country," but he uttered a warning against indulging in "unrealisable expectations" which, if they were fulfilled, would damage the Egyptians even more than they would damage this country and the world. He concluded by assuring the Egyptians that, unlike their former masters, the Turks—"who," he remarked, parenthetically, "in Egypt at this moment still affect to be pro-Egyptian"—we shall pursue the policy that has made Egypt such a different place from what it was under Turkish rule. It is unfortunate that the memory of those days of sheer oppression appears to have faded utterly out of Egypt, and that all that many Egyptians know, or care to know, about the Turks, is that they are, or profess to be, good Moslems. The spread of education may effect a change in the outlook of the Fellah, but just now he is in no mood to grasp the truth. In Egypt Mr. Balfour's declaration will be received with little satisfaction, but almost certainly it will exercise a beneficial effect. The leaders of the Nationalists and Zaghlulites are quite shrewd enough to know that such a man would not make use of such words without first weighing them: and if they are capable of thinking out what course of action their use implies, they may yet find it advisable at least to moderate their demands.

Three other topics upon which Mr. Balfour touched were: the future of Turkey, the situation in Syria, and the Arabs; and it is refreshing to find them all handled with the firm grasp of a statesman instead of being shuffled round and evaded as they have been for so long in Parliament. As to Turkey, he admitted frankly that the state of unrest now prevailing in the Ottoman Empire is doing infinite harm and making it more difficult to solve the problem of the country's future; but he also made it quite clear again that the delay is due to America's delay in making up her mind as to her policy towards Turkey. He declared, however, that the Turkish people, who have had a great past, are not going to be wiped off the map by any conference in Paris, in London, or even in Washington. And he was not afraid to suggest that it might be advisable to apply the principle of self-determination to the Turks, as to other peoples. But what the boundaries of the future Turkish Empire will be, he confessed he was unable to say.

The question of Syria, Mr. Balfour said, has not yet been settled, and he wisely declined to commit himself to any prophecy about it. But he performed a useful service in stating categorically that there is not, and never has been, any truth in the reports which have been set about to the effect that Great Britain, being in military occupation of Syria, means—or meant—to remain the dominant power in that country. So far as England and France are concerned, there is no rivalry and can be no rivalry regarding Syria. It will be interesting to note whether this frank and explicit statement will put an end to the rumours referred to.

The Arabs who learn what Mr. Balfour said of them should be gratified. They had, he said, shown themselves faithful, brave, and efficient, and had lately, for the first time in centuries, played a great part in a great movement, with the result that the prestige of the Arab race has greatly risen. But the most significant part of his remarks in this connection was that in which he declared that he has every hope that we shall see a resuscitation of the great Arab civilisation. That is a bold thing to say, but for the sake of the world, no less than for the sake of the Arabs themselves, it is to be hoped that the future will justify the speaker's faith. The Arab civilisation was very different from the European, but it had many virtues of its own, and if it can be coaxed into renewed growth, on natural lines, the world at large will undoubtedly be the gainer thereby.

Some light is shed upon the workings of the Egyptian Extremists' minds by their decision to cele-

Digitized by Google

brate as a National Holiday the anniversary of the day on which Zaghlul Pasha first put forward his demand for complete independence for Egypt. To them, it would seem, asking for a thing is synonymous with getting it, or, at any rate, as worthy of admiration as working for it. And these are the people who clamour for independence! Unfortunately, the first celebrations of this new Independence Day (Egyptian variety) did not pass off without violence. Both in Cairo and in Alexandria there were attempted demonstrations, and in both cities the police were attacked by the mob and it was necessary to call out Egyptian troops.

But the most important news from Egypt is that a *communiqué* has been issued from the Residency, announcing that the policy of Great Britain in Egypt is to preserve the autonomy of that country under British protection and to develop the system of self-government under an Egyptian ruler. The establishment of a constitutional system in which, under British guidance, the Sultan, his Ministers, and the elected representatives of the people may in an increasing degree co-operate in the management of Egyptian affairs is also mentioned. The *communiqué* concludes by declaring that the Milner Commission is to work out the details of the Constitution and to propose a scheme of government, which can afterwards be put into force. The first effect of the announcement appears to have been to bring about the resignation of the Cabinet. Such action was not altogether unforeseen. It is to be hoped that reflection may bring wiser counsels to the Ministers and responsible Egyptians, if not to the Mob.

Prince Alexander of Serbia has issued an appeal to the British nation to come to the help at this time of the Serbian people. There can be no doubt as to the need for such assistance. Earlier in the year the disastrous mistake—for which the blame must be shared by the Paris Conference and the Serbian authorities—was made of not proceeding drastically with demobilization in order that every available man should devote all his energies to the task of rehabilitating the devastated country. In place of this policy the great bulk of the Serbian troops were kept on a war footing, operating in the Banat, or in Montenegro, or watching the Italian frontier. Serbia was entitled to say to the Peace Conference that she had done her share in the war, and that she must leave her foreign relations in the hands of the Allied Powers while she set about her more pressing domestic concerns. In this way the country might have been ploughed and sown, and the outlook for the winter would have been happier. That Serbian interests would have been adequately safeguarded is proved by the experience of Fiume and the Banat.

THE WEEK AT HOME.

Parliament and Russia.

The Government's Russian policy has now been announced, but there is, of course, no certainty that it will not be reversed in a fortnight's time. There is to be no further aid to the various factions, and we shall no longer fight Bolshevism in its own house. On the contrary, a respectable Labour representative is being sent to Stockholm to interview the notorious Litvinoff on the subject of prisoners; and those who believe that the conversations will be entirely confined to prisoners, as is suggested in the official announcement on the subject, are probably rather unsophisticated folk.

The Prime Minister's statement on Monday night satisfied none of the parties. Sir Donald Maclean, indeed, "praised with faint damn," but his praise is so like his damn, and both are so like lukewarm water, that nobody can tell the difference. The Labour Party declare themselves anxious to be friends with Bolshevist Russia, which they profess to regard with affection as a democratic republic; but the Labour leaders, who are recruited from the respectable bourgeois class in England, are not really overflowing with enthusiasm for a Government which kills the bourgeois at sight on general principles. Mr. Arthur Henderson, who is a very solemn and portentous individual when he tries to be impressive, does his best to speak to his brief on behalf of Bolshevism; but he cannot forget that they examined his personal luggage and stole his clothes in Petrograd, and that the Bolshevist Press in Russia denounces him day by day as a traitor. The accusation is absurd; Mr. Henderson would never betray anything except his own inadequacy to deal with a big situation.

Most of the Coalition seem furious at the decision to abandon the fight against Bolshevism in Russia, and they are not in the least impressed with the plea that one cannot fight against an idea. After all, we fought successfully enough against the Prussian idea. The Northcliffe papers are also full of denunciations of a Prime Minister "shaking hands with murder"; but the public is not and never has been interested in the Russian adventure. They did not understand the situation in Russia; they doubted, and with some reason, whether the Government understood it; and the mere fact that the whole policy of intervention was inspired by Mr. Winston Churchill, gave many a respectable citizen a cold shudder down his back.

The Return to Isolation.

The argument has been generally advanced that if we abandon Russia, Germany will overrun that country. It is probably true, but it has failed to convince. The reports from Germany do not indicate any real revival of energy a year after the war; despite rumours of the possibility of Monarchist or Spartacist revolutions, general lassitude still seems to prevail, and no definite policy of reconstruction has been decided on. It therefore appears not very likely that Germany will possess the energy to dominate Russia in the near future, although no doubt that will be her ultimate aim. She cannot, indeed, expand in any other direction. The dream that Central Europe was going to control the rest of Europe has vanished altogether, like a professor's nightmare; and the collapse of German sea-power has ended all hope of oversea expansion. She is therefore driven back to the East; but she will hardly have the strength to do much in that direction during the next generation.

As to Russia itself, admittedly our ignorance is appalling. But all the efforts of all the friendship societies and the propaganda organisations which read papers on Russian music and generally dissect the Slavonic soul have fallen flat; for if an Englishman is not naturally interested in a subject, no known form of persuasion will make him listen.

The ordinary Englishman's attitude to Europe may be summed up as follows: He never wants to hear of Russia again, or to see a German again; he is ready to back up

Digitized by Google

the Poles, and he has a rather vague idea that although he does not know where Yugoslavs and Czecho-slovaks live, they are generally on the right side of the hedge. But he would rather they did not make too much noise whenever they find it necessary to quarrel. For the rest, he means to keep friends with France, and to develop the British Empire, and those are really the corner-stones of his foreign policy. He is exhorted to grieve because the League of Nations idea is steadily losing support; but he felt towards that institution very much the same as towards the Athanasian Creed—both might be very good things in their way, but they were beyond ordinary comprehension, and had better be left alone.

America and Europe.

The reports from Washington as to American action over the Peace Treaty have therefore not disturbed anybody very much in England; indeed, they have probably done more to arouse a friendly feeling for the United States than all the brotherly speeches by Lord Reading and Lord Bryce at the inevitable Anglo-American dinners. It is undeniable that President Wilson's way of making peace led to a feeling, which was not publicly expressed out of courtesy, that his policy was autocratic and would not work; and we are all relieved to find that Americans appear to feel this even more strongly than we do. We on this side of the Atlantic are so used to the policy of splendid isolation for ourselves that we have always perfectly understood the average American's dislike of intervention outside his own continent.

There is general sympathy for President Wilson in his illness, which appears to have been brought on by his exertions in Paris, and later by his very natural and, in the circumstances, entirely proper desire to recommend his personal policy to his own people; but it cannot honestly be said that there is any general regret at the failure of his policy to secure support. The difficulties seem indeed to have been insuperable. The American public has always been very conservative, especially in foreign affairs, and it has never forgotten Washington's warning against entangling alliances. American books and newspapers recently published show conclusively that the country is faced with grave social and economic difficulties which urgently require attention, and it may be excused for thinking that home problems should come before foreign affairs. It is not selfishness, or lack of vision, which has made the United States jib at President Wilson's novel canons of foreign policy, but a very practical appreciation of the need for cleaning up one's own house before telling a neighbour how to clean his.

It must be confessed that something of the same feeling about the League of Nations exists here. A good number of meetings have been held in support of the idea, and a fair amount of people have attended them, as they naturally would to hear speakers like Lord Grey, Mr. Balfour, and General Smuts, all of whom have addressed audiences on this matter during the year. But the verdict of the ordinary political speaker is that "the thing cuts no ice; you feel you ought to mention it, like education or temperance reform, just to show how much you know; but more than an allusion bores people, and a whole speech on the subject could only be attempted by men with very safe seats."

A Novel Charge.

The Government has sometimes been accused of profiteering, but never so directly, or in such novel form, as at Oxford last week, when a learned economist brought a charge before the local Profiteering Tribunal, in which he accused the Treasury of profiteering on the ground that paper money which could be manufactured for less than a penny was sold to the public at a pound—obviously the most extortionate rate of profit conceivable. The complainant assured the puzzled tribunal that his complaint was to be taken seriously. Quite evidently they were nonplussed at the charge, and they hastily adjourned to consider their course of action.

Labour and Industrial Control.

The most important industrial event that has occurred for many years has passed almost unnoticed by the Press this week. During the last year or so Labour has added to its old claims for shorter hours and higher wages a third and far more novel demand—for a share in the management of the industry. The argument was that while Capital only gave its money, Labour gave its working life to the industry, and had therefore some right to a voice as to the conditions under which the business was carried on. The demand was opposed, and some employers of the die-hard character went so far as to say they would rather close their works than give Labour a voice in the management. But in the last few days the Government has conceded the principle on the railways. It marks a far more definite advance in the status of Labour than any strike could have won.

The details of the arrangement are lengthy and complicated, and cannot all be set out here. But, broadly speaking, the position is this: Before 1914 the railway companies had full control of their own lines, subject to Parliamentary statute. In 1914, and since, control has been in the hands of the Government, and the shareholders have merely received a guaranteed dividend. Now the control will be divided into three equal portions—the management representing the shareholders; the railwaymen, representing the operators, and chosen by the trade unions; and the public. Mr. Thomas, the railwayman, made a great point of the generosity and wisdom of giving the public equal rights with Capital and Labour; but after all it is the public that pays the fares and keeps both Capital and Labour going.

How rapid the change of status has been may be shown by a single comparison. In 1911 a railway strike was fought over the refusal of the railway directors to "recognise" the railway trade unions; in 1920 the two will sit at the same round table. It is quite certain that the change will affect other forms of industry, and that in every trade where Labour is organised there will now be a demand for a seat on the board for the elected representative of the workers. The experiment will be watched with considerable interest; its results, of course, depend very largely on the personal element, pure reason not being the exclusive prerogative either of master or man. Its most immediate reaction will probably be felt in the highly organised engineering trade.

Mr. Churchill as Journalist.

The critics of the Navy have provoked Mr. Winston Churchill to reply, and those who hold that he is a better journalist than statesman are impressed by the vigour of his polemic in the latest newspaper controversy. He points out that if the Navy had been as inefficient as its critics suggest, it is strange that the Germans did not discover the fact, since it would have been rather useful to them to have sunk the whole British Fleet in the first week of the war—which, according to those who attack the Admiralty, they could quite easily have done. As for the contention that the Admiralty is fossilised and stagnant, and stands in the way of any naval improvement with immeasurable quantities of red-tape, he remarks with truth that the Admiralty is recruited from the active list of the Navy, and that in order to ensure vitality at headquarters, the Admiralty is officered by men from the sea, who after two or three years' service ashore go back to the sea. Thus Lord Jellicoe's criticisms of the Navy ignore the fact that Admiral Jellicoe was himself in high office at the Admiralty almost immediately before the war; and Mr. Churchill asks pertinently why he did not point out the shortcomings when he was in office before the war, instead of writing a book about it after the war. There seems some force in the contention.

OCELLUS.

The War Office states that since October 25 eight vessels have sailed from Bombay and Basreh carrying 447 officers and 7,804 other ranks. Of the fourteen Territorial battalions and nineteen Territorial batteries which were in India when demobilisation recommenced after the interruption caused by the war in Afghanistan, ten battalions and nine batteries have been released, and the shipping programme arranged by the Indian Government will permit of the embarkation of the remainder of the Territorial Force units before the end of the present month.

EGYPT.

CAIRO, November 5.

More Disorder in Alexandria.

As the cables will have advised you, Alexandria has been the scene of another demonstration, with even more disgraceful results than that of the preceding week. The earlier part of the week was fairly peaceful, but a strike on the part of the Minet El Bassal carters again started excitement in the Gomrok quarter. They demanded a very substantial increase in pay, and their cessation of work completely paralysed the cotton market. The sidings became so congested that the railways had to refuse to accept any more consignments from the interior, while it became impossible to ship, and the managers of the Bourse deemed it advisable in the public interest to close it. The closure only lasted twenty-four hours, and shortly afterwards the strike was settled. But on the Thursday the low characters of the quarter took advantage of a parade of the carters to overrun the district and molest everyone they came across. In the course of their ramblings they stopped several cars containing officers and men, who only managed to get away by using the arms they carried.

Friday dawned peacefully, and in order to prevent any demonstration the Governor, accompanied by various notables, attended prayer at the Abu El Abbas mosque, which has by now become famous in this connection. But long before noon there were evident signs that the Extremists had arranged for a demonstration. Crowds made their way towards the mosque, while another large crowd began to assemble on the Mohammed Ali Square. At the conclusion of prayers the Governor and the "Imam" addressed the worshippers and enjoined them to go home; and when the congregation poured out and, with the crowd outside, commenced to form up into a procession, a police officer called upon them to disperse. No attention was paid to these admonitions, and the demonstration, which was larger than any previous one, started to walk towards the centre of the city. At the Mohammed Ali Square it was joined by the crowd already mentioned, and together they wended their way in quite orderly fashion across the square to Ramleh Station, and down the Boulevard Ramleh.

Where they were going was not quite clear. It is thought they intended to return to their starting point, but, unfortunately, as they entered the narrow end of the boulevard an ambulance, followed by another car, came up from behind and tried to pass. The driver apparently lost his head on finding that the crowd would not give him a passage, and, putting on speed, knocked over several of the demonstrators. This incident naturally upset the crowd, and the "agents provocateurs" quickly took advantage of it to get the demonstrators to attack the shops in the vicinity. While this was going on, a car belonging to the Frontier Districts Administration, and containing three Egyptian soldiers, arrived on the scene. They also appear to have lost their heads; for they suddenly started careering through the principal streets, firing wildly with their rifles as they went along. Their progress seems to have aroused the low characters of the Minet El Bassal quarter, for a large crowd of them suddenly appeared and started smashing and looting whatever shops were most handy. Order was restored by the police, who managed to obtain control of the situation without calling upon the British troops, but the damage done to the shops—most of which were European, and which included Morums Stores—was very considerable; though, as far as can be ascertained, the actual casualties were relatively small.

As might be expected, these events have considerably alarmed the European colony, and they are loud in their demands for the stoppage of these demonstrations, and for more energetic action on the part of the authorities. They are particularly indignant that the situation should have been left in the hands of the Egyptian police; for, although the latter eventually restored order, they obviously failed to carry out their most important duty—viz., the breaking-up, when it was first formed, of the demonstration, without which there would have been no such incidents, and no such menace to the European quarter as actually occurred.

The attitude of the authorities in this respect is very much criticised. Although no official explanation has been offered, the following appears to have been the reason for their action. As mentioned in my last letter, the utilisation of British troops in the course of the previous week's riot in Alexandria gave rise to protests, undoubtedly engineered by the Extremists. Pressure was brought to bear on the Government and the local authorities, not only through the Extremists' organs, but also by some of the notables of Alexandria, the latter of whom expressed their willingness to use their personal influence to prevent any further demonstrations or troubles, if the British troops were withdrawn from the districts in question. Numerous meetings were held by the Governor. It was finally agreed, on the personal assurance of the notables in question, to meet their wishes, and the acting Commandant of the Alexandria City Police undertook to maintain order by means of his police force, and to ask the military authorities to withdraw their troops.

This was admittedly a somewhat venturesome experiment, but the authorities appear to have been impressed by representations that the presence of the British troops would precipitate trouble and give rise to bloodshed, which might otherwise be avoided; and to have decided that, if after all the notables did not succeed in preventing a demonstration, it would in the circumstances be better to allow it to take place and regulate its progress by means of the Egyptian police rather than break it up at the outset and cause bloodshed, which it was desirable to avoid in view of the state of feeling in the country. As events proved, however, bloodshed

was not avoided. It is true that, as far as can be ascertained, the collision with the ambulance was the starting point for disorders and that the mad career of the Frontier Districts' car aggravated the situation; but there is no blinking the fact that had this vast concourse of people not been allowed to enter the city and block traffic, neither of the so-called contributory incidents could have occurred. In other words, we have now conclusive proof, if such proof were indeed necessary, that whatever steps are taken to regulate these popular manifestations they are bound at one point or another to disturb public peace, and that they are therefore against public interest. Apart from that, demonstrations are actually forbidden both by military Proclamation and Egyptian Law, and there is consequently no reason whatsoever why they should be tolerated.

As regards the utilisation of the British troops, popular feeling may, quite naturally perhaps, resent their introduction to maintain public order. But when the menace to public peace offered by these demonstrations cannot be prevented by the official agents of the Government, and when they develop, as they have done during the past few weeks, on the slightest pretext, into an attack on Europeans, there can no longer be any excuse for refusing to allow British troops to reinforce the Egyptian police, if the latter cannot break up the manifestations when they start; and popular feeling must in this respect suffer the consequences of the disregard of certain members of the Egyptian community for the laws of the land. After all, the British Government is responsible not only for maintaining internal order but also for protecting European interests in the country, and it has a very plain duty to perform if the Egyptian forces are incapable of carrying out this work. At the same time it is as much to the advantage of the Egyptians themselves that public order should be maintained, for such occurrences as those of the past fortnight can but bring discredit on Egypt both politically and commercially; and, however the Extremists may feign to regard the political result, they cannot afford to ignore the effect which these troubles are bound to have on the commercial relations between their country and the rest of the world.

It is not easy to prophesy what is likely to happen next Friday, but there is no doubt that the situation is such as to call for energetic action on the part of the authorities, including, if necessary, the reinforcement of the Egyptian police by British troops, not only to calm the European communities of Alexandria, but also to give a lesson to those who are persisting in these popular manifestations and to prevent the latter spreading to the rest of the country.

As I close this, news comes from Alexandria that the Council of Ministers has decided to prohibit demonstrations and to take steps to enforce respect for the law.

YUGOSLAVIA.

BELGRADE, November 1.

A Year Ago.

To-day is the anniversary of the liberation of Belgrade after three years under the enemy. This day a year ago, while the last Austrian detachments were hurrying across the Save to escape the Nemesis at their heels, and blowing up the bridge behind them, huge crowds collected in King Alexander Street to meet the liberating troops and decorate them with flowers.

The tremendous events of this time last year, both military and political, filled men with hopes of the Millennium, but Serbia is to-day suffering from the reaction. Perhaps that is the reason that there is a strange absence of excitement or signs of celebration in Belgrade to-day; a few flags on a few houses, and a procession of schoolboys and girls who struck work and paraded the streets with the national flag and the Stars and Stripes in honour of President Wilson—nothing more. Perhaps the people are saddened by the political history of the past four months, during which the squabbles of the politicians have done the country more harm than they realise.

The Cabinet Crisis.

The political crisis is over, and Dr. Davidovitch is carrying on the business of Government. There are slight changes in the Cabinet; the Dalmatian, M. Biankini is Vice-President, and now M. Marko Dakovitch, leader of the ten Montenegrin deputies, is joining the Cabinet on the understanding that no partisan matters be dealt with, retaining full freedom of action in national matters. Well he may, for his distracted country needs every attention. The recent incident at Tsrmnitsa cost the lives of several Montenegrins, who were done to death defending their property. At Simunji, between Biélitsa and Tieklitja, a party of Italians and Nicholite Montenegrins ambushed a detachment of gendarmes, killing a sergeant, corporal, lance-corporal, and two privates. Cannot the Olympians at Paris put an end to this misery and internecine bloodshed?

—And a Municipal One.

The political crisis has been followed by a municipal one, which is now settled. The vote of want of confidence was based solely on the failure of the municipal authorities to secure an adequate supply of coal, petroleum, salt, and other indispensable commodities. A curious situation arose, as the Minister of the Interior quashed the meeting at which the vote was made, n the grounds that there was no quorum, but the resignations of the mayor and councillors were held good. The Opposition consisted chiefly of Independents, who at once opened negotiations with the outgoing Radicals, and even offered them the mayoralty, but the latter claimed a clean slate on return to power. In view of subsequent proceedings this was impracticable, and elections took place. The new mayor is Dr. Kosta Jovanovitch, a high official of the Ministry of Social Policy, the Deputy-mayor is Mr. D. Zhivaljevitch, director of the State Press; the former an Independent, the latter a Progressive. Both are men of good reputation, and it is hoped that they will be able successfully to cope with the difficult task of satisfying the immediate needs of the town and executing the scheme of modernisation and improvement which its enhanced importance and commanding position demand.

Croatian Nationalists' Meeting.

On the anniversary of the Declaration of Freedom, a large meeting of Croatian Nationalists was held at Zagreb under the presidency of Dr. Laginja, leader of the Narodni Club, who declared that the Croatian people are all in favour of union, but cannot permit an affront. Dr. Pavelitch and Dr. Drinkovitch also spoke, and Dr. Mehmed Spaho, in the name of the Serbian Mohammedans of Bosnia and Herzegovina. The meeting passed a resolution accepting the minority clause in the Austrian treaty, demanding Fiume for Yugoslavia, and begging England and France to guarantee them justice in foreign affairs.

A More Optimistic Outlook.

With the return of Dr. Trumbitch to Paris, there is a distinct feeling of optimism in the air, based partly on confidence in the justice of their cause and partly on messages coming from Paris and notices in the French Press assuming a more favourable tone, partly on the good news of an improvement in President Wil-

CROWE & STEVENS,

Steamship Agents and . .

son's health and his rejection of the Tittoni proposal. Serbs feel that there is the beginning of a revulsion of feeling in their favour, that D'Annunzio's freak performance and the various "incidents" at Fiume have alienated a good deal of sympathy from Italy. The *Tribuna* reports that England is now more inclined to the Serbian point of view, that direct conversations are taking place between Dr. Trumbitch and Signor Tittoni, and that the Italian Delegation has decided to accept President Wilson's proposal.

Dissatisfaction with Paris.

The anniversary of the successful issue of the war has been signalled in a manner recalling its beginning—that is, by the presentation of an ultimatum damaging to the sovereignty of the State. Unlike the infamous incident of 1914, this ultimatum has come from allies, friends, and protectors, and is to the effect that the Conference in Paris will not permit the signature of the Treaty with Bulgaria until the Delegates of the S.H.S. have signed the Treaty with Austria. This has produced a most painful impression here, for the injustice of the Austrian Treaty, by which foreign Powers are given the right to interfere in Serbian internal affairs, while Serbia has no voice in the protection, *inter alia*, of the half million Slovenes who have exchanged Vienna for Rome, already rankled.

Even the moderate Press is in arms; the *Politika*, which, in spite of its name, is more a family than a political paper, published the first news of the ultimatum, which other papers declined to credit; and expresses the hope that the Government will refuse to accept it. Even the staid *Trgovinski Glasnik*, the Commercial Messenger, after a long leading article, expresses the same sentiment. But the *Pravda* points out that the Conference dares not admit any limitation of its authority, as the slightest concession would weaken its prestige and power to deal with the real enemy of Europe, Germany. No exception can be made in favour of China, or of Roumania, or of Greece, or of Yugoslavia; and so it prepares its readers for the inevitable. But the feeling of injustice is sinking deep and will leave a wound, for the Serbs feel that they have been hardly treated by the Allies. Bulgaria's war debts to Germany have been pardoned, but Serbia has to pay hers in full and with interest. "Bulgaria is excused from returning in full the enormous number of cattle which she has taken from us," complained a prominent Serb official recently, "on the grounds that it would ruin the country. Good heavens! What about our ruined country? What about our returned soldiers in the southern districts, who have found neither homes nor families, much less their stock?"

The Yugoslav delegates in Paris have submitted a request asking for consideration of their point of view on the Minority Question, and the question of the river steamboats which formerly flew the Austro-Hungarian flag but now belong to Yugoslavia or Yugoslavs, but which, by the wording of the Treaty, must be surrendered. This is evidently an unintentional effect of wording which will be put right.

The Serbs attribute their misfortunes in Paris to the absence and ill-health of their friend and protector, President Wilson. A pæan of thanksgiving has appeared in all the Press on the news of the improvement in his health and appearance of his activity once more. In practically all towns in Yugoslavia, some prominent street or square has had its name altered in his honour, and the Yugoslavs are convinced that his principles will obtain in Paris and finally justice be awarded, especially in the Fiume question. Italy's imperialism is in frank opposition to Wilsonian principles, and there is no suggestion of "self-determination" near the Italian frontier, nor anywhere where the Italian uniform is seen, as in Zadar (Zara) and Shebenik (Sebenico) in Dalmatia, and, above all, in Montenegro.

In a pessimistic leading article the *Politika* points out how the Great Powers are hurrying to secure their interests before the League of Nations can interfere; for instance, Great Britain is endeavouring to make "a new Egypt in Persia; Syria cannot escape a similar fate, while Mesopotamia directly links India with the Mediterranean." The hegemony which Germany was striving for in the Middle East has been secured by England, the more easily now that Russia is inarticulate. Japan has annexed a great portion of densely populated Chinese territory, and obtained the consent of Paris. The writer continues his lamentations on this "Diplomatic Nightmare" by not unnaturally complaining of the inefficiency of the League of Nations to prevent all this, or, at all events, to secure national justice once and for all for the little nations; while the Roumanians have marched on Pest, and are squabbling with the Serbs about the Banat; with the Czechs and Ukrainians, Ukrainians and Roumanians, Bolshevists and Russians, and the Baltic States, all fighting more than a year after the nominal cessation of hostilities.

Wolf Drive.

In spite of the mild spring weather, the following notice appeared in the *Pravda* of November 8:—

Because wolves have made their appearance in the district administered by me, and in collaboration with the Belgrade Shooting Association, I have resolved that on the 9th inst. there will be a wolf drive, in which will take part shooting men not only from my district, but also from the Belgrade Association of Shooting Men. Arrangements may be seen by those interested at the offices of the association at the "Café Shumadia." This for the benefit of the shooting world, for their information.—Given at the office of the Sub-Prefect of the Vrachar District, November 16, 1919.

BULGARIA.

SOFIA, October 20.

The Chamber.

On October 14 the Bill authorising six-twelfths of the Budget for the period October 1, 1919-April 1, 1920, was introduced in the Chamber. M. Kolaroff, a Communist, opened the debate with a speech which amounted to an appeal for the increase in pay of functionaries, the confiscation of wealth and property, and its equal distribution. Unfortunately, he failed to indicate in what manner the very heavy payments he advocated were to be made possible. The Bill was voted and adopted at first reading. According to the statement of the Minister of Finance the Budget from April 1, 1919, to April 1, 1920, will amount, in round figures, to 1,700 millions of levas outgoings, and revenues of only 900 millions, leaving the huge deficit of 800 millions.

Protest Against Peace Terms.

On October 16 there was a memorable sitting of the Chamber, at which representatives of the various parties criticised the Peace Terms, and claimed a place in the sun for Bulgaria. M. Asen Tzankoff (Moderate Socialist) said the Treaty was horrible; its authors ought to be here to see how the population of the territory torn from Bulgaria was flying. Only one principle was observed in the Treaty: violence, vengeance and oppression. There was not a word in it regarding the exchange of prisoners, though the condition of Bulgarian prisoners in all camps is heartrending.

The declaration which M. Madjaroff, Minister for Foreign Affairs, read to the Chamber is a denial of the widely held opinion that Bulgarian claims are immoderate and imperialistic. Bulgaria has reduced her claims to the extreme minimum, to which her neighbours cannot make any reasonable objection. With Roumania, she asks the frontier of 1912, with Serbia the frontier which the Serbians themselves drew in 1913, when they dictated the Bucharest peace terms. The same thing applies to the Ægean coast, which the Greeks themselves ceded to Bulgaria in 1913 at Bucharest. If anyone should dispute Bulgaria's claims to these districts, she would gladly accept the results of a plebiscite taken on the spot by disinterested and impartial parties. Lastly, for Macedonia, autonomy is asked for, which would serve, not to disunite, but to bind together, the Balkan States.

After hearing all the speakers the Chamber adopted the following order of the day: The Chamber is deeply shocked by the contents of the Peace Treaty handed to

Digitized by Google

the Bulgarian delegation. It sees in it an act of supreme injustice, vengeance, and punishment utterly unmerited by the Bulgarian nation. The national representatives of Bulgaria did not expect from the supreme tribunal of the Allied great States, convoked at Paris, violence, injustice, and a trampling on the great principles of nationality, liberty, and the independence of nations. The tearing away of parts of the living body of Bulgaria, the imposition of heavy and unbearable financial and economic obligations, fill the soul of the nation with the bitterest sorrow. The Bulgarian nation, which has not yet lost faith in the principle of world-justice, placed in such conditions of most terrible and extraordinary injustice, raises its voice through its national representatives, and vigorously protests before the civilised world against the violence and the vengeance inflicted upon her, by which she will be deprived of the chance of human culture and economic development, and even of human existence as a most modest member of the League of Nations.

The King and Thracian Refugees.

The unexpected Greek occupation of Xanthi set flowing a great flood of refugees from the threatened district. Last Wednesday H.M. the King, accompanied by the Prime Minister, M. Stambolisky, made a short tour in Southern Bulgaria, and visited the refugees, whom they advised to return to their homes, where the Bulgarian administrative and the French military authorities will protect them against Greek excesses.

TURKEY.

CONSTANTINOPLE, November 9.

The Election.

The Turks are in the throes of a general election, which, according to all accounts, differs in no way from former elections in Turkey. I say "the Turks" advisedly, for the Christian elements and also the Jews are abstaining from voting or taking any other part in the proceedings. The Entente Libérale party, the bitter enemy of the Committee of Union and Progress, is also holding aloof, and it is reported that another political party, known as the Peace and Prosperity party, is following its example. A local paper, commenting on these facts, ironically asks who is taking part in the elections. The answer is, of course, obvious; for the results that have so far come to hand show victories for the Unionists. That party is supposed to have ceased to exist, but its ideals are certainly very much alive, and, in spite of all denials, it is beyond doubt that the so-called National Movement is nothing but a move in the Unionist game.

From various quarters come complaints against irregularities in the elections and demands for annulling certain elections that have been completed. These demands are also accompanied by complaints against the proceedings of the National Forces, which have been raised in Anatolia for the avowed purpose of resisting the partition of Anatolia. From various districts protests have been addressed to the Sultan and the Government against Nationalist extortions of money and goods, as well as Nationalist pressgang methods of obtaining recruits. The Government is, however, powerless, for it was only able to assume office after having come to some kind of understanding with Mustapha Kemal Pasha and the other Nationalist leaders, whose headquarters are at Sivas. Recently the Minister of Marine, Salih Pasha, met Mustapha Kemal Pasha at Amasia, and was informed of the Nationalists' desiderata, which, if accorded, would make the central Government a mere automaton worked by the Sivas "government." Naturally, the position of the Cabinet is extremely critical. The War Minister especially finds his position intolerable, for the Army is divided into two sections, one of which obeys the Central Government, while the other looks only to Mustapha Kemal Pasha.

Nationalist Aims.

The Nationalists make no secret of their intention to resist by force of arms any peace terms involving the session of any part of Anatolian territory, more especially to the Greeks, with whom, in spite of the line of demarcation recently fixed by a special mixed commission, there seems to have been further fighting. This will add further to the embarrassment of the Government, for if there is an *entente* between the Central Government and the Nationalists, acts of hostility against the Greeks become official and acts of war. On the other hand, repudiation of the Nationalists involves the paralysis of Government authority in Asia Minor; for the Nationalists have proved that they have the power to isolate the capital completely from Anatolia, so far as all communications are concerned, at any moment. It is said that if the present Cabinet falls, Ahmed Riza Bey will be called upon to form a new Government. There may be some truth in this, for it must not be forgotten that Ahmed Riza Bey left the Committee of Union and Progress more in sorrow than in anger, and there have been signs that he has still a soft spot in his heart for the old ideals.

The Christians in Anatolia.

Meanwhile the position of the Christians in Anatolia is far from enviable. It is true that there have been no organised acts of hostility against them so far; but the fact remains, and has even been indirectly acknowledged by an ex-Grand Vizier, that they are hostages for the favourable consideration by the Allies of Turkish peace desiderata. So uneasy is the feeling among them that considerable numbers have been moving to the Samsun district, in order to be near the British troops who are stationed there. But only a certain proportion of them can do this, and the outlook for the rest is most gloomy, for there is no one to protect them when the time comes for accounts to be settled.

The Allies hold one trump-card—Constantinople; for the average Turk, the "Effendi," who pulls the strings of mass movements, would not consider life worth living without the "Dersadet," the "Abode of Felicity." It is to be hoped that, failing adequate occupation of Asia Minor as a precautionary measure, the Allies will make up their minds to make the Turks understand very clearly that the slightest organised outbreak against the Christians of Asia Minor will inevitably involve the loss of Constantinople as a penalty.

The French occupation of Marash, Aintab, etc., following upon the British evacuation of those districts, has aroused a storm of indignation from the Moslem population, but the Armenians naturally welcomed the French with open arms. It is reported that the French have treated certain attempts to disturb the peace in drastic fashion, and, if this is true, the lesson should be of value to Mustapha Kemal and his brigand friends.

The Goeben: A Turkish View.

Mr. Walter Long is reported to have stated in the House of Commons that certain precautions have been taken to prevent the Goeben from being scuttled, and that a British prize crew is on board. The first part of the statement is correct, but not only is the second part absolutely incorrect, no British crew being on board, but the ship is flying two huge Turkish flags, and it is a fact that the local population at Ismid firmly believe that the Goeben is there to keep an eye on *us*. This is folly, of course, but it makes the task of the local British forces no easier.

SYRIA.

JERUSALEM, November 3.

The general situation is still obscure. In the politics of Palestine there seems to be a lull, but in Damascus great excitement and agitation are reported to prevail.

The recent agreement between Great Britain and France by which the former agreed to withdraw all her forces to the North of Palestine by November 1, has upset the whole country, as it leaves the land in the hands of the French, who have not yet gained the goodwill of the inhabitants. It is stated that the Damascenes hate France, and regard her as being unable to put them on their feet again because of the difficulties of her economic and financial situation. They also state that the French have not been dealing justly with the Moslems. On the occasion of the arrival of General Gouraud in Syria, an Arabic paper, *Al Urdun*,

Digitized by Google

addressed him in a very harsh tone, telling him that they did not believe in French power, and that they refused his assistance. "We want to be friends with France," it said; "we do not want to be a part of France. Go back to your own country and stay there: we can only be friends if you return and inform those who sent you that we do not wish you here."

On October 28 a great demonstration was made by the educated people of Damascus. Its object was to protest against the partition of the country. Masses of people paraded through the streets. At the palace of the Emir speeches were made denouncing the present situation.

As yet it is not known whether the French have arrived or not. It is, however, expected that serious trouble will arise when the French find their way into the country. It is rumoured that the Arab Government has asked that the evacuation of the territory by the British be postponed until the country is more stable.

It is worth mentioning that on the whole the Moslems stand for the Shereef, although there is a small but very influential party of them who support France. The controversy between these two parties and other Syrian parties carried on in the Egyptian papers is very interesting. Pro-Shereefian articles are freely published in Damascus, and anti-Shereefian in Beyrout and Cairo.

The Latin and the Maronite population naturally support France; the Protestants are for England, as also are the Druzes. The Orthodox are divided, some being for the Shereef and some for France. The Shereef, who has given to other than Moslems very good positions in the Government, has gained much favour, and there are many Druzes and Christians, for example, who demand his rule.

Life is not very safe up in the North. Heavy clouds are on the horizon, and developments are awaited with intense interest.

CYPRUS.

Soli.

The site of the ancient town of Soli (Palaiòkhora), in the north-west of Cyprus, has been declared "a monument" under the Antiquities Law. The area includes various localities, the boundaries of which are fixed. The better known Soli, on the opposite coast of Asia Minor, near Mersina, which became Pompeiopolis, when restored by Pompey, contains very extensive and interesting ruins. It has been a question which of the two Solis gave rise to the term "solecism," which was given to the corrupt Greek *patois* of the inhabitants. The Cypriot Soli is said to have been an Athenian colony, while others say it was built by a Cypriot prince under the advice of Solon, who is known to have visited the island. It contained temples of Aphrodite and Isis. The present district of Solea is a fertile and attractive one. There were copper mines in the neighbourhood, as extensive slag heaps testify.

Dogs are being brought under municipal attention. According to late bye-laws of the Nicosia Council, dogs must be registered, on payment of a fee of 5s. A disc inscribed with a number, issued by the Municipality, must be worn by all dogs. It is probable that other municipalities will follow this lead, which is a new departure.

CORRESPONDENCE.

EGYPT AND THE MILNER COMMISSION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of November 14 you appear to infer that when men of so long experience of Egypt as Sir Walter Miéville and myself disagree as to the advisability of the Milner Commission postponing their departure for Egypt till Turkey has ratified the Treaty of Peace, the Government may well hesitate as to the best course to follow. Further, you speak of my suggestion that Zaghlul Pasha and others should be invited to assist the Milner Commission, as a daring one, the great thing at the present time being to avoid any sign of weakness, as it would encourage the agitators. But is my proposal a sign of weakness? Perhaps you will allow me to deal with my suggestion rather more fully than I did in my letter to the *Times*, as I hope that I shall be able to persuade you, and possibly your readers, that the weakness is not on my side. Mr. Lloyd George has told us that the Powers have made up their minds as to the future of the Turkish Empire, and there is a complete agreement amongst all the Allies on the fundamental principles of the settlement. In the recent debate in the Commons Mr. Balfour, on behalf of the Government, tells us also that the Canal, Egypt, and the Sudan are part and parcel of the same question, and that we have every intention of maintaining our position in these countries. Such being the case, what object is to be gained by postponing the departure of the Milner Commission? Will not such postponement be interpreted by Egyptian Nationalists as an admission that Turkey's action may still influence the future status of Egypt?

Again, as regards my suggestion that the Egyptians should be called into consultation, I do not for a moment imagine that a unanimous vote on their part would cause us to evacuate our army of occupation or hand over the Sudan forthwith to an Egyptian Governor-General. But I see no reason why what I may term the parochial side of Egyptian administration should not be left much more to Egyptians than at present; and an elected executive can be controlled as well as nominated Ministers, who at heart are as hostile to our interference as extreme Nationalists. The success or failure of such a scheme will, in my opinion, rest entirely with H.B.M.'s representative, who, whilst avoiding interference in every detail of administration and legislation, should, nevertheless, see that the British Imperial side of the question is duly recognised. Guide, philosopher, and friend should be more his rôle than Dictator. It is up to the British Government to continue to find such a Resident, Agent, or whatever he may be called, and to remove him promptly should he prove a failure. At the same time, the British Government must, with the help of the Milner Commission, furnish their representative with the weapons to fulfil his mission. As the Protectorate is no longer "veiled," this should be no very difficult matter.

I am, etc.,
COLES PACHA.

Rushton Lodge, Taunton, November 18.

THE FUTURE OF TURKEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I share entirely your views on the subject of the future of Turkey. My convictions are the result of sixteen years in Arabia, India, and Mesopotamia; and one of them I beg to state, for it is one on which I have seen no discussion.

A settlement of Turkey on the lines of your advocacy, with a generous and friendly assistance of her new Government to a higher level of political spirit and practical administration will conduce to enlightenment in world Islam, will operate away from bigotry. A harsh settlement will have the reverse effect, will make impossible the creation of such a Turkey as could throw out beneficent moral forces, will lock the doors of Moslem hearts to Christian advances, will conduce to bigotry. The effect of this on the British Empire and on world welfare I need not dwell upon.—I am, etc.,

ANON.

Hodeidah, October 19, 1919.

THE FIUME CONTROVERSY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The renewed negotiations between Paris and Washington with regard to a compromise on Fiume have ended in failure, and thus the settlement of the whole Adriatic question appears to have reached a deadlock. The actual details of the various solutions proposed have not been placed sufficiently clearly before the public, and we therefore trust you will find space for the enclosed sketch map, which shows at a glance the rival American and Italian proposals.

It will be seen that the Wilson line assigns to Italy

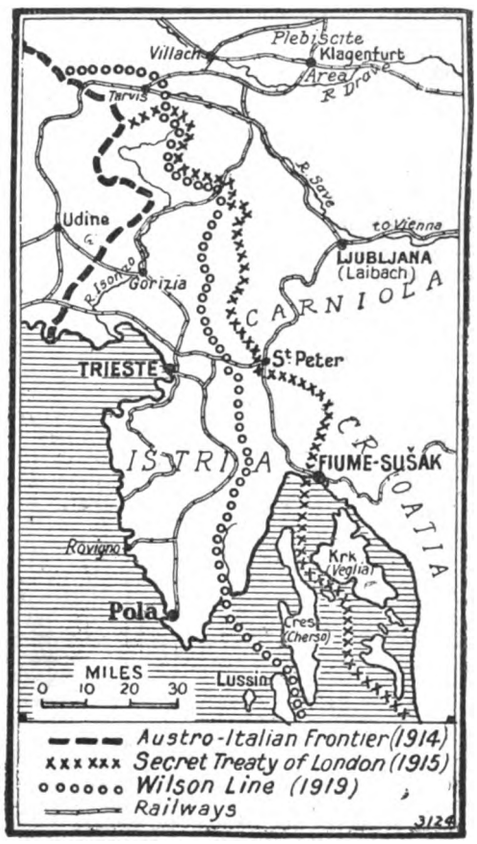
Gorizia, Trieste, and Pola, Central Istria with the railway connecting the two latter towns, and the island of Lussin, which has an Italian majority. On the other hand, it leaves to Yugoslavia the port of Fiume-Sushak (which contains a Yugoslav, not an Italian, majority), the railway from St. Peter to Fiume (Slovenia's only direct access to the sea), and the overwhelmingly Yugoslav province of Dalmatia (in which the Italians form 3 per cent. of the population), while the town of Zara, on its isthmus, receives special autonomy.

This line has been reached as the result of exhaustive inquiry on the part of the American experts at the Conference, and represents the only fair compromise between ethnography and strategy. It has the great advantage of reducing to a minimum the possibilities of aggression on either side. As it assigns over 300,000 Yugoslavs to Italy, and less than 45,000 Italians to Yugoslavia (24,000 of these



in Fiume itself), it will be seen that a very severe sacrifice is being demanded of the Yugoslavs.

The following resolutions, passed at the last executive meeting of the Serbian Society of Great Britain, seem to us to summarise the requirements of the situation :—

"1. That the territorial solution advocated by President Wilson is the only equitable compromise between Italian and Yugoslav claims, and should be upheld at all costs by the Supreme Council.

"2. That since (*a*) Fiume is the only adequate maritime outlet of Yugoslavia and of the whole middle Danubian region, and since (*b*) its annexation by Italy cannot be justified on ethnical, economic, or even historical grounds, the utmost limit of concesssion which could reasonably be urged upon the Yugoslavs is the establishment of the city of Fiume (in its pre-war boundaries) as a Free State under the sovereignty of the League of Nations."

We are, Sir, yours faithfully,

THE BALKAN PROBLEM.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—One of the first things the average Englishman does on his return from a trip abroad is to write to the Press and say how in the few days he has spent in a certain country he has discovered the panacea for all their ills, and how, if only those in authority will accept his advice, there will be an end to all trouble and the land in question will become a veritable Utopia. Now I do not go so far as to say that I have discovered a cure for the Balkan troubles, but during an extended business trip I have discovered many things that may be of interest to your readers, and which, if placed in the right quarters, may help in the solution of what is certainly one of the most difficult problems that confront civilisation.

During my tour I have had the opportunity of visiting towns and villages. I have talked with Ministers of the Crown, with business men, and with peasants. One and all say the same thing, and on all hands the same question was put to me: "Why don't *you* come and rule us?" Would to God that we could, for I am convinced that British rule in some form or other would not only be the best thing for, but would be accepted with acclamation by, all the Balkan peoples. A more feasible suggestion was made to me by a prominent diplomat who had spent several years in London. He said: "You must remember, Mr. Stuart, that although we are a very ancient people, we are young in governing. We need to be taught how to govern. Why not send us some of your statesmen, who would be the heads of our chief departments of state for, say, ten years, and let them teach us how to govern ourselves. We would welcome them with open arms." And I can assure you that of all the Allied and associated races the British are the only people to whom this would be said. They are popular right through the Balkans. They are trusted and respected where the others are only tolerated.

I started by saying I had no cure for the Balkan troubles. Nor have I, but one thing I have learned, and that is that nowhere are the terms of the Treaty of Peace approved. I refer more particularly to the alterations of the frontiers. These have been settled more or less by men who do not know the country—save, perhaps, by studying maps—and in some cases, it seems to me, grave injustice is being done.

At present the Great Powers are not going the right way to secure a lasting peace. Millions of people are utterly dissatisfied with the new frontiers, tens of thousands are leaving their old homes and are now refugees in other parts of their own country, rather than stay and face the dangers of becoming alien citizens of another race. It is common talk throughout the whole of the Balkans that ere long there will be another outbreak, and all because the Powers are delineating the frontiers without properly understanding what they are doing.

We at home do not know the Balkans. I wish every Member of Parliament would make a tour through them. Let him spend three months—even one month—in travelling round and talking to the *people*. Let him come out with no settled convictions, but ready and willing to learn and accept the truth, and I guarantee that very soon the Balkan question would be settled once and for all.

I write this letter in the hope that the suggestions may lead towards the making of a practical and a final settlement of a difficult problem, a settlement whereby British prestige, British influence, and British interests would derive immeasurable benefit.—I am, etc.,

E. E. STUART.

46, Craigmillar Park, Edinburgh.

NATIONALITY IN THE BALKANS.

The introductory lecture of a course on "The Rise of Nationality in the Balkans" was delivered on October 16 by Mr. H. W. V. Temperley, author of "The History of Serbia," in his new post as Reader of History in the University of Cambridge. The lecturer pointed out that the Balkans should not be understood in too narrow a sense. Even in a physical sense they could be understood as extending to the Save, the Drave, Adriatic, and the basin of Klagenfurt. In the moral sense, also, the Balkans should not be regarded as a specialised study of a specialised subject.

The small States of the Balkans were important not only in themselves, but because of the influence they had upon the Great Powers. In that way it could be understood how the Greeks brought Turkey and Russia to war in 1828, how the Turks embroiled France and England in the Crimean War, and how, in later times, Austria's ultimatum to Serbia had all had world-wide historical effects.

The lecturer then proceeded to comment on the fact that so much of modern history was influenced by political and partisan considerations, even in the most remote subjects and in cases apparently far removed from political controversy—for instance, the disputes between German and French historians as to the nationality of Charlemagne and the long roll of English historians who advocated the theory of primitive democracy derived from Germany and in the ingrained Teutonic genius for liberty. All these were influenced in their arguments by considerations which were not purely scientific, and unfortunately they are not always conscious that they are so influenced. These considerations apply with much greater force to Balkan historians, especially in such questions as the nationality of Macedonia or the origin of the Roumanian people. Such questions, which were actually of serious importance at the present moment, necessarily could not be handled by natives of these countries in a proper spirit. England had the advantage of being relatively remote from these controversies, and it was the duty of English students of Balkan politics to see that their views were general and impartial, and not influenced by the fact that they were pro-Serb, pro-Greek, pro-Bulgar, or pro any Balkan nationality. The only method by which truth could be obtained was by resolutely holding the balance even between conflicting claims and views.

PRESS ON THE NEAR EAST.

Bulgaria.

We have received from our Sofia Correspondent the following:—

In the journal *Zemledelchesko Znarne*, the official organ of the Prime Minister, M. Stambolisky, in its leader of October 18, writes the following:—

Bulgaria will not perish! That which is done to-day at Paris with her fate may humiliate, parcel out, enslave her, but will not kill her. This is the burden of the speeches of all the representatives of the party groups on the Chamber relative to the Peace Treaty. The hope for mitigation is small. Willy-nilly, we must accept what is shamefully forced upon us.

But is the danger of our obliteration passed? England finds the peace terms mild, and France is not contented that Bulgaria has been sufficiently punished. Her Press demands the final enslavement of the Bulgarian race and its partition between its neighbours.

And they, our neighbours? They are only waiting for a favourable opportunity—from the south the Greeks, from the west the Serbians, and from the north the Roumanians—to rush against us, for swallowing us. The least pretext of internal disorder may put an end to the independence of the Bulgarian State.

Bulgarians! Preserve order and remain calm!

It is true that the present state of things is compromised; it brought all these evils to the fatherland. They ought to be changed to respond to the new needs of the time and the spirit of the generation. But . . . now is not the time. Let us have a little more patience! Let us remain alone masters in our humiliated and blood-stained land, and then let us recreate it. So preserve order and tranquillity until the signature and acceptance of the Peace Treaty and the occupying Powers depart, so that we ourselves, with untied hands and alone, may create our future. Then let us create the most ideal order.

Let Hungary serve us as an example. Her attempt to introduce internal reorganisation gave a pretext to the Roumanian oligarchy, greedy for pillage, to plunder her. Her condition to-day is more than terrible. And in the international relations we are worse off than Hungary. Our neighbours are waiting to revenge the evils inflicted during the war, and all the European Powers are unfavourably disposed towards the isolated Bulgaria. Our salvation is in our hands. Our native soil appeals to us for tranquillity. She demands from all her sons of the various callings and professions to exert their utmost efforts over themselves, to restrain their passions, and to preserve order and peace.

Turkey.

In a recent issue of the *Sunday Times* Mr. Crawfurd Price discusses the problem of Turkey, and advocates the application of principle to the Turkish Peace Treaty. He states that the traditional friendship of Great Britain was never very creditable, and goes on:—

Sometimes because the course represents the line of least resistance, often, again, prompted by ulterior motives, it is urged that it is to our interest to preserve the integrity of Turkey. The perennial scare of Moslem India is suspended over our heads like a sword of Damocles; we are threatened with Pan-Turanianism, Pan-Islamism, Pan-Arabianism, and sundry other of the movements so prolific in the Near and Middle East, and we are told by some that it will be more advantageous for us to preserve Ottoman sovereignty and make the Turkish State a vassal of the British Empire, than to give other nations a finger in the pie in Asia Minor.

He then says that where the principles of the League of Nations and British interests clash, it is the interests that must be affected. Finally, he says:—

The dangers of Pan-Turanianism and Pan-Islamism on their part are obvious, and cannot be lightly set aside. I shall attempt no examination of the potential importance of these movements here, but they may conceivably necessitate the repression of disorders within the Empire and punitive expeditions without. But, once again, what are our motives? Are we for self or for humanity? We may have to slaughter a few religious fanatics for interfering in political questions which do not concern them. We may have to teach the uneducated Asiatic, like the enlightened German, that "Pan" agitations, be they religious or political, cannot be tolerated where they entail the subjugation of nationality. But we must ask ourselves whether the mere possibility of these things warrants the continued domination by a minority of Turks of a Christian majority, which they have attempted, throughout their sovereignty, to exterminate by extortion, deportation and massacre? We shall have to resolve the Turkish problem sooner or later, and it will probably be easier and cheaper to resolve it now. And the way to its felicitous solution can be found not by toadying to defunct traditional friendship, international finance, or religious fanaticism, but by concern for the welfare of the nationalities involved.

The Near Eastern Settlement.

The *New Europe* lately debated the chances of a permanent settlement in the Near East, and, in view of the lack of considered policy, considers them remote. Of the treaty with Bulgaria it says:—

It is impossible to regard its terms with any real enthusiasm. As regards the Serbo-Bulgarian frontier, it was recognised from the first, even by the Bulgarian delegates themselves, that there could be no question of depriving Serbia of Macedonia, and that the most hopeful settlement of racial discord in that unhappy province lies in the direction of autonomy within the bounds of the new Jugoslav state—not on purely federal, but also not on extreme centralist lines. The amputation of the Strumnitza salient (which brought Bulgaria within five miles of the Vardar railway, and thus enabled her to threaten the connections of Belgrade with the Ægean) is a provision with which it is difficult to quarrel. But the very motive which justifies it deprives Serbia of all right to extend her frontier to the east of Pirot. Against this decision, which will virtually place Sofia under the guns of the enemy, we feel bound to protest most emphatically. Indeed, it is difficult to explain such a decision at all, save as the work of those who positively desire to perpetuate trouble between Jugoslavia and Bulgaria. As against Roumania, the treaty leaves the frontier of 1914 untouched. This, in our view, is not only an infringement of Bulgarian national rights, at a point where they are not open to contest, but is definitely contrary to the interests of Roumania herself, who would be well advised to restore to Bulgaria at least a very large section of the Southern Dobrodgea (which she annexed after the second Balkan war in 1913), and in particular the purely Bulgar district of Dobric-Balcik. For its retention there can be no justification, save the naked right of conquest; and common sense suggests that Roumania can only lose by thus perpetuating a quarrel for the sake of gains which are not worth insisting on.

The article ends by considering the question of the fate

of Constantinople and of the expiring Ottoman Empire. Its conclusions are:—

The only safe course is to dictate the main territorial terms to Turkey without further delay, leaving the complicated financial arrangements to a special commission of liquidation. The essential points of the Turkish settlement are: (1) The assignment of Constantinople and its territory to the sovereignty of the League (failing America); (2) the restriction of Turkish rule to what Mr. Lloyd George, in a speech now famous throughout the East, described as "the Turkish home-lands"—namely, Central Anatolia; and (3) the complete severance of the Turkish and Arab worlds. It should not be at all difficult to draw the frontiers within which the Turks are henceforth to be confined; the real difficulty is to establish the boundaries between the various mandates or spheres of influence in territory passing from their control. But this task can best be accomplished after the elimination of the Turks. Further, it is necessary to draw a very sharp distinction between the Sultan's spiritual and temporal functions. The idea that any Christian Power—and, above all, one with so many Moslem subjects as the British Empire—should presume to decide for or against his retention of the Caliphate, is altogether preposterous. But it is no less preposterous that the Moslems of India or of any other country should attempt to introduce religion into the purely political problem of Constantinople. The time has come for the Sultan to return to Broussa or Konieh, whence he came—preserving, if it is desired, extra-territorial rights in one or other of the palaces and mosques of Constantinople. But so long as his office as Caliph is respected, the change is no concern even of orthodox Sunnites at a distance, while, so far as the Shiites are concerned, their interference would be as grotesque as an agitation of Scottish Calvinists in favour of the Temporal Power of the Pope.

Articles to Note.

MUSICAL NOTES.

This country never suffers from an absence of pianoforte recitals, though many of our pianists are merely advertised, listened to, and forgotten. We are a long-suffering people, and the immense number of lesser fry among our pianists is a witness at once of our patience and of our slow critical ability. Recently, however, London has had the opportunity of listening to people whom it is worth going miles to hear. In London during the last few weeks such eminent pianists as Busoni, Lamond and Cortot have been playing; and there have been several others whose names, though good, I do not think so worthy.

These three men have reputations both wide and high; two, Busoni and Lamond, have returned to this country, and the other, Cortot, has visited it, not only to maintain their reputations, but in a very impressive way to add to them. Of late we had heard overmuch the emotional player, the man who, with every crotchet of Chopin splashed a tear in the eye and pulled loose a heart-string. We had also the hectic technician who strove with long-haired energies to beat the pianola. To mention examples of such performers would be superfluous; but I may say that I do not think Jerusalem in all its glory will be without these. With the return of Busoni and Lamond we have gratefully seen how, in music, intellectuality is a far greater thing than emotion. We do not wonder at these masters' technique—for them physical difficulties do not exist; but their interpretation, which is passionately intellectual, simply staggers us. Hear Busoni in Beethoven, for instance, and you will probe (or think you do) the profoundest things in music; or hear Lamond in Scriabin (who may rank one day with Beethoven), and you will understand the incomprehensible. The point about these masters is that, unlike the majority of modern pianists, they reach the heart through the head. Their readings are always intelligible, and this fact makes their appeal absolutely sure.

In England to-day the position of the pianist seems very similar to the novelist's. There is a reaction against the playing of sugary melodies as there is against the description of pretty conventionalities; there is a tendency to play complex harmonies as there is to indulge in sordid intricacies. In neither case can we allow the head or the heart alone to rule. There must be a balance between the two, a new compromise between realism and romance. To my mind, Busoni brings to the young pianist what Hardy, for instance, brings to the young novelist. He and the other two pianists mentioned bring dignity, form, and, above all, continuous meaning, into their work. Having heard them play, you can almost guess their philosophy of life. They seem to realise that life is neither wholly "pretty-pretty" nor "ugly-ugly"; they do not obscure its issues by flooding us with a gush of emotion. In a word, and in opposition to the emotionalist school, they know that Life is greater than that medley of sad and joyful passions which is by some called Love.

ANDANTE.

ARAFA FESTIVAL AT KERBELLA.

We are indebted to the Acting Civil Commissioner in Mesopotamia for a copy and translation of the *Madhbata* (Manifesto) issued by some of the Guardians of the Holy Shrines, notables, theological students, and leading men of Kerbella and other Sacred Places on the occasion of the Arafa, 1337 A.H. (1919 A.D.). This Manifesto and a second, of similar character, were reproduced, with illustrations of the Hazrat-ul-Hussain and the Hazrat-ul-Abbas, Kerbella, as a supplement to the *Busreh Times*, September 22. The following is the translation referred to:—

It is not hidden that the Arafa day is a great occasion in the estimation of the Moslems; that all the public hasten to Kerbella from other parts in order to make pilgrimage to the sepulchre of the grandson of the Prophet. (May the blessing of God be on him and his posterity), and that caravans are in the habit of arriving at Kerbella from the first day of Zilhijjah and crowding there up to the 10th day of the month, when they would disperse gradually. This custom has existed since ancient days and olden times; but the greatness of the assembly used to differ in different years. In certain years some one hundred thousand persons used to gather here, while in the other years the arrivals were more or less, according as the conditions of the people and the exigencies of the times differed. A remarkable feature of the occasion in this year was the fact that the number of the arrivals at the Holy City of Kerbella came up to about two hundred thousand, and they were pouring into the town and forming crowds consisting of men and women, Arabs and Persians, young and old, and they thus used to gather together for this noble occasion until all the caravanserais, houses, precincts of the Holy Shrines, the schools, and the blessed mosques were overcrowded and the market places and streets were found to be too narrow to accommodate them. The people then lodged, group after group, on the roads near the gardens around the Sacred City. Banners and standards beneath which dense crowds could be seen continually to arrive from different quarters, while the people were singing songs of joy and raising their voices in delight for the fact that they had succeeded in arriving at Kerbella; and the inhabitants were receiving them with due honour and respect, taking them to the guest-houses and attending to their needs. It is well known that the assembly of such a great multitude of people in a single town for a period of ten days will surely lead to many thefts, great troubles, and scarcity of provisions, and that it will even lead to diseases breaking out. But we all thank Providence for the great bounties we have seen during the pilgrimage, despite the great number of arrivals and pilgrims. Notwithstanding all these, the people enjoyed great comfort, perfect security, and were happy and pleased with the freedom, ease, and tranquillity prevalent, and these all are due to the zeal and policy of the local government, which devoted all its attention towards maintaining peace, and even arrested over twenty habitual thieves and imprisoned them until the pilgrimage should end. They will then be set free. We repeat our thanks to Providence for His bounty, and pray to Him to cause our great British Government to endure.

NEAR EAST BOOKSHELF.

WITH THE BRITISH ARMY IN THE HOLY LAND.*

This well-written volume gives a complete, though condensed, account of the Palestine campaign from the earliest Turkish efforts against the Suez Canal in 1915 until the "crowning victory" in 1918. It is a straightforward narrative, free from any political or religious bias, and, being to a large extent a record of the writer's personal experiences, contains fresh and vivid accounts of the military operations in particular sections of the field not treated of in more general surveys. There is a chapter on the topography of Palestine and another on the history of Jerusalem, both useful summaries, while the outline maps greatly assist the narrative.

In developing his main theme Major Lock points out that the Suez Canal, "the most vulnerable point in the short sea route to India," was the most coveted object of our enemy's desire and the point of our most anxious defence. When, after the Turkish attack on February 3, 1915, our enemies proved to us—though happily the attempt actually failed—that it "was possible for them to achieve the almost impossible," it was seen that the true defence of the canal lay not in trenches on its banks but in an attack upon the enemy's base in far-away Palestine. When, therefore, after our failure to obtain any decision in Gallipoli, the Turks were once again assembling their forces to attack the Canal, the British Army was pushed boldly into the desert, supported by a railway and pipes of fresh water, both of which accompanied them as they advanced. Steadily all through 1916, with many a fight but no serious set-back, the advance was made until, in March, 1917, the outskirts of Gaza were reached. Here we received the two great defeats of the whole campaign. First, on March 26, when a withdrawal was made (it is not clear why, even now) "when complete success was almost within our grasp," and when it was considered by many who took part in the battle "that had we held on for a short time longer we should have captured the town and the whole of the (Turkish) force"; and, secondly, on April 19, an attempt which can only be described as a ghastly failure.

The coming autumn was, however, to retrieve all this. The whole British force was reorganised under General Allenby. The Turks energetically entrenched themselves in a position of great strength, thirty miles long, from Gaza—which they "converted into a modern military fortress"—to the oasis-town of Beersheba. Meanwhile, we held lines which ran along the northern edge of the Wady Ghuzzeh from Gaza to Gamli—twenty-two miles—while the accumulation of supplies, the organisation of water and other transport, etc., proceeded apace. The monotony of life in the British lines was relieved by occasional raids. The author has much of interest to say about this period. Life was not without its diversions and touches of humour:

"On one occasion, the General was going round the front lines, accompanied by the Intelligence Officer (who is the officer that selects the password, which is changed daily) and by the C.O. of the unit in this sector. Staying out rather later than they intended, it was dusk or dark when they approached one of the posts. The sentry challenged: 'Halt! Hands up.' Up went the General's hands in prompt compliance. 'Advance one and give the countersign,' continued the sentry. The General turned to the Intelligence Officer: 'What is the countersign to-day?' said he. 'Really I am afraid I have forgotten,' replied the Intelligence Officer, and both referred to the Colonel. 'When I left my quarters it had not yet come through' was his reply. The sentry remained obdurate. Then followed explanations, and after some parley and identifications the party were allowed to proceed. As they were leaving the General hurried again to the sentry, saying: 'Well, my man, you might just tell us now what the password is.' 'I am sorry, sir, but I haven't the least idea.'"

There is a good, if somewhat "tall," spy story belonging to this period:—

"To one particular 'hush-hush' spot rode up a General with his staff officer, both faultlessly attired, accompanied by the usual orderly The General asked to be shown round, and his request was conceded with the thoroughness and courtesy due to his high rank. His inspection completed, the General expressed his thanks and the party rode away, never to be heard of again—at least, not in that capacity. Shortly afterwards, a notorious spy was seen working as a coolie in the Egyptian Labour Corps. Perhaps that was the General."

On October 31 came the sudden dramatic capture of Beersheba, and events moved swiftly. The following week saw the complete penetration of the enemy's lines of defence, and the night of November 7-8 the beginning of our rapid pursuit. The "full cry" up the Maritime Plain was carried out with no serious check as far as the mouth of the River Aujeh on the coast and north-eastwards far into the mountains of Judæa. The first rush slowed off somewhat about November 22, and a pause had to be made while roads were constructed and guns brought up. Major Lock describes in some detail the stiff fighting around the dominating height of Nebi Samwel, the "key" to the taking of Jerusalem. "The bulk of the hill fighting fell upon the 75th Division, whose Indian experience proved invaluable." The weather, cold and drenching rain, was against us, and yet, despite all, on the night of December 8-9 the Turks, threatened by the risk of being cut off by our main attack upon the Jerusalem-Nablus road, withdrew from the Holy City, beaten and disorganised. Fighting was thus avoided in the city itself. Later they seem to have thought their withdrawal was premature, and on the night of December 26-27 they embarked upon a determined counter-attack. This just anticipated, but did not stop, General Allenby's plan for a general advance, and in a few hours the Turks found themselves hurled well to the north of their previous position, and the security of Jerusalem was ensured.

During February Jericho was occupied, and the two following months witnessed two very bold raids east of the Jordan, which successfully convinced the Turks that our coming main attack would be in that direction. During this time the author's personal experiences were with the 21st Corps in the Wadi Dar Ballat:—

"Except for occasional raids, our soldiering . . . throughout February and the early part of March was campaigning *de luxe*. The enemy had gone right back to the line of the Wadi Dar Ballat, leaving a no man's land in front of us about four miles across. . . . We therefore enjoyed immunity both from sniping and shelling, and could move about in front of our line without anxiety, even in broad daylight. . . . We thus had opportunities for training and preparing ourselves for the next forward push. The whole battalion was put through a course of musketry. . . ."

Aerial activity was the most interesting military diversion. One Hun machine was forced to land within the British lines and another returning from our lines pitched in enemy territory. The Turks, mistaking it for a British machine, opened fire, and the Hun pilot, thinking he had landed among enemies, "burnt his machine and surrendered to his own friends!"

"Campaigning *de luxe*! The wild flowers did all that lay in their power to add to the luxury. The warm sun of February and March, following the drenching rain of the winter, produces in Palestine a profusion of beautiful flowers that is probably surpassed nowhere. The countryside was literally carpeted with choice flowers of sweet smell and vivid colour. To mention but a few: there were red, white, and blue anemones; cyclamen, white, pink, and mauve; aromatic herbs; poppies and cornflowers; scarlet tulips; pink phlox; blue irises; velvety arum lilies, black and crimson; tall, stately hollyhocks. And the catalogue is scarce begun. Truly a floral Paradise."

In the middle of March came a forward movement. "With a genius little short of that which has made roads across the Himalayas and the Alps, roads were soon engineered down and up the steep sides of the Wadi." The local advance at the end of March is fully described, an advance which was suddenly cut short by the events in France, but which gave us the commanding hill of Rafat, which was fortified "on an impregnable scale," and "ultimately became the firm pivot on which was based the great sweep which conquered Palestine."

The chapter entitled "The Crowning Victory" gives a condensed account of General Allenby's wonderful offensive of September, 1918, which was so successfully "camouflaged" by a spurious activity in the Jordan Valley—while an overwhelming force was concentrated near the Mediterranean—as to deceive the enemy entirely regarding our real point of attack. The exactly-timed onset of the concentrated force near the sea, the great break-through of the massed cavalry, the cutting off of the enemy's connection with his base of supplies, and the synchronous swoop of the Hejaz troops upon the railway line at Deraa, all worked together with the exactness of a machine. In a single fortnight the enemy lines were utterly broken. "Samaria, Galilee, Eastern Palestine and Damascus had been conquered; three Turkish armies had been destroyed, with the loss of their entire war material; and over 350 guns and 71,000 prisoners had been captured." As the news travelled north the Turks were forced by the Arabs to abandon Beyrout without a blow, and some three or four days later British (*not* French) troops arrived by sea to take possession. Aleppo was entered by our cavalry on October 26, and the station of Muslimie, on the Baghdad Railway, seized. Four days later the Turks concluded an armistice, to be followed within a fortnight by their powerful masters.

The writer, in conclusion, correctly points out the—very undesirable—inaccuracy of calling this great campaign the "Last Crusade." "At the final battle the Moslems serving in our armies far outnumbered the Christians."

"THE NEW MAP OF ASIA."*

In 1906, at the Cecil Hotel, Mr. William Jennings Bryan, after a short tour of India and a short stay in London, handed the present reviewer with pontifical amiability a holograph peace and fraternity message anent Anglo-Saxon friendship for the British Press. Arrived in New York, about to bid a third time for the United States Presidency, he lodged a violent indictment—with his countrymen—against British rule in India. Three years later the reviewer heard the same Mr. Bryan—we had almost said with Bret Harte, "the same Mr. Brown," sarcastic-like—in Buenos Aires, deliver to an audience of inoffensive Argentines his well-thumbed lecture entitled "The Prince of Peace." The Argentines laughed at this American "hard case," because they do not like the Monroe doctrine, and Mr. Bryan thinks that it is good for them.

And even President Wilson finally had to cut the tow-rope of this Prince of Peace; and we are wondering whether the author of the "Fourteen Points," which are beginning to look in the United States Senate more like fourteen hundred points, will implore our present author to stop writing about new maps which exist mainly in a distorted imagination. Having given a puzzled world the new map of Africa and the new map of Europe, Mr. H. A. Gibbons, late of Roberts College, Constantinople, now perpetrates "The New Map of Asia." It out-Bryans Bryan.

We will, however, congratulate our author on a faculty for plain English and simple exposition. Continents, even the largest, offer no obstacle race for him; he takes them easily in a sprint; and so that there shall be no question about the infallibility of his verdict he hits the winning-tape with his breast, quoting not an American, not even a South American, but an English statesman—Mr. Asquith. How flattered must Mr. Asquith be! If this book be a contribution towards Anglo-American peace and fraternity we are profoundly sorry that it has been written. Nevertheless, confident that its one-sidedness will defeat the efforts of its author, we recommend it warmly to our readers. The book is an onslaught on "European Eminent Domain" in Asia, with the single exception of the Philippines, which is an "accident" (page 127). Let us compare:—

None can doubt the material benefits to the Filipinos of American rule during the first fifteen years of our occupation of the islands.

and

The builders of the British Empire in India [let us substitute "of the United States in America"] had admirable qualities—qualities essential to the making of successful pirates and free-booters—resourcefulness, persistence and military genius developed under extraordinarily difficult circumstances. Ruffians though they were, earlier British administrators were free from cant. They did not hesitate to admit that they were out for the loot, and that might made right. They did not attempt to justify their actions. They did not speak of the blessings of the *pax britannica* [*americana*], and they never get angry over the unwillingness of their victims to laud their efforts (page 38).

Or, again, in the chapter on Persia (page 263):—

No commentary is needed to drive home to the reader the heartlessness, the immorality, the hypocrisy, the brutality of the European Powers in their relations with Asiatic races

We read on, and we cannot rid a humming noise from our ears: Pope's poor old friend, "Lo, the poor Indian," and a red one at that. Or, again, on Zionism in Palestine (page 213):—

Americans hope that this war is going to bring together [not "has brought"] every element of the American nation in a common brotherhood. Native-born and immigrant, white and black, Protestant and Catholic and Jew, Aryan and Semite and Indian have one allegiance—to the Government of the United States, for which all alike shed their blood on the battlefields of France. This sacrifice was demanded by a Government which does not make citizenship depend upon race, or religion, or colour. The same responsibilities are exacted of all, the same privileges are extended to all.

We have another humming noise in our ears; but we will only mention that it is of the nature of a coon song sung in the ballroom of the Waldorf-Astoria on Fifth Avenue.

But despite the fanaticism, the pharisaism, the disingenuousness, the unctuosity of our author, some, nay much, of his mud sticks. You arise from his map of Asia (very indifferent, skimpy, are the five charts in the volume) with an admirable bird's-eye view of the most civilised, the most injured, the most virtuous of polygamous continents. The continent was builded when our author discovered it; he describes the structure very graphically; he then utterly destroys it. Constructive criticism is evidently not in our author's armoury. And yet the whole of Asia *was* there when he put up his telescope. He is a Genghis Khan come to bless Asia in the twentieth century, but the Anglo-Japanese Alliance is not to his liking.

* "The New Map of Asia." By Herbert Adams Gibbons. (New York: The Century Co.)

SALONIKA AND AFTER.*

Four years ago Mr. Owen, by his own modest confession in these pages, knew little more about Salonika than the fact that St. Paul addressed two of his epistles to the people of Thessalonica; in his most imaginative moments the idea of editing *The Balkan News* never occurred to him. He would probably have repudiated with indignation any suggestion that he was an authority on Near Eastern politics. But what the gods will, is; and so far has the author's hand become subdued to what it worked in that we now find him maintaining with all seriousness the view that Salonika was the decisive theatre of the war. Perhaps Mr. Owen would not have expressed that opinion quite so earnestly in, say, 1917; in those dreary months when there was nothing whatever doing in Greece he may even have thought once or twice that Shoe Lane was about as decisive a theatre of operations as Salonika.

But we will not quarrel with Mr. Owen over these controversial matters; we are too grateful to him for a delightful book. He seems to us to have caught the very soul of the Salonika front—and of Salonika itself, which, as he makes clear, was not quite the same thing as the front; and he has expressed it in that delightful style which has too long been missed by London editors from their tables. Life was not always easy in the Near East, and the difficulties of producing an English newspaper in anything recognisably like the English tongue at Salonika were enough to make angels weep; but *The Balkan News* achieved a fame of its own, and was far the most successful of the special newspapers on the various fronts. Once or twice the obstacles to publication seemed so insuperable that even Mr. Owen, surely the mildest-mannered man who ever dipped his pen in ink, confesses that he would have liked to murder somebody; unfortunately he does not give us the mortality statistics of his sub-editors.

"Salonika and After" deserves to be kept as a permanent record of the side-show that became something more. It is not a military text-book, but a record of life that redounds to the credit of the Army—and the author. A. W. T.

AN EDUCATIONAL EXPERIMENT.†

Readers who hold that education means something more than setting up schools and colleges will be interested in this official account of the attempt made to furnish all the literate inhabitants of an Indian State with that desideratum known as "something to read." The initiative, as is usual in the States, was taken by the Ruler, who nine years ago set an American library expert to work with adequate financial provision: in the result, the State is now equipped with a central library, town libraries, and a system of circulating books in the villages, together with special provision for ladies and children, and what is known as a "Visual Instruction Branch," or, in other words, "Pictures." So far as we know, no part of British India has a comparable equipment, and the Gaekwar can at least claim to have pioneered an undertaking of genuine importance. The figures given show that a large amount of literature has, in fact, gone into circulation: a wealth of illustrations is furnished of library buildings and their internal arrangements, while the letterpress gives what appears to be a fair account of the difficulties experienced and the results achieved. We should be grateful for more information as to the class of books put into circulation and the relative popularity of the various kinds: American library methods are designed to give such details, and we hope the Curator will see his way to publish them, and so enable us to judge whether the undertaking is mainly recreative or mainly instructional.

BOOKS RECEIVED.†

"The Poems of 'Amr Son of Qamt'ah, of the Clan of Qais Son of Tha'labah." Edited and translated by Sir Charles Lyall, D.Litt. (Cambridge University Press. 21s. net.)

"Balkan Problems and European Peace." by N. Buxton and C. L. Leese. (London: George Allen and Unwin, Ltd. 4s. 6d. net.)

"How Jerusalem was Won," by W. T. Massey. (London: Constable and Co., Ltd. 21s. net.)

"Ottoman Land Laws." By Stanley Fisher, M.A. (London: Humphrey Milford. 12s. 6d. net.)

"A Brief Description of the Holy Sepulchre: Jerusalem and Other Christian Churches in the Holy City." By George Jeffery. (Cambridge: University Press. 10s. 6d. net.)

BOOK NOTE.

Very shortly Mr. Murray will publish "By Nile and Tigris: A Narrative of Journeys in Egypt and Mesopotamia on behalf of the British Museum between the Years 1880-1913," by Dr. E. A. Wallis Budge, Keeper of Egyptian and Assyrian Antiquities in the British Museum. A full account is included of the excavations in Assyria and Babylonia from 1792 onwards.

* "Salonika and After." By H. Collinson Owen. (Hodder and Stoughton 10s. 6d. net.)

† "The Baroda Library Movement." By J. S. Kudalkar. (Baroda Central Library. Price 3s. 6d.)

27	14	Thursday	4	5

The Shah of Persia, who is now in Paris, has decided to prolong his visit.

M. Nano has been appointed Secretary to the Roumanian Legation in London.

Prince Bibesco has been appointed Councillor of the Roumanian Legation.

Lord Oranmore and Browne has arrived in London from Castle MacGarrett, Co. Mayo.

Prince Ismail, the son of the late Prince Zil-es-Soltan, has arrived in London from Teheran.

Lord and Lady Barrymore have left Fota Island, Co. Cork, and have arrived in London.

General Gouraud left Toulon on November 16 on board the cruiser Waldeck Rousseau for Syria.

M. Slobodan Yovanovitch has been appointed Secretary of the Legation of the Kingdom of Serbs, Croats, and Slovenes.

The Persian Minister for Foreign Affairs, Prince Firooz Mirza Nosret ed-Dowleh, has returned to London from the Continent.

M. George Boncesco, who has retired from the Roumanian Diplomatic Service, left London on November 17 for Bucharest.

Dr. Ronald Burrows, Principal of King's College, London, underwent a second operation on November 18. He is progressing favourably.

The Persian Minister is now making satisfactory progress towards recovery, and hopes to be able to leave town shortly to recuperate.

The Maharaja Gaekwar and the Maharani Sahiba of Baroda had the honour of being invited to luncheon with their Majesties on November 15.

An Egyptological exploring expedition, under Professor W. M. Flinders Petrie, left London on November 19 for Cairo, to renew excavations at Lahun.

The Sultan of Egypt has bestowed the Order of the Nile (4th Class) upon Temporary Lieutenant P. S. Taylor, formerly Deputy Director of the *Palestine News*.

Sir Ian Malcolm left London on November 15 to assume his duties in Paris as director of the Suez Canal Company. His address for the present will be Hôtel Vouillement, Rue Boissy d'Anglais, Paris.

The marriage was celebrated on November 11, at St. Peter's Church, South Kensington, by the Rev. Canon C. S. Woodward, between Major Graham Yalden Thomson, I.M.S., and Clare Coral Mullard, of Llandudno, Wales.

The marriage took place on October 13, at Baghdad, Mesopotamia, between Captain Herbert John Todd, Assistant Commissioner of Police, Baghdad, and Nancy, younger daughter of Colonel A. E. Pullen, R.A., and Mrs. Pullen.

The marriage took place on November 12, at Meerut, India, between Capt. Cuthbert James Blaikie, R.A.M.C., son of James Blaikie, late S.E.D., and Helen Dorothea Campbell, Q.A.I.M.N.S., India, daughter of Colonel J. C. Campbell, late R.E.

An engagement is announced between Elliston, elder son of Mr. and Mrs. John F. Campbell, of Sydney, Australia, and Phyllis, younger daughter of Mr. Charles Caspersz (late Calcutta High Court), and Mrs. Caspersz, of 29, Pembroke Gardens, W.8.

The *Egyptian Gazette* states:—Mr. H. E. Wortham, the editor of the *Egyptian Mail*, who left Egypt on a visit to London some weeks ago, will not resume his editorial duties in Cairo. Mr. O'Farrell has been appointed editor of that Cairo daily paper.

The marriage took place on November 18, at St. Matthias Church, Warwick Road, London, between Guy Lynn, son of the late Graham R. Lynn, of Karachi, and Mrs. Lynn, and Ida Mildred Cookson, daughter of the late Dr. and Mrs. S. Cookson, of Stafford.

A marriage has been arranged, and will shortly take place, between Arthur Owen Playford Reynolds, eldest son of the late Playford Reynolds, of Bombay, and Cheltenham, and Anita, younger daughter of Herber W. Morrison, of 15, Thurloe Square, S.W.

An engagement is announced between Major Cyril G. Rossi-Ashton, D.S.O., only son of Mr. and Mrs. A. Rossi-Ashton, of Iona, Agrapatana, Ceylon, and Crawley, Sussex, and Gladys, younger daughter of Mr. and Mrs. F. G. Jonas, of Woldingham, Surrey.

A marriage has been arranged, and will shortly take place, between Eugen Millington-Drake, of his Majesty's Diplomatic Service, only son of Mr. and Mrs. Henry Millington-Drake, and the Hon. Effie Mackay, youngest daughter of Lord and Lady Inchcape.

A marriage has been arranged, and will take place in Calcutta early in the New Year, between Morice Carlos Bird, younger son of Mr. and Mrs. George Bird, of The Orchard, Esher, and Molly, only child of Mr. and Mrs. Arthur Hinds, of Calcutta.

The engagement is announced between Mr. George Lingner (late Anglo-Russian Commissioner for the Caucasus), of 68, Warwick Road, Kensington, and Winifred Vera, daughter of Mr. and Mrs. Frederick Chattaway, of The Manor Cottage, Sunbury-on-Thames.

The marriage arranged between Captain Randall E. Hunt, 51st Punjabis, younger son of the Rev. and Mrs. H. F. Hunt, of Cookham Dean, Berkshire, and Gwendoline Violet, younger daughter of Dr. R. Morrison and Mrs. Morrison, M.B.E., of Duffield, Derby, will take place at Duffield on December 10.

The marriage was celebrated on November 12, at St. Columba's, Pont Street, by the Rev. Archibald Fleming, D.D., between Captain James Herbert Grove White, M.D., I.M.S., youngest son of the late W. Grove White, of St. Helen's, Lucan, and 18, Elgin Road, Dublin, and Frances Katherine, second daughter of the late J. H. W. Rolland, of 4, Gledhow Gardens, S.W.

The valuable collection of Oriental works belonging to the library of the late Dr. Ernest Haas, formerly of the British Museum and of University College, London, has been presented to the library of the School of Oriental Studies, London Institution, by his widow, Mme. Alma Haas, and family. The gift comprises upwards of 300 volumes, dealing chiefly with Sanskrit and the other languages of India.

It is announced that the marriage was celebrated on October 11, at St. Paul's Cathedral, Ranchi (India), by the Rev. Canon Cosgrave, M.A., between Captain Dennis James Leonard, 57th Wilde's Rifles, F.F., only son of the late the Hon. J. W. Leonard, K.C., and Mrs. F. Lloyd Cayzer, of Kensington, London, and Dorothea Gertrude, youngest daughter of Major and Mrs. H. Cyril Veasey, of Gonda House, Ranchi (Behar and Orissa).

The Secretary-General of the Order of St. John has received from Mr. Lee Smith, Grand Master of the Grand Encampment of Knights Templar of the United States, a contribution on its behalf of 5,000 dollars to the restoration fund of the hospital of the Order in Jerusalem. This is the second American gift within twelve months in aid of the British Ophthalmic Hospital, which, though damaged by the Turks, is again in working order.

Digitized by Google

In the arrangements made for the Royal Society of Arts is the following:—December 18, P. J. Hartog, C.I.E., M.A., member of the Calcutta University Commission, 1917-1919, on "Some Problems of Indian Education." And the following papers will be read after Christmas:—Sir John Hubert Marshall, C.I.E., M.A., Litt.D., F.S.A., Director-General of Archæology in India, on "Recent Archæological Discoveries in India"; and Sir Valentine Chirol, in the Sir George Birdwood Memorial Lecture.

Our Cyprus Correspondent writes:—Mehmet Halil Bey, Turkish judge at Famagusta, has been granted three months' vacation leave and sixteen months' leave of absence from October 15. Halil Bey proposes to study law in London, with a view to being called to the Bar.

Mehmet Fehmi Effendi is appointed Judge of the District Court of Nicosia.

Mehmet Effendi Raïf will act as Turkish Judge at Famagusta.

Mr. A. J. Shettish has been appointed a Clerk in Division I. of the General Clerical Staff.

Mr. H. T. Miller is appointed temporarily Ordnance Surveyor in the Land Registry.

APPOINTMENTS, ETC.

Our Cyprus Correspondent writes:—Major Bayley has been appointed to act as Registrar-General.

M. Bonzom, French Consul-General at Alexandria, has been appointed Consul-General at London.

The *Sudan Times* understands that Dr. V. S. Hodson, M.V.O., has been appointed Director, Khartoum and Omdurman Civil Hospitals, in place of Dr. J. B. Christopherson, who has been placed en pension.

The appointment of Mr. James William Ronald Macleay, C.M.G., to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary to the Argentine Republic is announced. Mr. James Macleay has acted in various capacities at many places, including Constantinople and Belgrade.

It was officially confirmed on November 12 that, with the approval of the King and in accordance with the decision of the Allied and Associated Powers, Sir Reginald Tower, K.C.M.G., C.V.O., had been appointed Administrator of the free city of Danzig, pending the appointment by the League of Nations of a High Commissioner. Sir Reginald has had a distinguished diplomatic career, his posts including Constantinople, Madrid, and Berlin.

OBITUARY.

Mr. Aram Raffi, Secretary of the Armenian Bureau in London, died on November 13 at the age of forty-three years.

The death is announced of Mr. John Albert Venn, M.D., M.R.C.P. He was the son of John Whalley Venn, the first municipal magistrate of Colombo.

The death occurred on November 9, at Buckleigh House, Westward Ho! North Devon, of Alexander Blakely Patterson, C.I.E., Bengal Civil Service (retired), aged 77.

The death occurred on November 8, at Newbold, Forres, N.B., of Colonel John Woodcock, late Madras Staff Corps (Hyderabad Contingent, in his ninety-second year.

Major Thomas Bott, late of the 6th Dragoon Guards, who served with distinction in the Crimean and Indian Mutiny campaigns, died on November 10. He was in his ninetieth year.

Reuter's Berlin correspondent reports:—The newspapers state that Mohamed Farid Bey, who succeeded Mustapha Kamel Pasha as leader of the Egyptian Nationalists, died here on November 15.

Captain W. F. Portlock Dadson, late Royal Marine Light Infantry, has died in London at the age of 86. He took part in the Crimean Campaign, receiving the medal with clasp and the Turkish medal.

Major Samuel Phillips, late of the Royal Irish Regiment, died on November 11 at Gaile House, Cashel, County Tipperary, in his seventy-first year. He served in the Afghan War of 1879-80, and had the medal for that campaign.

Colonel Charles Birch-Reynardson, late of the Grenadier Guards, has died of pneumonia at Hopetoun House, the seat of the Marquess of Linlithgow. Colonel Birch-Reynardson, who was born in 1845, was A.D.C. to the Viceroy of India in 1872-4.

Admiral Charles John Rowley died on November 11 in his eighty-seventh year. He saw active service in the Black Sea during the Crimean War and was second in command of the Channel Squadron in 1887-8. He had also served as Aide-de-Camp to Queen Victoria.

The *Indépendance Belge* announces the death of the Count de Lalaing, former Belgian Minister in London. Count de Lalaing, who was born in London in 1856, entered the Belgian Foreign Office in 1879, and was afterwards promoted to the Diplomatic Service. Before coming to London he served in Vienna, Bucharest, Berlin, and Berne.

NEWS IN BRIEF.

America has undertaken to provision Armenia till August next.

Mgr. Fumasoni Biondi, the Delegate-Apostolic to India, has been appointed Delegate-Apostolic to Japan.

It is understood that the Capitulations will at once be re-applied in respect of nationals of all the Powers which fought against Turkey in the war, including Greece and Serbia.

Relief operations in Bombay Presidency, in Bankura District of Bengal, and in Angul District of Bihar and Orissa, and relief works in Banka sub-division of Bhagalpur District, have been closed.

The *matinée* which was to have been given at the Globe Theatre by the courtesy of Miss Marie Lohr for the benefit of the Serbian Relief Fund, on November 24, has been unavoidably postponed.

M. Poulet and M. Benoit, the French airmen, telegraph from Karachi that they were obliged to stop their Paris-Melbourne flight during the day because Hindus mistook them for devils and tried to kill them.

According to an official return, 143,752 officers and other ranks were conveyed in transports on long sea routes last month. Of this number 9,812 sailed from Egypt, 21,697 from India and Mesopotamia, 10,670 from the Black Sea, and 9,991 from Russia to the United Kingdom. From the United Kingdom to India there sailed 28,095, and to Egypt 2,020.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant,

FRIDAY, NOVEMBER 21, 1919.

THE FUTURE OF AFGHANISTAN

The Afghan question is still with us, and we see no immediate prospect of a complete solution. The victorious peace which was celebrated by such brave official trumpetings turns out on further inspection to have but little relation to peace, and perhaps less to victory; such as it is, it makes no claim to finality, and after a due breathing-space negotiations are to be resumed, though at the moment no prudent man would venture a confident opinion on the question whether the arguments to be advanced will be drawn from the ordinary diplomatic armoury or from the stores furnished by the chemist and the engineer. Our purpose to-day is not to discuss either the immediate past or the prospects of the coming winter, but to look somewhat farther ahead, to estimate the basic factors of the situation, and to arrive at a reasoned view of the future of the Afghan nation. Is there, in a word, any hope that they will develop into good citizens of the world, and friendly neighbours to the Indian Empire, or must we act on the assumption that their present attitude will be maintained for an indefinite period? That their attitude has been, and is, most inconvenient is a proposition which we need not urge. Their numbers are small, perhaps five or six millions all told, but small nations may be the cause of great evils, especially when the national characteristics are strongly marked, and, subject to little variation, these statements are certainly true of Afghanistan. The people are not destitute of qualities which might be of service to the world. They are laborious husbandmen, intelligent craftsmen, astute merchants; they fight well, and individually they are often excellent company. They have bad qualities also, particularly that perfidy which has become proverbial, and that overbearing insolence which makes them the terror of the Indian plains, and at present there is no doubt that the scale inclines against them. Let us see whether there are any influences at work likely to result in a reversal of the adverse balance.

There is first of all the economic motive. Afghans are poor, and it is conceivable that they may settle down to employ their undoubted qualities in the material development of their country. The prospect is not, however, very promising. Some of the land is fertile, but much of it is utterly useless; there is little scope for agriculture on a broad scale, and while the inhabitants may extend the production of such specialities as drugs or dried fruits, which can bear the heavy cost of transit imposed by the nature and position of the country, only a very sanguine man would suggest that the immediate prospect of gain is so strong as to justify the hope of any marked change in the attitude of the people. There is some evidence of the presence of mineral wealth, of copper, lead, and iron, but no great mining developments can be looked for until large supplies of coal or oil are located in accessible positions, and the fuel question must also govern the possibility of large-scale manufacturing industry, the materials for which would have to consist mainly of the metals, together with wool, which is now the country's most important export. Conditions in Asia must undergo a very great alteration before Afghanistan can regain its old position as a commercial centre for the interchange of Eastern and Western products; and, taking all these considerations together, the inference seems to be justified that economic development is likely to be slow, and to follow rather than precede an alteration in the national outlook. The religious motive offers even less prospect: the country is, to say the least, an unpromising field for any form of missionary effort, and at the present time the only propaganda likely to be important is Pan-Islamism in its most militant form, an influence which must serve to accentuate rather than mitigate all that is worst in the mental attitude of the people. Similarly, the only cultural influence to be expected is the creed of Bolshevism, which is already welcomed, and which in essentials is so closely akin to Afghan mentality that its general acceptance would not be matter for surprise. To what then can we look? Education, if education there should be, will be dominated by the religious and cultural influences to which we have just referred; the environment is not likely to tolerate an independent or enlightened Press; and the effect of travel and neighbourly intercourse is for some time likely to be deleterious rather than beneficial. We are forced to the pessimistic conclusion that Afghanistan is not for the present likely to be of any service to the world, and that she will be a worse neighbour rather than a better.

The prospect is, therefore, black, but at the same time there is a chance of better things. With the orderly development of Persia, of which there is more hope now than there has been for centuries, and with the establishment of saner political conditions in the country to the north, which is at the least a possibility of the near future, Afghanistan may find herself enclosed gradually in an iron ring of progressive civilisation, beset by neighbours who may not interfere with her internal activities, but who will stand no nonsense on the borders, and will at the same time bring opportunities of peaceful intercourse increasingly within her reach. The pressure of such an environment works slowly, but in the long run with relentless force; the contrast between advancing wealth and stagnant poverty, between ordered freedom and disordered licence, must eventually produce an impression on the more backward nation, and in the end civilisation will win. The process will indeed be slow. An Eastern despot might have hoped to attain the objective more rapidly by a wholesale deportation such as once befell the Hebrew race, and it is not entirely inconceivable that in the distant future the united wills of the civilised nations may determine on not less drastic solutions of similar problems, but failing such measures, which at the present day lie entirely beyond the limit of practical politics, there appears to be no alternative to the line which we have indicated, to fence such turbulent communities with a ring of civilisation. But the ring must be maintained intact; and this brings us to the practical lesson to be drawn from what may appear to be a somewhat academic argument. The chief responsibility must for the present rest on England and on India, because for eight long centuries the Indian plains lay open to Afghanistan, to be raided and devastated whenever economic pressure, or mere lust of spoil, provided the necessary incentive to a task in itself so easy that it bore the aspect of sport rather than of war. We had thought that the doorways to the plains had been effectively closed, but the events of last spring have taught us that our preparations were in some respects inadequate: the Afghans were led to believe that the time so greatly longed for had at last arrived, when the road to wealth and spoil could again be forced, and in the light of the most recent information we must admit that they had some excuses for their belief, erroneous as it proved. This must never happen again. The security of the North-West Frontier is now, as it has always been, India's most vital national interest, and it must be maintained for the future with such a margin of safety that not even the ignorance and lust of Afghanistan may venture on another effort. All internal reforms, however desirable in themselves, must be subordinated, if necessary, to this paramount claim, and when the new Legislative Assembly meets in Delhi, its members may fitly be reminded that the Afghans have been in Delhi, too.

THE SITUATION IN TURKESTAN

By IKBAL ALI SHAH.

Nowhere probably in Asia has the Russian revolution altered the situation more definitely than in the Middle East; and the regions of the Uzbek Khanates, which have remained a forgotten land, now emerge into real and immediate strategical importance. Many travellers with an eye of scrutiny who visited Central Asia during the last four decades have affirmed that if ever the Tartars and the Uzbeks awoke to a sense of national autonomy it would come through outside influences, and the developments of affairs during the Great War have amply justified the assertion. Yet, paradoxical as it may seem, it is nevertheless true that while the Russians in years gone by had carefully checked the wave of national individuality among their subject races in the East, the overthrow of the Imperialist régime made it possible for the Central Asian people to revert to the old order of things and to regain their longed-for liberty.

But the circumstances of the recent fighting around Merv in the north-west of Afghanistan differ materially from those of the Persian or the British occupation of Herat of long ago. The question at issue is one of foreign dictation, and the consequences will not only react on the integrity of Afghanistan and Persia, but may also become equally menacing to the peace of the whole Middle East. In such a remote corner of the earth as Transcaspia it is difficult to despatch sufficiently strong forces of the Allies to strengthen the power of resistance of the Ameer of Afghanistan or the Shah of Persia: yet leaving those regions alone to the mercy of the Bolshevists may render the position untenable.

Simultaneously with the abandonment of the Caspian shores by the Russians, the Bolshevists have made overtures to the Turkomans and the Uzbeks to join the party through whose exertions alone, they declared, the self-determination of the Tatar race could be regained. There could not have been a more opportune moment or a cleverer perversion of aims. Consequently the Bolshevist "advice" was gladly taken by the Khan of Bokhara. There was, naturally, self-interest involved on both sides. The Khanate of Khiva proclaimed itself as a self-governing State, and Bokhara followed suit. Much blood was shed in Central Asia during the last three years of this war, when some discontented people, solely to attain their own political ends, did a vast amount of mischief. They even employed the Pan-Turanic propaganda with some results; but quite different influences were at work beneath the surface.

To examine the deeper vein of the political difficulty one must take into account the conditions prevailing when Bolshevist influence began to make itself felt among the Uzbeks. It is never redundant to say that in almost all diplomatic dealings with Asiatic peoples much attention has to be paid to their sentiments. With most of them religion is the first and last concern in life, and from an Oriental's point of view many of the canons of their faith have inextricable associations with their racial prejudices. Herein lies the root cause of the Russian collapse in Turkestan: in their Eastern march for conquest and annexation they had grossly blundered in neglecting the sentimentality of their subject races, more especially those of the people of the Khanates. It is therefore desirable that in any consideration of Central Asian problems, the previous conditions should be inquired into. Let it then be said that the Russians had not only ignored Uzbek sentiments, but, by injuring the feelings of those over whom their good fortune had made them conquerors, had actually inflicted a blow to their Imperial stability.

The Russian reduction of the Khanates was not approved by any neighbours of Khiva or Bokhara. Powers much beyond the Oxus had also looked askance at this movement, but chose rather to await further developments before making any active remonstrance. The frowning forts of Kushki Post—only eighty miles from Herat—engendered no friendly feelings in the hearts of the Afghans; nor did the Persians in Meshed think their town in perfect safety; while the Uzbeks, the Kerghiz, and the Turkomans fretted for liberty.

The projection of the Transcaspian Railway from Merv to three points north-west of Afghanistan has already involved the statesmen of Great Britain, Russia, and Afghanistan in considerable controversy. In explanation the Russians declared that the necessity of the undertaking arose out of a desire to open commercial routes in Persia and Afghanistan, and to a lesser degree with that of India, but the motive of the Russian policy lay in a quite different direction.

There are a few things which are not generally known about this project of the Transcaspian Railway, and one of them, which had for long been concealed as a State secret, is particularly illuminating. It shows how far the policy of carrying the railway on to three points in the north of Afghanistan was dictated by purely military considerations. The fact is that at times military communications are almost suspended between Russian posts on the frontier of Afghanistan, as the Oxus freezes during winter and the Amu-Daraya flotilla can do no duty. It was, therefore, to establish an additional avenue for military operations that the Murghab Valley line was laid to Kushki Post. The sum of 9,669,000 roubles which was spent in the construction of this line has been repaid twice over since its installation. Side by side with this one must bear in mind that the Russians have taken "a dear bit" of Afghanistan. The late Ameer deplored the loss of his rightful possession of Panjdeh. The Afghans have never forgotten the incident, and a great breach has ever since remained in their relations with Russia. Unnecessary bloodshed at Panjdeh has created a gulf never to be bridged over.

Now that the common enemy of the Allied and the associated nations in the name of Bolshevism is menacing the permanent disintegration of the Central Asian States, it is of importance to consider what measure of resistance can be offered, so that the sordid influence may not entirely shatter all hopes of returning peace in the Middle East.

In the past the people of this country were too prone to leave the Central Asian questions severely alone, as if it were a region which lay outside the British sphere of interest. Turkestan was not infrequently called a "land of a lethargic people." Consequently there existed—and still exists—save among a few students of world-politics, a somewhat hazy idea regarding the character of the people of the Khanates of the Middle East. This ignorance was perhaps not unnatural, for while Russia advanced in big strides in Central Asia, the British public became indifferent on the matter, probably thinking that it kept Russia from meddling in European politics. The scheme succeeded; and then we were startled by a rude awakening to the fact that Russia's frontier was common to a country which abutted on the bulwark of the Indian Empire—the North-West Frontier province. Diplomatic difficulties became frequent, and the safety of the peace of India was threatened. At one time it was the menace of an Imperialistic Russia bent upon territorial expansion; to-day the same danger looms up, though in a different guise. Bolshevism is at the door.

It is now pretty generally admitted that the "Labour Communism" which the revolutionaries have inscribed on their banners has won many adherents to the Bolshevist movement. It is also known that brute force has been employed in the furtherance of Lenin's principles. Hence one is disposed to view the subject with mingled disgust and alarm. Both factors have contributed towards winning over the Khanates; for labour conditions in Central Asia are quite as acute as in any other country. The assertion may be surprising, but when it is said that ever since Russia's entry into the last war, and right up to this day, the whole supply of cotton, silk, wool, and live stock is derived from the Khanates, it will be evident that noble Bokhara is not only a university town but also the great commercial centre of the Middle East. The last returns show that the annual output has increased as much as 31,715,000 roubles in raw material alone.

"The chief task," said Lenin, "which we set ourselves at the beginning of the war was to turn the Imperialist war into a civil war." This is the avowed policy of the Bolshevists. They have accomplished the overthrow of Tsardom, and it is of importance to endeavour to ascertain how far and how long this overthrow may affect the economic as well as the political equilibrium of Central Asia. If the matter be not faced and grappled with, it may submerge Asia in blood and render any efforts towards reconciliation sterile. Whatever may be the relations of the Allies towards the saner Russia of to-morrow, they, as guardians of smaller nationalities, must see that Bolshevist intrigue and propaganda are presently checked in Central Asia; otherwise that part of the East, as history bears witness, is always full of potentialities of conflict and war. I leave further consideration of the situation to more responsible parties. The object of this article is merely to point out the existence of a real threat as seen by one who belongs to those troublesome spheres.

DISCOVERIES IN GREECE.

The Athens correspondent of *The Times* has recently reported the excavations of some important ruins. In the village of Malia, near Candia, in Crete, have been discovered the ruins of an ancient palace, attributed to the Minoan period. Near by tombs containing skeletons have been brought to light. In Amphipolis, Macedonia, a colossal marble piece has been found in a space which was originally excavated by British soldiers. During the excavations adjoining the portico of the Temple of Æsculapius at Epidaurus (forty miles S.W. of Athens) a portico (*Stoa*) with mosaics has been found. Two further buildings have been discovered near the great reservoir, with columns, pedestals, and a statue of Hermes.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Montenegro. November 17.

Mr. McNeill asked the Under-Secretary of State for Foreign Affairs (1) whether his attention had been called to a dispatch dated from Trieste on October 25, and published in the *Chicago Tribune* on November 1, which contained a summary of the Report of Count de Salis on Montenegro; if he would say why a document concealed from the House of Commons was allowed to be published in the American Press; whether, in view of such publication, he would reconsider his decision not to lay the report upon the table of the House;

(2) if he was aware that the summary of the De Salis Report published in America contained the statements that the Podgoritza Assembly was a bogus one from beginning to end, that Montenegro was in the grip of Serbia, that the Serbs were murdering the Montenegrins wholesale, and that the people of Montenegro were eager to maintain their independence of Serbia; whether the summary gave correctly the substance of the report; and, if not, in what particulars was it inaccurate?

Mr. Harmsworth: I have not yet seen the newspaper report, and until it has been received and examined within, I hope, the next few days, I can offer no comment on the subject.

Turkey.

In the course of replies to questions put by Brigadier-General Surtees and Captain Ormsby-Gore, Mr. Balfour said:—As regards the Turkish Empire, it is impossible for any Government which has taken part in the Peace Conference at Paris to speak of itself as to the policy which, if it were alone in the world, it would desire to pursue. This must be a common policy, and until a common policy is settled it would be action unfair to our Allies and friends if we were to map out the Turkish Empire in precisely the form in which we should like to see that great area ultimately arranged. It would be impossible to carry on any action between different Governments if that kind of procedure were once sanctioned. It is not our fault, it is the fault of the fact that until America has given a clear lead on this subject as to her own policy it is impossible that a common policy of all the Associated Powers, of which America is one of the most important, should be laid in clear outlines before the House.

It is quite true that the state of unrest which now prevails in the Turkish Empire—from Constantinople in the west to the furthermost limits of Mesopotamia in the east—is doing infinite harm and is making it more difficult to find a final and satisfactory solution of these difficult problems. Let us face the question and not reproach each other with evils and difficulties for which none of us are responsible. What is the use of saying it is a very unfortunate and very unhappy thing that Turkey should not know her own destiny? It is a very unfortunate thing. I am not going to pronounce upon the final destiny of the Turkish Empire, but this we may surely say with certainty, that a great historic population like the Turks is not going to be wiped off the map of the world by any arrangement which will ever be sanctioned by the Peace Conference at Paris, or London, or Washington, wherever the Peace Conference may meet. The Turkish people are there, and if all that we profess and all that we believe about self-determination and nationalities is to find its exemplification with regard to the Turks, as with regard to other peoples, it is as certain that there will be after the peace a Turkish Empire as it is uncertain at this moment what the precise bounds of that empire will be.

Syria.

Mr. Balfour stated his hope of a resuscitation of the great Arab civilisation. He then said:—So far as England and France are concerned, let it be quite distinctly understood that there is no rivalry, and can be no rivalry, between those Powers in Syria, and whatever difficulties present themselves in future it is our earnest wish, in the friendliest co-operation with the French, and with the warmest regard for our Arab Allies, to see all those difficulties brought to a satisfactory conclusion.

Egypt.

In regard to Egypt, Mr. Balfour said:—Egypt has suffered, as so many parts of the world have suffered—I might almost say the whole world—under that spirit of unrest which the world catastrophe has brought upon us. I have, for myself, absolute confidence that that unhappy state of things will be brought to an end, and I have the more confidence because General Lord Allenby is in control of the situation, and perfectly understands the duty that lies before him. I am told that the East is the birthplace of rumour and is full of the strangest legends as to the views and policy of the Government. Let me, therefore, say very shortly that in our view the questions of Egypt, the Sudan, and the Canal form one organic and indissoluble whole, and neither in Egypt, nor in the Sudan, nor in connection with the Canal does England mean to give up any of her responsibilities. British supremacy exists; British supremacy is going to be maintained, and let nobody either in Egypt or out of Egypt make any mistake upon that cardinal principle of his Majesty's Government. Having laid that down, let me make this addition to the statement, that we desire in every way we can to associate the Egyptian native population with the government of the country. We desire to further in all respects, I need hardly say, the prosperity of that ancient land. It is now disturbed and torn by a certain amount of dissensions and a certain amount of unrealisable expectations, expectations which if they were fulfilled would damage Great Britain, would damage the world, but would damage most of all the Egyptian population itself. The Government long ago announced that they were going to send out a Commission under the most competent presidency of Lord Milner to investigate the situation on the spot. To that policy they unalterably adhere, and until we get the report of that Commission it would be folly for me to sketch any project of legislation or reform. I think the Egyptian population and those who feel for them may rest assured that our desire is to associate them as far as possible with the work of administration in Egypt, and that, unlike their Turkish masters, who in Egypt at this moment still affect to be pro-Egyptian, we shall steadily pursue the policy of amelioration which has made the Egypt of the early part of the twentieth century an utterly different place for all its inhabitants, and most of all its native inhabitants, from what it was under Turkish rule.

Malta. November 19.

Colonel Amery (Under-Secretary, Colonies), replying to Captain Ormsby-Gore, said the Government had decided that the time had come to entrust the people of Malta with full responsibilty for the control of their purely local affairs. The control of the naval, military, and other services and functions of the Government that were connected with Malta as an Imperial fortress would remain vested in the Imperial Government. Some time would necessarily be involved in working out details and clearing up certain financial problems created by the war. At a later date he would come to the House for a measure of assistance for the finances of the island, which had been seriously embarrassed by circumstances arising out of the war and the subsequent reduction of the garrison and the dockyard staff. He hoped they might be able to dispose of these matters in the course of next year and enable the new system of local self-government to come into force in the early part of 1921. This decision had been come to on the advice of Field-Marshal Lord Plumer, the Governor of the island.

Topics in Parliament.

The subjoined headings are those given in the official report:—

Egypt. Indian Army Officers (Prisoners of War Pay.) Aliens: Miss Dora Kostich. Troops in Egypt. India: Army Education System.—Japanese Imports. Montenegro. (November 11.)

India: Afghanistan (Negotiations with Bolshevists).—Civil Service (Proportionate Pensions).—Officers' War Bonus Gratuities.—Civil Services (Leave, Pay and Pensions).—Punjaub Riots.—Kurdistan (Murder of British Officers). Belgrade. Asia Minor (Italian Military Garrisons) Trebizond (Military Representatives). Turkish Treaty. India: Indian Civil Service (Probationers).—Afghanistan (Viceroy's Proclamation).—Land Settlement (British Officers).—Punjaub (Prosecuting for Rioting).—Burma (Government). (November 12.)

S.S. River Clyde. Near East (Treaty with Greece). His Majesty's Arabian Guests. Demobilisation: Troops in India. India: Government of India Bill (Evidence).—Wolseley Helmets (Contract).—Afghanistan. (November 13.)

Asia Minor (Protection of Armenians). Montenegro Government Policy in Near East. Wireless Squadron, Mesopotamia. India: Provident Fund Deposits (Interest).—Medical Service, Mesopotamia (Furlough). (November 17.)

THE DE SALIS REPORT.

The *Chicago Tribune* publishes what purports to be a summary of the report sent by Count de Salis to the British Government. According to the correspondent who forwards the summary (under date of October 25, from Trieste): "After its dispatch to the British Government more than a month ago the Count, with Colonel E. G. Cheke and other British officers, were practically interned in Cettigne, and only permitted to go when a British cruiser arrived in Cattaro to take them home." The correspondent adds that the report "was known to Serbian secret agents almost as soon as it was sent." The "extract of the report," which, he states, he has succeeded in obtaining, is as follows:—

"Montenegro is in the grip of Serbia, who is ruling at the point of the bayonet. All the mayors are Serbians. The Serbs have one division in Montenegro. All the Montenegrin notables are in jail.

"The Podgoritza Skouptchina (General Assembly) was a bogus one from beginning to end. Everything was secret except the result. The Serbs are murdering the Montenegrins wholesale, particularly the notables who do not approve of the Serbian administration of the country.

"Montenegrins in the pay of the Serbs do not count where the will of the people is concerned. If King Nicholas had enough money he could have bought them. The royalists are stronger and also more popular than they were six months ago. The remainder of the population is silent. But all are ready to certify that they are suffering from Serbian maladministration and oppression.

"Rightly or wrongly, Nicholas is king of Montenegro. That has been recognised by all governments all through King Nicholas's years of exile. He is king, and the government cannot go back on that, and his Government, although a provisional one, has been recognised by the Allied Powers.

"How can we get the Serbs out of Montenegro? By means of an alien military force it could be effected, but probably the Allies will not act. An Allied command to the Serbians to evacuate would be disregarded. If the King went to Antivari the loyalists would join him at once over the hills. If he went *viâ* Cattaro he would be done in by the Serbians.

"We are up against a stone wall. The problem is not a simple one. How to get the Serbs out and self-determination of the people? Freedom of the Press and a fearless journal would do it."

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

I was much interested in a correspondence in *The Times* recently on the derivation of the name "Bloomsbury." One writer suggested that the old name was Bleomans-bury, and that the first part represented a personal name, Bleoman—*i.e.*, a man of colour. He added that the term "is used to designate a Moor, a black-a-moor." Another correspondent bore out this theory, adding that he himself had examined a prehistoric earthwork, near Rotherham, "called 'Blue Man's Bower,' from the man's name, Bleoman, or Bloman, a black man, or negro." So it seems that the district famous for boarding-houses and the British Museum very likely does owe its name to some old "Moor." The second writer I have quoted remarks that "one is reminded of the Blue Beard (black beard) of the old tale." I suppose Bloomsbury, like other parts of London, has its Bluebeards and its Sister Annes. But I shall like the place better henceforth by reason of the Eastern associations that its name will call up.

***

I have received from "A. W. B.," some of whose ribald rhymes have already appeared in these columns, some verses on the *Basra Times*. His efforts are too prolonged to be reproduced *in toto* here, but I give a few of the stanzas for the enjoyment of my readers:—

For really spicy, nevsy news,
Of all the papers and reviews,
Which, gentle reader, would you choose?
The *Basra Times?*
"The auctioneer will sell at ten
"A mule, a bullock, and a hen,
"Those wretched banks are closed again,"
says the *Basra Times.*
The Military Governor writes
That dancing girls in silken tights
Must not stay out too late at nights
in the *Basra Times.*
My gifts poetic, it appears,
They bore my choicest friends to beers.
I could go on like this for years.
(But Not in the *Basra Times.*—Ed.)

***

There is in the City of London a large and popular restaurant, which is extensively patronised by citizens who first saw the light of day in the Levant. I have visited it—the restaurant, I mean—myself, and I was struck by the number of obviously Near Eastern patrons who were doing their best, or their worst, for their precious 'tummies. Well, a friend of mine tells me that he was in the building the other day, having a wash and brush-up before lunch, when he heard the attendant and another person discussing a third party. "Say 'e is sixty, do you?" queried the attendant. "I don't think!" "Sixty? Every day of it," retorted the other. "Why, he has been lunching here for the past forty years—and very nearly every day at that." "Lunching 'ere for forty years?" demanded the man in charge of the soap and towels. "Lunching *'ere* for forty years! I can't swallow that. 'Uman flesh and blood wouldn't stand it." I do not know who the heroic luncher may be, but I should not mind betting that he came from somewhere east of—Brindisi.

CORSAIR.

MESOPOTAMIA.

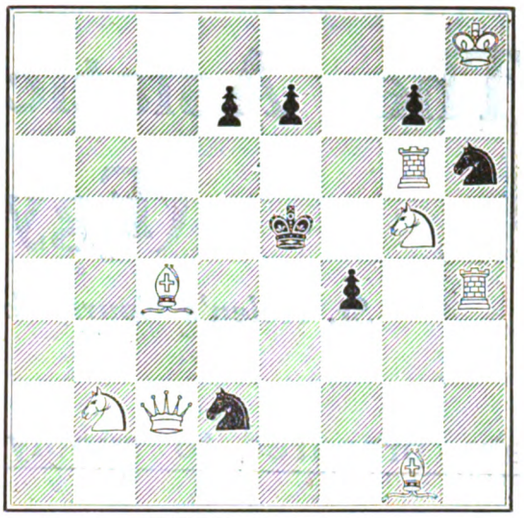
In a lecture given on November 10 before the Royal Geographical Society on "Surveying in Mesopotamia During the War," Lieutenant-Colonel G. A. Beazeley, R.E., said: Survey research work, he continued, had revealed the ruins of an elaborate irrigation system, by means of which the country in the remote past was covered with a network of canals. Some of these were 20 ft. deep, with steep embankments. The ancient city of Samarrah, at a period before the Christian era, was twenty miles in length and two and a-half miles in width, and, it is estimated, contained a population of 4,000,000. It had then miles of walls and warehouses, and constituted a centre of trade, on which caravans converged from a vast area. The present city of Samarrah was a mere shadow of its former greatness. Another city in Mesopotamia showed unmistakable traces of having been laid out on the lines which to-day characterised a modern American city.

Sir Francis Younghusband, who presided, referred to the important part which photography from the air was destined to play in research work in the future.

The German Imperial Standard captured at Jerusalem has been presented to the 5th Welsh Regiment.

CHESS.

PROBLEM No. 3.



White to mate in two.

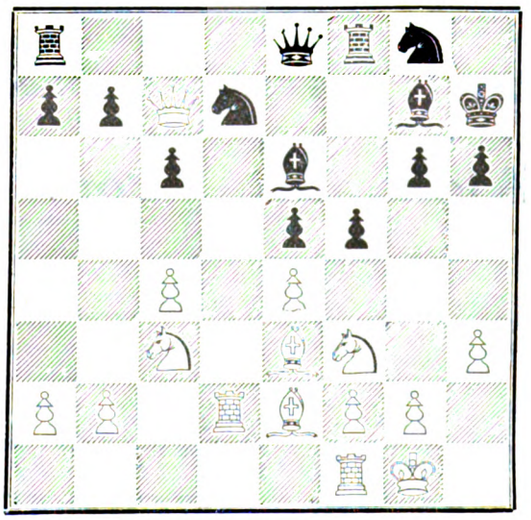
The above problem, by "G. W. M.," Philadelphia, took the first prize in one of the competitions of the Good Companion Club in 1913.

From the point of view of brilliance it is not surprising that the view should be taken in some quarters that the Hastings Tournament was rather disappointing. Games of the Morphy type were conspicuous by their absence, but that, of course, is only to be expected as the result of the work of the analyst. Openings are now such cut-and-dried affairs, and the lines on which a game is likely to develop so limited, that anything out of the ordinary must be very exceptional.

The solution to last week's end game is 1. . . . K—Q4; 2. K—K2, K—Q3; 3. K—B2, K—Q2; 4. K—Kt3, K—K; 5. K—Kt4, K—B2; 6. P—R5, K—K2; 7. P x P, P x P; 8. QP—Q5! K—Q3 (best); 9. P x P, K x P; 10. P—B5(ch)! P x P(ch); 11. K—B4, K—K2; 12. K x P and wins. K—Kt6, which seems the obvious move for Black, loses by 2. P—B5, KtP x P; 3. P—R5, K x P; 4. K—B3, and it is immaterial whether Black plays K—R7 or P—B5. In the former case White plays K—B2, and when Black plays K x P goes to Kt; in the latter P x P, and when Black plays P—K7 White plays K—Q2.

The following game was played in the Minor Tournament at Hastings. Opening, Queen's Pawn: White, Mr. H. E. Price; Black, M. A. Gibaud. 1. P—Q4, KKt—B3; 2. KKt—B3, P—Q3; 3. P—K3, B—Kt5; 4. P—B4, QKt—Q2; 5. B—K2, P—K4; 6. Kt—B3; P—B3; 7. Q—B2, P—KKt3; 8. 0—0, B—Kt2; 9. P x P, P x P; 10. P—K4, 0—0; 11. B—K3, P—KR3; 12. QR—Q(sq), Q—K2; 13. P—KR3, B—K3; 14. Q—Q2, K—R2; 15. Q—Q6(1), Q—K(sq); 16. R—Q2, Kt—KKt(sq); 17. Q—B7, P—KB4;

Position after Black's 17th move, P—KB4.



18. Q x KtP, P—B5; 19. B x RP, R—B2; 20. Q x P, R x B; 21. Kt—QKt5, Kt—K2(2); 22. Q x B, R—B3; 23. Q—Kt4, P—R4; 24. Kt—Kt5(ch), K—R3; 25. Q—B3, K x Kt; 26. Kt x R, K—R3; 27. Kt—Kt5, Kt—B3; 28. Kt—Q6, Q—K3; 29 Kt—B5(ch), K—R2; 30. Kt x B, K x Kt; 31. KR—Q(sq), Kt—Q5; 32. R x Kt, P x R; 33. R x P, Kt—K4; 34. Q—B3, P—B6; 35. B x P, Kt x B(ch); 36. P x Kt, K—R3; 37. Q—Q2(ch), P—KKt4; 38. R—Q5, R—Kt3; 39. Q—Q4, R—B3; 40. P—B5 resigns.

1. White anticipates Black's attack on the King's side.
2. Black had to lose something.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The announcement that the Yugoslav Government has prohibited the export from Yugoslavia by the individual traveller of foreign money in excess of the value of £30 need not unduly alarm intending visitors to that country. Similar precautions have been in vogue for some time past in other countries suffering from a depreciated currency, where it is desirable that as much foreign money as possible should be held in the country to steady exchange. It is to be presumed that foreigners entering the country will be required to declare the amount of foreign money in their possession, and that the unexpended portion will be exempted from the £30 rule. The possibility of trouble can be minimised by recourse to letters of credit. The prohibition is far more serious for the Yugoslavs themselves than for foreigners; for if it were enforced according to the strict letter of the law it would virtually prevent anyone leaving the country for trade purposes, as he could not expect to find any large market abroad for kronen or dinars.

***

The Yugoslav export duty, to which I referred last week, is the subject of an important despatch from our Belgrade correspondent which will be found on page 569. It appears that the duty consists of a high tax ad valorem on meat, lard, corn, and flour, and that it has been imposed with the triple idea of providing revenue, restricting the export of food, and helping the exchange. Originally the tax took the form of a war profits tax on all articles of export, and was to be retrospective in effect, but this project was dropped in view of the storm of protest from the trading community. It need scarcely be added that the result of the export regulations has been to create a position of great uncertainty in trading circles, and that it is adding to the great difficulties that confront British firms who are trying to develop an export as well as an import business.

***

According to schedule the Athens Exhibition would have been over by now, but the undertaking has proved such an extraordinary success that the representatives of exhibiting firms unanimously voted in favour of extending the date of closing to November 23. During the second week of the exhibition the visitors numbered 16,000, making the total attendance 30,000. It is noteworthy that one of the most frequent visitors has been the King of the Hellenes, who has throughout taken the keenest interest in the exhibition, and whose active support has done much to make the exhibition an outstanding success. On one occasion the King enjoyed a flight in the Handley-Page aeroplane with which exhibition flights are being given for the benefit of visitors; on another he purchased a Drummond lathe.

***

The success of the exhibition is merely one more illustration that a policy of enterprise is nearly always justified, and it must be emphasised that this gratifying result means much more than the triumph of the individual exhibiter. The firms who were enterprising enough to exhibit at Athens represented not merely the most influential body of manufacturers in the United Kingdom, they also stood for British trade as a whole in the eyes of the Near East, and as a consequence of their efforts British trade as a whole will benefit in the future.

***

The forthcoming British Mission to South Russia under Mr. H. J. Mackinder, M.P., who goes as High Commissioner, is an event of considerable importance. Vast areas of South Russia have been freed from the Bolshevist peril by General Denikin's army, and the urgent need of the district is for economic development. It would not be going too far, indeed, to say that the existing régime there depends very largely on this factor. What is required above all things is a return as soon as possible to normal conditions of trade and commerce, and it may be hoped that the mission will be able to make arrangements which will enable the population to exchange their produce for British manufactures, of which they are in special need. No other country is so well able to give a helping hand to the people of South Russia as Great Britain, and I trust that British merchants will not be backward in this respect. In this connection I would point out to them that valuable as the South Russian market proved before the war, it is nothing to what it will be in the near future; and there is a great opportunity now to establish British trade with that region on a sound and lasting basis.

***

The excellent results achieved by the Anglo-Egyptian Bank during the year ended August 31, 1918, have been practically maintained during the past twelve months. There was a substantial increase in the gross profits from £273,900 to £325,800, but this was slightly more than counterbalanced by heavier expenditure, and the net profits of £142,000 are £3,000 below those of the previous year. A dividend of 15 per cent., tax free, was declared last year, and the directors also made a distribution of £100,000 in 20,000 shares, which amounted to a bonus of £1 per share. The dividend is again 15 per cent., tax free, but it is further proposed to give a bonus of 2½ per cent., tax free, making 17½ per cent. for the year. The allocation to the reserve fund is £10,000, making it £720,000, or £120,000 larger than the paid up capital. The reserve account for new premises receives £22,600. and the carry-forward is £40,000, as against £38,000 brought in. The balance-sheet shows the growing strength of the bank's position. Deposits have risen to £17,113,000, as against £12,545,000; cash stands at £3,604,700, as against £2,441,100, while the total of bills receivable is £10,443,800, as against £7,515,900.

***

A very satisfactory report is forthcoming from the Ceylon Land and Produce Company for the past year ended June 30. The available balance amounted to £39,318, including the carry-forward of £5,746 and £4,541 representing recovered excess profits duty, and after allocating £12,500 to excess profits duty, income-tax, and fees, and providing for the dividend on the preference shares, it is proposed to make a distribution of 25 per cent., with a bonus of 5 per cent., as against a dividend of 20 per cent. for the previous twelve months. The market outlook is now extremely favourable for companies producing tea, the indications being that in the near future demand will outstrip supply, and in the circumstances it may be anticipated that the present distribution will in due course be improved.

***

An interesting light is thrown on the effect of the rising rupee as regards companies operating in the East in the report of the Oriental Gas Company, which shows that in the year ended June 30 a profit of £5,600 was realised on exchange. Allowing for an allocation of £10,000 to renewals suspense account, the balance on revenue account amounts to £26,200, or £200 less than the previous year. Adding £5,300 brought forward and £1,100 from dividends and interest, the disposable balance amounts to £32,600, which it is proposed to utilise to pay the usual dividend of 8 per cent., carrying forward £6,800.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,743,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 147,000 tons; wines, 3,000,000 casks; tobacco, 9,000,00 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,500,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 23·12 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10% primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 125·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·111 imperial quarter, pike = ¾ of a yard, stremma = ·242 of an acre.

Yugoslav Export Duty.

Serious Effect on Trade.

(From Our Own Correspondent.)

Belgrade, Nov. 9.

The commercial world has recently been very perturbed by the imposition of an export duty. As originally laid down this took the form of a kind of war profits tax, by which the State took about three-quarters of the profit based on the difference of prices of commodities in the country and across the frontier. It was exceedingly comprehensive, uncertain in action, and retrospective, permits for export already issued being cancelled. Traders who had made arrangements and contracts were seriously affected, and a storm of protest broke out on all sides. The Government saw that they had made a mistake, and set to work to modify the original arrangement. The tax was limited to a high duty, ad valorem, on meat, lard, corn, and flour; other articles were exempt, but only provisionally, and the cancellation of permits to export was withdrawn.

This was, indeed, a welcome concession, but new announcements are being made, as anticipated, almost every day, and the state of uncertainty makes it impossible for merchants to enter into any engagements.

Purposes of Tax.

The motives of the Government were probably mixed; the tax was to have been a valuable source of much-needed revenue, to retain food in the country, and to help the exchange, which is crushing. The encouragement of export rather than handicapping it would be a sounder policy to help the exchange; but the Government wish to prevent the importation of kronen—whether Austrian or Hungarian—and lei, which are in as bad a condition as their own currency. As to keeping food in the country, in certain districts there is plenty, even abundance, the shortage in others being due to the difficulties of transport.

Another step taken to improve the exchange is the sale by the Denzna Centrala—a branch of the Ministry of Finance—of several million French francs at a comparatively low rate, about 220 for 100 dinars, which has certainly had a tonic effect. It has been suggested that they would do well to restrict imports, at all events luxuries; for instance, large quantities of chocolate have been imported from Switzerland and paid for in good money against a very heavy exchange, and a great deal of this has been re-exported to Hungary and Roumania for inferior currency. There is a prohibition on the export of foreign paper; for instance, American dollars, of which there is a substantial amount in the country lying idle, the release of which could be well employed in the payment of necessary imports.

Export Restrictions.

After considerable discussion the Government has issued another order allowing free internal circulation and trade in all commodities except sugar. Exports are divided into three categories: First are articles which may be exported without restriction; such are fruit, vegetables, wine, alcoholic drinks, cordage, cement, various ores, and domestic products. In the second category are articles which may be exported without restriction of quantity, but subject to an export tax; such are articles of food, which may be exported to the following extent: wheat and flour, 8,000 truckloads; maize and maize-flour, 12,000 truckloads; beans, 100 truckloads; hay, 2,000 truckloads; hemp, 200 truckloads; cattle for slaughter, 20,000 head; sheep and goats, 30,000 head; swine, 25,000 head; horses for slaughter, 2,000 head. The exportation of other articles is forbidden. The export duties are as follows: Wheat, 45 dinars; flour, 40; maize, 40; beans, 80; cattle for slaughter, 1,500 dinars per head; small stock, as sheep, goats, etc., 50; swine, 400; horses, 500; lard, 450 dinars per 100 kgrs.; building materials, from 2.15 to 15 dinars, according to quality. Goods may be despatched only when the exporter has satisfied the authorities that payment will be made in good money, and when the export duty has been paid.

It will be gathered from this that the Government proposes to use this tariff as a source of revenue, and to ensure the importation of good money; while it is desirable to retain food in the country, as there is undoubted distress in some districts, especially in the south, in Bosnia and Herzegovina, and in Dalmatia; yet communications are so difficult that the producers in the rich districts north of the Save and the Danube would suffer great hardship in having large stocks of surplus stores on their hands if exports were entirely forbidden.

British Firms' Difficulties.

British firms who have been sufficiently enterprising to begin an export as well as an import business have found all this uncertainty very irritating, but patience and perseverance overcomes all obstacles, and these are indispensable qualities for those pioneers who are doing good work in establishing a footing for British industry and commerce in this new market. The difficulties are indeed considerable; the crushing exchange makes it very difficult for Yugoslavs to buy cheques on London; communications are slow and uncertain. It is true that there is far less looting on the railways, and conditions within the country have improved, but the Fiume question is having a paralysing effect. Goods shipped from England months ago are held up at Fiume, and British subjects who go there to try to get their property are exposed to insult, and even physical danger, while goods destined for Yugoslavia have to be unloaded at Trieste, and even Venice, which occasions an immense amount of trouble and expense.

There is hope that some of the minor difficulties will gradually disappear. The parcels post with England is expected to be restored by the New Year. A British banking firm is offering a large loan to the municipality, which should enable the authorities to carry out some of the much-needed improvements in Belgrade, and at the same time should give an opening for British firms. There is no further talk of the foundation of an Anglo-Serbian bank. All who wish to see British enterprise suitably supported and represented in Yugoslavia will regret this, if only on purely patriotic grounds. At present the British colony here do all their business through the Franco-Serb Bank, where they meet with most courteous consideration. This bank was established here before the war, owing to which, of course, it has passed through difficult times, but it reopened its doors directly the country was free, and has been a boon to British residents and visitors.

EXPORTS TO TURKEY AND BULGARIA

The special list D, of articles prohibited from export to Turkey, Bulgaria, and Black Sea ports, covering many specified kinds of war materials, has been abolished by an Order in Council dated November 14, which appeared in the *London Gazette* of November 17. By the same Order list E is abolished, and the articles specified in it—namely, vehicles and articles used for land transport, telegraphs, and telephones, and materials needed in connection with them, may now be freely exported to Bulgaria without licence.

Of the large number of articles included in list D all are now free for export except the following:—Armoured motor-cars, implements and apparatus designed exclusively for the manufacture of munitions of war or for the manufacture or repair of arms, of war material for use on land or sea; and apparatus which can be used for the storage or protection of compressed or liquefied gases, flame, acids, or other destructive agents capable of use in warlike operations, and their component parts. These excepted articles are under a stricter formal prohibition from export than before. Another Order in Council of November 17 forbids their export, except under licence, to all destinations.

Constantinople Business Letter

Outlook for British Trade

(*From our own Correspondent.*)

CONSTANTINOPLE, November 9.

Business generally continues to be very quiet, but it is very pleasurable to be able to report that agents state that they are finding British firms much easier to deal with than heretofore. Possibly the advice given on the subject of Near Eastern business in THE NEAR EAST has not fallen upon deaf ears, but, in any case, firms who follow that advice will certainly not lose by it. There still seems to be a tendency to attempt to do business without the intermediary of an agent. Generally speaking, this is not wise. Every firm doing business out here should have some sort of a representative permanently here. Even in England it is necessary to send commercial travellers to customers. The commercial traveller is simply a travelling agent. Here in Turkey it is all the more necessary to keep in constant touch with customers, and to have someone specially to look after the firm's interests.

Soft Goods.

The soft goods market seems to be pretty well flooded with goods mostly of Spanish manufacture. The designs of English cloths have been skilfully imitated, and these goods, of an inferior quality and at a low price, seem to find a ready sale. At the same time, so far as finish is concerned, British cloth easily holds its own, but the strikers in England should remember that wages increased mean cost increased, and if our competitors do not also have to increase their cost, this means loss of trade. *Verbum sap.*

There are also large quantities of hosiery from the United States on the market, but the goods do not seem to be giving satisfaction. It is complained of them that they are not up to sample.

On the whole, the outlook for British trade in the Near East is decidedly rosy, and when the country is at peace once again British commerce should benefit by an increasingly valuable market.

South Russia.

On November 4, there was a well-attended meeting of the Russian section of the British Chamber of Commerce. Mr. W. Seager, agent for the Cunard S.S. Company, took the chair, and among the Committee members present were Mr. Tcharikoff, former Russian Ambassador in Constantinople; Mr. Waugh, British Consul-General before the war; and Mr. S. Bilinsky, Director of the National Bank of Turkey.

It was stated at this meeting that members of the British Military Mission in South Russia are willing to do all in their power to assist British merchants, and this should be of very great value, seeing that we have officers as far north as Kharkoff. It was also suggested that firms interested in South Russian business would do well to follow the example of one firm that has established a representative permanently at Rostoff, with the preliminary object of studying conditions at first hand. It appears that one of the greatest hindrances to business at the present moment is the disorganisation of the railways, and that although there are many British experts at work already, many more are urgently needed.

Mr. Tcharikoff stated that there is a great shortage of hardware and tools in South Russia, and that with regard to the question of permits for exportation, he understood that the permission to export maize was at present available, while with regard to other goods the Russian Trade Committee here would be willing to furnish British merchants with letters of recommendation to the Ministry of Trade in Russia, with a view to hastening the granting of such permits. Mr. Tcharikoff reminded the meeting that Russia was still carrying on a great and desperate war, which naturally rendered business a very complex matter.

Firms interested in South Russian trade should communicate with the Secretary of the British Chamber of Commerce, Mr. W. Smith-Lyte, British Consulate, Galata, Constantinople.

BULGARIAN TRADE NOTES.

Tobacco Deal.

(FROM OUR OWN CORRESPONDENT.)

SOFIA, October 20.

Mr. Ery Kehaya, president of the Standard Tobacco Co., New York, and Mr. A. H. Jackson, London, have purchased 10,000,000 lb. of the choicest Bulgarian tobacco for 220 million levas. The Bulgarian leva, which had depreciated so far that 152 levas were quoted per pound sterling, is now rapidly rising. If the Chamber agrees to the export of the surplus grain, amounting to one milliard kilogrammes, a sharp rise in the value of the leva is to be anticipated.

November 4.

Record Shipment.

On Tuesday the s.s. "Jacona," built in the United States in 1908, sailed from Burgas for New York on her first voyage. Her cargo consisted of nothing but tobacco, of which she is carrying the record amount of 10,000,000 lb.

In view of this year's excellent crops, a measure is being introduced in the Chamber authorising the three State banks (the National Bank, the Agricultural Bank, and the Co-operative Bank) to form a consortium which will have the monopoly of the purchase and export of the surplus grain, with the object of improving the value of the leva by disposing of the stocks for gold.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended October 20 amounted to £E16,332, making the total for the year £E158,417. The corresponding figures for 1918 were £E13,442 and £E176,066.

PROPERTY RIGHTS IN ROUMANIA.

H.M. Commercial Secretary at Bucharest reports that a decree law of October 7 prohibits all dealings in mining or industrial property rights in Roumania until the expiration of the period of six months after the signing of the general peace. The law is not clearly expressed, and from its literal meaning it would seem that all property rights, industrial and mining, must remain in their present legal ownership until the expiration of the period mentioned. This means that transfers of factories or mines to other owners than the present is prohibited, and it is to be presumed that any modification of existing ownership, such as takes place at the forming or the dissolution of a partnership, or the acquiring of such property by a new company, are equally prohibited for the same term.

Needless to say, any such strict rendering of the law into actual practice will be fraught with difficulty to the industrial circles of this country, and it is hoped that some modification of the text will be brought into operation should there be any serious intention of applying the restrictions. It must not be assumed from the above that foreign co-operation is not heartily welcomed in Roumania. It simply represents a desire that Roumanian industries should be run by Roumanian companies under Roumanian incorporation. There is no reason why British interests should not do this, as the Roumanian company laws are very liberal and permit of two foreigners to one Roumanian having seats on the boards of directors. There is, therefore, no reason to suppose that British capital invested in Roumanian industries is in any danger from Government interference.

PUBLIC WORKS IN TUNIS.

A programme of railway, port and water-supply developments in Tunis, published in the *Journal Général* of October 26, has been approved by the Tunisian "Commission de l'Outillage Economique."

According to the report, the total length of the Tunisian railways is 1,993 kilometres. On the Bone-Guelma Railway the company are exploiting 1,551 kilometres, 499 kilometres of which are of normal gauge and 1,052 of narrow gauge. The Sfax-Gafsa line extends for 442 kilometres, narrow gauge. The work laid down in the programmes of 1907 and 1912, it is stated by the Director of Public Works, is to be completed first. This includes the reinforcement of rolling stock and the extension of the Tunis-Teboursouk line to the Salines terminus.

The construction of new lines—including a line from Poul-du-Fahs to Maktar, Kalaa-Djerda Haidra, and eventually Tébessa; branches on the Pont-du-Fahs-Kalaa-Djerda line; a line from Gabès to Ben-Gardane, with branches at Médinine Zarzis and Hount-Souk, and a line from Tozeur to Nekta—is under consideration. The provisional cost of the new undertaking (626 kilometres), together with the completion of the work referred to, is estimated at 270,952,000 frs. The Commission are also contemplating the construction of two additional lines extending to the Algerian frontier. With regard to routes, the construction of 2,400 kilometres, at an estimated cost of 83,000,000 frs., is under consideration.

At the Tunisian ports the work will consist principally of the creation of quays, landing stages, etc., at an estimated cost of 33,500,000 frs. For the supply of drinking water to the principal Tunisian centres the programme provides for a total expenditure of 30,000,000 frs. It is hoped that the realisation of these important schemes will bring a new era of prosperity to Tunis. A second programme is being prepared in connection with agricultural water supply.

India's Trade in 1918-19.

Position of United Kingdom.

The review of the trade of India for 1918-19, advance copies of which have just reached this country, is of special interest, since it deals with a period of transition which saw the close of the war and the commencement of the return of normal conditions. It was a period of exceptional incident. "The silver crisis, a rise in exchange, the failure of the monsoon over wide areas, a virulent epidemic of influenza—responsible, it is estimated, for a death-roll of six millions—and the Armistice illustrate," Mr. Findlay Shirras points out, "if illustration were necessary, the unique diversity of this year." We shall have occasion to return to the review, and in the present article will merely refer to some of the more notable features of India's commerce during the period.

The overseas trade amounted during the year to Rs.423 crores (£282 millions), showing a marked increase on the figures for the previous year of Rs.393 crores (£262 millions) and of Rs.370 crores (£247 millions), the average of the pre-war quinquennium. The effect of the rise in the values of commodities on these figures was naturally very marked. Thus, while the imports of merchandise in 1918-19 show an increase of nearly Rs.19 crores on the figures for 1917-1918, if the prices obtaining in the former year are applied the value would be Rs.10 crores less than the previous year. Similarly as regards the exports, which actually show an increase of Rs.43 crores, or 22 per cent., on account of higher prices.

Imports and Exports.

The imports amounted to Rs.169 crores (£113 millions), the value being the highest recorded with the exception of the last normal year before the war. The most noticeable features with regard to the imports are (1) the large increases of Rs.4,69 lakhs, or 60 per cent., in the value of iron and steel, and of Rs.4,57 lakhs, or 106 per cent., in the value of imports of cotton twist and yarn; (2) increases in imports of silk manufactures, raw cotton, wood, railway plant and rolling stock, mineral oil other than kerosene, apparel, machinery, etc.; and (3) the decrease in the imports of kerosene oil, matches, and timber.

The value of the exports was Rs.239 crores, against Rs.233 crores in the previous year. The main features of the trade are the decreases of Rs.14 crores in the value of exports of food grains, of Rs.12 crores in the exports of raw cotton, and the surprisingly large decrease of Rs.10 crores in the exports of jute manufactures. There were also decreases of Rs.3 crores in seeds, Rs.3 crores in raw and tanned skins, Rs.2 crores in tanned hides, Rs.1 crore in raw wool, and Rs.1 crore in oils. Jute, cotton, grains, hides and skins, tea, and seeds were the six chief exports of the year. During the past thirty years the first place in the export list has been taken on seventeen occasions by raw and manufactured cotton, seven times by jute, and six times by food grains. On the present occasion manufactured jute heads the list with the record total of Rs.52 crores, figures which, it is pointed out, are in excess of the total exports of raw and manufactured cotton by no less than Rs.7 crores.

Direction of Trade.

The most important feature of the review, and that which will be read with the keenest interest by British merchants and manufacturers, is that dealing with the direction of trade. There are no marked changes to record compared with the figures of the previous year; the statistics given merely bring out the marked extent to which during the war period Japan, and to a lesser degree America, have been able, owing to the preoccupation of the merchants of the United Kingdom with the preparation for war, to obtain a substantial share in the Indian market.

The main features of the year under review were the increases of Rs.15 crores in the imports from Japan and of Rs.4 crores in those from the United States, the increase in exports to the United Kingdom of Rs.10 crores, of Rs.3 crores in those to the United States, and of Rs.4 crores in those to Asiatic Turkey (in the latter case, of course, mainly to Mesopotamia), and the decrease in imports from the United Kingdom of Rs.5 crores.

The British Empire's share of the total trade came to 54 per cent., as against 55 per cent. during 1917-18, while the share of the Allies came to 26 per cent., as against 34 per cent. for the previous year. As regards imports, the British Empire's total amounted to 58 per cent., as against 70 per cent. for the pre-war period, this being due to the large decrease in imports from the United Kingdom. On the other hand, the shares of other parts of the British Empire increased from 7 per cent. to 12 per cent. As regards exports, the British Empire's share amounted to 52 per cent., against 42 per cent. for the pre-war period. The former enemy countries had about 14 per cent. of the export trade, and this, it is gratifying to state, has been almost entirely taken by the British Empire.

Japan.

The second place to the United Kingdom in the import trade is taken by Japan with 19.8 per cent., and this country is third in the export trade with 11.6 per cent., as against the United Kingdom's 28.5 per cent., and the United States with 13.1 per cent. The imports from Japan in the past year amounted to Rs.33 crores, against Rs.18 crores in the previous year and Rs.3¾ crores in the pre-war trade period. In other words, since the war Japan has increased her exports by almost ten times. Cotton manufactures make up the bulk of this increase, her exports of piece goods last year amounting to 238 million yards, as against about three million yards before the war, and represent 51 per cent. of the imports, as against 28 per cent. Other commodities in which Japan has increased her trade are apparel, metals, woollen manufactures, hardware, beer, tea chests, paper and pasteboard, machinery, millwork, chemicals, haberdashery and millinery. On the other hand, there has been a decrease in India's imports from Japan of matches, glass and glassware. As regards Japan's imports from India, which amounted to Rs.29 crores, it is interesting to note that raw cotton was responsible for 80 per cent. In other words, Japan was taking India's cotton and returning it in the form of manufactured articles.

The receipts of the Egyptian Markets, Ltd., for the week ended November 6 were:—Cattle markets, £931; general markets, £605; total, £1.536. Total for year, £48,744. The figures for the corresponding week in 1918 ended November 7 were:—Cattle markets, £871; general markets, £545; total, £1,416. Total for year, £44,630.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 12:—

Weather dry everywhere except in Southern India, Burma, and the head of the Bay.

During the week ending Saturday, November 1, preparations and sowings spring crops and harvesting autumn crops continued. Harvesting paddy continued Bengal, Bihar and Orissa and Southern India. Sowings continued Madras. Plucking tea continued Assam. Cotton picking continued Burma. Central Provinces, United Provinces of Agra and Oudh, Punjab, and parts Bombay. General crop conditions good, but rain wanted parts of West Bengal and parts Bihar and Orissa, and urgently wanted Punjab, where crops suffering drought.

Bombay cotton market dull. Fully good Broach, April-May, Rs 562. Piece-goods market strong. Calcutta jute market quiet, but steady. Hessians inactive. Heavy goods quiet. No change in bank rate.

Reconnaissance survey by North-Western State Railway, 19 miles, and Hukong Valley railway preliminary survey by State for metre gauge railway line between India and Burma sanctioned.

By a fire at Grozny, Northern Caucasia, nearly five million poods [over 80,350 tons] of oil were destroyed.

SMALL ADVERTISEMENTS.

A LEADING YUGOSLAV CONCERN wishes to engage a young first-class English Correspondent, introduced in the British trade, to organise and lead its British Department.—Address offers to the Export and Import Company, Ltd., Zagreb (Yugoslavia), Frankopanska ulica 1.

GOVERNESS desires Post (would go abroad). Usual English, French, el: Italian and German. Good Music, Drill. £80-£100.—C. H., The Ladies' League, 118, New Bond Street, W.

LADY SECRETARY desires Post (would go abroad). Shorthand, Typing (quick speeds). Good French and Italian. 70s.-80s. —D. B., The Ladies' League, 118, New Bond Street, W.

THE LADIES' LEAGUE (under Royal Patronage), 118, New Bond Street, W., successfully Recommends Secretaries, Lady Housekeepers, Companions, Governesses, Nursery Governesses, Lady Nurses, Nurse Companions, &c.

MR. JOHN KIRSOPP, M.I.M.E., F.G.S., Offers his services, home or abroad, on Mine Management, Supervision of Prospecting or Diamond Boring Operations or Mineral Reporting work; practical experience Northumberland, Durham, Yorkshire, Lancashire and Leinster coalfields, and extensive experience in coal, oil, etc., Canada, Alaska, United States, West Indies and Spain. 4 years' Munition work. First-class colliery manager's certificate endorsed with Surveyor's qualifications. Mr. Kirsopp will undertake technical or research work anywhere. — Address, 36, Gladstone Terrace, Gate-head-on-Tyne.

EXPORTNO I IMPORTNO DIONIČKO DRUSTVO

(Export and Import Company, Ltd.

HEAD OFFICE:

ZAGREB (Yugoslavia).

Founded by most of the Southern Slav banking houses and some of the pre-war exporters, with branches to be opened in all the commercial centres of the new Kingdom of Yugoslavia. The Company is very desirous to enter into business relations with the British trade, buying goods for own account and accepting agencies.

The New Levant Company.

British Interests in the Near East.

Lord Carnock presided at a meeting of the Central Asian Society, held on November 19, at 22, Albemarle Street, London, W., when the Right Hon. Sir Maurice de Bunsen, G.C.M.G., G.C.V.O., K.C.V.O., delivered an address on "The New Levant Company."

Sir Maurice de Bunsen at the outset gave a brief history of the old Levant Company, which extended over a period of 244 years. He said that the company had its origin in 1581, when a small body of merchant adventurers were sent to the East to see if facilities could be given to traders from England. One of them was Sir William Harborne, who became the first English Ambassador at Constantinople. As a result of his exertions the first capitulation between England and Turkey was signed, which put the trading relations and the privileges of the growing little English colony there and in the East on an equal footing with the Venetians, the French, the Poles, and the peoples of other nations. On his return Letters Patent were issued to a small company which was for a long time known as the Turkey Company and which was the beginning of the Levant Company. Probably the principal reason for the establishment of closer relations with Turkey in the East being desired at that time was that Queen Elizabeth, from whom the company received its charter, was looking out for friends to help her in the approaching conflict with Spain, the period of the Armada being then approaching. One of the duties and privileges imposed upon the Old Levant Company was that of nominating and selecting all the Ambassadors and Consuls who were sent to the Porte and the Near East. The company had its charter renewed from time to time, and what was known as its Great Charter was granted by James I. in 1606. This was the principal document on which it afterwards relied. In 1825 it was decided to bring the company to an end. In a letter to the directors, Canning expressed his appreciation for all their services, adding that they were not to blame for anything, that he had no reproach to make, but that their privileges and their great position were inconsistent with the needs of modern times. He therefore called upon them to give up their privileges and to resign their charter. Perhaps the general public who are informed on those subjects had not given the Old Levant Company credit for all it did, for the very important part it played in history, and for the services it rendered in the development of the vast and prosperous trade of Great Britain.

Dealing with the New Levant Company, Sir Maurice de Bunsen said that it had its origin in the following circumstances. Before the war, it had always been said as a reproach against British banks that they did not do enough for the British trader in the way of helping him in starting business in a foreign country, and that they should follow the example of the German banks by taking a share of the risks of merchants who were doing business in foreign countries, and not confine their attention to banking in the strict sense of the term. Then was started the great institution of banking interests known as the British Trade Corporation, the object of which was to remove from the British banks the reproach which had hung over them for so many years, and to do something for British manufacturers and traders in their relations with foreign countries. Since the conclusion of the war it had put this policy into effect, and one of the first things it did was to start the Levant Company, taking over all its shares with the exception of some which had since been taken over by the general public. The object of that company was to assist British traders and manufacturers to establish themselves, and to maintain their position if they were already established in foreign countries. In the very short time which had elapsed since it came into being, the Levant Company, of which he had the honour of being a director, had created a number of agencies, and British companies had been established over a great portion of the Near East. It had agencies at Constantinople, all over the Balkans, including Bucharest, Athens, Salonika, Belgrade, Sofia, Aleppo, Damascus, Baghdad, and other places.

One of the enormous difficulties with which the new company had struggled since the beginning of its career was that no one was able to say to whom some places belonged. The Peace Conference had not been able to make up its mind about the great problem as to what was to be the ruling power. The consequent uncertainty was detrimental to serious trading relations. The company did not know what power to deal with or what prospects there were for serious business. Then another enormous difficulty which had to be contended with by British merchants and manufacturers in starting business in the various countries in the Levantine Seas after the war was that these appeared to have been swept clean. After the war, they appeared as if a swarm of locusts had swept over them. Their currency had sunk so low as to have no value at all. The result was that their peoples had their pockets full of their own currency, but no business could be done with them on that basis because British merchants could never get that currency converted into a pound. If British merchants were to do business with them, it must only be by a system of barter. A branch of the Levant Company had been established in the Sudan with its headquarters at Khartoum. The company had difficulties to struggle against, but he was sure it would be said that it was animated by the same patriotism and the same spirit of adventure and enterprise as the old Levant Company. (Applause.)

Lord Carnock remarked that he himself spent some years in Constantinople and in various parts of the Near East, and used to watch, sometimes with anxiety, the somewhat fluctuating fortunes of British commerce. It was mainly owing to the sturdy determination and pertinacity of British merchants that we were able, in great measure, to retain our position against the most strenuous and active competition. He agreed with Sir Maurice de Bunsen regarding, and fully appreciated, the very great difficulty there was arising from not knowing who were to be the future masters or administrators of many of the regions in which the Levant Company conducted its operations; but he did hope there would be no question of allowing any of the countries which might have mandates over these regions establishing preferential tariffs or any exceptional privileges for their own nationals. (Applause.) The Levant Company would have to keep a careful and watchful eye to see that there was complete freedom for trading, and absolute equality of commercial terms, otherwise we might find that undue, and perhaps unjust, competition would hamper our future. He was glad to hear that the Levant Company was not going to restrict its activities to its present area, but to look far into the future, and extend them still further Eastwards. There was vast scope for the company's activities, and he felt quite sure it could render immense benefit in promoting British trade in the East. (Applause.)

EGYPTIAN COTTON CONDITION.

A Reuter message from Cairo, dated November 11, states that the cotton condition of Lower Egypt is 94 per cent. of the average, of Middle Egypt 100 per cent., and of Upper Egypt 93 per cent. The damage caused by the pink bollworm is much lighter than in the last three years. The second picking is almost over. The available ginning outturns are practically similar to last year's in Lower Egypt, being 99.61 for the Sakellaridis, compared with 99.74. The Ashmouni outturn is better, being 106.89, compared with 104.55.

YUGOSLAV CURRENCY.

Re-marking of Crown Notes.

A Reuter message from Belgrade reports that the following statement is issued by the Serbian Ministry of Finance :—"In order to stop as soon as possible the enormous influx of paper crowns occasioned by a criminal abuse of the situation arising from the stamping of crowns last January, the Minister of Finance orders an immediate re-marking of the crown notes now in circulation in our territories. The new marking will not be applied to those notes which were not previously stamped or to those bearing a foreign stamp. Regarding those notes bearing a doubtful or indistinct stamp or one in a foreign language, these may bear the new mark consisting of an adhesive stamp, providing that original stamping clearly shows that it has been affixed by the established authorities in the territories, even if only temporarily. In cases of doubt, benefit is given to the bearer of the note. The authorities charged with the revision of the stamps are ordered to carry out their duties without vexatious measures. The State and also autonomous authorities are instructed to accept at the State and autonomous treasuries all crown notes with the exception of those which have never been stamped."

FOREIGN MONEY IN YUGOSLAVIA.

Export Regulations.

A Reuter message from Belgrade, dated November 15, states that a decree has been issued prohibiting the export from the Kingdom of the Serbs, Croats, and Slovenes of foreign money in excess of the following amounts :—French francs, one thousand; English pounds, thirty; American dollars, one hundred; Swiss francs, six hundred. Further, if a traveller is carrying money in more than one foreign currency, the total must not exceed the value of 1,000 French francs, the exchange per French franc for this purpose being fixed at 30 francs to one English pound, 10 francs to one American dollar, 1.60 franc to one Swiss franc. In the event of this order being contravened, the traveller's money will be confiscated by the Customs at the frontier and paid into the State Treasury, while he himself will be prosecuted on a charge of carrying contraband, with very heavy potential penalties. Orders have been issued to the Customs officials to exercise the very strictest control in the above connection.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agriculture Department, dated November 14 :—Our telegram, dated November 7. Relief operations in Bombay Presidency, in Bankura district of Bengal, and in Angul district of Bihar and Orissa, and relief works in Banka sub-division of Bhagalpur district, have been closed. Valedictory doles for recipients of gratuitous relief being distributed in Sadar sub-division of Bhagalpur. Numbers on relief :—Bihar and Orissa : works, 371; gratuitous, 29,476. Feudatory States of Orissa : works, 3,051; gratuitous, 6,888. Central India : works, 3,400; gratuitous, 4,800. Hyderabad : works, 15,000; gratuitous, 15,000. Madras figures not reported.

AYAHS' HOME,
26, King Edward Rd., South Hackney, London.
ESTABLISHED 1825.
IN CONNECTION WITH THE LONDON CITY MISSION.
Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China, and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD., 4 LOMBARD STREET, E.C.

Engineering.

MOTOR SHOW REFLECTIONS

(From a Correspondent.)

Now that the Show is over, it is possible to deal with the large number of models, of all sizes and types, that were on view much more easily than could be done during the exhibition. As regards the success of the show, from a spectacular point of view there is no need to say anything; in fact, that it was visited by nearly 290,000 people during the eight days it lasted speaks for itself.

To speak of its larger aspect first, British motor manufacturers have every reason to feel proud of their great achievement in producing such a variety of pleasure cars in the short space of time at their disposal. When it is remembered that during the past twelve months they have had to finish up immense army contracts and entirely to reorganise their works for peace productions, a process involving the scrapping of practically the whole of their special plant and the replacing of it by new machinery and the getting out of entirely new designs and drawings, it will be seen that they had really very little time at their disposal to get ready for the show, the first, by the way, which has been held for six years. They might well have been excused had they contented themselves with turning out cars of pre-war design and type. Instead of that, however, they realised that buyers all over the world were looking to them to maintain the lead they had secured in 1913, and saw to it that no buyer should be disappointed, and that no other country, either America at the Chicago show or France at the Paris Exhibition, should produce anything that should be better or more efficient in any way than the cars they could turn out. Every branch of British industry, it is safe to say, has been stimulated and encouraged by the splendid example of the British motor industry.

As usual, the show was divided into three portions, the cars and chassis being arranged in the main hall, with the bodies in the annexe, and the accessories, components and sundries, such as clothing, in the gallery Even then, the space at the disposal of the exhibitors was far too small, and it is certain that next year's show, to be successful, will have to be held in some larger building, as the Crystal Palace, or in some temporary erection put up for the purpose.

This year the cars were sharply divided into three general groups or classes, namely, the light cars, those of medium size and the big and luxurious productions of from 40 to 60 h.p. or thereabouts. Almost all of these showed radical departures from pre-war designs, and in quite a large proportion it was easy to note innovations that plainly showed that the lessons taught by aero-engine practice had not been neglected.

It was in a fine sporting spirit this year that the promoters of the show threw it open to foreign as well as to British cars. Such a course naturally led to a certain amount of grumbling on the part of those who wished to secure space which they found had been allotted to American, French, Belgian, or Italian makers, but there is no doubt the policy was sound, inasmuch as it enabled us to see the best that could be turned out of other workshops, and to judge for ourselves whether our products were in any way inferior. If they were not, well and good; if, on the other hand, there was room for improvement, we should have an opportunity of seeing our shortcomings and remedying them before we put the 1920 models on the market.

From a very close and lengthy examination of the cars and accessories on view, as well as from practical experience with several of the show models on the road, I am able to say definitely that our manufacturers have kept the lead they had established in 1913, and that in no respect was any foreign product other than inferior, and in some instances greatly inferior, to our own. Whether in engines, chassis, springing, lighting and starting sets, bodies and accessories, this was equally true; and as I believe that, in some respects, several of the British cars will be improved still further before the promised quantity production begins, we have every reason to feel proud of the industry which did so much for us in war, and which will do so much for us now that we are at peace.

Still, speaking generally, it was noticeable that our cars were lighter than those of pre-war days an improvement largely due to advances made in metallurgy, to new alloys, and to progress made in machine tool design and operation. In car lighting and self-starting sets designers and manufacturers have made great strides, and whilst at the last show only one car was fitted with a self-starter as an integral part of the chassis, this year practically every car shown was equipped with one of these as a standard.

Another departure from pre-war practice, due almost entirely to the experience we have had in building engines for aeroplanes, was in the valve arrangement, overhead valves being fitted on by far the greater proportion of engines. It is, perhaps, only natural that aero-engine influence should be so marked. At the beginning of the war we had, as a nation, only a very few aeroplanes in this country capable of flying any distance or at any height; by the time the Armistice was signed we were ahead of every other country in their production. New types of engines, each bigger and more powerful than their predecessors, were continually being evolved, and the weight of these engines, in proportion to the power they developed, was continually being reduced. Perhaps this reduction of weight per horse-power is one of the most important things British motor-car manufacturers have learned. It may not seem much to say that modern science has enabled us to reduce the weight of a certain powered engine and chassis by a couple of hundredweight or so, as it is certainly true that weight reduction does not mean quite so much in connection with car building as with aeroplane production.

But it must be remembered that lightness, combined with equal speed, stability, strength and power, means more economical running. It means less wear and tear on tyres and a less consumption of fuel. Taking two cars of equal power, the one a pre-war design of a certain weight and the other one of our modern productions weighing considerably less, the lighter car will be cheaper to run, will get away from a start more quickly, will climb hills better, and will attain higher speeds on the level.

The subject of stream lining, or of designing parts in such a way that they offer the least possible resistance to the wind or to air pressure when running, has also received a good deal of attention. This is again due to tests made and experience derived in connection with aeroplane work. The old idea of designing by eye, so as to get a good-looking, but often inefficient, design, has been abandoned. No longer does a maker turn out an outline merely because it looks smart or rakish. Instead, design is now a matter of many and often lengthy experiments in wind tunnels with a view to ascertaining which models offer least resistance for speed work. At one time it was not realised how wind pressure cut down speed; it is barely recognised to-day in cycle and motor-cycle building. Aeroplane practice, however, has shown us that even at speeds of 100 to 120 miles per hour from 5 to 6 per cent. increase in speed can be obtained by making the wires used in construction of a properly designed stream line oval section instead of round, as in ordinary practice.

Other respects in which a visit to the show made it obvious that we had learned a good deal from air work were in the placing of controls and in their design and construction. The concentration of weight at the centre of gravity is another direction in which we have learned a great deal, and as a result the new models are practically free from oscillation, are much more stable in grease, and can negotiate corners at a greater speed.

(To be continued.)

MISCELLANEOUS TOPICS.

A New Fire Engine.

A fire-fighting machine of an entirely new type that has recently been put into the service of the London Fire Brigade will interest many municipal authorities in the East who are anxious to introduce modern methods and modern equipment in their brigades. The machine is a handsome motor van, fitted with an engine of the War Office subsidy type, and a gear-box giving four speeds and reverse. It is designed to attain a maximum speed on the level of twenty-five miles per hour. The principal use of this emergency tender is to assist in fire fighting in enclosed spaces, as, for example, in basements and cellars, and also to provide greater safety for firemen when they work in a vitiated atmosphere. It is equipped with powerful searchlights and cluster lamps to illuminate the scene of a fire at night. The power for these lamps is obtained from a dynamo driven by the car engine, and giving a current of 100 ampères at 100 volts. Two searchlights are carried, each being of 3,000 candle-power. An electrically operated fan, capable of pumping 400 cubic feet of air per minute, is coupled to a motor. The object of this fan is to pump clear air into smoky basements, sewers, etc., with a view to enabling the firemen to see what they are doing. On each side of the van are compartments containing two sets (four in all) of self-contained breathing apparatus of the Proto type.

These enable four of the crew of the vehicle to live in an atmosphere of poisonous gases for one hour. The Proto equipment includes a leather helmet, goggles, and a breathing apparatus, providing a supply of oxygen and caustic soda to absorb the carbonic acid which results from respiration. There are many other equipments of the vehicle, too numerous to be described here. The machine is, in fact, completely equipped with the most modern devices to render it entirely efficient for the work for which it is destined.

Outlook in Syria and Palestine.

There are opportunities, an authority points out, for great expansion in the agricultural activities of Syria and Palestine, and as this is the industry upon which these countries almost wholly depend, there are prospects of early developments in this direction. It is not well known that before the war not more than 10 to 12 per cent. of the total area was under crops. Drought is the chief drawback, and an equable distribution of rain during the winter season is an important factor. The climate ranges from tropical heat in the Jordan valley to perennial snow on the upper slopes of the mountains. Cereals, vegetables, and fruit are the principal crops, and tobacco, cotton, and hemp are cultivated successfully. Wheat forms 50 per cent. of the grain crop, which annually averages upward of 3,000,000 tons. Grain is winter-sown and harvested in June. Barley is produced at the rate of half a million tons annually, and is the next most important cereal. Indian millet, maize, and sesame (an oil-producing crop) are also grown. Green crops yield some half-million tons each year, and are chiefly consumed in the country. Fruit is represented by the olive, vine, mulberry, and orange. Vine production annually reaches 350,000 tons. It should be realised that Syria is a land of small holdings, with the methods of the peasant cultivators extremely primitive. The average size of a holding is governed by the extent of land which can be tilled by a pair of oxen. The wooden plough, with the light iron nose, superficially breaks the soil after the first rains, when speed is of much importance, and the ground retains the moisture better than if it were deeply ploughed. Attempts in the past to introduce European implements have not been very successful, because of the failure to realise fully the peculiar agricultural conditions of the country. Many agricultural implements were introduced recently to the natives, who, when accustomed to them, prefer them.

Water Power in the Balkans.

We have frequently referred in these columns to the advantages of the utilisation of water power in the Balkans and the

Digitized by Google

neighbouring countries. Under the new state of affairs the question of the value of water power has become a matter of first importance in all schemes of reconstruction in every country. In France, for instance, according to recent reports, schemes are before the Chamber for the utilisation of the Rhone which, if carried through in their present form, provide for the generation of power equivalent to about 400,000 kw. continuously, and, according to Reuter, will conserve approximately 5,000,000 tons of coal. But the great value of water power cannot be more evident and convincing than in Italy, for Italy, like the Balkans, has been endowed by Nature with water in such ways as to be conveniently utilised for irrigation or power in falling, and thus has greatly contributed to the economic prosperity of that country. Its use for agricultural and industrial purposes is continuously increasing, in the case of the former for the more intensive cultivation of the soil, and in the case of the latter to relieve the manufacturers of the expense entailed by importing foreign coal. The Italian Government has prepared new schemes for the construction of dams and artificial lakes in Calabria and Sardinia, in the former case chiefly for the development and distribution of motive power, and in the latter chiefly for irrigation purposes. It is estimated that in Calabria 170,000 h.p. will be made available, whilst in Sardinia 20,000 hectares of land can be watered and power developed to the extent of 11,000 h.p., which in part can be utilised for pumping the water into the irrigation channels. Let us hope that the Balkan States will also pay attention to the utilisation of water power. The rivers Danube, Vardar, Morava, Save, Drin, Ibar, Maritza, and their numerous tributaries, lakes, and waterfalls can transform the Balkan Peninsula at a comparatively moderate expenditure into one of the most prosperous regions of Europe, and a most important and safe waterway between East and West.

British Cars in India.

In last week's notes reference was made to the competition in India, and to the apparent success of the American and Japanese engineer manufacturers in those markets. According to official statistics the imports of motor-cars into India during five recent months, April 1 to August 31, were, from the United Kingdom, 87, value Rs.6,99,392; from the United States, 1,963, value Rs.50,50,217. Commenting on these figures a correspondent says that, with an exchange of 10 rupees to the pound sterling, English manufacturers could place thousands of cars in that country. The Americans, he says, are selling because there is nothing else to buy, and the public have got tired of waiting. The figures, it must be admitted, are very unsatisfactory, but in the circumstances some allowance must be made for the British manufacturers of motor-cars, of whom, speaking last week at a dinner of the British Motor and Allied Manufacturers, H.R.H. Prince Arthur of Connaught said that "No one could fairly accuse British motor manufacturing and allied industries of being in any sense asleep." He referred to the part played by the industry in the war, and said that without motor transport he did not believe the war could have been carried on a colossal scale as it had been. However, now that the trade war has commenced British motor manufacturers must look after the export trade; above all, the Indian market must receive attention.

The ordinary general meeting of the Anglo-Palestine Co., Ltd., will be held on November 25.

The traffic receipts of the Suez Canal for the week ended November 7 were 4,920,000 francs against 1,250,000 francs.

Mr. Henry J. Wenham has resigned the chairmanship of the Egyptian Agricultural Company, but retains his seat on the board. Mr. E. W. P. Foster has been appointed an additional director, and succeeds Mr. Wenham as chairman.

The following official information respecting the rates of exchange in South Russia has been received in London from Taganrog, dated November 6:—Unofficial exchange for British notes during past week: highest, 900; lowest, 800. Cheques on London: Highest, 710; lowest, 635; all for exceedingly small amounts.

STAMPING OF SHARE CERTIFICATES.

The Roumanian Legation in London notify that by the decision of the Department of Industry and Commerce of the Roumanian Government, No. 8,648, of May 16, 1919, the notice published on page 14 of the "Journal" of July 3 last, relating to the registration and stamping of share certificates in companies incorporated under Roumanian law, is extended also to those companies which, although sequestrated or placed under the control of the Roumanian Government, have for various reasons been released from control.

Therefore, persons and companies domiciled in the United Kingdom who hold shares in companies incorporated under Roumanian law, which, on or after August 28, 1916, have been sequestrated or placed under the control of the Roumanian Government, including those companies which for various reasons have been released from control, are hereby notified that, in order to comply with the provisions of the Decree-Law of the Kingdom of Roumania, No. 1,353, of March 29, 1919, and the decision of the Department of Industry and Commerce of the Roumanian Government, No. 5,452, of March 5, 1919, they must within 25 days from to-day's date present their share certificates in such companies to the Roumanian Legation, 4, Cromwell Place, London, S.W.7, for the purpose of being viséd and stamped.

In the case of shares which were held by the present owner prior to August 28, 1919, proof must be produced in support of this.

With regard to the securities which have been transferred or negotiated since August 28, 1916, proof must be given that on that date they were not held up by or for account of subjects of countries with which Roumania has been at war nor in the meantime have been so held.

The share certificates must be accompanied by a schedule in triplicate, giving the numbers and denominations of the shares held.

The following is the full list of companies to which the present notice refers:—

Societatea Romana de cai ferate Buzau Nehoiasi.
Societatea anonima pentru distribuirea produselor petrolifere.
Magazinele generale si antropozitele "Obor."
Societatea anonima romana pentru fabricarea acumulatorilor electrici.

Near East Markets.

TURKISH FRUIT CROPS.

Messrs. C. J. Giraud and Co., Smyrna, report as follows, under date November 1 :—Since our previous report, dated October 1, we have to record considerable activity in all dried fruits Markets are firm and prices have been steadily advancing. The British Food Ministry has ceased purchases of sultanas, but Continental demand has considerably developed. Supplies both of sultanas and figs are diminishing, and stocks in the interior are very much reduced.

The fig packing houses have now closed down. Arrivals are limited to small and irregular supplies of natural figs of inferior descriptions. American buyers are inquiring for fine sorts of Naturals, but, for want of supplies, very little business has materialised. The British Food Ministry has bought some limited quantities of G.A.Q. Naturals, and would probably have increased its acquisitions had shippers been able to offer more freely. Interest now attaches to the statistical movement of the season, which has been as follows :—

Sultanas.

Total sales reported on the Smyrna market to date, 143,500 bags; total sales reported on the Vourla market to date, 8,500 bags—152,000 bags. Bags this season have averaged 2½ to 2¾ cwts, making the above quantity equal to about 21,000 tons. Estimate of stocks :—Smyrna market, 1,000 tons; Vourla district, 1,000 tons; Magnesia, Cassaba, Axar, Nymphio, Salihli, Alascheir, etc., 5,000 tons—7,000 tons. Estimate of total yield, say, about 28,000 tons. The quantity of 21,000 tons sold up to date has been distributed as follows :—Shipments to the United Kingdom up to date, 13,500 tons; shipments to the Continent up to date, 6,000 tons; shipments making per s.s. "Belgravian" and "Castillian" for the United Kingdom, estimated at about 1,000 tons; shipments making per s.s. "Calypso" for Amsterdam, 500 tons—21,000 tons.

Of the visible stocks now remaining, and estimated at about 7,000 tons, the Continent is more than likely to absorb a considerable portion before the end of the year. In our preceding report we referred to the causes which had influenced farmers in rushing their produce to market. According to advices received from all producing districts, farmers have practically cleared the bulk of their fruit. Existing stocks, now concentrated in the main centres, are in strong hands, and will only be released for sale gradually over the next four or five months. On the present showing, therefore, there appears to be little chance of any decline in values, and although, as usual in December, export activity will lessen, stockholders are alive to the statistical position, and are likely to wait for the resumption of business in the new year before selling out.

Red Raisins.

The yield of red raisins at Vourla and Carabournou has been disappointingly small, the production being estimated as follows :—Vourla district, 1,600 tons; Carabournou district, 180 tons—1,780 tons. Sales to date :—Vourla, 1,200 tons; Carabournou, 50 tons—1,250 tons. Stocks existing, say, about 530 tons. Arrivals commenced towards end-September, and market opened rather hesitatingly at 88s. to 90s. per cwt. c.i.f., but, under the influence of Continental inquiry, prices soon improved, and have since steadily advanced, good average quality marking 100s. and the choicer growths ranging from 105s. to 125s. c.i.f. Total shipments to the United Kingdom consist of 10,637 bags, say about 250 tons. The remainder of the production will be entirely shipped to the Continent.

Figs.

Total arrivals to date amount to 32,000 loads, equal to about 7,000 tons. The United States have secured the bulk of this quantity. Shipments so far to the United Kingdom, consisting entirely of G.A.Q. Naturals, total 826 tons, and it is estimated that a further quantity of about 7,800 tons is in lighter in course of shipment. Arrivals from the interior have now practically ceased. Some stocks are still available in the disturbed areas, but transport difficulties militate against much of this fruit becoming available in the immediate future. Some limited shipments have been made to the Continent, Canada, and Australia.

The Outlook.

In all our reports since July last we consistently pointed out the unfavourable outlook of both sultanas and figs and the difficulties which shippers were likely to encounter in the course of the season. The forecasts we made earlier in the year have been very closely borne out by actual results. The sultana districts lie almost entirely in the zone under Greek military occupation, and the measures which were taken by the Greek authorities to safeguard the gathering of the grapes have been successful, and have assured the collection of the yield in its entirety. In some of the more outlying districts some fruit has doubtless been lost, or, if collected, will later on in the year find its way to market, and add somewhat to the weight of the production. The railway companies have also made every effort to facilitate the transport of dried fruits, having given during the past two months the preference to fruit over all other traffic.

As regards figs, the bulk of the orchards lie in the Meander Valley, which, as we have already explained, is under the divided occupation of the Greek and Turkish forces, and is the scene of continued strife. In our August report we clearly set forth the conditions prevailing in the district, and expressed the conviction that not more than 25,000-30,000 loads would be available for transport to market. It is due to the initiative of two or three shippers, who sent their agents into the disturbed areas, and succeeded thereby in bringing down some 7,000-8,000 loads, that the quantity of 32,000 loads has reached our port, and been shipped off to this date.

Prices now ruling for both sultanas and figs are firm. Very few figs are left for shipment. Sultanas have advanced 7s. to 10s. per cwt., according to quality, and this advance is likely to be maintained.

LONDON PRODUCE REPORT.

Currants.

There is little fresh to report. The distribution has been delayed by the difficulty of finding warehouse accommodation for supplies.

Sultanas.

Supplies in this country at present are nothing like sufficient to meet requirements. Messrs. Giraud's latest report on the position in the Smyrna district, which will be found in the adjoining column, gives a slightly more encouraging picture of the outlook.

Coffee.

On the whole, the market has been steady. Two thousand one hundred and fifty-seven packages were offered at auction this week, and met with a very small demand. Nicaragua bold greenish made 135s. 6d. for home consumption, while peaberry was done at 130s. to 132s. 6d. Transactions have taken place in Costa Rica at 150s., Mysore at 145s., and Guatemala at 125s., while prices for Jamaica have ranged between 95s. and 155s. Stocks of Brazilian amount to 104,324 bags, as against 197,880 a year ago, while supplies of Central American total 159,467 packages against 127,140, and of other kinds 81,691 packages as against 21,752. The futures market has been quiet. Quotations: December, 123s.; March, 119s. 9d.; May, 116s. 3d.; July, 115s. 3d.; and September, 113s.

Sugar.

There has been a brisk demand for free sugar for manufacture, and also to a lesser extent for export. The result has been that prices have moved upwards, and have reached a record level, American granulated having been done at 116s., White Java at 114s., and Mauritius at 112s. Java is quoted for January at 81s., and Mauritius at 77s. 6d.

Oilseeds.

A hard tone has characterised the market. Indian linseed has come to business at 50s. per cwt., while the English description is quoted 60s. Transactions are being effected in new crop Argentina at 35s. for January shipment. Rapeseed has been steady, with little business resulting. Toria to Hull is quoted 40s. 6d. January-March.

Oilcake, etc.

There has been practically no change in the prices of oilcake. Oils are very firm. Linseed has been done at 93s., while rapeseed has come to business at 104s. Transactions have taken place in soya bean oil at 90s., common Indian cottonseed at 84s., and fine Indian cottonseed at 91s.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows for the week ended November 1 :—

The activity of last week in opium has not in any way abated this week, resulting in a large exchange of cases, amounting in all to 104, which, taking them on an average of 160 lb. per case, brings up the aggregate to the grand total of 16,640 lb. The prices paid for this opium range from 12s. to 20s. per lb., as to quality and strength, and the Far-Eastern markets are by far the largest buyers, with a few cases of soft shipping elastic qualities presumably for Cuba.

Within the past fortnight inquiries for the drug from the Central Powers have been reaching our usual shippers, but hitherto we cannot say whether any business has resulted. Anyway, as Germany is altogether depleted of stock, it is very likely that this market will come in for important supplies very soon. Taking all this, therefore, into consideration, we foresee higher prices will rule in the near future, notwithstanding that London and the States are convinced that prices will drop further before the year is out. The Exchange for dollars and sterling has been steady at last week's figures. The arrivals are now 847 cases against 57 last year at even date. In pre-war times the arrivals from June to November were never or very rarely under two to three thousand.

CONDITIONS IN CYPRUS.

(From a Correspondent.)

As winter approaches, the cost of most articles continues to rise, including fuel—wood and charcoal. Wages have advanced to double and treble pre-war rates. A tour in agricultural districts reveals considerable change in conditions. In the plains the sowing of cereals is being pushed with commendable activity. The demands on Government for advances of seed corn are large. The fall of the price for locust beans (carobs) from £7 15s. to £5 11s. the ton has come as a blow to the large class of growers. Passing to the hill districts, the prices obtained for wines and spirit are a great boon in all wine-producing villages, where so many depend upon this industry

In the vine-producing areas the value of the best land has been greatly enhanced. To take a few examples. Land is sold in Cyprus by the *donum*, which is roughly (for the *donum* differs in different districts) one-third of an English acre. Prior to the war the best vine lands were valued at from £8 to £10 the *donum* (roughly, £24 to £30 the acre). An average price would, perhaps, have been about £3 10s. the *donum*, or £10 10s. the acre. In some recent sales from £100 to £140 (£300 to £420 the acre) has been paid. Good garden land realised at pre-war prices £10 to £30 (£30 to £90 an acre), according to circumstances—position, soil, irrigation rights, etc. Lately as much as £90 (£270 an acre) has been asked and given. The price of grapes has been quadrupled; that of vegetables, as well as of meat and fish, at least trebled.

An Issue of Notes.

By an Order in Council, the officer administering the Government has sanctioned the issue of notes not exceeding in value £700,000. It is probable that this will include notes of 6d. up to £60,000 or more. This is to meet a great dearth of small change, which not infrequently occurs during and after the carob season.

Under the stimulating title of the *Commercial Driver of Cyprus*, a guide is to be published in English, and should appear on December 31. The object is to encourage island trade in European markets.

COMPANY MEETING.

Assam-Bengal Railway.

The forty-ninth general meeting of the Assam-Bengal Railway Company, Ltd., was held at the offices, 80, Bishopsgate, London, on November 18, the chairman, Mr. James M. Rendel, presiding.

The Secretary, having read the notice of meeting and the auditors' report, the Chairman said:

I have now to present to you the report of the directors for the financial year which ended on March 31. It may, I assume, according to the usual custom, be taken as read. The result of the year's working, speaking broadly, is that while there has been a large, and, as we believe, unavoidable increase in the expenditure, this has been practically set off, and, indeed, taking the system as a whole, including the Mymensingh Bhairab Bazar Branch Line, which we worked for the Branch Line Company, rather more than set off by a corresponding increase in the gross receipts. In the circumstances this is perhaps as good a result as we could have ventured to look for, and may be considered, therefore, as satisfactory.

The increase in the working expenses is due to some extent to the cost of repairing the damage caused by the earthquake in July, 1918, which was of a somewhat serious character. In the main, however, it is to be ascribed to the continued rise in wages and salaries, and the cost of fuel and of all necessary material of every kind, which has been the direct and unavoidable consequence of the war, and has affected all railways alike, in India as elsewhere. How far this rise will go and how much of it will be permanent it is impossible to say. What is clear is that the general standard of working costs has been definitely raised to a much higher level than we were accustomed to before the war. This emphasises, if emphasis were necessary, the need for economy wherever economy is possible. This is fully realised, I am glad to say, by the agent of the railway, Mr. G. Anson Bayley, and the very competent staff of officers acting under him. We are confident that they are doing, and will do, everything that careful supervision and technical skill can do to meet the situation.

But, apart from economies, what we must look to to reduce the balance is to increase the receipts. If the line is to cost more, may we not hope that it will also earn more? From this point of view it is satisfactory to know that during the year under review the gross earnings of the whole system amounted to just over 87 lakhs, being larger by upwards of 10 lakhs, or over 13 per cent., than the gross earnings of the previous year. It is the highest that has been obtained. During the current year, so far as it has gone, the same process has continued, and at a very much greater rate. For the half-year ending September 30 last there has been an increase for the whole system, including the branch, of nearly 13 lakhs, or over 33 per cent. We cannot, of course, expect that the expansion of the traffic can be maintained on anything like this scale. But we may fairly hope from present indications that the steady development of the traffic, which was arrested by the war, has now been resumed, and is once more assured. The most significant fact about these figures is the remarkable growth of the passenger traffic. In the year 1917 the Railway Board sanctioned, as a war measure, a large increase in the passenger fares. The primary object was, I believe, to ease the pressure on the railways by restricting the passenger traffic. The actual result has been a great augmentation in the receipts from that traffic. Experience has shown that it can easily bear the increase imposed on it. Notwithstanding this increase, there has been, concurrently with it, a large expansion in the volume of the traffic. Looked at as an experiment in rates, the measure has so far been entirely successful.

You will have seen from the report that Col. Huddleston, the managing director, is to visit India during the present cold season We believe, as a general principle, that visits of this kind are of great value to the administration, and ought to be repeated at frequent intervals. But on the present occasion there are two special reasons why we have asked him to go. In the first place, very important proposals as to the future of the Port of Chittagong are under discussion between the Government of India, the Port Commissioners, and the board, and it is very desirable that the board should be represented on the spot, not merely in the interests of the railway, but in order that the mercantile community may have the fullest opportunity of making their views known to the board, in personal discussion, and may be satisfied that in working out the details of the new arrangement their views have been fully and sympathetically considered. But besides this the board feel that after the interruption of progress caused by the war we are making, as it were, a new start under conditions which have greatly changed, and that in these circumstances there are all sorts of questions affecting the future policy and development of the line which it is highly desirable that the managing director should have an opportunity of studying in India in personal conference with the agent. It will be remembered that when Col. Huddleston last visited India two years ago the sole object of his mission was to come to a settlement with the Railway Board, if that were possible, on the question of the transfer to the railway of the Dacca-Mymensingh Line. As I told you a year ago, he was unfortunately unable to succeed in that object. The position, as it has since been developed in correspondence with the India Office, is, as we understand it, that no final decision adverse to this railway will be taken without giving us an opportunity of being heard once more on the subject. We are not proposing to reopen the question at the present moment. But we hope that during his forthcoming visit to India Col. Huddleston may find an opportunity of discussing it, at least informally, with the responsible authorities in that country

He then moved that the report and statement of accounts be received and adopted, which was seconded by Lieut.-Colonel G. Huddleston, C.I.E., V.D., and unanimously agreed to.

The Chairman then moved that Col. Sir Walter Lawrence, G.C.I.E., G.C.V.O., C.B., be re-elected a director, which was seconded and carried unanimously.

(*Continued at foot of next column.*)

The auditors were reappointed, and a vote of thanks to the staff in India and at home for the able way in which they had carried out their duties terminated the proceedings.

LANCASHIRE COTTON.

Market Still Firm.

(From Our Own Correspondent.)

Manchester, Wednesday.

Although the tone of the market continues firm, business to some extent has been adversely effected by the easier tendency in American cotton prices. Since a week ago there has been a substantial decline in Liverpool and New York. Spinners and manufacturers remain very difficult to deal with, and concessions from top rates have not been easily obtained. Although the outlook for supplies of Egyptian cotton is favourable, prices continue to go against buyers. The crop continues to make steady progress. It is reported that spinners in the United States are continuing to purchase freely in Alexandria. In yarns made from Egyptian cotton prices have again been put up in sympathy with the rise in the raw material. A fair business has been done in home counts with an increased turnover in qualities suitable for America. Bolton spinners are in a stronger position than ever before in the history of the trade. Demand in piece goods for Egypt has not by any means spent itself, and in a variety of goods a fair turnover has taken place. Other Near Eastern outlets seem to be a little quieter. India has sent a very large inquiry. Although a good part of it has not been practicable the sales have been of considerable weight. A steady business has been put through for China and Singapore. It is now quite usual for manufacturers to want delivery in the second half of next year. American yarns have been well held, especially twists, but the turnover shows some falling off. In both single and two-fold descriptions India and China have given healthy support.

MORTGAGE COMPANY OF EGYPT.

Messrs. Glyn Mills Currie and Co., as bankers, and acting under instructions from the Mortgage Company of Egypt, are prepared to purchase a limited amount of the Four and a-Half per Cent. First Charge Debentures at a price of £82 per cent. net to sellers. In order to make delivery of the debentures with unmatured coupons attached holders of registered debentures who wish to avail themselves of the above offer will have to reconvert their registered debentures into debentures to bearer, in accordance with the conditions endorsed upon such debentures, prior to presenting the same for payment. Debenture holders desirous of tendering their debentures for sale under the conditions above named can obtain a copy of the circular letter dated November 14, 1919, and the necessary form of tender specifying the identifying numbers of the debentures offered for sale on applying to Messrs. Glyn Mills Currie and Co., 67, Lombard Street, E.C.3.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

SUPPLIES AND PRICES IN TURKEY.

STAMBOUL, Oct. 25.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Opium.—The crop of opium ended two months ago, and our stock, owing to dispatches to Constantinople, diminishes from day to day. The market price of opium is £T5½ to 6 the kilo.

Cereals.—The crop this year has been plentiful. Prices have a tendency to rise. They are :—

Corn.—A wagon of 15,150 kilos c.i.f. Haidar Pacha, Constantinople, £T1,200.

Barley.—A wagon of 15,150 kilos c.i.f. Haidar-Pacha, Constantinople, £T750.

Manufactures.

The activity on the market has been more marked this week. Four vessels have arrived, three of them from England and the other from Italy, loaded with manufactures. The demand remains very strong for the Russian ports—Odessa, Novorossik, Rostoff, and the rise of the rouble—the Kerensky rouble—from 210 to 140-130 per pound Turkish, and the Romanoff from 65 to 45, is calculated to maintain, if not to increase, this tendency.

Manchester prices have lately undergone a new increase of 10 to 15 per cent. In Italy stocks are almost exhausted, and the shortage of raw materials and of fuel, as well as the strikes, hinder further production.

Produce.

Sugar.—The strong demand for Java sugar has caused a rise in price at centres of production, and this commodity has been done at £70 the ton. America has ceased offers of sugar for the Continent, and factories are not turning out more than is required for the Allied countries. All the same, this increase in prices has not yet been reflected at this market. Quotations :—£65-£66 the ton for disposal, in transit.

Coffee.—Quiet, without change.

Oil.—Arrivals, 50,000 cases of American. Price unchanged at £T5.20-5.30 the case. Arrivals from Russia and Roumania have not yet commenced.

Exports.

Owing to the complete suspension of traffic on the Angora-Eski-Chehir line, more than 300 wagons with various commodities—cereals, mohair, wool, opium, fruit, etc.—are held up.

Opium.—Seventeen cases druggist new Karahissar and Ak-Chéhir have been sold at Ps.715-720 the oke, and 23 cases druggist second quality at Ps.660-700 the oke. The market has been weak following the discouraging news received from New York.

Mohair.—Arrivals of the week, 636 bales; sales, 300, at Ps.76-82 the oke.

Wool.—Arrivals, 214 bales. No sales.

Silk.—The high level continues. There is a very active demand. Twenty bales Broussa have been sold at £T14.75 the kilo, against £T13.35 last week.

Cereals.—Arrivals of the week, 42 wagons. The market is weak, with a tendency to improve in view of regular arrivals from Anatolia.

FEDERATION OF BRITISH INDUSTRIES

The following appointments were made at the annual meeting of the Federation of British Industries on November 12, Sir Vincent Caillard relinquishing his position as president on the termination of his year of office :—President, Mr. W. Peter Rylands, Messrs. Rylands Brothers, Limited, Warrington. Vice-Presidents, Mr. Godfrey Isaacs, Marconi Wireless Telegraph Company, Limited; Mr. Philip Lockhart, W. and A. Bates, Limited, Leicester; and Sir William Pearce, M.P., Association of British Chemical Manufacturers. In addition, the seven retiring vice-presidents were re-elected.

COMPANY NOTES & REPORTS

Anglo-Egyptian Bank.

The report of the Anglo-Egyptian Bank for the year ended August 31 last states that the gross profits, after making full provision for all bad and doubtful debts and all taxation are £325,803, and deducting the expenses, amounting to £182,823, there remains £142,980 net profit for the year. To this is added £38,000 brought forward, making £180,930. The directors propose paying a dividend of 10s. per share free of tax on December 1, making 15 per cent. for the year, and bonus of 2s. 6d. per share, also free of tax, transferring to reserve fund £10,000 and to reserve account new premises £22,644, carrying forward £40,000. A branch has been opened at Haifa; arrangements have been made for opening a branch at Port Sudan, and other extensions are under consideration. Meeting, 27, Clement's-lane, E.C., November 25, 3 p.m.

Bawdwin Syndicate.

The report of the Bawdwin Syndicate for the year ended March 31, 1919, states that the profit and loss account shows a credit balance of £2,099. The balance at credit of appropriation account at March 31, 1918, was £3,220, and with the above sum, less refund under articles of association of £273, leaves a credit balance of £5,047 to be carried forward. Since the closing of the books further repayments of excess profits duty have been received amounting to £13,470, and this sum will be shown in the accounts to March 31, 1920. The refund of this amount completes the £17,368 paid by this syndicate on account of excess profits duty; this is subject to income-tax and to a deduction in accordance with Article 88 of the company's articles of association. Investments at cost, £104,451, remain at the same figure as last year, and are represented by £83,615 fully-paid shares in the Burma Corporation, Ltd. In accordance with the resolution passed at the extra-ordinary general meetings, held on January 23 and February 10, the capital of the company is now reduced to £105,000, divided into 150,000 shares of 14s. each. This reduction has been effected by cancelling uncalled capital to the extent of 6s. in respect of each of the shares which have been issued and by reducing the nominal amount of all the shares from £1 to 14s. each.

Ceylon Land and Produce.

The report of the Ceylon Land and Produce Co. for the year ended June 30 states that the amount at credit of profit and loss account is £29,031, which, with sum brought forward, £5,746, and excess profits duty recovered £4,541, makes £39,318. It is proposed to pay on November 25 a final dividend of 15 per cent. on the ordinary shares (making 25 per cent. for the year) and a bonus of 5 per cent., both less tax at 6s. in the £, transferring to revenue reserve fund £7,500, and carrying forward £6,718.

Piccadilly (Ceylon).

The report of the Piccadilly (Kelani Valley, Ceylon) Rubber and Tea Estate for the year ended June 30 states that the accounts show a net profit of £1,982, which, with the amount brought forward, £1,432, shows a net balance for appropriation of £3,414. The directors propose to pay a dividend at the rate of 5 per cent., placing to reserve fund £1,000, carrying forward £1,120.

Central Tea of Ceylon.

The report of the Central Tea Co. of Ceylon for the year to June 30 states that the net amount at credit of profit and loss account, including balance brought forward, is £7,816. It is proposed to pay a dividend of 10 per cent. on the ordinary shares, less tax, and to carry forward (subject to excess profits tax, if any) £3,816.

North Anantapur Gold.

The report of North Anantapur Gold Mines, Ltd., for the year ended June 30 last states that revenue expenditure amounts to £30,869 and the receipts, after allowing for royalty due to the Indian Government, aggregates £49,315, leaving a profit of £18,446, against £21,855. The total credit at profit and loss is £24,637 and the debit £12,976, leaving a credit of £11,662. A balance dividend of 2s. 6d. per share and a bonus of 6d. per share on the Preference and 6d. per share and a bonus of 6d. per share on the Ordinary shares was paid on November 1, which absorbed £8,313, leaving £3,349 to be carried forward. The distribution for the year was 5s. per share on the Preference and 1s. per share on the Ordinary shares, both less income-tax. The company's financial position is strong, the total liquid assets being £63,083 and the liabilities £5,367, leaving a credit balance of £57,716. In addition to this, the materials and stores at the mine are of a value of £8,643. Underground development work measured 1,551 feet, against 3,051 feet. It was estimated by the superintendent that the reserves of ore at the close of the year amounted to 11,000 tons, or a decrease of 9,000 tons as compared with the quantity computed at June 30, 1918. In addition, however, to the 11,000 tons mentioned, there were some 3,000 tons of ore in the mine which will probably be recovered from pillars remaining. The lateral development work on the main reef at the 450 and 550-feet levels proved disappointing, and although reef formation, with occasional short shoots of quartz carrying small quantities of gold, has been followed in these drivages, no payable ground has been opened up by them. It has been decided to explore the mine at greater depth and systematically to test the reefs at surface, the latter to ascertain whether there is justification for sinking trial shafts in hitherto unexplored sections of the property. In the last report shareholders were advised that an option had been secured on favourable terms over a copper property in Northern India. This is known as the Baragunda Copper Mine and is situate in Chota Nagpur. Arrangements have been made for the speedy exploration of this mine below the known workings. Meeting, 6, Queen Street Place, E.C., November 27, 2 p.m.

TENDERS INVITED.

Tenders are invited for the contracts given below, and must be made by the dates mentioned:—

Great Indian Peninsula Railway.—Supply of (1) galvanised corrugated sheets, (2) Sheffield tools, (3) jim crows and screw jacks, and (4) ramps. (Spec., No. 1, £1; No. 2, 10s.; No. 3, 7s. 6d.; No. 4, 2s. 6d.; Secretary, 48, Copthall Avenue, London, E.C.2.) November 25.

Madras Corporation.—Supply and delivery of about 67 miles of English stoneware pipes, from 4 in. to 18 in. internal diameter. (Spec., 5s.; Messrs. J. Manserch and Sons, 5, Victoria Street, S.W.1.) February 2.

COMPANY RESULTS, Etc.

The transfer books of the capital stock of the Madras and Southern Mahratta Railway Co., Ltd., will be closed from December 1 to December 15 (both days inclusive) for the preparation of warrants due to stockholders who are registered on the company's books on December 15. No transfer deeds of the capital stock will be received during the time the books are closed. Warrants will be posted on December 31.

The transfer books of the debenture stock of the South Behar Railway Co., Ltd., will be closed from December 15 to December 20 (both days inclusive), and the capital stock from January 1 to January 8 (both days inclusive), for the preparation of interest and dividend warrants due to stockholders who are registered on the company's books on December 12 and 31 respectively. The warrants for the debenture stock interest will be posted on December 31, and for the dividend on the capital stock on January 14.

Owing to the continued difficulties caused by the war and the uncertain conditions of trade the directors of the Bengal United Tea Co. are unable at present to consider the question of payment of the interim dividend usually made in November on the ordinary and preference shares.

The directors of the Balijan Tea Co. have declared an interim dividend of 6 per cent. (12s. per share).

The directors of the Indian Electric Supply and Traction Co. have declared an interim dividend of 3 per cent. on the ordinary shares, payable on November 26.

The directors of the Bank of British West Africa have declared an interim dividend of 4 per cent., less income-tax, for the six months ended September 30, 1919, payable December 1.

The directors of the Highland Tea Co. of Ceylon have declared an interim dividend of 4 per cent.

The general meeting of the Imperial Ottoman Bank will be held on December 10 at Winchester House, Old Broad Street, E.C., at 1 p.m., to receive a report from the committee, with the accounts for the period ended December 31, 1918, and to replace the retiring members of the general committee.

The directors of the Assam Company announce an interim dividend of 7½ per cent., or £1 10s. per share, less tax, payable on January 1 next.

Cyprian Mining Company.—The receiver proposes to a make a distribution of the assets of the company. Particulars and proofs of any claims not already admitted by the receiver must reach him not later than January 15, 1920.

The Transfer Books of the Bank of British West Africa, Ltd., will be closed from November 22 to December 1, both days inclusive, to admit of preparation of Interim Dividend of 4 per cent., less income-tax, for the six months ending September 30, 1919. Warrants will be posted to shareholders on the evening of November 29.

An extraordinary general meeting of the Egyptian and Foreign Trust, Ltd., will be held at Dashwood House, 9, New Broad Street, E.C.2, on December 22.

Bengal-Nagpur Railway.—Registers of stockholders will be closed from December 4 to 31, inclusive.

Burma Railways.—Transfer books will be closed from December 15 to 31, inclusive.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

There has been a fair amount of business passing this week in Egyptian securities. Egypt has again been buying, but transactions have been rendered difficult by the absence, in many cases, of sellers, and within the last day or two demand has somewhat died down, probably in consequence of the fresh disturbances reported.

In Government stocks some business has taken place in Egyptian Unifieds at 76½, showing a decline of ¼, and some thousands of the 3½ per cent. preference have been done at 63½, an advance of ¼.

In Bank shares Nationals have remained a very firm spot, and have been in constant demand for Egypt. Agriculturals have also been wanted, but not much business has been passing, as sellers have been rather scarce. Agricultural preferences are ⅛ down at 7⅛, there being small sellers in the market, and, for the time being, buyers have withdrawn. There is also a decline of ¼ to record in Anglo-Egyptian Banks. In Land Banks, some few hundred shares changed hands in the neighbourhood of 6¾, a decline of ⅛ since last week. Amongst other land shares, Aboukirs are 9d. easier at 29s. 6d., Béhéras have continued to be wanted, but there are no sellers. Egyptian Consols (4s. 2d. paid) are 1½d. lower at 2s. 1½d. Delta Lands are 3d. down at 13s. There is a good local demand for Foreign Trusts, but very little business has been done, as there are very few sellers at the current level. Gharbieh Lands and Sidi Salem have also been in demand for Egyptian account, but no business has been possible owing to the lack of sellers. In New Egyptians some few thousand shares have been taken round 23s. Union Foncières have continued in strong enquiry from the other side, and the price closes ⅛ up at 3⅞. Sudan Plantations have dropped ⅛ to 7⅞.

Amongst Miscellaneous shares the only feature of interest has been a decline of an ⅛ in Salt and Sodas to 2 25-32.

In Oil shares, Anglo-Egyptian B have been a dull spot, and are closing ¼ down at 5 1-16. Roumanians have jumped to-day to 26s. 3d., a rise of 2s. 6d. since last week.

In Greek stocks the tendency has been rather weak. The Monopoly Loan is down half a point to 55½. Rente has dropped sharply 2½ points to 50. The 1881, 1884, and 1890 Loans are all offered at the current price of 64. The 1914 Loan has shed a further point at 68, but Greek 5 per cent. "Currant" bonds continue in demand at 94.

TURKISH DEBT.

The Council of Foreign Bondholders are informed that the estimated gross receipts from the conceded revenues for the year 1918-19 applicable to the service of the Unified Debt and Lots Turcs were £T5,906,664, as compared with £T5,448,061 in 1917-18 and with £T5,436,165 in 1913-14, which was the best year on record. The provisional receipts for the first six months of the current financial year are understood to be about the same as in the corresponding period of 1918-19.

Colonel Herbert Leonard Mitchell, R.A. (retired), of Cornwall Gardens, S.W., Mutiny veteran, a Deputy Governor of the Canada Company, a director of the Indian and General Investment Trust (Limited), who died on July 5, aged 83, left estate of the gross value of £336,562, with net personalty £336,237.

MAISEL'S PETROLEUM TRUST.

The manager in Roumania of the Maisel's Petroleum Trust, Limited, reports, under date October 29, that the Anglo-French Petroleum Commission, which has been investigating the damage suffered through the war by petroleum undertakings in Roumania belonging to the Allies in order to report on claims submitted for compensation in respect thereof, was about to proceed to visit this company's properties for that purpose. A claim for £200,000 was submitted by the company in 1916 and a further revised claim is now being prepared by the company's representatives on the spot.

The ordinary general meeting of the Alexandria and Ramleh Railway Co., Ltd., will be held at Alexandria on December 3.

The Secretary of State for India notifies that with effect from November 14 the acquisition rate for gold imported under licence into India has been increased from Rs.11 annas 11 to Rs.11 annas 13 per sovereign. The rate for gold bullion has been correspondingly altered from one rupee for 9.622 grains of fine gold to one rupee for 9.570 grains of fine gold.

In order to remove the danger to passengers disembarking at Tangier, caused by the overcrowding of the boats and motor launches in which they are landed from steamers, regulations have been drawn up by the Foreign Representatives, in agreement with the local authorities. A copy of these regulations (in French) may be inspected at the Shipping and Transport Section of the Department of Overseas Trade, 73, Basinghall Street, London, E.C.2.

NOTES OF THE WEEK.

According to Berlin reports, Roumania, in her reply to the Entente, repeats the desire not to separate from her Allies which was expressed by King Ferdinand at the opening of the Bucharest Parliament; but she declares that she is not able to carry out all the demands of the Superior Allied Council. She is ready to do all that is required of her for the protection of national minorities in the newly acquired regions, and to give way on the Bessarabian language question; but she declares she cannot renounce her claim to territory on the left bank of the Theiss. If this report be correct, it will be interesting to see the next move of the Powers in a distinctly difficult situation.

No words can be too strong to denounce the stupidity and villainy of a plot against the life of M. Venizelos, and the news will be received with as much relief abroad as in Greece that the conspiracy was restricted to a very small coterie of retired and, consequently, personally disaffected officers. Greece has had many occasions in the past to be grateful to M. Venizelos, but it may be doubted whether more reliance has ever been placed upon his administrative ability and statesmanship than at the present moment, when the country has been deprived for so many months of his personal magnetism. A hundred and one problems in Greek affairs have been left unsolved because they were felt to require the magic touch of the Prime Minister. With political difficulties at home overcome, the outlook for Greece's material prosperity is so bright that it is impossible for any group of malcontents who would attempt to plunge the country into civil strife to be actuated by any love for Greece.

In the early days of the Armistice British soldiers were welcomed wherever they went, and in the Near East especially it was felt that they were not as some other Allied troops were. As far as their reputation depends upon themselves it is safe to say that it stands now as high as ever, and it is therefore surprising to learn from our Smyrna Correspondent that the landing of fresh troops at that port has, to put it bluntly, not been welcomed. How far the phenomenon is due to purely local causes and how far to far-reaching political hopes and fears—not to say manœuvres—it is almost impossible to judge from a distance, but it should not be difficult to reassure the British community in Smyrna that our troops are there for pacific purposes, and not for any military adventure.

There appear to be no limits to D'Annunzio's extravagances. He has "raided" and "annexed" Zara, is reported to have in view other raids of a similar character, and is even said to have talked of "marching on Rome," whenever it should please him to do so. The Italian Government and the Italian Press profess great indignation at these performances. Naturally that feeling is present, and acute, in Yugoslavia. The Yugoslavs have, through their official Press Bureau, issued urgent protests and warnings. According to one of the latest reports, however, the Belgrade Government has reached the conclusion that "there exists no real motive" for anxiety regarding the vagaries of the poet and his followers. The whole question, it states, will shortly be dealt with by the Paris Conference, "and a solution found which, it is said, will satisfy our legitimate aspirations." The Yugoslav Government nevertheless thinks it wise to maintain its precautionary measures, and few people will be ready to question that wisdom. Italy—official Italy—has her hands so full at home just now that she is hardly in a position to deal faithfully with D'Annunzio.

It is announced from Sofia that the Bulgarian Government has embarked on the policy of effecting wholesale arrests with a view to establishing responsibility for the war. Smarting under the natural resentment caused by conditions of peace far more onerous than had been expected, the Bulgarian people may well wish to see the authors of their misfortunes punished; but, to judge from the list of those arrested, it would seem as if a very wide net had been cast. The whole matter is clearly one that concerns Bulgaria alone; but if M. Stamboliskv's Government could turn to any friendly country for advice there cannot be the least doubt that he would be warned of the pitfalls ahead. If the "war-guilty" can be shown to be so numerous, it will dispose at once of the plea that Bulgaria was forced into the war against the will of the people by a corrupt Cabinet bribed with German gold. With several hundreds of his supporters held worthy of being singled out for prosecution, M. Radoslavoff might urge that the rank and file of his followers comprised a substantial portion of the nation. On the other hand, an open and impartial inquiry into matters which have formed the basis of complaints against Bulgaria will be an earnest of the new Government's desire to rehabilitate the country in the eyes of the world. It would be a matter for regret, however, if just at the time when, in her own interests and in those of the Balkan Peninsula as a whole, Bulgaria needed to

Digitized by Google

make a united effort to promote her material development, she were to run the risk of a serious vendetta in party politics. Often wholesale arrests are made the occasion for indulging in personal spite, and the cause that it is intended to punish obtains fresh adherents from antagonism to any form of injustice, however worthy the cause.

The Sublime Porte has made a direct appeal to the Peace Conference to hasten the settlement of the Turkish question. The wonder is, not that such an appeal should be made, but that it was not made long ago, and that it should be necessary to make it at this late hour. The difficulties confronting the Allies in this matter may be, and probably are, very considerable; but there are excellent reasons for tackling them at once, and for putting an end to a situation which is full of dangerous possibilities for the Old World, whatever may be the case with regard to the New. In view of the latest developments in America in regard to the Peace Treaty and the League of Nations, it would seem to be hopeless to wait longer for the United States' decision—unless, of course, some assurance is forthcoming that it shall not be much longer withheld. It is not to be believed that there is any truth in the rumour that the delay is partly attributable to differences among the Allies as to the division of the Sick Man's estate among themselves, but the only way of disposing of such rumours is to press on with all speed to a settlement that shall be just to Turkey as well as to the other parties.

General Gouraud has arrived in Syria, and it is to be hoped that his presence will have a tranquillising effect upon Arab feeling, which is obviously in a highly excited state. The occupation by French troops of some points evacuated by the British has given rise to slight disturbances, and it is reported that many of the Arabs regard the change as the first step in the partition of their country. It is hinted also that further changes in the *status quo* will almost certainly lead to very serious trouble indeed. Apparently the Arabs still entertain hopes that the Peace Conference may eventually uphold their point of view, and in Damascus especially there is much talk of a fresh war, if it is ignored. In the circumstances, it is much to the credit of Emir Said, the King of the Hejaz's youngest son, who is in charge at Es Shems in the absence of his brother, that he has succeeded in keeping order there so far.

Following on Mr. Balfour's plain speaking regarding our position in Egypt, and the agitation of the extreme Nationalists, we have now a full and careful review of the situation by Lord Curzon, speaking in the House of Lords on Tuesday. A report of the speech will be found elsewhere, and the situation in Egypt in the new light thrown on it is dealt with in our leading article. Here we may briefly refer to some of the events that have occurred, or been reported—for reports from Egypt are once more subject to delay—in the past week. Lord Allenby's wise handling of the trouble appears to be having a good effect already, and though we may expect to hear of further rioting and demonstrations, Egypt will almost certainly respond to firm treatment again as she has so often done in the past. The Residency *communiqués*, which brought about the resignation of the late Cabinet, gave rise to rioting of a serious character in both Cairo and Alexandria, and British troops had to be called in to quell the disturbances. With characteristic fatuousness the Zaghlulite "Delegation" issued a manifesto protesting against the *communiqué* as being contrary to the principles of Mr. Wilson and the League of Nations. Apparently they had not heard, or had already forgotten the latest developments in the United States regarding the principles referred to and the proposal for the League.

Lord Allenby has warned several of the leading Zaghlulites to moderate their ardour and to take no further part in politics; and as some of them have declined to obey his orders they have been placed under arrest. A few vernacular papers have been suspended for publishing inflammatory matter; and various Orders designed to prevent the assembling of mobs have been issued. The students also have been warned that they must attend their classes regularly, or render themselves liable to pains and penalties. A highly satisfactory item of news is the announcement that a new Cabinet, described as stronger and more united than the old one, has been formed, with Yussuf Wahba Pasha at its head. The fact that the new Cabinet takes office at a time of stress argues that it is composed of men of courage, unlikely to be browbeaten by Nationalist or Zaghlulite bullies; and the new Prime Minister and some of his colleagues have considerable experience to aid them in their difficult but honourable work.

The Report of the Joint Committee on the Government of India Bill is a thoroughly businesslike document, and marks a definite stage in the progress towards reality for which we have pleaded throughout the discussions of the last two years. The Declaration of August, 1917, was pure idealism. The Joint Report which followed a year later was characterised by vision, and even inspiration, rather than an adequate grasp of facts. The Southborough reports and the series of despatches from the Government of India brought some of the essential facts into the picture, and not a few others are to be found embedded in the mass of verbiage contributed by the witnesses at the inquiry. Now we have the Committee's Report, almost as bald as a balance-sheet, and characterised mainly by an earnest striving after actuality. It is a strictly impersonal document, appearing without minority reports, minutes of dissent, or reservations of any kind; it contains no lengthy disquisitions, but it is so full of compressed matter that no summary could do it justice; it presents conclusions only, and its result is to exhibit dyarchy definitely as a business proposition, a novelty indeed, but the best course in a very exceptional set of circumstances.

Dyarchy being thus accepted in principle, the problem is to make it workable in practice. The Committee have evidently seen the grave risk of its degeneration into oligarchy, and, beginning at the foundations, they insist on a widening of the proposed basis, with more seats for rural representatives, a better chance for urban workers, and larger representation for the depressed classes, who, in one sense, are the most important classes of all. Provision must also be made for the non-Brahmans of the South; this is to be arranged by compromise, or, failing that, by arbitration. Much has been said about votes for women; it is a difficult, but not a vital, question, and each provincial Legislature will be free to settle it for itself. These provisions, with some others of less importance, will undoubtedly increase the stability of the structure, but the danger remains that the foundations may be sapped, and therefore a "complete and stringent" Corrupt Practices Act must be brought into operation before the first elections. The need for such a measure was urged in these columns at an early period of the discussion, and we are glad to see that it has been recognised in uncompromising terms; its preparation will be no easy task, but the whole future depends on its successful accomplishment.

Turning from foundations to superstructure, we are struck by the Committee's obvious dislike of shams. The original proposals for securing "essential legislation" which could not pass the Legislature come under this head; the Governor-in-Council is necessarily responsible for such legislation, and he should, in the last resort, act on his responsibility. Consequently, the Grand Committees disappear, while the analogous imperial organ, the Council of State, is to become a real Second Chamber, which will serve an important purpose. Again, each side of the dual government is to stand out as responsible for its own acts much more clearly than was provided in the original scheme; the two sides are to work together, and "there cannot be too much mutual advice and consultation," but when "opinions have been

Digitized by Google

fully exchanged, and the last word has been said," the decision must rest with one side or the other, and the proceedings must show clearly where the responsibility lies. The result of these changes, with some others, is that the people will have a much better chance of learning who are their masters, and thus the time will be brought nearer when the masters will be transformed into servants, and the federation of great peasant States will finally emerge.

An excellent sample of the Committee's methods is furnished by the paragraph dealing with provincial finance. They think the distribution of resources between the two sides of a Government ought to be capable of adjustment by common sense and give-and-take, and they allow scope accordingly; but they propose to reserve to the Governor power to make a clear cut if at any time friction becomes serious, and the clear cut, when once made, will last for at least the whole life of the existing Legislative Council. In our opinion that is essentially a reasonable arrangement between the claimants for a "Joint" and a "Single" Purse; Councillors and Ministers should usually be able to agree, and it is best that they should do so, but if they fail, then each side must be content with the allotted share. There is no doubt that many Indian politicians are still unconsciously influenced by the old theory of an inexhaustible treasury, and they will continue for a time to make impossible demands; but financial education has made rapid strides of late, and under the arrangements proposed by the Committee we anticipate that Ministers and legislators will quickly realise the hard facts by which the success of their endeavours is conditioned—no progress without money, no money without taxes, and no taxes without trouble in the constituencies; that is the thorny road they will have to follow.

We have perhaps said enough to indicate by examples the general tendencies of a Report which cannot be summarised without sacrificing essential features. There remains the fundamental weakness of dyarchy, which we pointed out when the Joint Report was published, the terrible strain which it must throw on the provincial Governors, who have to keep things going somehow, and reconcile their own responsibility to Parliament with the responsibility of Ministers to the electorate. The Committee are under no misapprehensions on this point, and they recognise that the Governor may have to "hold the balance between different policies and different ideals," as well as to "help with sympathy and courage the popular side of his Government in their new responsibilities." The scheme now put forward will, in our judgment, give the Governor adequate powers, and its success or failure in any province will depend on his personal qualities more than on any other single factor. Can we be reasonably confident that for the period of this great experiment every province in India will be provided with the Man that is required?

We do not for a moment doubt that the men are to be found. To take any other view would be to despair of the proved capacity of the British race, and our question relates to the system of selection and not to the available material. Political patronage has given such deplorable results on so many occasions in the past that the prospect is by no means assured, but the Committee's explicit recognition of the needs of the situation is in itself a safeguard of very real importance, and with a watchful Standing Committee of Parliament, the perpetration of a real, old-fashioned job will require a bolder Secretary of State than India has usually possessed. We can recognise further that recent appointments are of good augury, and we can say now—what could not have been said a few years ago—that most, if not all, of the important provinces have Governors under whom dyarchy will have a fair chance at the outset. A strong and wise Governor, with a free hand to select his councillors and his ministers, ought to be able to make a successful start, and the start once made, we must hope that the new machine will acquire comfort as well as vigour as it runs.

THE WEEK AT HOME.

Electricity and Coal.

The House of Commons is discussing the Electricity Bill this week, a measure that was originally part of the Ministry of Transport's sphere, but was eventually placed in a category by itself. The Bill raises great questions of state and municipal enterprise and control versus private enterprise, and it appears likely to receive the careful consideration that it demands. The details are somewhat technical, but the main purpose of the Bill is to link up the sources of electrical supply into greater units, which will prevent waste and probably ensure cheaper power.

A first-class sensation was created by the Government's decision to reduce the price of domestic coal by ten shillings a ton. The reduction does not apply to industrial or export coal, and it appears to be an attempt to reduce the cost of living. As such, it will be popular all over the country, for the heavy price of fuel has pressed heavily upon the poor; but the stricter economists are inclined to believe that it will involve a loss, and therefore call for another subsidy from the Exchequer. In that event, it would absolve Mr. Chamberlain from his promise not to impose fresh taxation next year; and it is the fact that subsidies once granted are extremely difficult to take off. A few weeks back the Government had decided to abolish the bread subsidy; but the certainty that this would mean a further increase in the cost of living made them revise their decision, and there is no prospect of its being stopped during the present winter.

Political Undercurrents.

It had been supposed that Mr. Asquith would have intimated a desire to stand for Parliament in one of the bye-elections now pending, but either he decided that the prospect was not sufficiently favourable, or else, like Achilles, he preferred to sulk in his tent. Sir John Simon, who is looked upon as his probable successor, is standing as Independent Liberal for the Spen Valley, but the Coalition Liberals also talk of putting up a candidate. If they do, the split in the old Liberal Party, which there have been some attempts to heal of late, may be regarded as almost irreparable.

Some of the Coalition Liberals and most of the Unionists who form the right wing of the Government are strongly advocating the formation of a Centre Party to combine the two old parties, with a few Labour men of standing. If that project, which is supported by both Mr. Bonar Law and Mr. Lloyd George, materialises, the old Liberal Party is doomed to sterility for many years. The main strength of the Centre Party would lie in the fact that people are tired of the unreality of party politics, and are ready to support a strong Government. The present Government is not faultless, and it has its critics—some of whom are so venomous that their assaults recoil on their own heads—but it is likely to have a longer lease of power than was anticipated earlier in the year.

The New Physics.

Sir Oliver Lodge has delivered a lecture on "Einstein's Theory of Light and Space," which has attracted much attention. Sir Oliver does not dispute the Einstein theory, but he admits that it has so changed the conception of the universe that the new work in physics will have to be done by younger men. There was almost a valedictory note in his address which sounded more than a little pathetic; it is difficult to realise that he is already a veteran of nearly seventy, and that he may no longer feel equal to the prolonged mental effort which the new vistas in science are opening up. But he very definitely stated that the reinterpretation of physics must be left, so far as England is concerned, to the younger school of Cambridge men. Fortunately, there is every reason to hope they will prove equal to the charge.

Ecclesiastical Poverty.

The Bishop of London has again been compelled to issue an appeal for funds for the clergy of his diocese. Probably no class has felt the burden of increased prices so much, and unfortunately the clergy can neither go on

Digitized by Google

strike nor insist on a "war bonus." Some of the beneficed clergy, it is true, have benefited by the increased value of tithe, but this does not apply to all, and many, both beneficed and unbeneficed, are in dire straits. In the case of London it is admitted that the suppression of several of the City churches and the sale of their enormously valuable sites, would materially relieve the situation, and assist not only in raising the stipends, but in building new churches in populous districts, where they are urgently wanted, but the process of reform is slow and Church finance is extremely complicated.

As things are, the position is extremely unfortunate. Not only are the older clergy hard put to it to meet their obligations, but the younger men are not coming forward in sufficient numbers to fill up the gaps in Holy Orders; there are many vacant livings, and curates are difficult to obtain. Something is being done by the amalgamation of small country parishes, but this is often resented by the parishioners, the enmities of neighbouring villages being proverbial. Similar conditions prevail among many of the Nonconformist churches, which are beginning to abandon much of their exclusiveness in consequence.

Burglary and Unemployment.

The legal mind is proverbially subtle; but the fact that the Court of Criminal Appeal has just decided that a professional burglar who is not exercising his energies is eligible for unemployment pay is a little startling to the lay mind, which had an idea that the criminal courts were for the punishment of crime. The decision is of no particular moment, for the unemployment benefit has now ceased, but possibly the burglar may institute a case against the State for the recovery of arrears.

More Judges Needed.

The perennial controversy as to the adequacy of staffing of the judicial bench has again broken out. There is a long list of arrears in most of the civil courts, largely because actions which could be postponed during the war are now down for hearing; and since delayed justice is as bad as no justice at all, the case for more judges appears to be a strong one. (Incidentally, there is an excellent case for the increase of judicial salaries, which are no longer adequate, but the Government has not agreed to the proposal.)

The opponents of the appointment of additional judges urge, however, that the accumulated arrears are only a temporary phenomenon; that a revision or abolition of the circuit system would save a great deal of judicial time; and that the growing habit of appointing judges to preside over non-judicial committees is in itself one of the prime causes of the trouble. Both contentions appear to be justified. But the smaller county towns, which love the panoply of "the red judge" coming in state, always protest vigorously against any alteration of the circuit, although there is often no case for the judge to try; and in these days of fundamental politics the only means of getting a Commission of Inquiry to do its work in reasonable time, or even to maintain order between partisan members and still more partisan witnesses, is to appoint a judge to the chair.

It is notorious, however, that the judges do not like extra-judicial duties: and Lord Birkenhead, who promises to be a much stronger Lord Chancellor than his many enemies anticipated, is understood to be giving the whole system his careful attention. It is believed that he intends to put forward comprehensive proposals for legal reform, and the times are now ripe for such a step.

Bank Amalgamations.

Two more of the smaller banks have been practically absorbed by the big banks, of whom there are now five; the small bank operating in a local area will soon be practically extinct. It is curious to note how public opinion has changed in this matter during the past two years. When the policy of amalgamation first began on a great scale, there was a very genuine feeling of alarm, and it was suggested that a money trust was in process of formation, which would look askance at the small trader, and refuse him any accommodation. It cannot be said that the event has justified the prediction in the least; on the contrary, it is understood that the banks have financed their customers small and large, in the difficult period since the war, although very great demands have necessarily been made upon them, and by practically all classes of traders at once. The dissatisfaction is now not so much on the part of the public, as in the bank staffs. It would have been incredible before the war, but the bank clerks now have their own trade union. Probably the truth of the matter is that the amalgamations allow less chance for the ambitious man to get to the top, and he feels a mere helpless unit in a big machine, whose utmost promotion will probably be to some small country branch; and this fact renders him more inclined to organise for his own common interests with his fellow clerks, particularly at a time when the mass of business is greater than ever before.

Housing and Furniture.

Interesting evidence as to the rise in prices is given in an advertisement by a firm offering to furnish a flat for £500. Before the war practically the same furniture could have been bought for £200. Then, too, the landlord of the flat advertised the conveniences, the central situation, and the general amenities of the property in order to attract tenants; now the prospective tenant advertises his willingness to pay a premium to obtain a flat. Owing to the high cost of building, the shortage is not likely to be remedied for some years; for although the Government have promised a subsidy to the builder—an inevitable decision that has evoked a certain amount of criticism—this is likely to apply mainly to small suburban residences for the working-classes, which are even more urgently required.

A Book on Russia.

One of the most interesting books that has appeared this month, which is almost the busiest of the publishing year, is "From Liberty to Brest-Litovsk," a detailed story of the Russian Revolution by Mrs. Williams, a lady of Russian birth, who was an eye-witness of many of the scenes she describes. The work has no particular literary merits, but it gains rather than loses from the fact that it tells a plain, unvarnished tale, and for the first time gives a logical account of Bolshevism as preached in its naked crudeness and cruelty by Lenin. It appears from irrefutable evidence to be true that the Bolshevists regard England as the real enemy; their real sympathies are with Germany. But we may perhaps find their enmity less harmful than Germany finds their support.

A Useful Biography.

One of the most interesting books published so far this season has been the "Life of Sir Victor Horsley." The great surgeon, who died in Mesopotamia of sunstroke, would probably have left a much more enduring name in mental medicine had he been able to restrain himself from political and other quarrels. He had two particular bees in his bonnet—female suffrage and total abstinence from alcohol and tobacco. On both he may have been right or wrong; but his methods were assuredly wrong, for he alienated many who would have supported him, and although he was one of the greatest operators in London, or in Europe for that matter, in the last few years of his life his practice fell off miserably. Patients simply would not go to him, and his fellows in the faculty at once admired and distrusted him. It is a singular record of a very singular man.

For the rest, the bookshops continue to groan under the weight of spiritualistic literature which rolls daily from the publishers. There is a steady market for this kind of thing—it is one of the legacies of the war; but the anti-spiritualist and rationalist literature does not appear to find a ready sale. Poetry is also popular, which indicates another change in taste; the novelists are not doing so well. Lucas Malet's last book made little noise; H. G. Wells is writing too much, and adding nothing to his reputation; Stephen McKenna's attempt to show "Sonia Married" has not repeated the furore which attended "Sonia." Most of the other story-tellers are very feeble, although an exception must be made for Mr. de Vere Stacpoole, whose latest romance bids fair to repeat the success of "The Blue Lagoon," which has already become a classic. But England wants a new novelist rather badly, and the publishers are quite ready to welcome a genius. OCELLUS.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, November 11.

Arrival of New High Commissioner.

Field-Marshal Lord Allenby, whose arrival has long been expected, landed yesterday morning at Alexandria, where he was received by the Ministers and the military and civil authorities. His Excellency had an audience of the Sultan, and then proceeded by special train to Cairo. On arrival here he was received by Sir Milne Cheetham, the Governor of Cairo, Mahmud Pasha Fakhry, Lieutenant-General Sir Walter Congreve, Major-General Sir Lee Stack, the Advisers, the Diplomatic Corps, representatives of the religious communities, the senior Government officials, and the notables. There was a British guard of honour on the platform, and one furnished by the Egyptian Army outside the station. After shaking hands with everyone and inspecting the guards of honour, Lord Allenby, who is accompanied by Lady Allenby, drove in his car through the city, the streets of which were lined with troops, to the Residency, followed by the members of his staff. There was quite a large crowd in the neighbourhood of the station, but everything passed off very satisfactorily.

Contrary to what has appeared in the London Press Lord and Lady Allenby will, of course, reside for the winter in Cairo, whither, as soon as the Sultan decides to leave Alexandria, the seat of Government will be officially transferred.

The Friday Demonstration.

The decision taken by the Council of Ministers to prohibit all future demonstrations, which I reported briefly last week at the close of my letter, appears to have had a salutary effect on the situation. At the conclusion of prayers last Friday at the Abu El Abbas Mosque, the congregation complied with the exhortation from the pulpit, and for the most part dispersed to their homes. Some of the worshippers, together with the usual hangers-on, made an attempt to form a procession, but they were quickly dispersed by the police. Another attempt was made in the Mohammed Ali Square by those who had managed to filter through the police cordon, and the procession got as far as the top of the Sherif Pasha Street but the police were quite equal to the situation, which at no time aroused any anxiety, and by 3 p.m. the city had resumed its normal condition. The evidence which the Government has given of its intention to secure compliance with its orders should go a long way towards stopping demonstrations, both in Alexandria and in other parts the country. On Friday, as already indicated, those who attempted to make a demonstration were quite distinct from those who had taken such an active part in previous demonstrations, while the hooligan element was to a very great extent absent. This would clearly prove that the public only makes trouble when it has reason to believe that the authorities are not settled in their policy, but that, once it is convinced that a firm attitude has been decided on, it immediately submits to what it regards as the inevitable.

An Egyptian Anniversary.

There are rumours that the Extremist Committee contemplate some widespread action on the 13th. The latter is the date on which Zaghlul Pasha, last year, formally presented his demands to the then High Commissioner, Sir Reginald Wingate. The Extremist Press have voiced a request that the day should be celebrated as a national holiday on the lines of the French July 14, the American Independence Day, and the Italian September 20. There was an intention of holding demonstrations on the 13th, but in view of the Government's decision, it is highly probable that that project will be abandoned, and that the day will be kept up by the shutting of native shops and the holding of special services in the Mosques and Coptic Churches.

The Railway Strike.

A magnificent response has been made to the appeal of the Egyptian State Railways for volunteers. In Cairo alone over 2,000 names have been registered, and most of these are attending training classes. A similar response is reported from Port Said and Alexandria, where special bureaux have been opened. The remarkable feature is that the majority of the volunteers are Egyptians; which would tend to indicate that the general Egyptian public does not approve of the proposed strike which the men, egged on by the political agitators, still threaten to make as soon as they get the chance. However, I do not think we need worry, as the E.S.R., always a highly organised administration, have laid all their plans and are fully prepared for any emergency.

A Well-Merited Promotion.

It was recently announced that Mr. A. D. Alban, British Consul in Cairo, had been appointed Consul-General at Alexandria, and that Mr. A. B. Geary was to succeed him in Cairo. These gentlemen have now taken up their duties at their respective new posts. In this connection it is only fitting to voice the general feeling of satisfaction that the signal services rendered by Mr. Alban to the British community should at last have received recognition. Mr. Alban was appointed to Cairo as far back as 1903, and during the sixteen years which have intervened he has gained the esteem and respect not only of the British community but also of those members of the foreign community who have from time to time come in contact with him, either socially or officially. Anglo-Egypt gratefully remembers that on more than one occasion he has stood out firmly for the rights of individual members of the community, and that it has been solely through his courageous action that justice has been done. The fact that during his tenure of office in Cairo, the British community—by its composition far from an easy body to manage—should have got along so smoothly and so

happily speaks volumes for his tactful handling of the various elements comprising it, and for the authority which, as a result of his admitted ability and impartiality he enjoys amongst them, and whilst pleasure is everywhere expressed at his promotion, there are deep regrets at his departure from Cairo.

Travelling to Egypt.

Complaints continue to flow in from returning residents, not so much regarding the difficulty in getting accommodation, as the nature of the accommodation actually given on the steamers. To previous complaints of overcrowding is now added that of lack of hygienic and sanitary arrangements, and on one of the last steamers, a Government transport, too, the conditions are reported to have been simply disgraceful. This new development merits the serious attention of the responsible authorities.

While on the subject it is as well to utter a warning to intending travellers to Egypt. There is at the present moment, although very few visitors have come out as yet, an entire lack of accommodation in Cairo. Cessation of building operations during the war, the continued occupation of hotels by Government, and the greater demand for flats and houses due to the existence of a larger garrison than before the war have resulted in an unprecedented state of congestion, and it is extremely doubtful whether there will be any improvement this winter. The housing question has indeed assumed a very serious aspect, and those who may intend wintering in Egypt should make sure of their accommodation before leaving, otherwise they will find nothing on arrival.

YUGOSLAVIA.

BELGRADE, November 17.

Changes in the Cabinet.

The Cabinet is undergoing a process of reconstruction. M. Dakovitch, the Montenegrin leader, has declined, on grounds of health, to join the Government, but his group will be represented by M. Spasoje Piletitch. M. Kosta Stoyanovitch, who has recently returned from Paris, is expected to take the portfolio of Education; it is thought probable that the Ministry of Public Health will be given to Dr. Lazar Popovitch, an energetic and respected man from Karlovtsi, in Srem; while Bosnia will be represented by Dr. Dushan Vasiljevitch, a prominent lawyer in Serajevo, and President of the Serbian Organisation of Bosnia and Herzegovina. It is also expected that Dr. Palechek, *Ban* of Croatia, will join the Cabinet, in which case he would be succeeded in the post of *Ban*, or Governor, by the Deputy-Governor, or *Podban*. Meanwhile the Radicals, who are carrying on a political campaign in the provinces, are loud in their cry for the assembling of Parliament, when no doubt they hope to overthrow the Government, or at least make its work impossible. It is announced that the Skupshtina will be summoned as soon as the reconstruction of the Cabinet is completed.

News from Paris.

News from Paris is slightly reassuring. Various messages from different sources announce that the delegates of the S.H.S. have received from M. Clemenceau a reply to their note, in which it is reported that their representations have had the most careful consideration, and that the Supreme Council will grant their desires, with the reservation that the question of the Danubian steamboats must be referred to a special Commission, and that their demands on the question of minorities cannot be granted. This leaves one wondering what the concessions can be; possibly support on the Fiume and Dalmatian question. This is badly enough wanted, in all conscience, for the grotesque freak of d'Annunzio is inflicting great hardship upon Yugoslavs, and also on British traders, by virtually blockading the country and holding up goods for months—incidentally, necessary equipment for the Belgrade tramways, which were urgently ordered early in the summer. The crazy poet is also holding up private property of British residents in Belgrade, as well as insulting British subjects. But public opinion is somewhat reassured by the news that the delegates are going to sign. Probably they have really no choice, but great resentment is felt at any interference on the part of Paris in internal affairs of the old kingdom of Serbia, over which they have no jurisdiction. Serbia, as a democratic and almost socialistic State, cannot be reproached for any discrimination of minorities or aliens, who have all had equal rights and equal duties within the kingdom. It has been said that the objectionable minority clause was inserted by friends of Serbia as an alternative to a much worse condition, demanded by her enemies, for the autonomy of Macedonia; but what right have the Allies to dictate to Serbia as to her behaviour in territories which she released from Turkey by her own efforts in 1912? It is also announced that the delegates have requested the attendance in Paris of Dr. Joseph Cvijitch, the eminent ethnographist and geographer, to give evidence on the question of the ethnographic problems of Baranje and the Medjumurje, so the question of frontiers is not even yet settled.

Serbia and Italy.

But the Serbs would give much for support against Italy. Apart from the swashbuckling at Fiume, the Italians have suppressed the only Slavonic paper in Istria, the *Kuchni Prijatelj*, imprisoned the editor, and smashed the press. The authorities state that they will pay the damages, estimated at 160,000 dinars. Meanwhile the occupying troops are carrying on propaganda to sow dissension between the Croats and Serbs, especially in the army, referring to the former as enemies and the latter as gallant allies, both by Press and by pamphlet. That they treat the Croats as enemies is clear, from the statements of a party of prisoners who returned only last week to Zagreb from an internment camp near Rome. They are reported to be in a pitiable condition, and to complain bitterly of their treatment. At the same time a telegram from Cettigne announces that the Italians are ceasing to arm and finance the *Zelenashi*, offering them instead employment in the Italian army as volunteers, or to send them to America to work. Perhaps this is not unconnected with the cheerful air of the messages from Paris.

A Lady Advocate.

Considerable interest has been taken in legal circles in a case heard at the Court of First Instance at Vranja, where the accused, a certain Zhivko Simonovitch, who was being tried for homicide, was defended by a lady. Zhivko had no barrister of his own, probably because he had no money to pay one, so the President of the Court, as is customary in such cases, nominated him a defender, his choice falling upon Miss Kalchichevitch, who was fully qualified. This Serbian Portia conducted her case so successfully that the accused got off with three years' imprisonment. The interest of the case lies in the fact that this is the first time that a lady has performed advocate's duties in court, and legal circles are awaiting with considerable interest the decision of the higher court, for this is an innovation in Serbian legal procedure, for both criminal and civil law refuse to recognise full rights to women. The civil law allows them full rights only in certain instances, while the criminal law restricts their privileges still more. One paragraph of the regulations for Criminal Procedure expressly lays down that the Court shall nominate a male representative for any woman who has to appear

CROWE & STEVENS,
Steamship Agents and . .
Commercial Representatives,
PATRAS, PIRÆUS, ATHENS,
SALONICA.

Digitized by Google

before a criminal court, regardless of her mental and other qualifications. Consequently, the question arises, Can a woman who is actually disqualified by her sex from appearing herself in a criminal court perform the duties of an advocate in the same court?

The Undecipherable Telegram.

An amusing story comes from Liubliana. It will be remembered that the Democrat members of the Provincial Government tendered their resignation in order to complete the fall of the Provincial Governor, Dr. Breitz, who, after Dr. Koroshets, is leader of the Clerical party. Dr. Breitz, however, declined to fall in with their views, and obstinately clung to office, although it was known that he had received a telegram from the Central Government, presumably calling upon him to give up his office. When pressed, he admitted that he had received a telegram, but it was in cipher, and he had lost the key and so was unable to decipher it.

The Municipal Council.

The new Municipal Council is getting busy. It has just announced its programme, with nine points. These are: The completion of a new register and new elections; the revision of the staff; the housing problem, which is very acute in Belgrade; the supply of fuel, flour, salt, sugar, and other necessities; the paving of the streets; distress, especially among war sufferers; the removal of octroi duty on necessities and its increase on luxuries, for the cost of living is becoming desperate: the introduction of a Bill for the reorganisation of the Municipal Council; and, finally, the remodelling and modernisation of Belgrade. The Radicals, who are in opposition, laugh all this to scorn, as a counsel of perfection, a scheme of dreamers, or, rather, of artful politicians, who wish to throw dust in the eyes of the electors, as a mere catch-vote, in fact; but the Socialists, who are strong, welcome it, especially the more practical clauses of immediate interest. The Ministry of Reconstruction have granted the Municipality a credit of half a million dinars, and the Mayor is negotiating with a Croatian bank for a larger sum. Incidentally the Council has received from the late M. Nikola Spasitch a legacy of 350,000 dinars with which to build a hospital.

General Notes.

The Government has issued a decree demobilising the Second Ban, which has called forth expressions of satisfaction from all sides; it is announced that the First Ban will be demobilised as soon as possible.

Satisfaction is expressed at the revival of the Capitulations in Turkey, though in a somewhat modified form. Serbia now will have those rights, which were refused her before owing to the not unnatural opposition of the Turks to grant such a privilege to their former subjects and *rayahs*.

A French Consulate is to be opened at Zagreb.

The strike fever has spread to schoolboys, who have all struck at Nish and Skoplie. The students of Belgrade University have also struck. They proceeded to the Ministry of Education in a body, crying "Down with the Minister!" A deputation waited on the President of Council, urging their demands for housing, for sustenance allowance for poor students, and for better food. Dr. Davidovitch promised that their very reasonable demands should receive careful attention immediately. They pointed out that before resorting to this extreme step they had sent in twenty-two petitions in vain.

M. Buksheg, Minister of Reconstruction, has asked for a credit of sixty million dinars, to buy food and necessaries to sell at cost price, in order to reduce the market price of indispensable commodities. He anticipates that the money will be recovered in two months.

A party of Serbian officers are proceeding to Prague as Instructors to the Czecho-Slovak army.

ROUMANIA.

BUCHAREST, November 16.

The General Election.

Bucharest is a city of many attractions, and to these have been added of late a General Election and a "Beauty Chorus" from England. At the risk of sinning against the principle of "Place aux Dames," the General Election must rank first. Not that it was what you might call a universal attraction; in fact, numbers of good Bucharestians declined to regard it as an attraction at all. Nor was it advertised in the manner so familiar to the British voter; no flamboyant posters yelled at you the alleged merits of rival candidates; instead, the prospective member contented himself with a small handbill displaying his photograph and setting forth his lofty principles in a few short sentences. The Roumanians have not yet learnt how to make elections "merry and bright." There was less restraint in the speeches; but, then, every politician all the world over is prepared to promise a new heaven and a new earth in return for the conndence of his electors.

Of the many letters and declarations called forth by the General Election a letter from the King to the President of the Council ranked highest as an utterance clear and forceful. It appeared simultaneously with a declaration by M. Bratiano and three *communiqués* from Ardeal, Bukovina and Bessarabia respectively; and pointed out that his Majesty has charged the President of the Council to form a Ministry which should make possible by all available means a free and unhampered election. In his declaration M. Bratiano dealt with internal politics after the manner of party politicians; it was in the latter half of his speech that interest centred; for here he stated his case as representative of Greater Roumania at the Peace Conference. He stated it well, too, and one cannot but approve of a strong man's sense of the position his country has a right to hold. It remains to be seen to what extent the question of Roumania's foreign relations and that of the "Minorities" influence the voters. It seems as if the question had been relegated to the background lately, or had perhaps been covered up by other smaller matters. For instance, there is said to be considerable discontent over the present military Ministry, and its view of the freedom of the Press and the right to strike.

The Strikers Who Didn't.

Strikes have indeed been taking place; engineers, mechanics, and some of the workers in the oilfields have been threatening to go out, and a general strike was said to be arranged for the night of 1st-2nd inst., when water-works, gas and electric installations were all to cease operating at midnight. Waiters at hotels and restaurants seemed to have caught the infection and waited worse than ever, patrols paraded the streets, chiefly on the side-walks, and wise householders filled up all manner of receptacles with water overnight. Several rifles went off during the night, probably owing to carelessness and cold fingers, for there was a distinct "nip" in the air. But Sunday was heralded by the tram that whistles shrilly as it goes by under your window at 5 p.m., proving that the electric works were still going. Then the cold douche, colder than ever, proved that there was no strike at the water-works. In fact, everything seemed normal, but for some rather feeble electioneering demonstrations in the streets. At first sight the results of the elections would seem to be very unfavourable to the Bratiano party. For the 240 seats allotted to Old Roumania there were 867 candidates, which does not bear out the contention that the Liberals were to have a walk-over. Of these seats the Liberals now have 120 in the provinces and all those in the capital, in the latter place possibly because the Socialists declined to vote. The result is that the Bratianists, though numerically the strongest party, have lost their lead; but it seems unlikely that the other parties will form a government. Mr. Také Jonescu and General Averesco seem to be out of the running, and M. Maniu the only other alternative leader, is considered to lack sufficient experience to weld together the parties opposed to M. Bratiano's policy. This lack of experience in the Transylvans is regrettable, but unfortunately it applies to all the branches of the Ardeal administration. Nor is it to be wondered at, considering the treatment of the Roumanians under the Magyar domination. The Transylvans are, however, earnest and sincere, and eager to learn: and are certainly in the way of gaining the much-needed experience. It seems, therefore, that M. Bratiano will be called upon to lead the destinies of Great Roumania, and the prospects of

Digitized by Google

the country, despite its many difficulties, are fair, for the people have at least a firm determination to settle their own affairs as speedily as possible, and prefer to do so without outside interference.

The New Territories.

Apropos of declarations, speeches, and other matters pertaining to elections, those of the Bukovina and Bessarabia were good reading. They showed an earnest desire to co-operate in the reconstruction of Great Roumania and at the same time a political sense sufficiently developed to guarantee a sound representation of their special interests, but always subservient to the well-being of the wider community. Unhappily, the declaration made by M. Maniu for Ardeal was not of this order, and was lacking in statesmanship; it is to be hoped that the Transylvanians have a sounder sense of solidarity with their brothers on this side of the mountains.

The "Minorities."

Another factor, which will prove of interest is the question of the "Minorities." Of these, the Jews are best left to themselves, out of the question. They are not likely to take harm. Then come the Germans, the Saxons and Suabians. Both are determined to insist on their "Teutschtum," to keep up their schools of German thought and culture, and no Roumanian Government would be so unwise as to try to prevent them. They are hard egoists, most of those Germans long separated from the Germans of the "Reich." They will look to the "Teutschland" of their tradition, the country of Kant, Schiller and Goethe; they are good citizens and workers, and for all their racial eclecticism are likely to prove a solid asset in the construction of their new country. But they mean to keep to themselves culturally, as they consider themselves superior to the Roumanians in this respect. Next are the Magyars; they are probably without exception passively hostile to all things Roumanian. They are very bitter at being bottom-dog to the Roumanian after being his master for centuries; and they yet hold some hope that the present state of affairs is only transitory, that the Supreme Council in its affection for the Hungarians will return to them the lost provinces and set them on their legs again. So, for the present, they are taking no active part in the affairs of the new State, are rather offering passive resistance to the working of the public services. But as the Magyars are all opportunists it may be taken for granted that they will in time accustom themselves to the new conditions and become useful citizens. The Szeklers, many of whom are Magyarised Roumanians, are already inclining that way.

Wanted—British Goods.

The import of foreign manufactured goods increases: boots and shoes, American style, with toe-caps suggesting the horn of a rhino, French soaps and scents, Swiss cigars and lace, the former hard to classify; they may be a luxury—that is a matter of taste; they can hardly be considered a necessity. British goods are rare, but they are eagerly expected. It strikes the Roumanians as strange that a great commercial nation such as ours should not run a weekly train across Europe, as do the French and the Swiss. These trains are escorted by armed men, too—a necessary precaution, as a rifle-bullet passed very close to a couple of Swiss officers who were looking out of the window the other day; so even the Swiss Army has been under fire—about the first time since the days of Napoleon I. Whether that action enhances their claim to draw great economic advantages out of the misfortunes of the rest of Europe is quite another question.

Finally, I must revert to the "Beauty Chorus." This consists of 24 dear little English girls who are taking part in a *revue*, the advertisements of which do not err on the side of restraint. Their simple art is familiar, so familiar, to the Londoner, their song brings with it memories of Cockaigne, their dance is so conscientious and painstaking—they are a great success, perhaps more for their personal attractions than for their artistry. It is said that they make good propaganda. No doubt: but so would the British business-man.

BULGARIA.

SOFIA, October 29.

The National Assembly.

The extraordinary session of the National Assembly was closed last Saturday after the voting of the remaining six-twelfths of the Budget, which, as one of the Agrarian leaders expressly stated, did not reflect the policy of the Agrarian League, the latter not having had time to prepare their Budget. However, from statements of Ministers, and from the voting and other indications, it is possible to form an idea of what the Agrarian programme is likely to be. The session removed certain misgivings as to the revolutionary aims of the League; and it made clear the resolution of the Agrarians to save the land from ruin, and property from annihilation, and to secure democratic reforms. The guarantee for a stable and sound Government by the Agrarians lies in their being supported by a very numerous, well-organised compact body, fit for a strenuous struggle if necessary.

Owing to repairs to the building, the Chamber closed its extraordinary session somewhat abruptly. It will be convoked in ordinary session on November 20, if nothing compels an earlier meeting. Its first work then will be to consider the Peace Treaty, and its next to adopt new taxation, in order to secure a balance in the Budget.

Internal Security.

The new Minister of the Interior, M. Dimitroff, is taking adequate measures to guarantee internal security. He has undertaken a renovation of his administration, and may possibly create a new gendarmerie force, with special title and functions. The elections for municipal and county councils are approaching, and the Ministry is taking all measures to secure the fullest manifestation of the national will in these bodies, the basis of democratic government in the interior.

The Prime Minister and the Communists.

On the 24th inst., in the course of the debate on the Budget, in connection with the railway functionaries' demands for great increases in their salaries, and their threat of a general strike, M. Stambolisky took a firm line. He declared to the leaders of the Communists and the Moderate Socialists, who were pleading for satisfaction of the railway men's demands, that he accepted the challenge thrown out by the parties of the Left, and that he would defend with rigorous severity the principle of the State defending itself against such attacks.

November 4.

War Criminals Arrested.

In accordance with the programme of the Agrarian party and the decision of the Supreme Council of the Agrarian League and the Cabinet, the Government proceeded last Tuesday very early in the morning to arrest politicians and military men who are held responsible for the war, and many others who are alleged to have committed various crimes and excesses during the war. These people are all to be put on their trial. Among those arrested are a great number of people who played a part in the Government of M. Radoslavoff, or who were compromised in the Administration.

According to a statement by the Minister of the Interior, orders were given for the arrest of (1) All the Ministers of the Radoslavoff Cabinet; (2) all former deputies who, moved by the desire for personal gain, favoured the war; (3) all journalists who, prompted by the same spirit, made propaganda in favour of the armed intervention of Bulgaria in the war; (4) men of influence, State officials, and so forth who abused their powers for the same end; and (5) functionaries who oppressed the population in the occupied territories or maltreated war prisoners.

Dr. Radoslavoff is in Berlin, but his extradition has been demanded, and the following former members of his Cabinet have been arrested:—MM. P. Pecheff, Christo I. Popoff, and Dr. Dincheff, Radoslavists; D. Toncheff and J. Bakaloff, Young Liberals; Dobri Petroff and V. Koznitchky, Stambolovists: Apostoloff, Genadiavist: and General Naidenoff. Others arrested include: Dr. Montchiloff, Vice-President of the Chamber;

Digitized by Google

General Michael Savoff, and General Alex. Protogneroff and T. Alexandroff. Among former Deputies arrested are Dr. Gheorghieff and Dr. K. Provadalieff, respectively Dr. Radoslavoff's son-in-law and brother-in-law; while a similar fate has befallen M. Damianoff, Director of the journals *Dnevnik* and *Outro*, and M. K. Stancioff, Director of the *Kambana*, who are accused of having accepted enormous bribes from the Germans and of having organised the Press propaganda in favour of the alliance with Germany and Austria.

The extradition of ex-King Ferdinand and his Commander-in-Chief, General Jekoff, is demanded.

All the arrested have been lodged in the Central Prison, and a mixed military and civil tribunal will shortly be formed to try them.

These arrests were effected by the Government solely on its own initiative, without any pressure from the Entente. The object is to calm the over-excited public feeling caused by the nation's disasters, and to prove to the civilised world that Bulgaria was forced into ranging herself against the Entente.

The Final Peace Terms.

M. Theodoroff, the first Bulgarian Delegate in Paris, is expected to return here to-night with the Allied Powers' final terms to Bulgaria; though it is possible he may not arrive before to-morrow morning. The Chamber is summoned in extraordinary session to-morrow to take cognizance of the final terms presented by the Paris Conference for Bulgaria's signature. Thereafter M. Stambolisky will leave for Paris, probably on Sunday or Monday, by way of Belgrade. After signing the Peace Treaty he proposes, if permitted, to visit the capitals of the Entente Powers and to plead personally the cause of Bulgaria.

ASIA MINOR.

SMYRNA, November 12.

A year, almost to a day, since the first British warship after the armistice entered Smyrna, the B. I. Kapathula has landed British troops. The arrival of H.M.S. "M. 29" on November 6, 1918, was hailed with frenzied delight by the entire Christian population, and also by the Israelites; but the landing of British troops on November 8, 1919, leaves the entire population, with the exception of the European colonies, absolutely cold. The Turks fear that they will have to fight once more against British soldiers—a very different thing for them from fighting against the Greek Army. The Greeks fear that the British will—to adapt the facetious definition of a lawyer—"rescue the territory from their enemies and keep it themselves"; the Armenians and the Jews tremble because the "Advanced British Headquarters" have already commandeered their houses and furniture (without paying any rent), and they fear more will be taken to provide accommodation for the new arrivals. Moreover, looking back as far as November, 1918, they all see a series of massacres, brigandage, outrages, and interminable guerilla warfare gradually getting worse and worse until to-day the situation seems positively hopeless.

However, the old fishermen are reputed to say that when a storm reaches its worst stage then it mends, and, perhaps on this principle, the European colonies, or at least the British, American, and French colonies, see a ray of hope in the recent landing of British troops. It is believed that they will take the front line, and that the Turkish rebels will immediately stop fighting. There are pessimists, it is true, who claim that the British troops are absolutely inadequate to bring about peace between the Greeks and Turks, and that we shall see a repetition of the Dardanelles, Gaza, and Baghdad (first attacks) failures. They fear that only after our first contingent has been severely mauled shall we send a larger and more adequate force to finish the job.

If this small British force is really intended for the front it is certainly to be regretted that the cool, bright, autumn weather has been allowed to slip by, and that British troops should have to go into action now, in the rainy season, when it will certainly mean that many will go down with malarial fever. However, the four generals handling the matter here—Milne, Hanbury, Bates, and Hare—are men possessing every qualification to settle this affair satisfactorily, if only politicians will let them have a free hand, and an adequate army.

CYPRUS.

General News.

The small-pox epidemic, far from being stamped out, continues to spread in several directions in different districts, and as winter approaches further extension is feared, cold weather being regarded as favourable to the disease. The cry now is for compulsory vaccination.

The Cyprus deputation write that they have decided to remain in London till the conclusion of the Allies' Treaty with Bulgaria, by which time it is hoped that a definite reply will have been given to the memorials which have been submitted. The general opinion in the island now does not at all agree that this is likely to be the case.

The late assizes at Nicosia and Limassol seem to show that crimes of violence maintain their level. Several death sentences for premeditated murder have been passed, and cases of attempted murder dealt with.

MALTA.

(FROM OUR OWN CORRESPONDENT.)

VALETTA, Nov. 13.

To all intents and purposes the excitement and the (in some cases) rabid discussions anent the findings of the Royal Commission appointed to inquire into the causes of the June riots are fading away towards nothingness. However, in the Commission's Report, to which we have referred before, it will be remembered that a club known as "*La Giovine Malta*" came in for some severe comment and stricture at the hands of the Commissioners. The "*Giovine Malta*" have issued a flowery resolution in protest against the statements levelled against them. The local Government have acted wisely in allowing the protest to be spread broadcast, allowing the committee of the *circolo* to affix a copy in the principal hall of their club and to cause it to be printed in the local Press. A copy is to be forwarded to H.E. the Governor, with a request to transmit it to the Secretary of State for the Colonies.

Small islands have many drawbacks on account of their intensive and perhaps cramped vision; but, on the other hand, there is a compensation to be found in the fact that local grievances can be threshed out very completely. Just now criticism is on the coming Bill on excess profit duty or levy on capital. This is not to be wondered at, as since the war broke out mushroom men have become Malta millionaires. Now they may have to part with some of their newly acquired wealth. The trend of feeling of those who will have "to pay the piper" is reflected in the local Press. According to the sentiments there expressed, the Government is not justified in imposing a war tax on profits after a year of peace, when these profits have already been passed to capital account in traders' books. What would be far more applicable to Malta would be

for the Government to increase this reasonable tax and invest the proceeds in the establishment of local industries —the island's greatest desideratum.

A rupture of rather a serious nature has occurred between the German prisoners and those in charge of them. Several, it is understood, have been killed.

Armistice Celebrations.

Armistice or Peace celebrations passed off both tamely and quietly. The 1st Batt. N. Lancashire Fusiliers trooped the Colours on the Palace Square. No invitations were issued for the ceremony. A great number of the general public availed themselves of the kind invitation of Rear-Admiral Culme-Seymour to visit and inspect H.M.S. Emperor of India.

Public opinion generally seems to indicate an honest hope of economic, political, and financial reform. Truly there is much scope for improvement all round.

The Lieutenant-Governor is now in England, where he has gone to exchange views on financial and constitutional questions with the Home authorities. It is considered that more good would be forthcoming if a suitable deputation of Maltese citizens could proceed to England to clear up the many points of difficulty a change of Constitution would involve. Past experience has shown that little good can come of official correspondence.

H.E. the Governor has been pleased to appoint Lieut.-Colonel Clare Ruxton M. Savile, D.S.O., O.B.E., to be an official member of the Council of Malta in the place of Major-General W. C. Hunter-Blair, C.B., C.M.G., who has left.

November 19.

Surplus Stock.

During the war, it will be remembered, Malta was a great base for the wounded, with the result that the number of motor-lorries and ambulances used has been very large. They are now being sold off at greatly reduced prices, and the old *carozzin* (or carriage) stands a chance of almost disappearing. There have been many sales, and the latest, just announced, is that of the gear of Australian Imperial Forces. There are also a number of old destroyers and other craft offered for sale on reasonable terms.

Olla Podrida.

The proposed increase of pay to the local police is causing dissatisfaction and unrest in other departments, which have been left as they were. The Revenue Guards and the elementary teachers are particularly aggrieved.

Upon the question of the proposed abolition of the *Fideicommissa* the Maltese Nobles have voted adversely—13 votes to 11.

JERUSALEM.

November 12.

Armistice Day.

On the eleventh hour of the eleventh day of the eleventh month, it being the first anniversary of the Armistice, all the Government offices all over Palestine suspended work for two minutes, in order that they might think of that glorious day and of those who had laid down their lives so gallantly to bring about a victorious peace. All kinds of routine business were stopped in Jerusalem, and while all officers, clerks, and many other officials and notables were solemnly thinking of the past four years of the horrible war, the great bells of the German cathedral on the Mount of Olives pealed eleven times as a sign of the occasion. This had a very moving effect on all who participated in the ceremony. On the afternoon of the same day a general holiday was granted to all the school children as well as to the Government employees, and a grand international fête was arranged for by Lady Watson and General Watson, the Chief Administrator of Palestine. Contributions consisting of every kind of article were collected from all the people of the city, and were on sale in a well-prepared and charming garden. The proceeds of the sale went in aid of the Y.M.C.A.

All sects and nationalities participated in this historic day. The Scouts of St. George's School paraded and gave performances of signalling and first aid, while other school children sang and played. Thousands of people attended and the signs of joy and happiness were seen on the faces of all present. A military band played selections to the public, while the tea section was busy in attending to all. In the evening a very big concert was also arranged for, under the patronage of Lady and General Watson, in which songs and selections in the four languages were given. The proceeds of the evening were devoted to the Y.M.C.A.

This historic and glorious day passed very peacefully, and had a very marked influence on all the population.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Egypt. November 25.

Earl CURZON made a long statement upon Egypt. He briefly sketched the causes and demonstrations of discontent in Egypt, and then said :—

Such was the sequence of events in Egypt until mid-autumn. The sharp recrudescence of disorder in October, to which I shall again revert presently, was so distinctly and directly connected with the anticipated dispatch of the Mission under my noble friend Lord Milner that I must now ask your lordships to go back with me to the date at which that Mission was first announced and to the object which it had in view. Already in May last I announced the intention of his Majesty's Government to send such a Mission, and I thus defined its object. It was "to inquire into the causes of the late disorder in Egypt, and to report on the existing situation in the country, and the form of Constitution which, under the Protectorate, will be best calculated to promote its peace and prosperity, and the progressive development of self-governing institutions, and the protection of foreign interests." I call special attention to the words "progressive development of self-governing institutions," because they have been almost completely and as it would appear deliberately ignored in the subsequent agitation, although they were the key-note of the policy which the Mission was to hold in view. At that time it was intended to dispatch the Mission at as early a date as its composition could be completed. But difficulties were experienced in more ways than one. It was not found easy to find available members with the requisite authority and experience. The summer is not exactly the best time in which to conduct investigations in the interior of a country with the Egyptian climate. It was felt desirable to give the newly-formed Egyptian Administration an opportunity of firmly establishing itself; and it was thought at that time—an illusory hope—that the Peace Conference at Paris might address itself before the autumn to the solution of the Eastern problem. Lord Allenby, upon whose judgment his Majesty's Government place great reliance, informed us that the Sultan of Egypt and the Prime Minister both favoured a postponement till the autumn, and that he agreed with their views. It was in these circumstances that the date of departure of the Mission was deferred. Meanwhile, his Majesty's Government succeeded in composing a Mission of persons possessing in at least three cases actual administrative experience in Egypt, and all of them qualified by their representative character, high position, and public reputation to produce a strong feeling of public confidence in the impartial and sympathetic character of the inquiry which they were commissioned to hold. I have little doubt that, under the guidance of my noble friend Lord Milner, whose name has been so long and honourably associated with Egypt, they will be able to render a great service to that country.

I will now proceed to deal with the object that Lord Milner and his colleagues will have in view. Your lordships will have noticed from the reports in the Press that the attacks which were made upon it revolved to a large extent round the words "the British Protectorate," and that these had became a sort of battle-cry in the agitation that had been fomented in Egypt. I think it desirable that we should clear our minds on the matter—not of cant, because I suspect that the apprehensions that have been aroused have been to a large extent sincere—but of gross and palpable misunderstanding. It was in 1914, after we had been compelled to declare war upon Turkey, that the British Protectorate over Egypt was declared. So far from this being intended or, indeed, regarded at the time as a high-handed act aimed at the suppression of Egyptian liberties, it was decided upon by Mr. Asquith's Government as a much milder and more generous policy than that of annexation, which at that time was strongly advocated by some. Cyprus, which had been long administered by the Colonial Office as a part of the British Empire, was annexed; but the opportunity of incorporating Egypt in the Empire was deliberately, and I think wisely, rejected, because it was intended, in the wide latitude of opportunity which the formula of a Protectorate affords, to give free scope to the political aspirations and the self-governing capacities of the Egyptian people. I observe that a great deal of play is now made with the argument that when the British Protectorate over Egypt was declared in 1914 no attempt was made to define its character or implification. I do not remember that that argument was much used, or, indeed, used at all, at the time. Perhaps, in the light of later events, it would have been wiser if Mr. Asquith's Government, which at that time had the advice of Lord Kitchener at their elbow, had indulged in some fuller explanation. But I think that your lordships can readily understand how it was that this was not done. Not Egypt alone, but almost the whole of the Western world, soon to be followed by the Eastern, was involved in the first throes of the terrific struggle which was to last for another four years. Before long Egypt herself was threatened; her own frontiers were in danger; immense armies were collected upon her soil either for the defence of the Canal or on their way to the various theatres of war. Egypt became a throbbing hive of war industry and war commotion. *Inter arma silent leges*, and the time was hardly opportune for discussing politics or formulating a constitutional definition. I doubt very much if at that time a serious attempt in consultation with Sultan Hussein and the then Ministers had been made to determine what form the Constitution of Egypt should assume after the war, whether it would have been found practicable to pursue it to any solution.

But now the situation has changed, and the questions which

Digitized by Google

it might have been difficult to answer then may, with propriety, be put and answered now. What, then, is the nature of our position in Egypt, and what is the task with which the Mission is charged in working out the future form of its Government? I need hardly elaborate to your lordships the reasons for which Great Britain is compelled to interest herself in the political fortunes of Egypt and is unable to give any encouragement to the claim of complete national independence. Quite apart from the fact that Egypt, if left to stand alone, could neither protect her frontiers against external aggression nor guarantee a strong and impartial Government at home, her geographical position at the gate of Palestine, for which it seems likely that a special responsibility will before long be placed upon our shoulders, at the doorway of Africa, and on the high road to India, renders it impossible that the British Empire, with any regard to its own security and connections, should wash its hands of responsibility for Egypt. Egypt is, of course, primarily an Egyptian interest; the good government and the prosperity and happiness of its people are the first concern; but it is also a British interest of capital importance; and I suspect that there are few who would deny that it is also a world interest, and that world interest is best secured by leaving Egypt under the ægis of a great civilised Power. Accepting these fundamental propositions, which underlie the whole matter, and which no British Government or party will be disposed to dispute, there may yet be wide differences of opinion as to the form which the British interest should assume. I shrink on the present occasion from attempting any scientific definition of the term protectorate, which, as a constitutional expedient known to all countries and to all periods of the world's history, has many shades of meaning, from an advanced degree of political or administrative control at the one end, to little more than a sphere of political influence at the other. Common, however, to all these examples is the conception that the protecting Power is under an obligation to defend the protected State from external attack, to secure the proper treatment of foreign subjects and property within it, and, generally speaking, to control its foreign and political relations. The degree to which a protectorate carries with it the prerogative of interference in the internal administration of a State is laid down by no law, and must be decided in each case on its merits. In Egypt, however, these constitutional commonplaces appear to be in danger of being forgotten, and the British Protectorate is mistaken for a thinly veiled form of annexation. The constitutional history of Egypt since the first grant of representative institutions after Lord Dufferin's mission nearly 40 years ago, culminating in the Organic Law of 1913—unhappily never carried into effective operation owing to the outbreak of war in the succeeding year—should have supplied a sufficient answer to these misunderstandings. If annexation, either open or disguised, had been intended the time to carry it out would have been in the winter of 1914. But it was not intended then, and it is not intended now.

The idea that Egyptian aspirations and Egyptian nationality are to be crushed or ignored is an extravagant misconception which I cannot too emphatically repudiate. The object with which the Mission is going out has been defined in the declaration which Lord Allenby, acting upon instructions from his Majesty's Government, has already issued in Cairo. It has been published in the newspapers in this and every country, and I have no doubt your lordships have seen it, but I may be permitted, perhaps, on the present occasion to add a few further words on the subject. I have already spoken of our responsibilities and duties towards Egypt—responsibilities which Great Britain cannot forgo or disown. Egypt depends upon them for her safety from foreign attack and her existence as a nation. But within those boundaries there is a wide and ample field in which Egyptians are invited to participate, and must, as time passed on, participate in an ever-increasing degree in the government of their country. We recognise the legitimacy of these aspirations. We desire to provide for their satisfaction. The progressive development of self-governing institutions in Egypt is an ideal which they may share with us and we with them. It is not to be thought of that a race like the Egyptians, possessing in its upper ranks a high culture and historic memories, should be content with a *rôle* of passive subordination in the administration of their country.

It will be the object of Lord Milner and his colleagues—in consultation with the Sultan and his Ministers and representative Egyptians of all classes—to devise the details of a Constitution by which all these parties shall be able, in their several spheres and in an increasing degree, to co-operate in the management of Egyptian affairs. British assistance and British guidance will still be required. Nor will any of those who have followed the history of Egypt for the last 40 years and seen the astounding advance that she has made under our auspices, question the necessity of this supervision. Lord Milner's Mission is not going out to Egypt with a Constitution in its pocket. It intends to consult all parties before it even forms an opinion. It is not authorised to impose a Constitution. What it has to do is to undertake the preliminary work that is necessary before the future form of government is determined. While it is engaged in this task, the Mission, with the assistance of the material which Lord Allenby has already collected, should be able to form an opinion on the causes—some of them obscure, but others very patent and removable—of the recent risings and the present discontent, and will be able, as I hope, to propound a remedy. They will doubtless hear of many anomalies and grievances, and if they are confronted with proven abuses in the Administration, they will, I am confident, recommend their extirpation with an unflinching hand.

If these intentions are known, Lord Milner's Mission should be assured, not of an unfriendly greeting, but of a cordial welcome at the hands of all friends of Egyptian nationality and Egyptian progress. Such a reception, I am sure, they will meet with at the hands of the new Egyptian Ministry under Yussuf Wahba Pasha, which assumed office on the resignation of Mohammed Said Pasha a few days ago. The High Commissioner has reported to us very favourably on the character and composition of the Ministry which now enters upon office, sharing, as it does, the hopeful views of his Majesty's Government, and resolved to co-operate loyally in their execution. I see that the question has been raised in some quarters why the Mission, even if there were good reason for its postponement in the middle of the summer, did not go out in the early autumn, and an impression of irresolution or vacillation is said to have been produced by the delay. We were quite willing and had made all preparations to dispatch the Mission in September. But two reasons interfered with the execution of our plan. The late Egyptian Prime Minister more than once pleaded in the strongest possible manner for the further postponement of its arrival, and we were anxious as far as possible to carry him with us. Secondly, Lord Allenby was called to Europe for other purposes. We desired to profit by his advice, and we did not wish to act in his absence from Egypt. As soon as he had returned to Cairo and had taken stock of the situation he advised that the Mission should start with as little delay as possible, and preparations are now being made for its early departure.

One other plea has been put forward and has found a good deal of favour in Egypt, namely, that the Mission should not appear upon the scene until the Peace with Turkey has been signed. There may have been some value in this plea in the course of last summer, when everyone hoped that the Paris Conference, having completed its other labours, would turn its attention to the peace with Turkey without delay. But these hopes were disappointed; and although his Majesty's Government are anxious to take up at the earliest possible date the concluding stages of the work of the Conference, and have made formal proposals to the other Allied Powers to that effect, the point has not yet been reached at which it is possible to commence the investigation of that subject or to prepare the way for the future settlement of the East. But I should like to point out that, whatever form the future peace with Turkey may take, or at whatever date it may be concluded, it can make no difference whatsoever in the solution of the Egyptian problem. The political connection of Turkey with Egypt is at an end. Nor is it conceivable that it should ever be revived. It is not to Turkey that Egypt must look for the fulfilment of her aspirations for the future of her race. Whatever be the terms imposed upon Turkey by the Powers, the recognition of the British Protectorate already made or promised by all the Great Powers will be an inseparable feature of the Treaty, nor can any provision in the Treaty alter in any way the fundamental principle of the inquiry with which Lord Milner's Mission is charged, namely, the progressive development of Egyptian self-governing institutions under British protection.

Lord Curzon shortly noticed the most recent disturbances, and said:—But these incidents will not deter us from pursuing the path which has been mapped out for us by the highest conception of duty both to Egypt and to ourselves. We appeal to moderate opinion in Egypt to support us in the task we have undertaken, and to co-operate with Lord Milner and his colleagues in their undertaking. The effort to raise Egypt from the misery and oppression in which she was plunged less than half a century ago, and the successful results of which have been our pride and her glory, cannot be dropped midway. Rather may we hope to guide her energies and resources into new channels of progress and influence. Before I sit down I should like in a sentence to point to the opposite and encouraging picture that is presented by the Sudan. Under the able rule of the Governor-General, Sir Lee Stack, the inhabitants of that country have continued to maintain perfect order, and have given notable evidence of their affection towards Great Britain by the visit to this country in July of a deputation of notables, who were received by his Majesty the King. Both to his Majesty and subsequently to myself they expressed their warm appreciation of the work accomplished by Great Britain for the regeneration of their country and their dissociation from the events which have happened in Egypt. Their one desire is to remain in the Empire and not to be dissevered from it. This gratifying testimony of loyalty is largely, if not entirely, due to the admirable work accomplished by the late Governor-General, Sir Reginald Wingate, who devoted his great abilities for so many years to promoting the prosperity of the Sudan and to laying the foundations of a State in which the methods of British rule have received their fullest vindication.

HOUSE OF COMMONS

Topics in Parliament.

The subjoined headings are those given in the official report:—

DEMOBILISATION: Troops from India (Treatment). INDIAN ARMY (OFFICERS' STAFF SALARY). TURKISH EMPIRE. BALKANS (COUNT DE SALIS' REPORT). (November 18.)

INDIA: Government of India Bill (Joint Committee).—Officers (Service and Pensions).—Punjab Riots (Arrests). MONTENEGRO. EGYPT. (November 19.)

MONTENEGRO. RUSSIA: Communications with Turkestan. INDIA: Government of India Bill. ODESSA (PHOTOGRAPHS). SOUTH-EASTERN EUROPE (FAMINE). ARMENIA. EGYPT: Calumniating British Soldiers. (November 20.)

NURSING SERVICE. MESOPOTAMIA (PAY AND ALLOWANCES). (November 21.)

INDIA (UNITED STATES IMPORTS). MONTENEGRO. DEMOBILISATION: Telegraphists, India. NURSING SERVICE, MESOPOTAMIA (PAY). GOVERNMENT OF INDIA BILL. (November 24.)

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Readers who know Roumania's gay capital will be interested in the following extract from a letter recently received from that city:—"Something will have to be done about the Calea Victoriei. There are several fine broad boulevards crossing the town in diverse directions, yet everyone crowds into the wretched Calea Victoriei, one of the narrowest, dirtiest, and worst-paved streets of the town. True, the shops are here, but at certain times of the day the crowd is so dense that you can only reach them after a severe struggle. The crowd moves slowly, and slops over from the side-walks into the street, where cabbies and motorists add their mite to the tumult with voice and horn. It is really incredible that a sensible people like those of Bucharest should consider it necessary to promenade the narrowest and dirtiest thoroughfare of the town twice a day at stated times. There is one compensation: here you may meet the eye of gladness, but what is that among so many? No, this habit must change, and the people of Bucharest must take their walks elsewhere—along the Boulevard Bratiano, for instance—until the Calea Victoriei has been widened and cleaned up. At present it is too narrow even for ventilation."

***

Perhaps because what little golf I know I learned in Turkey, I always find it hard to remember that golf is not an Eastern game, like polo or chess. And that must be my excuse for telling a golf story here, though it is of the West Western. The Rector and the Colonel played a game on Monday, and the Colonel beat the Rector rather badly. On Tuesday the same thing happened, and on Wednesday, and on Thursday, Friday, and Saturday. Then said the Rector, perhaps a trifle crossly: "Well, it's no good. I must give up golf, I suppose!" "Oh, nonsense!" replied the Colonel, pleased by his success. "You'll have your revenge over me some day, at any rate." "How so?" asked the Rector. "Why, I expect you'll read the burial service over me." The Rector's face lighted up momentarily, only to cloud over again at once. "No good," said he. "It'll still be your hole."

***

At the present time we are hearing of Bolshevism almost more from mid-Asian sources than from Russian. I wonder what the significance of this political creed among semi-civilised peoples really is. It seems to me that much of the talk about it is extravagant. Certainly the lust for plunder (an ingredient which reactionaries declare exists in every revolutionary faith) is appealing—has always appealed—very strongly to the inhabitants of Turkestan and Afghanistan; but to suppose that they understand the political and economic doctrines of Bolshevism, to suppose that they, when the Red Armies of Russia are defeated, will continue to hold aloft the banners of Lenin and Trotsky, seems to me more than a little absurd. Personally, I do not believe that the East will ever adopt wholesale a system—religious, social, or whatever it may be—that has been conceived in the West. They may borrow certain excrescences of a system (in the case of Bolshevism they appear to have borrowed the least undesirable), but they will never fit their lives to Occidental ideals. I refrain from quoting the inevitable Kipling line about the two peoples, but I think that those who deny its truth are doing so more from a fear for Capitalism than from a dread of Bolshevism.

***

It is an instructive and absorbing subject of thought, this contest between East and West. Everyone appears to think that a conflict is certain, but how near it is no one has guessed. Lord Haig recently said that we should prepare for it now, seeing that it was to be the next great war. Why a struggle is inevitable it is not easy to say—does a difference in religious, economic, political, social, moral systems denote an utter incompatibility of civilisations which can cease to exist only with the destruction of one by the other? It is a question which has always interested me, and I thought of it again the other night when I saw the opera "Prince Igor." Of Borodin's music I am not competent to judge, but the setting of it—it represents a struggle in the twelfth century between the Tatars and Russia—fascinated me. As a matter of fact, the Tatars were victorious in that struggle, but—where are they to-day? He would be a bold man who predicted a future for them; it is a much easier thing to see a Russian civilisation as an essential part of future history.

CORSAIR.

PALESTINE.

Speaking at the Jews' College, Russell Square, on November 24, Captain Ormsby Gore said the geographical position of Palestine was such that its foreign policy would be of enormous importance alike to the internal development of the country, to its neighbours and to the whole world. It was the bridge between the two main sections of the Arabic speaking world. So far as concerned Egypt, if England was to have a mandate over Palestine her power to do any good there would be seriously diminished unless good relations between England and Egypt could be restored; the present situation was full of peril. With regard to the Bedouins who inhabited the Sinai peninsula and the desert beyond, these desired nothing but to be left alone. Damascus was the natural economic and intellectual capital of the Arabs. It had been linked up with Beyrout by a railway, but its atmosphere was essentially that of the capital of the early caliphs. It was only in Damascus under the Ommayed dynasty, and, subsequently, under their successors in Cordova that the Arabs produced important contributions to civilisation, and Damascus was the only place where Arab civilisation was likely to revive. It was in the interests of Palestine to see a revival of Arab culture in Damascus side by side with the revival of Jewish culture in Palestine. The burning question was the position of Syria north and west of Damascus, and any failure to effect a settlement would react on the Arabic-speaking people in Palestine.

Taking another view, the lecturer said that Palestine presented enormous difficulties owing to its being the religious centre of the world. Associated with this fact was the rivalry between Italy and France. Italy's claims dated from the time of King Robert of Naples; Suleiman the Magnificent had made France protector of the Latin Millet, this consisting of all persons resident in his dominions, whether Ottoman subjects or not, who acknowledged the Pope as their spiritual head. Thus, though there were not many Christians in Palestine the slightest mistake became an international question. The international claims in Palestine could not be liquidated, they must be recognised.

NEAR EAST BOOKSHELF.

GERMAN AND RUSSIAN.*

During the war it was extremely difficult to gauge the mentality of belligerent peoples: in the case of our enemy Germany and of our erstwhile ally Russia this was especially so. In the two books under review we have an attempt, in the first case by documentary evidence, in the second by the relation of personal experience, to appreciate the German and Russian mind as shown by their respective actions. Unfortunately neither of the works has a great value. One is compiled from sources (e.g., *Manchester Guardian, New Europe, Cambridge Magazine*) which of necessity were both scarce and partial; and the other is the product of an observation which was close but in no wise deep.

What Germany did at Brest-Litovsk is a matter of fact, about which two opinions are impossible. It stamped our enemy for what he was, and it caused many foolish people who hitherto had said kind words for the German for a time at least to hold their peace. The question that ensued in men's minds did not concern the German. It was: Was the Russian a traitor and a rascal, or was he not? An absorbingly interesting question, one which Dr. Magnes is inclined, though he gives no personal opinions, to answer (through his selection of documents) in the negative, but which Mr. Price answers in a decided affirmative. In the American work the Russian (as personified by Lenin) is shown as a man very consistent to his ideals, as a victim of the saddest of tragedies. In this view certainly Lenin was no traitor. When he spoke on the treaty of Brest-Litovsk, he knew that Russia was signing a Tilsit peace, and was convinced that it would only be by the greatest efforts possible that his country could be saved. Dr. Magnes' book stops at Brest-Litovsk, but it would be extremely interesting to have his (or a collection, similar to his present one, of other people's) views on Lenin's later efforts.

Mr. Price, whose book is based on intimate experiences of the German militarist and the Russian revolutionary, gives vent rather to his feelings than to the considered utterance of views. He has much to say on the wickedness of the German, some of it important, some of it trivial, but all of it quite credible. Without adding very much to our knowledge of the Blonde Beast, he does lay stress on some points that matter (e.g., the German hostility to the Austrian soldiers), and is occasionally illuminating. It is when he gets to Russia, and becomes excited, that one hesitates to accept all that he sets down. He appears to make Bolshevism responsible for all the ills of Russia; he scoffs at the idea of Soviet Government (about the details of which he is rather hazy); and he does not seem to understand (though he professes to) that the Slav mind works in a very different way from his own. Bolshevism, which after all is merely the creed of a particular party (and a pretty unpopular one at that!), will in all probability disappear—it is, as Mr. Price rightly says, an impossible tyranny—but such things as Soviet Government and the socialisation of the land may endure. Although Mr. Price says he has tried to avoid questions of principle, he has unhappily confused excesses with essentials, and has set all post-revolutionary things in Russian under the dismal pall of cloudy invective.

THE FOLLY OF WISDOM.†

This book is introduced to us as being "the work of the greatest poet of Arabia, the man of whom Rodin said: 'He is the William Blake of the twentieth century.'" The publishers continue with the doubtful compliment: "In the opinion of many critics he is a far greater poet than Tagore." We are naturally and at once interested; and, having finished the book, we are yet more interested.

The thread of the parables is this. A lone personage, having been robbed of his seven masks of deception (owing to which misadventure he is called by the world a "madman"), visits our world of ordered sanity and finds it not to his liking. He discovers its shams and superficialities, and loathes its measured virtues and ordered excellencies. He laments the inability even of the friend to understand, and, seeking refuge in defeat and freedom in loneliness, finds a perfect safety in not being understood.

In his main theme Gibran does indeed justify the extravagant comparison with Blake, who said in one of those mystic paradoxes which are always true:

The visions of Eternity, by reason of narrowèd perceptions,
Are become weak Visions of Time and Space, fix'd into furrows of Death;
Till deep dissimulation is the only defence an honest man has left

But his process is intellectual, and his hatred of the evil of conventional things comes rather from an ultra-sanified sanity than from insanity. His mystical and emotional reins are tightly held, and he steadfastly drives his horses to the reality of Truth, though they sometimes wish to turn off in quest of the ideality of Beauty. But he tries to get to his goal by a reverse route—there is always, he thinks, a back-door to the house of Truth, and thus he sees (and in this he is quite in fashion) everything upside down. It is his pleasure to "gaze at nothingness, which is behind all things"; and he smiles in "the joy of being shunned and scorned." In a splendid poem on "Defeat" he says:—

Defeat, my Defeat, my shining sword and shield.
In your eyes I have read
That to be enthroned is to be enslaved,
And to be understood is to be levelled down,
And to be grasped is but to reach one's fullness,
And like a ripe fruit to fall and be consumed.

Yet, though he can see with undeniable intensity into things, there is little evidence that he can see out of things. There are here but few (possibly accidental) hints of the larger, constructive mind of Blake.

In one point, however, he certainly does resemble Blake. There are three drawings in this book, all admirable in technique and very pregnant in conception. They, at least, are full of Blake's vivid obscurity. For the rest, he resembles Lord Dunsany more than any author we know. His literary qualifications for this (Dunsany's) poetic parable style of writing are considerable: his sense of humour, deft rather than subtle, is keen; his satirical power is more than sufficient; and the concise phrases and air of finality with which he invests and envelops his thought are perfect. In a word, he is an extremely capable writer, whose development (or, ought we to say, the translation of whose other books) is obviously a matter of unusual importance.

THE SEASON IN EGYPT.

(From Our Social Correspondent.)

Cairo, November 4.

The Residency has returned from Cairo from its summer stay by the seaside at Ramleh, thus marking the commencement of the winter season in Cairo, with its attendant gaieties. We have, it is true, already had a certain number of social events, such as the military meetings at Ghezireh and Heliopolis, one or two small dances at Shepheard's, and a most delightful ball given by the Air Corps out at Helouan. The season proper, however, never starts until November is in, with the cooler weather which that month usually brings in its train.

This year those of us who returned in September and October have suffered somewhat in consequence, for the dying summer has had more "kick" than usual, and the weather has been exceedingly trying; so much so, that we are now feeling as if we had had no leave at all, and are exceedingly envious of those more fortunate mortals who either had later leave or were detained owing to difficulty in finding accommodation. For the latter the delay has proved a blessing in disguise, as far as concerns the weather, at any rate.

Of course, we have had no season proper in Egypt since 1913-1914; for, although there has been a good deal of gaiety during the interval, most of it was specially for the men and the officers of the Egyptian Expeditionary Force, and, in any case, whilst residents threw themselves heart and soul into the work of entertaining, as they did into that of tending our soldiers and nursing them back into health, it was only natural that whatever took place lacked the careless *entrain* which has always been one of the characteristics of the Egyptian season.

What sort of a season are we going to have? Everyone poses the query whenever the topic of the coming winter comes up, but the reply is very difficult to give. As regards visitors, judging by what one hears from Home, there seems little probability of any great influx unless the shipping facilities improve very considerably during the next month or so. A short time ago the hotels reported good advance bookings, especially from across the "herring pond," but they are by no means so sanguine now, though a certain number of winter visitors have managed to get out already. Nevertheless, there are indications that, if the season is going to suffer in the number of its visitors, its programme will be just as varied and as entertaining as any of its pre-war predecessors. The first winter race meeting, which has been held at Heliopolis, was exceedingly well attended. The new battalions of the Army of Occupation turned up in great force, while the grand stand and paddock seemed to have an unusual contingent of the fair sex, most of them looking charming, and gowned in light muslins and silks, such as the weather fully justified. The Heliopolis management are to be congratulated on the efforts they have made to cater for the comfort of the public, especially for the ladies, for whom a special *pari-mutuel* has been put up at the back of the Grand Stand, where they can put their money on instead of having to fight their way through the boxes at the far end of the enclosure—an arrangement which incidentally allows us to change our minds many times without being too late for the "last bell."

As regards the actual racing, I must leave that to "our racing correspondent," for I can tell you but little about the gee-gees beyond that they looked very pretty and seemed to run very well. The colours of the jockeys were all very charming, though it did seem a shame that the prettiest combination—which, by the by, I backed—should never have been allowed to win even one race. The racing arrangement made during the war years is to be continued, and there are to be weekly meetings alternatively at Heliopolis and at Ghezireh. As both clubs have increased the value of the prizes, we are looking forward to some really good racing.

As far as the season's fixtures are settled at the present moment, we are promised an excellent season at the Sultana Opera House, where Italian opera is to be given. Except for charity performances, this house has been closed since 1914. Already the bookings are more than the little house can hold, and as all the boxes and stalls are taken by subscription for the whole of the season, it is to be feared that those who have not succeeded in retaining anything will not be able to go unless they manage to "wangle" a seat in a subscriber's box. Mr. Bandmann, who has kept us going for the past four years with concert parties, light comedy, and musical comedy companies, intends to continue, and at present is playing to crowded houses some of the London revue successes, such as "Yes, Uncle," "The Bing Boys are Here," etc. In addition, we are to have the usual classical concerts every week; while there will be weekly dances throughout the season at Shepheard's, and Mena House and the Continental are sure to follow suit, though nothing is as yet decided.

Alas! we can hope for no revival of the old successes at Ghezireh Palace, the Savoy, or the Semiramis Hotels, for whilst the first-named has been bought by a wealthy Syrian notable as a private residence, the other two are still in Government hands. The Savoy is retained by the War Office, and the Semiramis has been taken over as the headquarters of the Ministry of Communications. Whether other hotels will be built to take their place remains to be seen, but for the coming winter we shall have to rely on Shepheard's, the Continental, Mena House, and the Grand and Tewfik Palace Hotels at Helouan, which will account for the general lack of accommodation this year.

To these may, however, be added on January 1 the Heliopolis Palace Hotel, which during the war has passed through many vicissitudes—first as a hospital, then as the headquarters of the Air Force, and latterly again as a hospital. In all probability it will reopen its doors with an entertainment similar to those which have so distinguished it since it made its debut some ten years ago.

After a year's absence it is interesting to compare Cairo under peace conditions with Cairo in war-time. When I left Egypt the war was still on, with all its horrors, and everyone was working hard doing his or her little bit. Those of us who were not nursing were busy organising concerts, etc., for our boys. When I returned two months ago I was struck by the almost total absence of signs of war. Going across France one saw little evidence of the struggle that has ceased but so recently; we had a delightfully peaceful time on board the steamer, and here in Egypt, although, it is true one sees more khaki than at home, there might truly have been no war, so little do its effects make themselves felt, or obtrude themselves on one's attention.

Down at Ghezireh, where tennis and tea are as popular as ever, and where polo will restart as soon as the grounds are ready, one has been so glad to meet one's friends again, but many of the old faces are, alas! missing. Some the whirligig of time and events have taken to other climes, others have made the last sacrifice.

All said and done, however, there are very few changes in Cairo. Living is very expensive, and we housewives find it impossible to make both ends meet on the old budget, and even the war allowance which generous employers are granting our husbands scarcely suffices to cover the deficit. All the same, it is good to be back in Egypt, for here, at any rate, one can move about and travel in comfort; there is no domestic trouble, one is waited on by excellently trained servants—and so one can once more be "a lady" instead of a general servant in one's own house—and, although it may be expensive, food is neither restricted nor short, and one does not go in perpetual fear of the food controller.

On all sides you hear the same expression of pleasure at the return to Egypt. Never, people say, have they returned with such joy to this land of everlasting sun. In spite of strikes, which one hardly seems to notice or feel, and demonstrations, which, thank goodness, appear to have been taken in hand in a sensible manner, we all seem to go serenely on our way and live joyously in the glorious sunshine of the land which the Pharaohs have made immortal. In short, we all look forward to a very happy winter, and so long as Young Egypt learns to behave itself and does not protrude its activities on public attention, the coming season should be a successful one, and I shall hope to be able to tell you of all our gay and happy doings, and make you long to be with us in sunshine and warmth, instead of being, as I fear you will be, in the midst of fogs, slush, and cold.

THE ALPHABET.

Mr. T. Eric Peet, lecturing at Burlington House on November 21 on the subject of "The Egyptian Origin of the Alphabet," said that not later than 1000 B.C. a remarkably perfect alphabet of 22 signs, without vowels, was in existence on Phœnician soil. Greece adopted most of her letters from this alphabet. In Sinai we had at a date, probably earlier than 1500 B.C., a Semitic people apparently in the act of borrowing from the Egyptian hieroglyphics in order to form on the acrophonic principle their own alphabet. For b they borrowed the Egyptian sign for "house," because their own word for house, "bet," began with the sound b, and so on. Many of the letters of the Phœnician alphabet could be traced in this fashion. If we had not here the actual origin of the Phœnician, and hence of our own alphabet, suggested Mr. Peet, we had at least a good example of the process to which it was due.

2	19	Tuesday	9	10
3	20	Wednesday	10	11
4	21	Thursday	11	12

Sir Stanley Reed and Lady Reed have left London for India.

General Gouraud, the French High Commissioner in Syria, has arrived at Beyrout.

The Hon. Mr. J. H. Kerr, Chief Secretary to the Government of Bengal, has been granted leave for one year.

Our Malta Correspondent reports that an exequatur has been granted to J. R. Agius, Esq., to act as Consul of Serbia at Malta.

The Persian Minister was stated on November 26 to be decidedly better. He hopes to leave London shortly for Switzerland to recuperate.

Mr. J. Hullah will succeed Mr. R. A. Mant as Secretary to the Government of India in the Revenue and Agriculture Department at the end of March.

Sir William and Lady Joynson-Hicks, with their daughter, left for India on November 22, and will not return to England until the spring.

Captain M. Costiesco Ghyka, Secretary to the Roumanian Legation, who has been on a special mission to America, returned to London on November 24.

A delayed Delhi telegram states that the Viceroy was to leave on November 16 for a tour in Southern India, and intended to spend Christmas at Calcutta.

His Excellency Boghos Nubar Pasha, President of the Armenian National Delegation, arrived in London on November 23, and is staying at the Carlton Hotel.

The Oriental Circle of the Lyceum Club held, on November 26, an "at home," when a lecture was given by Mr. Kundan Lal on "The Drama of Ancient India."

M. Michael Gavrilovitch, the newly-appointed Minister Plenipotentiary of the Kingdom of Serbs, Croats, and Slovenes, arrives in London this week from Belgrade.

The Maharaja of Mysore, the Maharaja of Kolhapur, and the Maharaja Rana of Jhalawar, K.C.S.I., have been appointed vice-presidents of the Royal Colonial Institute.

Our Malta Correspondent writes (November 19):—
His Grace the Archbishop Dom Maurus Caruana, O.S.B., has left Malta for Naples, where he is to stay twenty days.

The Governor of Ceylon has arranged to visit England for the purpose of consulting with Viscount Milner, Secretary of State for the Colonies, on the subject of constitutional reforms in Ceylon.

Colonel J. A. C. Younger, Mrs. P. T. Williams, and her niece Miss Malzard have left Braboeuf Manor, Guildford, to winter in Ceylon, and will return in April next. Their address will be Galle Face Hotel, Colombo.

Mr. T. A. H. Way, Commissioner of Excise, United Provinces, is proceeding on leave and will be succeeded by Mr. R. L. H. Clarke as soon as the latter is relieved of the Commissionership of Jhansi by Mr. D. Calnan, O.B.E., who returns shortly from leave.

Under the auspices of the Anglo-Hellenic League a public lecture is being given to-day at 5.30 p.m. in the Great Hall, King's College, Strand, by M.M. René Puaux upon "L'Asie Mineure et la Question d'Orient." The chairman of the meeting is Sir A. H. Crosfield, Bart.

A marriage will shortly take place between James Hume, of Sidapur, Coorg, South India, and Amy, elder daughter of Mr. and Mrs. Henry Platts, of Springfield, Bingley, Yorkshire.

Prince Nicolas and Princess Marie of Roumania will leave England shortly for Bucharest, where they will spend Christmas with their parents, the King and Queen of Roumania.

The engagement is announced between C. A. Galpin, Colombo, Ceylon, and Evaline, younger daughter of Mr. and Mrs. J. F. Fraser, of Peermade, Southern India. The marriage will take place shortly.

The engagement is announced between Lieutenant-Colonel Sydney Boyce Combe, D.S.O., M.C., 47th Sikhs, younger son of Major-General Boyce Combe, C.B., and Grace, younger daughter of Mr. and Mrs. George Behrens, of Vron Yw, Denbigh.

The marriage took place on November 17, at the Chapel Royal, Savoy, between Captain Richard Charles Simpson, 130th King George's Own Baluchis, Indian Army, and Audie, daughter of Theodore F. Carroll, of Ringacoltig, Rushbrooke, Ireland.

A marriage has been arranged, and will shortly take place, between Cecil Claude, Imperial Forest Service, India, third son of the Rev. A. J. Wilson, D.D., St. Mary's, Oldham, and Elsie Woodthorpe, daughter of Mr. and Mrs. David Barry, of Purfleet.

An engagement is announced between Captain Norman Moray Carstairs, Indian Army, younger son of Mr. and Mrs. Carstairs, of Lencote, Harrietsham, Kent, and Ella Margaret, eldest daughter of the late E. C. Y. Macvean and Mrs. Macvean, of Killean, Thurlow Road, Hampstead.

The marriage was celebrated on November 20, at Great Bardfield Church, Essex, by the vicar, the Rev. W. E. L. Lampet, Essex, uncle of the bridegroom, between Captain Lionel Edward Kirwan, I.A.R.O., M.B.E., of Mysore, India, and Maud Isabella, widow of G. A. Watson, M.B.

A marriage has been arranged between Captain Ivon R. Dyer, 53rd Sikhs, elder son of Brigadier-General R. E. Dyer, C.B., I.A., and Mrs. Dyer, and Phyllis, second daughter of Colonel T. R. Mulroney, I.M.S., and Mrs. Mulroney, of 14, Hilgrove Road, South Hampstead, and Crigga, Newquay, Cornwall.

The engagement is announced of Alexander Evelyn Cardew, Ministry of Finance, Cairo, elder son of Sir Alexander Cardew, K.C.S.I., and Lady Cardew, C.B.E., and Gertrude Evelyn, elder daughter of the Rev. L. Staniforth, M.A., LL.M., vicar of Broadway, Worcestershire, and Mrs. Staniforth.

M. Venizelos, throughout the illness of Dr. Burrows, Principal of King's College, has kept himself informed, by personal inquiries and telegrams through the Greek Minister and to Mrs. Burrows in London, of the Principal's state of health. Dr. Burrows is now reported to be making satisfactory progress.

The marriage was celebrated on November 22, at All Saints, Oakleigh Park, by the Rev. M. O. Blakelock, vicar of St. Andrew's, Muswell Hill, and the Rev. H. S. Miles, vicar of All Saints, between Captain H. S. Lewis-Barclay, Indian Army, and Isabel Clare (Lala), daughter of Layton H. Lucy, Oakleigh Park, N.

The marriage was celebrated on November 18, at Holy Trinity Church, Pitlochry, by the Rev. J. Harrison, assisted by the Rev. B. Blakiston, between Captain Benjamin Wyatt Bagshawe, of Calcutta, and Dulcie Katherine Margaret, younger daughter of Mr. and Mrs. G. P. Warren, Tir-Aluinn, Pitlochry.

The marriage was celebrated on November 20, at All Saints, Margate, between Major A. C. Eales, 119th Infantry (The Mooltana Regiment), son of C. L. M. Eales, I.C.S. (retired), Tiverton, Devon, and Florence Muriel Bennett, daughter of the late H. G. Bennett, Margate, and granddaughter of the late William Bush, Sheffield.

The marriage was celebrated on November 19, at Mossley Hill Church, by the Rev. Canon George Harford, vicar of the parish, assisted by the Rev. Canon W. E. Sims, vicar of St. Anne's, Aigburth, between Frank Noel, D.S.O., Indian Army, son of Mr. Frank R. Cross, of Fulwood Park, Liverpool, and Eileen Mary, second daughter of the late Mr. George S. Bleasdale and Mrs. Bleasdale, of Mossley Hill, Liverpool.

Digitized by Google

A marriage has been arranged, and will take place on November 25, between Agnes, daughter of Mr. Harry Playfair, of Sonapur, Assam, and Henry Montague, eldest surviving son of the late Rev. C. C. Prichard, of Alresford, Essex, and of Mrs. Prichard, Little Court, Goring-on-Thames.

The marriage was celebrated on November 14, at St. Andrew's Church, Bombay, between Charles Fozzard Thomas, of Bombay, son of the Rev. S. and Mrs. Thomas, of 21, Winchester Road, Oxford, and Bertha Isabel, elder daughter of George Jackson, Reigate, and widow of Capt. H. B. Stevenson, 2nd Queen's Own Rajput Light Infantry.

The marriage was celebrated on November 20, at Holy Trinity Church, Sloane Street, S.W., by the Rev. F. Penny (uncle of the bridegroom), between Capt. C. C. Penny, R.E., youngest son of the late E. Penny, C.I.E., Superintending Engineer, P.W.D., India, and Dorothy Winfred Maxwell, elder daughter of R. McGevin Spence, I.E.S., of Jubbulpore, India.

It is announced that the marriage was celebrated on October 22, at the Hosur Remount Depot Church, South India, by the Rev. E. O. Jervis, between George Henry Montague, eldest son of the late Mr. and Mrs. Robert Gompertz, of Yercaud, South India, and Vera, youngest daughter of the late Mr. A. S. B. Scott and of Mrs. Scott, late of Crondall, Hants.

The marriage took place on November 11, at St. James' Church, Wood Green, North London, between Roy Bathurst Gore, Captain 127th Q.M.O. Baluch Light Infantry, Indian Army, eldest son of Mr. William Cuddeford, late Colonial Civil Service, and Mrs. Cuddeford, of Sunnybank, Mortimer, Berks, and Helen Thomasina Jack, only child of Mr. and Mrs. James Milne, of Cranbrook Park, Wood Green.

Lord Atkinson, a Lord of Appeal in Ordinary, received news on November 21 from the India Office that his elder son, Mr. Cecil Thomas Atkinson, K.C., an Indian Judge, had been killed in a railway accident in India while on his way from Bombay to Patna. Mr. Atkinson, who was forty-three, was appointed a Puisne Judge of Behar and Orissa in 1915, and lived at Patna. He was called to the Bar in 1912.

Capt. W. A. H. Kelly, C.B., C.M.G., has been granted the rank of vice-admiral in the Royal Hellenic Navy while serving as head of the British Naval Mission in Greece. Capt. Kelly, who was Commodore-in-Charge of the British Naval Forces in the Adriatic at the time of the Armistice, took up his new post on June 1 last. He is assisted by a staff of officers from the various branches of the service, and this is about to be increased by two artificer engineers, one for duty ashore and one for duty afloat.

APPOINTMENTS, ETC.

Our Malta Correspondent writes:—

Major F. W. Mansell has been appointed Superintendent of the Corradino Prison, and D. Calleja, M.D., the medical officer in charge.

Sir Horace Byatt has been appointed Acting-Administrator of East Africa. The choice is very gratifying to Malta, for as Lieutenant-Governor to the Island he is well remembered on account of his sterling work during his tenure of office.

OBITUARY.

Mr. Theodore Bosanquet, late of the Bombay Civil Service, has died at Lynton in his eighty-seventh year.

Lieut.-Colonel Cecil Robert Stevens, Indian Medical Service, whose death took place on November 18, served with the Chitral Relief Force in 1895 and also with the Tirah Expeditionary Force in 1897-8. Colonel Stevens, who was fifty-one years of age, was the eldest surviving son of Lady Stevens and the late Sir Charles Stevens, I.C.S.

The death at Montagu House, Southsea, on November 20, is announced of Major-General John Ritchie, late R.A. He was born in 1834, and joined the Royal Artillery in 1853, and retired in 1886, after thirty-three years' service. He fought in the Indian Mutiny, taking part in the actions of Nimbhera and Jeerun, the defence of Neemuch, and the capture of Kotah.

The death is announced of Mr. John Dibblee Crace, who was fifth in direct descent of those in his family who practised the art of decoration. He was a most industrious sketcher all through life, and pursued the object of his love in many countries, including Egypt, Turkey, Greece, Palestine, and India. His connection with the Palestine Exploration Fund began shortly after his visit to the country in 1869. One of his unrealised ambitions was to provide a distinct and all-embracing Indian museum in Central London.

NEWS IN BRIEF.

M. Achard, a well-known engineer, has been appointed technical adviser to the French High Commissioner for Syria, and will leave shortly for Beyrout.

Admiral Troubridge, in an interview with a representative of *Az Est*, stated it was to be presumed that Paris would be the headquarters of the Danube Commission, with a general secretariat at Budapest.

The Admiralty have ordered the destroyers Sepoy, Sirdar, Serapis, and Somme to be manned with special complements from Chatham and Devonport, and to be commissioned for service in the Sixth Reserve Destroyer Flotilla in the Mediterranean. They will leave England next month.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

THE EASTERN NETTLE.

By far the most hopeful sign in the situation in Egypt is that it has become so bad that there is no longer any opportunity or desire to conceal the facts. With this stage reached, the outlook at once is more promising. But two points of view are involved—the British and the Egyptian; the latter will now be looked after, and it is incumbent upon the people of Great Britain to see that the mistakes made in Egypt, for which they have to suffer, are not likely to be repeated. The root of the trouble has been, by common consent, neglect, ignorance, or misunderstanding of the Egyptian problem. It is not difficult to multiply excuses; the preoccupations of war-time have been invoked to cover a multitude of sins of omission as well as of commission; but the plea is essentially specious. It might hold good if the machinery of government in Great Britain had broken down completely as a result of the war. This was, however, far from being the case. Apart from the achievement of winning the war, home affairs were, on the whole, consistently well managed during the latter period; in the domain of foreign affairs our relations with a number of countries—France, the United States, Japan, Spain, Holland, and others—were handled skilfully; only in one direction can Great Britain be said to have failed altogether, and that is in the countries that are grouped together in the term the Near East. South-Eastern Europe and Egypt present entirely different problems, but they have a connecting link in Turkey, and experience has shown that they have shared in common the "blind spot" of British statesmanship. It will be of no avail to introduce heroic remedies in Egypt and to start the country once more on the road of peace and progress, if this defect remains. Its consequences may be obscured under the régime of a Cromer or a Kitchener, but sooner or later they assert themselves. In the case of the Balkans the defect and its consequences have never been hidden. The remedy is obvious. The business of the Foreign Office has outgrown the existing system of management, and a working method of devolution must be introduced. Terms and titles are immaterial; the aim must be to have someone or some department of sufficient standing that it will be impossible for a British Government to be ignorant of and indifferent to the affairs of the Balkan Peninsula on the one hand, and of Egypt and the Middle East on the other. Separate representatives are inevitable in the different Balkan States, but their work should be correlated, if necessary, under a High Commissioner; they should feel obliged to make their activities dovetail as far as possible, and they should be encouraged in this way to set the example which it is most desirable that the States to which they are accredited should follow, that of co-operation with their neighbours. Whether Egypt and the Middle East be linked together for administrative purposes or not, British policy towards these countries should not be dependent for its wisdom or consistency entirely on the personality of the British representative for the time being at Cairo.

While, therefore, Lord Allenby and the Milner Mission are taking the case of Egypt in hand on the spot, it is to be hoped that the British Government will deal with the root of the trouble at this end. For the soundness of the attitude now displayed towards Egyptian unrest only serves to emphasize the serious dereliction of duty in the policy adopted since the outbreak of the war. If the Egyptians had been given the clear statement of Great Britain's intentions which they have now had, first from Mr. Balfour and this week from Lord Curzon, there would have been a less fruitful soil for the agitators to work upon. Zaghlul Pasha is not the first foreigner who has mistaken the British character. In Paris he will, perhaps, be able to appreciate more readily than in Egypt that his movement, which has achieved a wonderful success up to a point, has now shot its bolt. If he were as great as he would like to be, he would profit by the occasion and range himself on the side of the constitutionalists. The British are easy-going or generous enough to have preserved some sympathy for him, and his correct behaviour to-day might ensure him a great position in Egypt in the future. The whole spirit of the agitation, however, is entirely against the possibility of such action on his part. It has been admirably stage-managed, but there has been no quality of statesmanship behind it. Zaghlul Pasha has held out to himself and to his followers the hope of complete independence; he was prepared to go to any lengths—riot, murder, or foreign support—in attaining it, but he could not see the flaw in his argument. The very measure of success that he has achieved invalidates his claims, for he has merely conjured up chaos, the antithesis of a recommendation for self-government. He has certainly shown up the weaknesses of British policy in Egypt, and his Nationalist agitation has tested Great Britain's confidence in herself. The speeches that have now been made on the British Government's behalf suggest that the ordeal is passing. A clear enunciation of the faith that is in us has reassured public opinion at home, and will, we trust, prove a sedative to Egypt. Great Britain, Lord Curzon declared, in a speech that may well rank as the *locus classicus* of our Egyptian policy, is unable to give any encouragement to the claim of complete national independence, and he continued: "Quite apart from the fact that Egypt, if left to stand alone, could neither protect her frontiers against external aggression nor guarantee a strong and impartial Government at home, her geographical position at the gate of Palestine, for which it seems likely that a special responsibility will before long be placed upon our shoulders, at the doorway of Africa, and on the high road to India, renders it impossible that the British Empire, with any regard to its own security and connections, should wash its hands of responsibility for Egypt."

Starting from the standpoint thus enunciated on behalf of the British Government, the process of meeting the legitimate aspirations of Egypt should present no insuperable difficulties. The two rallying cries for Egyptian disorder have been the word "Protectorate," and the Milner Mission, and it is amazing that the British authorities should have remained tongue-tied on these subjects; while moderate opinion in Egypt was gradually forced over into the extremist camp. To-day, those of the Egyptians who are still open to reason know that the British Protectorate is not intended to be a thinly veiled form of annexation. The degree to which the Egyptians are left to manage their own affairs rests entirely with themselves, and it is well that they should be reminded that neither the history of the Legislative Assembly nor the recent outbreaks are strong arguments in support of the widest latitude in self-government. On the other hand, the composition of the Milner Mission is a guarantee that no hasty judgment will be passed. It goes out to report on the existing situation in the country, and "the form of Constitution which, under the Protectorate, will be best calculated to promote its peace and prosperity, and the progressive development of self-governing institutions, and the protection of foreign interests." Within these terms of reference there is the fullest scope for Egyptian aspirations. It is a favourable sign that a new Ministry was found ready to step into the breach caused by the resignation of Mohammed Said Pasha. Recent events have shaken the country badly, but with firm and generous treatment it will be possible for the forces of ordered government to reassert their right to peaceful development.

RAILWAY DEVELOPMENT IN PERSIA.

Whatever difficulties may have been encountered at the outset by the British Government in negotiating the Anglo-Persian Agreement that was signed at Teheran on August 9 last, there is no room for doubt to-day that the consensus of enlightened opinion in Persia welcomes the Treaty. The majority of the Persians may not be in a position to hold any views at all on it, and a certain number will be opposed to it on selfish grounds; but the remainder, it is confidently believed, will prove numerous enough to make the Agreement the stepping-stone to Persia's restoration. Even if the internal affairs of the country were in a settled and prosperous condition, Persia could still not stand alone in the present state of things around her. The collapse of Imperial Russia, which was hailed with justifiable relief, has been followed by the rise in the North of a power of deadlier menace. To the north-west there is the traditional hostility of the Turks, and on the eastern border no love is lost between Persians and Afghans. An Afghanistan at war with Great Britain might easily avail itself of the opportunity of scoring off the latter by invading Persia. Great Britain has no need to deceive herself over the attitude of the Persians; they have had every reason to complain of a country which has never displayed the courage of its convictions, and they are not to be blamed for placing their own interests higher than any international obligations by which Great Britain may have been handicapped. At last, however, the interests of the two countries are identical, and are recognised to be so by both Governments. Persia had to turn somewhere for help, and she realised that there was no one to whom she could turn with a better chance of being able to achieve her salvation than Great Britain. The resultant agreement is one of which neither country has any reason to be ashamed. It is conceived in a broad spirit, and makes provision for the free development of the Persian people on lines which are calculated to bring them by the shortest route to their goal, the revival of some at least of Persia's former glory.

No clause in the Agreement is more important for both parties than Clause V., which states:—

> The British Government, fully recognising the urgent need which exists for the improvement of communications in Persia . . . are prepared to co-operate with the Persian Government for the encouragement of Anglo-Persian enterprise in this direction, both by means of railway construction and other forms of transport, subject always to the examination of the problems by experts and to agreement between the two Governments as to the particular projects which may be most necessary, practicable, and profitable.

With the exception of a line leading from the Caucasian border to Tabriz, with its branch to Lake Urumiah, Persia has so far been without railways. The necessity of maintaining communications for the British force detached from the Army in Mesopotamia for the occupation of Baku led to the construction of a line from Baghdad to the frontier at Khanikin, and this has since been extended into Persian territory in the direction of Kermanshah. The war also led to an extension of the Nushki line from the Baluchistan border to Seistan. Both for trade and strategical reasons, therefore, Persia stands in urgent need of railways. The country is exposed to recurrent famines—one of the most terrible raged during the winter of 1917-18—mainly owing to the lack of communications—and it is obvious that any programme of construction must strike a wise balance between the ends in view. Fortunately in this respect there is no irreconcilable clash of interests. The first need is to improve Persia's communications with the outside world, to enable her to receive and to export goods more easily. The construction of a line from Baghdad towards Kermanshah decides, without any room for challenge, the direction which this first main route of railway shall take. By linking up Teheran with Baghdad, Persia is provided with communication with the Persian Gulf, and ultimately, when a Damascus-Euphrates line has been built, with direct access to the Mediterranean.

For the Anglo-Persian Agreement to achieve its maximum ultility it is necessary that no time should be lost in giving effect to its provisions. The recent visit of the Shah to Great Britain will have given an impetus in this direction, and although little information may be vouchsafed to the public there is reason to suppose that both Governments are working to carry out the clauses of the Treaty with the least delay. Certain it is that steps have been taken to make a start with railway construction, and the choice has very rightly fallen on the Baghdad-Teheran line.

A Persian Programme.

The essence of the Agreement is that Persia should be under no domination, but should have placed at her disposal all the expert advice necessary to enable her to arrive at a sound decision regarding matters affecting her own interests. In regard to railway development the Persians who are qualified to speak on the subject seem to have very decided views. They place security in the forefront of their programme, and urge that the lines to be built should be those which are likely to be the most effective in safeguarding the integrity of the country. With communication between Teheran and the Persian Gulf secured, well-informed opinion favours the early extension of the line which has now reached Nasratabad Seistan from Nushki, in Baluchistan, along the eastern frontier to Meshed. Then, when connection has been established between Teheran and Meshed, Persia will have a "ring-fence" of steel rails stretching from the Persian Gulf to India and offering, with British co-operation, an effective barrier to the worst menace, whether from the north-west, the north, or the east. It has been pointed out already that to-day British and Persian interests are identical. Great Britain desires to see a Persia able to stand alone; for while she remains weak she constitutes a standing danger to India. So long, therefore, as her protection devolves upon Great Britain the advantages of a railway system offering an approach from two directions are obvious. The line through Seistan to Meshed will not only protect Persia, but will also be a reminder to Afghanistan that she is vulnerable from more points of the compass than one. If the Afghan Mission which has reached Merv implies that Afghanistan intends to take a permanent interest in affairs in this part of Turkestan, it might only be a matter of time before she felt encouraged to turn her attention to Meshed. The possibility, we may be sure, is not overlooked by the Persians.

These three lines—Baghdad to Teheran, Seistan to Meshed, and Teheran to Meshed—will meet immediate strategic requirements, and at the same time will give a considerable impetus to trade. From Meshed a comparatively short line, of less than a hundred miles, will serve to link up the Persian system with the Trans-Caspian Railway from Krasnovodsk to Merv and Samarkhand. Persia will then benefit from the increased facilities offered to Indian trade with Central Asia. One or more branches of the Teheran-Meshed line would in course of time be built to the shores of the Caspian, which is destined to play an important part in the life of a new Persia. It will be recalled that by the act of Imperial Russia the Persian flag has not been allowed to fly on the Caspian Sea. This embargo has now been removed, and Persia, while contenting herself with a modest navy, may develop as

WHITE HORSE WHISKY.

GREAT AGE AND BOUQUET.

By Appointment to

KING GEORGE

KING OF SPAIN.

Digitized by Google

strong a mercantile marine on these waters as she desires. Enzeli will, doubtless, remain the most important Persian port on the Caspian, in railway communication, viâ Kazvin, with Teheran and Baghdad; but there will be room for other ports on the south and south-eastern shores. In both her naval and mercantile developments on the Caspian Persia will have the advantage of British assistance, and there is reason to suppose that practical steps in this direction have already been taken.

The lines enumerated do not exhaust the possibilities of railway development in Persia, but they represent the programme of construction on which the Persians themselves are inclined to lay the most stress. It will be noticed that the Mohammerah-Khoremmabad line, in which British capital has been particularly interested in the past, does not appear on this programme. There can be no question, however, that its construction, while having no special strategical value, would be of the greatest use from the point of view of Persia's economic development. It would tap and inevitably lead to the extension of a valuable wheat area, providing Persia with the means of safeguarding the capital and other parts of the country from famine, and possibly in the long run producing enough grain for export. Under settled conditions Persia has splendid agricultural prospects; there is plenty of water in the country that has not been utilized. It is true that the population has declined, and the downward movement is likely to continue until the cultivators of the soil are given adequate protection and encouragement.

Last of all on the railway programme must come the Trans-Persian Railway scheme, which at one time held the field to the exclusion of lines more urgently needed. The linking up of Tabriz with Teheran will be essential to the good government of Azerbaijan, a province which the Persian Government may always find somewhat difficult to administer. A trunk line, after leaving the capital would pass south to Kum, and thence viâ Ispahan and Yezd to Kerman, and ultimately to Karachi in India, by way of Nushki or the coast. A branch from Ispahan would pass through Shiraz to the coast opposite Bushire, and Bunder Abbas would be connected with Kerman either as part of the trunk scheme or as a branch line, if the Trans-Persian Railway preferred a more direct route to the Indian Ocean, say at Charbar, or west to Nushki.

The programme thus outlined is in its entirety an ambitious one, and in the best of circumstances could only be carried out very gradually. There is no need, however, to regard Persia as an altogether impoverished country. Corruption and maladministration have done their worst for many years, but the short régime of an American Treasurer-General showed what might be achieved, if the mismanagement of the national funds were permanently stopped. It has been stated, on the authority of a member of the Persian Treasury Department that the 1916 Budget, which was not met, balanced at 6,000,000 tomans, while the sum that should have been paid into the Treasury under existing conditions was 25,000,000 tomans, and the amount available under proper control, with little change in the revenue laws, would be 100,000,000 tomans. Persia, there can be not the least doubt, with her undeveloped resources, will be in a position, under an efficient and honest Government, to finance her own development. Certainly she will be able to provide all the funds required for a substantial programme of railway construction under joint Anglo-Persian auspices. What is needed is the practical application of Clause V. of the new Agreement. Railways are urgently needed, and no half measures will suffice. Motor traffic will be a valuable adjunct to railway communication, but it cannot hope to be an adequate substitute. One line of motor transport is already in operation between Teheran and Enzeli; another, it is understood, serves Ispahan from the North. The light motor, it may be pointed out in passing, is better suited to Persian roads than the heavy lorry. With railways in existence there will always be scope for motor lines as feeders, and until that time they are proving invaluable.

A start has already been made with an agreement for the construction of the Baghdad-Teheran line, and it is to be hoped that there will be sufficient support forthcoming in Persia itself for the other lines on which the Persians set special store to encourage British syndicates to take up without delay the matter of railway construction in Persia.

PRESS ON THE NEAR EAST.

Egypt.

In the *Sunday Times* of November 23 Sir Malcolm McIlwraith discusses the Egyptian outbreak, tabulates its causes, and finally suggests remedies. To the effect of President Wilson's doctrines upon the Egyptian masses he is not inclined to pay much attention: he finds the causes to be purely local and specific. The Egyptian Labour Corps, the collections for the Red Cross, and the requisition of camels and forage for the Army, he puts down as the chief causes. But there were, he says, other causes of antagonism:—

As regards the official and professional classes, these, as already observed, have always been more or less hostile to our influence because they—perhaps not unnaturally—dislike our large participation in administration, with the corresponding diminution of their own power and authority. Until recently, however, we have always managed to preserve good relations with the more important elements of this class. It was very important to us that we should, because it is on them we count for collaboration with us, as Ministers and high officials, in the government of the country. Latterly, however, this class, also, seems to have been antagonised to a large extent from a variety of causes. In the first place, the declaration of the Protectorate—left, perhaps imprudently, quite undefined—was believed by many to connote a general tightening of British control and a diminution of native authority, and thus to sound the death-knell of all hopes of ultimate Egyptian independence. Further, there was the closing of the Legislature throughout the war and the consequent suppression of all freedom of discussion, as to the expediency of which action opinions differ.

He then seeks the means of restoring peace:—

What can now be done to remedy the present state of affairs and restore peace and harmony? The task will not be easy, for there can be no doubt that British prestige has sustained a severe set-back, from which it will take us some time to recover. The Nationalist programme of "complete independence," as set forth recently by its leader, Said Zagloul Pasha, in a letter to *The Times*, is preposterous and utterly unreasonable. There is nothing in modern Egyptian history to warrant it and much to prove its danger and impracticability. The Milner Commission, we are told, is to settle the lines of a new constitution for Egypt, under which, possibly, some extended powers of autonomy will be accorded to the Native Legislature. But, as Mr. Balfour says, "British supremacy must be maintained"—notably, it is to be hoped, in such matters as State finance and foreign treaties. It is the better organisation of the exercise of this supremacy which seems to me, perhaps, the most important part of the problem. The control of Egypt by the Foreign Office has not proved, on the whole, a success, and latterly has been, on some occasions, detrimental. At the same time, matters of great importance cannot be left solely in the hands of the authorities in Cairo.

On this grave matter it is necessary to speak with frankness. Much of the recent trouble is to be traced directly to certain unfortunate selections of unsuitable men for some of the highest positions in the country, and some effective check upon unwise nominations must in future be retained and, when necessary, freely exercised. Probably more, rather than less, supervision of Egyptian affairs in London will be required for some time to come. If the Foreign Office is to remain responsible for the country an efficient Egyptian department should be created there without delay. There should also be established in London an Egyptian Council, on the lines of the Council of India. Only if some such measures are taken is it reasonable to hope that a recurrence of similar mistakes in future will be avoided.

New Worlds and Old.

In the *Morning Post* of November 21 Dr. W. M. Flinders Petrie seeks, in an article called "Light from the Past," to show how lessons may be learned from the old civilisations. Human history, he says, has been going over the old round of civilisation, and, but for an increased ability to use Nature, progress has a doubtful existence. However, there is much for us to learn from other civilisations, past and present.

There are great stretches of the past that we want to clear up, for the sake of suggestions in handling the same races in the present. Where did the great organising race come from that founded the solid fabric of the Egyptian dynasties? Is there more of that stock yet to be found about the Persian Gulf, and can we help them up? We want to know how Elam and Mesopotamia organised a civilisation earlier than all the rest of the world. Their system might give ideas for the resuscitation of those regions. They had the same antagonism of the cultivator and the nomad that we are troubled with at present. We need to get rid of all idea that the ways of one country will fit another. Each land has its own type of feeling and its own climatic needs and limitations; only in harmony with those can any success be reached permanently. Remember that the Scotti of North Ireland never resembled the rest of the islanders, but struck out and colonised Scotland, and must irrevocably be in harmony with

Digitized by Google

their descendants there rather than with those whom they always fought. We want to know how the immense terrace cultivation of Southern Arabia was worked; the causes of success, the kind of men that made it a success. This might throw great light on the way of using rocky regions; we have only a small scale of such work at present preserved in Malta.

The polity of ancient Crete may clear up the mode of administering some modern neighbours. There the rulers lived in public life, with great concourses of people about them, yet with the power and splendour of autocracy.

What was the secret of the Egyptians' great skill in co-ordinated work, where great numbers of men could be incredibly concentrated without interference, and all able to act in unison like one man? Might not the older system of local taxes for local purposes be best for such a country now? How far may the old house system of managing large areas without outside officials be available? I have seen it work with satisfaction to the people.

Then in Central Asia, what was the early civilisation that emerges in Turkestan, deep down in the mounds of buried cities? Did that feed other movements elsewhere? Further north the dispersal of the Aryan-speaking races may be gradually explained by the links which we can trace. The northern memories brought forward by Tilak—not Polar, but certainly coming from as far as Omsk—the southern movements into India and Babylonia, the western drive which poured Aryans into Greece, Italy, and other lands before the Gael and Celt appeared—all these have to be traced. The key to much of national psychology lies in the affinities of these stocks and the mixtures they underwent. All of these mysteries, when cleared up and put into the daylight of common knowledge, would give a new sense of the world and a new outlook on all the transitory struggles.

Ibn Saud.

In the *Illustrated London News* of November 8, Mr. F. W. Emett has an article upon "The Latest Crossing of Arabia." It contains a picture of Ibn Saud, drawn by Mr. H. St. J. Philby, one of the few Englishmen who have recently been in contact with that ruler:—

The present ruler of Central Arabia is Abdul Aziz ibn Saud, an Arab chieftain of the noblest Arab stock, and the father of the little Prince who is now on a visit to this country. As soon as war was declared between Britain and Turkey, he sided with us, and, though his geographical situation militated against any serious co-operation by him in the task of the Allies, he was able to do us good service in connection with the blockade of enemy territory, and on more than one occasion he attacked the only Arab State of importance which had joined the enemy. It was while he was preparing a sustained campaign in that direction, and after he had successfully launched his first attack on the enemy capital, that the war with Turkey was ended by the signing of the Armistice. His headquarters during these operations were in the province of Qasim, which contains the two biggest towns and commercial centres of Central Arabia—namely, Anaiza and Buraida, at each of which I resided for some weeks during the campaign. Ibn Saud's army on the march, with standards flowing in the breeze and the calvacade of 5,000 to 7,000 camel riders spreading far out over the desert plain, was always an imposing spectacle; but perhaps the most notable ceremony at which I was present was the division of the booty captured from Ibn Rashid—1,500 camels, countless sheep, etc.—among the conquering force. Such a division is conducted in Wahhabiland strictly in accordance with the precepts laid down by the Prophet Muhammad—one-fifth of the whole being set aside for the service of God, and the rest being divided on a rational scale—so much for an infantryman, so much for a camel-rider, so much for the possessor of a horse, and so on.

CHESS.

PROBLEM No. 4.

Solution to Problem No. 3.—1, B—K6; if P x B. 2. Q—QB5 mate; if P—Q3; 2 Q—B3 mate; if P—Q4, 2. Q—B7 mate; if Kt—B7 (ch.), 2. Kt x Kt mate; if K—Q3; 2 Q—B5 mate.

The Metropolitan Chess Club's Championship commences to-morrow. A strong entry has been received, including Sir G. A. Thomas and Mr. R. H. V. Scott. On November 22 the Metropolitan paid a visit to Hastings, defeating the local team by 8—3.

Señor Capablanca's audience, on November 22, at the School for the Blind, Swiss Cottage, were privileged to hear a most brilliant exposition of the principles underlying sound play. In the opening he emphasised the value of rapid development, in the middle games the placing of the pieces in mobile positions, and in the end game the value of time-saving. He illustrated his points with apt illustrations from his own games. Lack of space prevents my giving these examples this week, but they will be given subsequently.

Several relief camps have been closed in Hyderabad, where the number on relief is decreasing.

Strumnitza has been occupied by Serbian troops, and Serbian civil authorities have superseded the Bulgarians.

Some specimens of extraordinary beauty as well as historical interest from the late Sir Hermann Weber's collection of Greek coins have been secured for the British Museum, partly by a Government grant, partly by private generosity. The acquisitions range over the whole of the Greek world from the seventh century B.C. to the third century after Christ.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 23·25 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Exhibition of British Industries at Athens terminated on November 23. All reports agree that the success of the exhibition has surpassed the most optimistic anticipations. The attendances increased daily, and towards the end it was sometimes a matter of extreme difficulty to reach the various sections. Altogether it is estimated that the visitors numbered 100,000. I have already recorded the fact that most of the exhibits have been sold several times over. In some instances, as a matter of fact, the sales transacted by the exhibitors were so heavy that further orders were refused, as it would have meant that firms would have had to divert their whole output to the Near East.

***

The new issue of capital of the Anglo-Persian Oil Company is to be made next week. The capital of the company is being increased from £5,000,000 to £20,000,000, and of the new capital I understand that £8,600,000 will now be issued in the form of £3,000,000 of Ordinary shares, £3,000,000 of six per cent. Cumulative Participating Preference shares, and £2,600,000 of five per cent. Debenture stock. The new Ordinary shares will be taken up by the present Ordinary shareholders, but the Preference shares and the Debenture stock will be offered for public subscription, the former at 23s. per share and the latter at £85. The Preference shares and the Debenture stock will rank with the existing issues. The Preference shares, which have received 8 per cent. for the past two years, stand at 25s. 3d., and the new issue is, therefore, offered on favourable terms. This is the case also with the Debentures, the present issue of which is quoted at about 89.

***

The present capital of the company of £5,000,000, comprises £2,000,000 Preference shares, and £3,000,000 Ordinary shares, which are held as to £2,000,000 by the British Government and as to £1,000,000 by the Burmah Oil Company. The Debenture stock outstanding amounts to £2,400,000. Up to the present time dividends have been paid on the Ordinary shares on a conservative basis, but the potential dividend earning capacity of the company is immense, and if the Ordinary shares were to be quoted there is no doubt that the price would run well into double figures. As a result of the new issue, the British Government's holding of these shares will now stand at £4,000,000, while the Burmah Oil Company's holding will also be doubled, which should afford ample justification for the recent substantial rise in that Company's shares.

***

During the past few years remarkable progress has been made by the company, and only recently, it will be remembered, it enlarged the scope of its operations by the acquisition of the Scottish shale oil companies, while the construction has been commenced of a huge refinery at Swansea. The development of its vast interests and the necessity for the provision of more extensive transport facilities will entail capital expenditure on a large scale in the near future. Whatever expansion may take place outside Persia, it goes without saying that the oilfields in that country will always be the company's chief source of profit. The productivity of these fields is remarkable. At the general meeting in March, Sir Charles Greenway stated that it was estimated that the wells already drilled were capable of yielding a production at the rate of 5,000,000 tons a year, and that the wells on the field from which they had hitherto been obtaining their production still maintained their extraordinary high rate. Reports regarding other fields are very favourable, and with the development of the refineries and other extensions it will be possible for the company to deal with a much larger production.

***

The currency question in Yugoslavia is the subject of an interesting despatch from our Belgrade correspondent. The problem with which the Yugoslav authorities are confronted arises from the flood of kronen notes in the country, which it appears are being added to by smugglers. The remedial measures include an issue of small dinar notes to replace kronen notes, and the stamping of kronen notes. The intention is as soon as possible to replace kronen currency altogether by dinar notes. Our correspondent states that 500 million dinars' worth of these notes are reported to be ready, but this, he points out, would be insufficient, while an added complication is the fact that those notes that have been printed in Paris can only be sent to Yugoslavia by a roundabout route owing to the friction with Italy.

***

I never had any doubt that German traders, as soon as they were able, would endeavour to re-establish relations with the markets they exploited so successfully before the war, and thus I was not in the least surprised to learn that German firms in the hardware trade have been displaying considerable activity in Morocco. This was one of the favourite spheres of operations of the German trader, but the war came too soon for any great advantage to be reaped from that quarter. These firms to which I refer seem to have re-entered the field quite in the old spirit of "peaceful penetration." They have been offering extremely advantageous terms to local merchants, and have made a strong point of the advantage conferred upon buyers of German goods by the low value of the mark. Needless to say, also they have been extremely ready with the offer of liberal credit facilities, and, in short, have displayed extreme readiness to do "business as usual." But there is one little fly in the ointment. Morocco happens to be a French Protectorate, and France's intentions are, I think, to be read in the light of the recent announcement that the import into Morocco of German goods is for the present prohibited.

***

In his speech at the general meeting of the Anglo-Egyptian Bank this week, the Chairman, Mr. R. H. Foa, emphasised the satisfactory position of the bank. In this connection the fact that the bank has in immediately realisable securities and cash £16,000,000 with which to meet liabilities of £18,000,000 speaks for itself. The Chairman further commented on the fact that the gross profits of the year's trading amounted to the record figure of £326,000. Referring to the present position in Egypt, Mr. Foa said that Sir Valentine Chirol's appreciation of conditions in Egypt seemed to him to be absolutely just. Not only had he himself arrived at the same conclusions as Sir Valentine, but men of far wider experience and more intimate knowledge, with whom he was in frequent touch, had over and over again used the same expressions. If peace became assured, he concluded, and Egypt was allowed to work out her destiny under the beneficent and benevolent guidance of England, there would be much more hope of prosperity for the country than if the aspirations for self-government in all directions were gratified.

***

At the annual inspection of the port of Karachi, the Chairman of the Port Trust reviewed the work done there in war time. Ninety acres had been converted into a river craft building yard, the speaker pointed out, and subsequently transformed into a military coal and fodder dump, while it was bedecked with piers at a cost of over 2½ lakhs. The year 1917-18 was the busiest of the war period, and during it 144,546 troops were landed and embarked, 579,658 tons of military stores and 2,641,847 tons of merchandise were exported and imported. There was no single occasion throughout the war, continued the Chairman, even when troops and stores and grain were being shipped in enormous quantities, in which the strain upon Karachi's resources reached anything approaching the breaking point. With the present facilities, the Board maintained that the port could deal with an export up to 400,000 tons per mensem without interfering with imports. "I may add," he concluded, "that they only desire to have the test applied not spasmodically but continually. There seems no likelihood of anything of the kind."

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

Near East Coal Resources.

III.—South-West Russia.

By John Kirsopp, M.I.M.E., F.G.S.

(4) South-West part of European Russia, including 15 per cent. of the area of territory comprising European Russia.

(*a*) South-West Provinces. — Tertiary brown coals have a wide distribution in the south-west provinces, where they are mined at a number of points, principally in the provinces of Kiev and Votyn, but none of the deposits has been thoroughly examined. Under the Government of Kiev, lignites occur in the district of Kiev, and also in the provinces of Volyer. In the Kiev district they are either of Tertiary or Paleogene age, and also the lower part of the Oligocene. Lignite is found at Kiev, and also in the district of Vasilkov, in the bank of the Ross River in Kanev, near Berezniaky, in the district of Cheskassi, also to the north-west of Smela, and in the Chiguirin district. An important brown coal field occurs in the Ekaterinopolskaya forest reserve in Zvenigorodka, the coals running from 1.3 m. to 4.3 m. (4 ft. 1 in. to 13 ft. 4 ins. in thickness, as also near Ekaterinopol, Stebnoye and Novoselitza in Chichirkezovka, at Shestakovka, Novoselitza, Goncharikha, Lukovka, near the Pochapinski sugar refinery to the north of Zvenigorodka, and near the village of Budischi borings have proved a seam from 1.75 m. to 2.65 m. (5 ft. 9 ins. to 8 ft. 8 ins.) in thickness of coal. Coal also occurs in the districts of Chiguirin, Uman, and Lipovetz. The aggregate in the vicinity of the preceding known as existing is reckoned to contain a probable reserve of over 6,000,000 metric tons.

In the province of Votyn workable coals have been proved at Kremenetz in the middle Miocene formation, as also at Kouti, near Kremenetz, Zalesstzi, Zvinlyatche, on the slopes of Koss-chubova mountain, and in one or two other districts. Analyses of the Kremenetz coal gives carbon 56.77 per cent., ash 15.17 per cent., with 3,120—5,230 calories heating power, and briquettes made from it gave 4,535 calories.

A seam of brown coal 2.1 metres (6 ft. 10 ins. thick) occurs in the village of Kouti, and lignite outcrops are found between this village and Kremenetz, and in the neighbourhood of the villages of Zalesstzi and Zvinyatche, and on the slopes of Kosschubova mountain. At the village of Stari-Potchaieff thin seams occur in clays overlying Cretaceous measures, and seams are also met with in the districts of Doubny, Lutzk, Ovsutch, and Titomis. The probable reserve, as already proved, in this province is reckoned to be 26,475,000 metric tons, covering an area of 15,932,000 square metres (3,937 acres).

(*b*) New Russia.—Seams of brown coal of workable thickness have been found in many of the provinces, but none of the deposits has been thoroughly examined. Under the Government of Bessarabia, in the district of Ismail, a seam of lignite outcrops in the cliffs on the west side of Lake Yalpugh, between the villages of Kurchi and Imputzita, over 0.5 metres (1 ft. 7½ ins.) in thickness, as also further north in the town of Bolgrad, and also on the outskirts of the villages of Tabàki and Tarakliya, of Pliocene age. Analyses of samples taken near Bolgrad give fixed carbon 30.44 per cent. to 32.90 per cent., and 13.34 per cent. to 13.05 per cent. of ash. The coal at Kurchi is probably not worth exploiting, owing to its poor quality, and the thinness of the deposits. The aggregate extent of one seam, with an average thickness of 0.43 metres (1 ft. 5 ins.) on the west bank of Lake Yalpukh is estimated to cover 2,275,000 square metres (562 acres), and to contain a reserve of 740,000 metric tons.

Under the government of Kherson, in the district of Elisabethgrad, at Balashovka, a brown coal occurs of an average thickness of 5.2 metres (17 ft.), of a heating power of 2,500-3,000 calories, but containing 30 per cent. of ash, this basin lying in the Zlodeiskaya ravine, which runs into the valley of the Inguletz river a little above the Odessa railway line. Nine or ten kilometres (5 to 6¼ miles) further to the N.N.W. another deposit has been proved by borings covering an area of 364,200 square metres (91 acres), the coal varying from 3.2 to 3.9 metres (10 ft. 5 ins. to 12 ft. 11 ins.) in thickness.

In the Ekaterinovka-Meshchankaya a brown coal seam of 6.4 metres (21 ft.) is found at a depth of 15 to 25 metres (590 to 984 ft.), the estate of Mr. Boshoriak, comprising an area of coal land of 364,200 square metres (90 acres), in addition to the small reserve in the Shishkov estate in this locality and the Balaskovka deposit of 341,400 square metres (84 acres). The deposits of Balaskovka and of Mr. Boshoriak's estate is considered to contain a possible reserve of 1,817,100 metric tons. Brown coal also outcrops in the Shehesbanskaya ravine, near the village of Shehesbani, in the southern part of the district, these measures on this locality probably overlying the Sarmatian, and not, as the others do, the Paleogene formation.

In the district of Alexandria one of the largest brown coal fields lies near the village of Zelenovka, to the south of the town of Elisabethgrad, pits and borings having proved a seam of 2.8 to 12.7 metres (9 ft. 2 ins. to 41 ft. 7 ins.) in thickness at a depth of 21 metres (826 ft.), but the quality of the coal is not known, so the real value of this field is therefore doubtful, though with an average thickness of 4.27 metres (14 ft.), covering an area of 1,707,000 square metres (422 acres), it contains a probable reserve of 5,530,000 metric tons. Outcrops also occur in the lower Tertiary in the territory of the peasants of Adjamka and in several places to the north and north-east of Zelenovka, in the basin of the Beshka river (right tributary of the Inguletz), and a seam 10.7 metres (34 ft. 9 ins.) in thickness, with 0.7 metres (2 ft. 3 ins.) of clean coal has been proved to the east of Mashorin, in Trandafilivo, which deposit, aggregating 2 seams, totalling 2.13 metres (6 ft. 10 ins.) thickness of coal, extends over an area of 682,800 square metres (169 acres). and contains a probable reserve of 1,106,500 metric tons.

In the basin of the Murzinka, which flows into the Beshka, some exploitation work has been done on a seam 8.5 metres (20 ft. 4 ins.) in thickness and carrying not more than 8 per cent. of ash. Other deposits are found in the village of Novaya Praga, and in the Serdukova ravine, and further east in the Oligocene formation, and in the basin of the Ovnyanka, a tributary of the river Inguletz.

In the district of Kherson, to the west of Krivoi Rog (well known for its iron mines), a seam of good coal 2.8 metres (9 ft. 2 ins.) in thickness has been prospected, but its extent not thoroughly examined, and brown coal is also found in the shallow water sediments which lie below the Sarmatian limestone. In the southern part of the Krivoi Rog iron mining district friable brown coal occurs in Paleogene measures. Seams are also known both to the west and east of the Inguletz mountain, and there are also unconfirmed reports of the occurrence of thick seams near Privolnoye, on the Ingul river. In the district of Odessa traces of lignite and bituminous clay are found in Meotic deposits in the cliffs of the Bug river, in the basin of the Tsaregol river, and on the banks of the Liman Taligul, and lignite is also found in the town of Odessa, associated with dark clays, evidently of Sarmatian age, at a depth of 160 to 170 metres (192 to 557 ft.).

In the district of and at the town of Tiraspol, a boring near the waterworks met with brown coal among the limestones of the middle Sarmatian at a depth of about 60 metres (197 ft.) Coal occurs at a number of places in the government of Kherson, in Tertiary deposits, varying in age from the Paleogene to the Meotic. In time several beds of the Paleogene may become commercially important, especially those in the districts of Elisabethgrad and Alexandria.

FOREIGN MONEY IN YUGOSLAVIA.

In the House of Commons on November 24 Captain Moreing asked the Under-Secretary of State for Foreign Affairs whether his attention had been directed to a recent decree of the Serbian Government prohibiting the export from that country of money in excess of the following amounts: French francs, 1,000; English, £30; American, 100 dollars; Swiss francs, 600; with heavy penalties for contravention, and confiscation of any sums in excess of the amounts allowed; and whether he proposed to take any steps to protect British subjects passing through that State, who must of necessity frequently carry sums in excess of the amounts stated above?

The Additional Parliamentary Under-Secretary for Foreign Affairs (Sir Hamar Greenwood): His Majesty's Minister at Belgrade has reported that the Serb-Croat-Slovene Government are said to have decided to issue a decree on the lines indicated by the hon. and gallant member. Similar regulations have recently been introduced in other countries, notably in France, and are designed to alleviate difficulties of exchange and currency, which are at the present time acute in the Serb-Croat-Slovene kingdom. No details have yet been received with regard to the decree in question, or the manner in which it will be administered, but further inquiries are being made.

EASIER TRAVEL TO ITALY.

The London office of the Italian State Railways has made arrangements whereby through registration of luggage from London to Modane (frontier station of the Mont Cenis route), via Boulogne and Paris, shall be introduced on and from December 1. This will avoid the delay at the Nord and Lyons stations in Paris in claiming and re-registering baggage, and will enable the connection between the two stations to be made by the Girdle railways, thus obviating the need of crossing Paris by road.

Numerous and important improvements are announced by the Italian State Railways' London office to have taken place in the November timetable of the services to Italy. On the Italian lines there are many accelerations, new expresses and local services; the time-table is fast approaching its pre-war completeness. At the winter resorts in Italy there promises to be quite a revival of the pre-war season. Many English visitors have already arrived there.

FURTHER RISE IN THE RUPEE.

Owing to the continued rise in silver, the Secretary of State for India announces that the *minimum* price for future sales of immediate telegraphic transfers on India will be 2s. 2d. per rupee.

Sir Patrick Geddes is to visit Ceylon to draw up a scheme of town planning for Colombo in connection with the work contemplated by the Board of Improvement.

Glimpses of Baghdad.

Pre-War Trade Conditions.

(By a Former Resident.)

Prior to the war, most people were wont to think of Baghdad as a mythical city. Others, connecting it vaguely with Haroun al-Raschid and the Thousand and One Nights, would affirm that such a place had actually existed somewhere in Persia, but that it was now merely a heap of ruins covered with the dust and sand blown across the desert in bygone ages.

It was left to comparatively few to know that Baghdad still lay on both banks of the Tigris about 250 miles in a direct line north of the Persian Gulf, with a population of Mohammedans, Jews (of Bible-day stamp), native Christians of every "jarring sect," and a sprinkling of almost every known nationality, totalling some 150,000 souls; and that it was still very much in evidence and of considerable repute in the Middle East, being actually the chief distributing centre for Mesopotamia and Northern Persia, and having a large import and export trade with some of the world's most important markets.

The quickest way to reach Baghdad from the outside world was by river from Busreh, the port lying sixty miles up the Shatt-el-Arab from the Persian Gulf, and at which ocean-going steamers discharged passengers and cargo, and the journey generally took three or four days in a shallow-draught paddle steamer.

On entering Baghdad ten or fifteen years ago one was struck immediately with the fact that here was a city alive with energy, given over entirely to business pursuits. The occasional visitor and globe-trotter found the city and surrounding country full of historical interest, and in the search for relics of the past could spend much profitable time visiting the many old shrines and ruins. Haroun al-Raschid's palace was merely a heap of brickwork jutting into the river on the right bank a few hundred yards below the Bridge of Boats, but other points of interest, such as the Middle Gate (Bâb-el-Tulisman), Zobeida's Tomb, and many ancient mosques were in a splendid state of preservation. A few days' trip west of Baghdad, taking the road to Musseyib, on the Euphrates, thence on to Kerbela and south to Kifil, returning viâ Hillah, would amply repay the sightseer, for on this journey one crossed the beds of famous old canals, viewed the tombs of Abraham, Ezekiel, and many of the prophets, and explored the ruins of the Tower of Babel and Babylon and the once renowned Hanging Gardens.

The native, however, was little concerned with these things. His never-failing interest lay in "feloos" (money), and he searched for it diligently in devious ways almost every waking hour. While resting at a coffee shop he would talk money between inhalations from a narghileh: it was practically the sole topic of conversation during meals, and there is no doubt that thoughts of the elusive piastre were uppermost in his mind even during prayers.

The picturesque, winding bazaars, shaded with coarse straw matting, were places of the greatest animation, filled continually with people buying and selling wares of every description, and the din was terrific and unending. The raucous tones of natives engaged in fierce bargaining, the cries of beggars for alms, the resounding tap, tap, of innumerable hammers beating copper-sheets into pots and pans and like utensils, and the hoarse shouts of muleteers and donkey boys demanding passage for their caravans and loads through the throng, gave one the impression that the native led a life of incessant strife. Only for a few hours at night, after the muezzins had called the faithful to prayer, and for a short spell during the mid-day heat in summer, were the bazaars desolate places, being then inhabited solely by pariah dogs—the scavengers of the East—some sleeping and others raking over the garbage heaps.

The Custom House—a hotbed of bribery—alongside the Bridge of Boats, where the river steamers came to anchor and discharged their cargoes, was packed to suffocation with goods chiefly of European manufacture awaiting distribution by caravan along the roads in every direction, and produce brought from up-country and Persia packed ready for shipment abroad.

On imports going into consumption in Turkish territory an *ad valorem* duty of 8 per cent. (raised to 11 per cent. a few years previous to the war) was levied by the Turkish Customs authorities, while a transit duty of 1 per cent. was payable on goods destined for Persia. As regards the latter duty, merchants were supposed to pay the full 8 per cent. and to obtain a drawback of 7 per cent. on production of certificates signed by the Customs officials at Khanakin—the frontier station—to the effect that the goods specified had actually left Turkish territory, the period allowed for return of these certificates to the Baghdad Customs House being six months from the date of payment of the original duty. It was an understood rule, however, that 1 per cent. only would be accepted by the Baghdad Customs officials provided a payment of 1½ per cent. on the remaining 7 per cent. duty was made as a guarantee of the return of the certificates within the specified period. An export duty of 1 per cent., based on the market value at the time of dispatch down-river for shipment by ocean steamer from Busreh, was, with a few exceptions, levied on the produce of Turkish territory.

At the time of which I write the up-river transport was quite inadequate to cope with the ordinary imports from overseas. A Turkish company owned three or four small river steamers, but they were generally in a state of appalling disrepair, and made most irregular trips, their arrivals and departures being regarded by the natives purely as an act of God. Apart from these comparative derelicts and small native craft, which took weeks and months on the journey from Busreh—being towed most of the way by Arabs chanting continuously in low, monotonous tones—there were two paddle-steamers—the "Mejidieh" and "Khalifah," owned by a British concern, the Euphrates and Tigris Steam Navigation Company, who ran these boats by virtue of the only concession given by the Turks to a foreign Power, the Tigris being otherwise a closed river.

During the summer months the river fell to a very low level, and necessitated the steamers carrying small cargoes to avoid grounding on the many sandbanks, with the prospect of a long stay there, and consequently congestion would start in the Busreh Customs House and docks. The delay in getting goods up-river—merchandise has been known to lie at Busreh for over six months awaiting up-river shipment—and the consequent loss of the season's markets and accumulating interest and other charges, became at times worse than intolerable; but the Turks, apart from allowing the British company—after superhuman efforts on their part—to tow light barges with a carrying capacity of about 100 tons, did nothing to relieve the situation.

Several important British concerns with headquarters in London were actively engaged in general merchants' business in Baghdad, and there were a few native firms who had their own branches in London and Manchester. There was also a German firm, trading chiefly in imports of German manufacture, such as aniline dyes (for export to Persia) and small fancy goods, in the shape of cheap glassware, beads and the like, and exporting wool, skins and intestines.

Practically all business was transacted by means of bargaining, important sales being generally very protracted, and sometimes taking days to complete. It was the unfailing custom for a broker, nearly always a Jew, to act between buyer and seller, and he was made the butt for every vile epithet by both parties during the bargaining. The Jews spent their lives in an atmosphere of curses, and, consequently, were eminently fitted to the rôle of broker.

(*To be concluded.*)

ARMENIANS AND NEW COMPANIES.

In the House of Commons on November 19 Sir H. Nield asked the President of the Board of Trade whether, pending the exchange of the Peace Treaty with Turkey, directions would be given to the Registrar of Joint Stock Companies to approve Armenians and other emancipated nationalities as non-enemy subjects to admit of their becoming signatories to memoranda and articles of association tendered for registration; and whether he was aware that difficulties were being raised and obstacles put in the way by officials in Government Departments whenever it was sought to advance the interests of British commerce in the new independent States created by the Treaty of Peace?

Mr. Bridgeman: Section 10 of the Trading with the Enemy Amendment Act, 1916, provides that where on an application for the registration of a company it appears to the registrar that any subscriber of the memorandum of association of the company is an enemy subject he may refuse to register the company. I have ascertained that in a recent case the Registrar has refused to register a company on the ground that one of the signatories to the memorandum and articles of association was an Armenian. In this particular case the circumstances may be such that registration should be permitted, and I am in communication with the Registrar on the matter.

The Eastern Telegraph Company announce that owing to the accumulation of traffic caused by interruptions of main line cables, they cannot satisfactorily cope with the increasing number of messages handed to them by the public. They again urge the public, in their own interests, to reduce the number and limit the length of their telegrams as much as possible.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended October 31 amounted to £E16,910, making the total from the commencement of the year £E175,327. The corresponding figures for 1918 were £E15,375 and £E191,441.

A petition has been presented to His Majesty in Council by the Royal Mail Steam Packet Company praying for the grant of a supplemental charter, and, His Majesty having referred the petition to a Committee of the Lords of the Council, all petitions for or against such grant should be delivered at the Privy Council Office on or before December 24.

YUGOSLAV CURRENCY.

New Dinar Notes.

(From Our Own Correspondent.)

Belgrade, November 17.

The currency problem continues to concern everybody. The Government and municipality now accept payments in dinars only, at least in the old territories. The krone has now fallen to the value of 25 paras, or four to the dinar; consequently, kronen are now being refused in the shops and in the market and by the peasants in the villages, and there is as a result a tremendous demand for small change in the dinar currency, which is extremely scarce; in fact, almost unobtainable. To facilitate small purchases the municipality are going to issue very soon paper notes for one dinar and fifty paras, which will replace the small and usually filthy krone note, of which there is abundance. All kronen are shortly to be specially stamped, which should relieve the bewildered foreigner of the danger of finding his pockets filled with Austrian and Hungarian notes improperly stamped, which no one will accept. Smugglers are bringing in huge quantities of these notes. The police arrested at Zemun the other day a woman rejoicing in the very un-Serbian name of Katie Samuel, who had in her possession 1,800,000 kronen, of which 1,450,000 were bad. It is hoped that the kronen currency will soon be definitely replaced by the new dinar notes, engraved in Paris, Zagreb and Prague. There are said to be 500 million dinars' worth of these ready, but this is insufficient. There is difficulty in bringing the notes from Paris, as the Italian Government declines to consent to their passage through their territory, so they will have to come by sea. Meanwhile, the exchange is steadily falling. One of the regulations adopted to prevent this is the prohibition of the export of foreign paper money; no one may now take out of the country paper money to the value of over 1,000 French francs, 100 dollars, American, or £30.

There has been a good deal of discussion in the papers lately about a large consignment of boots and clothing which the Salvation Army have brought out to sell at cost price to the poor and needy. Apparently the late Government promised that these goods should come in duty free, but they have been held up for many weeks by the present Government insisting upon duty being paid. It justified its attitude by stating that a memorial had been submitted by 300 Serbian tradesmen objecting to this special privilege being granted on the grounds of unfair competition. The goods are now being distributed, as a compromise has been arrived at on the question of duty.

MALTA NOTES.

Excess Profits Duty.

(From Our Own Correspondent.)

Malta, November 19.

Local discussion centres round the prospect of an excess profits duty, the reason why this has come into prominence being the fact that a great many of our local merchants have made substantial profits during the war. The Chamber of Commerce has submitted a memorandum to the Governor in regard to the proposed duty. Their main contentions against the duty may be summarised as follows:—The duty, the Chamber states, would be inequitable, this view being based on the fact that the duty ought not to be retrospective, since the profits that have been made have been merged into the owners' capital and have been beneficially used. This opinion is not the prevailing one by any means. The Chamber argues, however, that if capital is to be taxed there ought to be no exceptions. It is further maintained that if the law had been proposed some time ago the choice would have been left open to merchants either to take the risk attendant upon trading or to invest their capital in State Loans. It is also argued that the Bill will have a deterrent effect upon the investment of capital in local industries, as capitalists would hesitate to take an interest in an undertaking on which unforeseen demands might be made in the future. Unfortunately, it is well known that Malta capitalists have been singularly backward in the past in supporting local industry; in fact, this lack of enterprise has been one of the causes of the present unsatisfactory economic position on the island. The Chamber takes the view that the present is a very inappropriate time for the introduction of the tax. There is, of course, no question that a mistake was made in not introducing the tax earlier. But while making every allowance for the objections raised to the tax, the fact remains that the finances of the Island are in an extremely critical position, and it is very obvious that new fields of taxation will have to be explored.

The Indian Tea Association have decided to inform the Colombo Tea Trades Association that they do not propose to send samples or participate in any way in connection with the International Tea Congress, which is to be held in Batavia in 1921.

Bulgaria's exports during September were valued at 50,830.758 leva, while her imports were valued at 67,618,720 leva. For the first nine months of the year the exports amount to 155 825,691 leva, and imports to 319,072,923.

LIVING IN CYPRUS.

(From a Correspondent.)

While the cost of living continues to disturb the public mind, Cyprus may still congratulate itself on faring far better than most neighbouring countries. The island has done uncommonly well during the war, and the currency is in a satisfactory condition. Some time ago a Turk coming from Constantinople related that bread there cost 60 piastres an oke, and a suit of clothes £25. The latter figure might indeed be quadrupled and stated as £T100 in Turkish paper money. At Famagusta, which used to be one of the cheapest districts, Government officials of all departments have now established a co-operative society of "officials and others," which has been for some time in contemplation. A board of directors and a supervising committee have been elected, the Turkish community being represented on both. They are starting with a bakery, and will proceed at once to the establishment of a general store for articles of consumption. Great interest is being taken locally, and the success of the enterprise is regarded as assured.

At Limassol prices have always been from 30 to 40 per cent. higher than in other districts. The reason generally given for this state of things, which remains unchanged, is the comparative "wealth" of the district, owing to its productive powers in wine and carobs.

Nicosia's Lighting Problem.

At Nicosia, amongst the difficulties arising out of increased prices of all articles, the electric lighting of the city has been threatening to be a source of trouble for some time. The contracting company has all along done its best to carry out its engagements with the municipality, but has had to face many difficulties. The cost of petroleum and all appliances is so great that unless the municipality agrees to some further modification of the terms, already to some extent relaxed, the capital runs the risk of a stoppage of the supply. The general opinion seems to be in favour of further concessions and a reduction in the number of lights, in view of the unforeseen obstacles that interfere with the strict carrying out of the company's obligations.

The receipts of the Egyptian Markets, Ltd., for the week ended November 13 were:—Cattle markets, £1,087; general markets, £611; total, £1,698; total for year, £50,442. The figures for the corresponding week in 1918 ended November 14 were:—Cattle markets, £853; general markets, £504; total, £1,357; total for year £45,987.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
„ „ ALEXANDRIA, JAFFA and BEYROUTH.
„ „ CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

For further information apply to the following agents of the Line:

At LONDON: J. E. Hyde & Co., 1, Lime Street Square.

Near East Markets.

LONDON PRODUCE REPORT.

Currants and Sultanas.

The distribution of dried fruit is proceeding, and retailers have already received considerable supplies.

Coffee.

At auction this week, 4,669 packages were offered; the demand was, however, moderate. East Indian medium greenish realised 135s. 6d. for export, while bold greenish for home consumption made 137s. to 139s. Costa Rica bold greenish for home consumption was done at 149s., while peaberry ranged from 142s. to 148s. 6d. The future market has been quiet. Quotations: December, 123s.; March, 118s. 3d.; May, 114s. 3d.; July, 111s. 6d.; September, 110s.

Sugar.

Business has been very brisk, traders being anxious to get sugar before December 27. In consequence of the demand prices are high, 115s. being asked for special Mauritius and Java white, 100s. for West Indian crystallised, and 66s. for yellow crystals.

Messrs. Willett and Gray estimate the world's sugar crop for the 1919-20 season at 16,600,000 tons, an increase of 279,346 tons on the previous twelve months. Advices regarding the cane crop in general continue to be favourable. An increase of at least 300,000 tons is expected in Cuba, and of 500,000 tons in India.

Oilseeds, etc.

Linseed has been firm, and prices have advanced. Calcutta-London, November-December, is quoted 51s. Rapeseed has also been firm. Tofia has been done at 43s. and Jamba at 33s. There has been little doing in cottonseed, though prices have been maintained. Egyptian cottonseed is quoted 21s. to 23s., while Indian has been done at 16s. The imports for the past ten months include 2,600,000 cwts. of linseed, 311,000 cwts. of rapeseed, and 48,000 tons of soya beans.

Oilcakes, etc.

Linseed cake has come to business at 24s. to 25s., while cottonseed cake has been done at 18s. to 19s. Other transactions include coconut cake at 22s. to 22s. 6d., groundnut cake at 22s. to 23s., soya bean cake at 25s., and rapeseed cake at 18s. to 19s. The imports for the ten months include 171,000 tons of cottonseed cake and 61,000 tons of linseed cake.

Linseed oil has been firm at 99s. to 100s. Rapeseed oil is 103s., while Egyptian has been done at 93s. and Indian at 84s.

OPIUM MARKET.

Messrs Barker Brothers, Smyrna, report as follows for the week ended November 15:—

The sales of opium this week on our market amount to 58 cases, at prices ranging from 16s. to 20s. per lb. c.i.f. port of destination. Some of the above goods, which changed hands at 20s., being pure, unadulterated gum, bright colour, and soft elastic paste, have given on analysis over 14 per cent. of anhydrous morphine. This class of opium we recommend as cheaper than the druggist manufacturing qualities, owing to their superior morphia strength, and easier to work. Exchange for sterling and dollars is stationary at Ps.335 per £ sterling, and $1.25 per Turkish paper pound. The arrivals are 970 cases, against 67 at the same date last year.

Lord Allenby has issued a proclamation removing the restrictions on the exportation of cotton seed.

The ruby mines in Burma produced an output of the value of £53,297 in 1918, as against £61,529 in 1917.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in October:—

Cotton.

The weather has been on the whole favourable to the late bolls. The attack of the pink boll worm is decidedly lighter than in the last three years. The first picking was completed early in October, and the second is now practically over except in the northern areas of the Delta. Picking is being as a rule very carefully made owing to the high value of cotton. Cotton sticks have already been pulled up on a large scale in most provinces, and this work continues to progress rapidly. The results of the picking are not uniform; in certain provinces the yield is reported to be slightly better and in others worse than last year. The available ginning out-turns up to date are practically similar to those of last year in Lower Egypt, being 99.61 for Sakellaridis, as compared with 99.74. The Ashmouni outturn is, however, slightly better, being 106.89, as compared with 104.55.

Maize (Nili).

The weather has been favourable to the growth of the maize, especially to the late-sown crop. Water supply sufficient. The early crop is being cut. The stalk-borer was noticed in various provinces. A satisfactory yield is expected in Middle and Upper Egypt, but the condition of the crop is somewhat below the average in Lower Egypt.

Millet (Nili).

Weather favourable and water supply ample. The crop is healthy and promises well.

Rice (Sêfi).

Weather favourable and water supply sufficient. Harvesting and thrashing early-sown crop are now general. The crop is a little below the average at Beheira and Gharbiya.

Rice (Nili).

The crop is progressing satisfactorily, and an average yield is expected. Harvesting is taking place in the early-sown fields.

Sugar Cane.

Weather favourable and water supply ample. The crop is healthy and promises well. Some cultivators began cutting the canes for local consumption. The stalk-borer was noticed in several provinces, but the damage done is negligible.

Ground Nuts.

Harvesting has started, and expectations point to an average crop.

Bersim.

Weather on the whole favourable and water supply sufficient. Sowing is still in progress. The early-sown crop has germinated well, but a good deal has been destroyed by cut-worm and cotton-worm, necessitating resowing.

HIGH PRICES AT MALTA.

(From Our Own Correspondent.)

Malta, November 13.

A Government notice compelling local tradesmen to mark their goods in plain figures has had a good effect. This practice has been practically unknown before in Malta. An instance of the effect of the notice is provided in the case of boots, a pair which, on Saturday night, were priced at £1 17s. 6d., and were obtainable on the following Monday at £1 5s.!

POSITION AT ODESSA.

The Acting British Consul-General at Odessa reports as follows on the position there:—Foreign trade is practically at a standstill, but efforts are being made to obtain Government sanction for export. Good order is maintained. Railway services are still naturally much disorganised and Black Sea steamship sailings irregular. There is no objection to the return to Odessa of British subjects at their own risk, provided they clearly understand that owing to shortage of fuel the town will probably be without heat and light this winter; unless certain of employment, however, they should not do so.

THE WORLD'S CROPS.

The Board of Agriculture has received the following information from the International Agricultural Institute at Rome:—

The production of wheat in Spain, France, Great Britain, Italy, Netherlands, Roumania, Switzerland, Canada, the United States, British India, Japan, and Tunis in 1919 is estimated at 1,095,130,000 cwts., or 6.5 per cent. below last year's production and 3.5 per cent. below the average production of the five years 1913-17.

The production of rye in Spain, France, Italy, Netherlands, Roumania, Switzerland, Canada, and the United States is estimated at 84,707,000 cwts., or 4.1 per cent. below last year's production, but 24 per cent. above the average production of the years 1913-17.

The production of barley in Spain, France, Great Britain, Italy, Netherlands, Roumania, Switzerland, Canada, the United States, Japan, and Tunis is estimated at 235,753,000 cwts.

The production of oats in Spain, France, Great Britain, Italy, Netherlands, Roumania, Switzerland, Canada, the United States, Japan, and Tunis is estimated at 595,939,000 cwts., or 16.2 per cent. below the 1918 production and 9.7 per cent. below the average production of the five years 1913-17.

The production of maize in Spain, Italy, Roumania, Switzerland, Canada, the United States is estimated at 1,563,097,000 cwts., or 14.8 per cent. above last year's production and 4.4 per cent. above the average production of the years 1913-17.

The production of linseed in Italy, Roumania, Canada, the United States, British India, Japan, and Tunis is estimated at 13,246,000 cwts., or 38.1 per cent. below last year's production and 39.1 per cent. below the average production of the year 1913-17.

The potato crop in Scotland, Netherlands, Switzerland, Canada, and the United States is estimated at 325,517,000 cwts., or 12.1 per cent. below last year's production and 1.2 per cent. above the average productions of the years 1913-17.

The production of sugar-beet in Spain, Netherlands, Switzerland, Canada, and the United States is estimated at 184,710,000 cwts., or 25.9 per cent. above last year's production and 14.8 per cent. above the average production of the years 1913-17.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 19:—

Rain general in Burma, North-Eastern and Southern India.

Recent sowings possibly damaged parts Madras by excessive rain. During the week ending Saturday, November 8, sowing spring crops and harvesting autumn crops continued. Harvesting paddy continued Bengal, Orissa, Chota-Nagpur and in Southern India. Commenced parts Lower Burma. Sowings continued Madras. More rain required parts Bihar and Orissa and for crop on high lands Bengal. Plucking tea continued Assam. Cotton picking continued Burma, Assam, United Provinces of Agra and Oudh, North-Western Frontier Province, parts Central India and parts Bombay. General crop conditions good.

Bombay cotton market irregular. Fully good Broach April-May, Rs. 552. Piece goods market quieter with encouraging demand and steady prices. Calcutta jute gunny markets inactive.

No change in Bank Rates.

RELIEF WORK IN INDIA.

The India Office has issued the following telegram, received from the Viceroy:—Revenue and Agriculture Department, dated November 21:—"Our telegram dated November 14. Several relief camps were closed in Hyderabad, where number on relief decreasing. Numbers relieved: Bihar and Orissa.—Works, 70; gratuitous, 26,111. Feudatory States of Orissa.—Works, 2,626; gratuitous, 602. Central India.—Works, 3,400; gratuitous, 4,700. Hyderabad.—Works, 12,000; gratuitous, 11,000. Madras (incomplete figures).—Works, 49,337; gratuitous, 74,432."

Engineering.

MOTOR SHOW REFLECTIONS.
II.

(From Our Own Correspondent.)

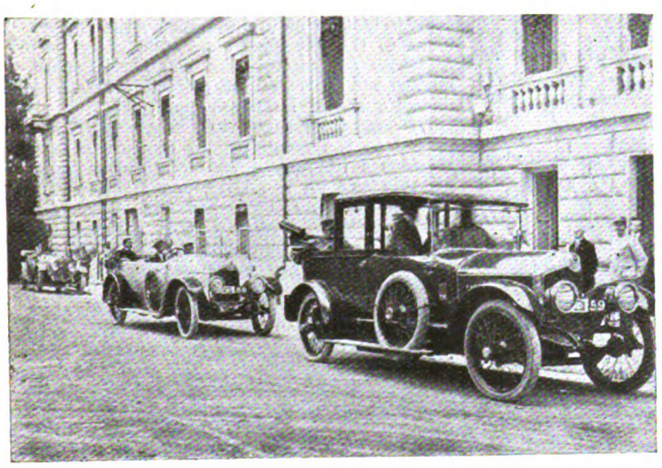
Before the show I was privileged to try out several of the exhibition models, had an opportunity of examining large numbers of blue prints, and was able to discuss matters of chassis and engine construction with a number of makers, and from all this it was easy to see that the days of unscientific design are over so far as the British motor industry is concerned. Buyers may take it that no maker has changed his design or added anything to his car equipment unless he has been honestly convinced, as a result of continued study and experiment, that he has improved his car by so doing. Any feature adopted which differs from pre-war practice has the soundest of reasons for its adoption, and has been the subject of much study and experiment.

As regards smaller details, marked improvement has taken place in ignition, and the foreign-made magnetos so largely used before the war have been replaced by neat, compact, and highly efficient and beautifully finished instruments made throughout in British shops. Although all of these are good, perhaps I may be permitted here to mention a personal liking for the C.A.V. magneto, which I have found to give results little short of amazing. Sparking plugs also are improved, and the detachable type, in which every part of the plug can be laid bare for cleaning, repair, and adjustment, were very largely in evidence. The standard equipment of most of the British cars comprised such items as wind screens, a very large number of which were of Triplex glass, spare wheels and tyres, lamps, electric lighting sets, and mechanically or electrically operated warning devices. Most of these were formerly "extras," and this fact must be taken into due account when comparing the prices of present-day with pre-war models.

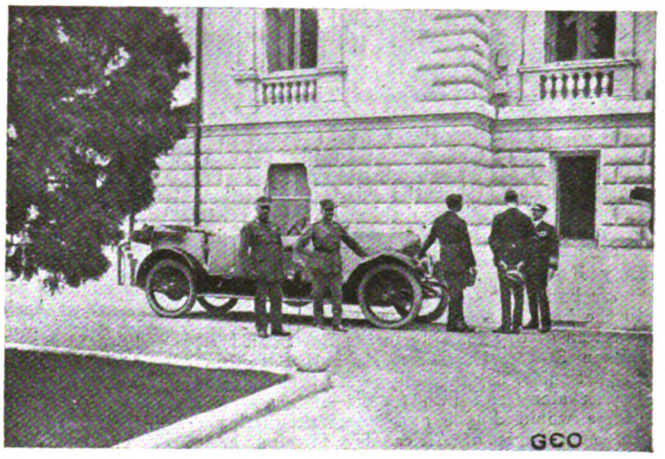
Coming more particularly to the actual exhibits, it was noticeable that they could all, so far as cars and chassis were concerned, be divided broadly into three classes, of light, medium, and heavy cars. Before the war every maker seemed to feel it incumbent upon him to turn out a bewildering variety of models, amongst which selection was a far from easy matter. Now, however, the short time at their disposal between the reorganising of their works and the commencement of peace production has compelled them to specialise, and there is no doubt that this is a step in the right direction. We have now, for instance, the high-class car, heavily engined with six or eight-cylindered power units, which embody every refinement and luxury known to the trade. We have the medium-powered touring cars, principally four or five seaters, which are magnificent models of British engineering work, and which are produced in such a way that the costs are cut down to the lowest figure without sacrifice of strength of materials, and which can consequently be placed on the market at prices which bring them within the reach of that large section of the motoring world who, whilst desiring to possess a high-class car, yet have to study cost a little more closely than those to whom money is no object.

And here in this show we have had for the first time what is known in trade circles as the production car; that is, the car which is being turned out by the thousands, each model precisely like another, cars made on a scale large enough to bring the standing charges proportion placed on each to merely a fraction of the amount that would have to be placed upon each were the production on the old pre-war scale. These cars are intentionally built in such a way as shall enable them to be sold at a price little if any greater, and in some instances appreciably smaller, than would be paid for an American quantity-production car of the same power, but with less perfect finish. In this class of car every component part is made to scale, and machined and finished literally by the thousand. Practically every part of the production is machine-made, and a host of automatic and machine tools are employed in turning out engine parts, frames, valves, springs, and the very bolts and nuts with which they are put together.

From an analysis I made of the show, I judged that there were about seventy types of car offered at a price of £500 or thereabouts, and in view of the reduced value of money to-day as against pre-war standard, it will be seen that the actual hard cash prices asked to-day are really not in excess of—in many instances they are below—the prices we were accustomed to before the war. It is particularly interesting to note, as I pointed out recently, that there were no foreign exhibits at Olympia selling at below £200. On the other hand, there were quite a number of fine British light cars offered at or below that price, and a really creditable production can be obtained for about £115—a fact which is in itself sufficient answer to those critics who said that our industry would be swamped by cheap foreign manufactures, and that we were quite unable to turn out a car at a competitive price.



The Start from the Palace.



King Alexander of Greece (in naval uniform) drove to the opening of the Athens Exhibition in a Crossley Motor Car.

MISCELLANEOUS TOPICS.

Presses for the Near East.

Presses for various purposes are very extensively used throughout the East, especially in the Near East and in districts where oils, wine, cotton, flax, and other similar fibres or wool, hides, etc., are produced and exported. In the Near East particularly the possession of a press is regarded as a very valuable asset to the grower or to the export merchant. But whilst hydraulic and other mechanical presses have been introduced in that region during recent years, their heavy weight is an impediment to their employment in hilly districts, where, owing to the lack of proper roads, everything has to be carried on the backs of mules or horses. The possibility, therefore, of being able to transport by such means efficient and powerful presses will be of great interest to many proprietors who are compelled to use wooden presses of an archaic design and local construction. We refer to a press which has recently been shown at an exhibition, and which was almost entirely made of mild rolled steel, only very few parts being cast iron. The risk of breakage is thus reduced to a minimum. The mechanism is very simple, but scientifically designed on the most correct principles to give a gradually but enormously increasing pressure while keeping the motive power almost constant. The press requires no skilled attention, and can be driven by hand power, animal power, or by means of a belt from any prime mover, such as steam, gas or oil engine, electric motor, or water-wheel. The machine is worked by turning a winch close, or attached to it, which winds in a wire rope and pulls a combination of levers together, thereby pressing down the platen. There is a knock-off arrangement which automatically stops the winch directly the platen reaches the required point, and applies a brake that holds it as may be desired. In this type of press there is, apparently, no "slip-back," as often happens with hydraulic presses. When the pressure is no longer needed the brake is released and the press returns to its initial position automatically. This press is built in various sizes and capacities to suit all kinds of produce, whilst a noteworthy feature is its portability. If the makers of this or similar types of presses will cater for the requirements of olive growers and oil mill owners in the Near East they will secure a good market.

Wireless Telephone Sets.

A group of seafaring men from the Eastern Mediterranean were specially attracted at the recent Shipping and Engineering Exhibition at Olympia by the wireless telephone sets and the wireless direction finder. One

Digitized by Google

of them, a sturdy captain, was relating to others how once he was sent down by a U-boat with his ship, which had no wireless instrument, and how more than five times he escaped U-boats and floating mines by the help of the wireless instruments which his other ship had. It could be seen that the listeners were much impressed, and their opinion that the owners should be pressed to have these wonderful instruments in every ship, was the result of a very long examination of the apparatus. There was a 1½ kw. (2-h.p.) ship installation with emergency set. It represented the wireless equipment of a modern liner. Demonstrations were given showing the musical spark discharger, which is a great advantage to the operator at the distance receiving station. With aerials approximately 90 ft. above sea level, vessels so fitted can communicate with each other during the day up to distances of 250 miles. At night this range is easily doubled. The emergency set is an auxiliary installation by means of which the operator can "carry on" in the event of the failure of the ship's electric supply.

A short-range wireless telephone set was also shown. Rated at 20 watts, and weighing only 40 lb., this set, when used with an aerial 70 ft. long and 30 ft. high, has a range of ten miles. Under favourable conditions this may be greatly exceeded. The wireless direction finder was very interesting. This instrument indicates the direction of a sending station; and is applicable to aerial navigation. Its usefulness in this direction has been abundantly proved during the war in the guidance of aeroplane forces towards their objective at night and in determining their position when in doubt. The set has a working range of some 200 to 300 miles when used in conjunction with normal lower-power coast stations, and a considerably greater range when higher powers are used. It is worthy of note that the wireless direction finder provides the only known means of taking bearings in thick weather; hence it is essential to navigation by sea or air.

Dry Farming.

We had occasion in previous notes to refer to the benefits that would be derived by the adaption of dry farming in the East. In the Balkan States, Greece, Syria and Palestine in particular, dry farming would turn almost barren stony soil into fertile land, and in others would double and treble production. In some parts of Africa dry farming has been successfully adopted, and recently in France the system is reported to have been seriously considered by farmers and others. An interesting experiment in dry farming was recently carried out by a proprietor and professor of agriculture, who has gathered in crops of wheat cultivated on a farm near Carcassonne. On account of the poor quality of the stony soil this land was abandoned for many years, and it, therefore, offered an excellent field for experiment, and more so because this part of the country is particularly dry and very little wheat is grown. By spacing the drills 13 inches apart, and distributing half the usual quantity of seed, the professor provided for a sparse cultivation, so that by a subsequent process of superficial tillage the seed bed was well aerated, and the humidity was preserved in the soil. The seed being sown at the end of August, a first hoeing took place when the grain reached a height of 6 to 8 inches. In the spring there were two other hoeing operations, and later on the soil was earthed up round the roots. The results were so good that whereas the average yield in the district is from 6½ to 8 cwt., the professor was able to obtain on his farm 25 cwt. per acre. These remarkable results were obtained under conditions specially favourable to dry farming, and it has still to be seen whether the increased yield pays for the additional expense of superficial tillage. Obviously, this system of cultivation is out of the question if the work has to be done by manual labour, which is both scarce and exceedingly dear. The only hope for dry farming in Europe, and especially in the Near East, lies in the employment of motor tillage, preferably with such appliances as motor hoes or small rotary machines. Having shown what can be done with dry farming on poor land, in a region where the rainfall is insufficient, the professor is now preparing to carry out a similar experiment in another district, where the soil is prolific and the crops are amongst the heaviest in France.

Yugoslav Railways.

The Traffic Ministry intends entirely to reorganise railway traffic throughout Yugoslavia. Locomotives and wagons will be provided, the requisite number of normal-gauge lines will be built, and all narrow-gauge lines will be turned into normal. French and American engineers and traffic experts will be employed in addition to home experts. It has been decided, also, to resume marine and river shipping and to provide the necessary means of transport. It is noteworthy that, in spite of what has happened since 1914, and the evident preference that is given to French and American engineers and experts, German bagmen, railway experts, and manufacturers were, it is said, the first to appear on the scene and offer their services.

Sugar in the East.

The heavy decline in the production of sugar through the war induced first France and recently other countries to seek new sources of sugar supply, and in this connection valuable assistance has been rendered during the past year by the Agricultural Department of the United States in the way of experimenting with the production of sugar from maize and sorgo. It has been found that the weight of sugar from an acre of maize is superior to what is obtainable from an acre of beet, and considering that the maize crop requires far less attention, not to speak of the fact that its preliminary cultivation is much less costly, the discovery is most important.

Maize and a great deal of sorgo are grown in all the southern parts of Europe, and in the Near East, and particularly in Greece, Serbia, Roumania, Bulgaria, Southern Russia, Syria, and Egypt, and crops of both kinds are raised so easily and cheaply that there seems every probability of the Near East becoming a great source of sugar supply in the future. As there is often a discrepancy regarding the identity of these two kinds of cereals, it may be added here that maize is what is commonly known in this country as Indian corn, and in the Near East as Arabian corn or *Kahlabohchi*, Turkish *misirbughdayi*, and Serbian *kukuruz;* whilst sorgo is commonly known as millet, and in the Near East as Kelchri. Great quantities of the latter are used in the East for feeding cattle and poultry, but it is also made into cakes, or boiled, and eaten by the poorer classes of peasantry.

TRADE OPPORTUNITIES IN ROUMANIA

H.M. Commercial Secretary at Bucharest states that all kinds of builders' materials—i.e., window glass of different thicknesses, roofing material, steel and ironware, ironmongery, door knobs, hinges, locks and keys, taps, and all smaller articles used in building work—are required in Roumania, and that there is also a large demand for rice, sugar, and colonial produce.

It is understood that Roumanian firms would be prepared to act as the agents of British manufacturers and merchants for the sale of such goods on a commercial basis, the commission being included in the price fixed by the British suppliers.

Prices should be quoted c.i.f. Roumanian port, if possible in lei. Should the sellers wish payment to be made in sterling it could probably be arranged for a deposit of Roumanian bonds to be made in any named bank to cover the amount of the purchase until it is possible to negotiate the necessary exchange. During this interval the purchasers would undertake to pay the usual current interest in London on the sum due. This would be achieved by the interest on the bonds and any additional payment necessary. It is understood that Roumanian bonds pay 5 per cent. interest, and it is stated that this would presumably mean 1 per cent. in addition from the buyers. A considerable volume of business is already reported to have been done on somewhat similar terms.

A fortune valued at £297,459 gross, with net personalty £285,900 has been left by Mr. Charles Grant du Croz, of 5, Queen Street, Mayfair, W., and of Courtlands, West Hoathby, Sussex, late of Messrs. du Croz Doxat and Co., wool brokers, of 2, Moorgate Street Buildings, E.C., a director of the Hyderabad (Deccan) Co., Ltd.

SUGAR CULTIVATION IN CEYLON.

A report has been presented by a special Sugar Committee of the Ceylon Agricultural Society recommending the establishment of sugar cultivation on the island. It is considered that the success of the proposal depends entirely upon the amount of assistance the Government will give. That there are immense possibilities in the way of sugar cultivation in Ceylon, either from the palmyra palm or from the cane, is generally admitted. Private enterprise has, however, lost heavily in the past and therefore there is a desire for Government support by means of land concessions, cheap loans, etc. The Sugar Committee recommend:—(1) In order to ascertain whether improvements can be effected in the preparation of local jaggery, two sets of pans of improved types should be secured from India and erected in central places in Jaffna, and in the Central Western or Southern Provinces. These pans should be worked experimentally at the beginning, and later leased to registered co-operative societies or individuals on lines similar to those adopted in Madras and Mysore; (2) That an improved mill and set of pans should be erected in the Kalupahana cane-growing area with a view to improving the output from that area and with the object of securing reliable figures for future work; (3) That experimental cultivation of sugar-cane under tank irrigation be undertaken by the Government in the dry zone on a sufficiently large scale to demonstrate its commercial possibilities and to warrant the erection of a small power mill and improved pans; (4) That the Government be asked to make enquiries in regard to the possibility of erecting a small modern mill for sugar manufacture on a suitable site on the Ginganga river, with a view to reviving the industry that has died out from that locality. It is possible that there are over 600 acres of owiti lands in this area suited to sugar-cane cultivation, of which some 400 acres could be cropped annually. If a sufficient guarantee could be obtained for the cultivation of a definite area under sugar-cane annually, the erection of a small factory on a co-operative basis would be warranted. The peasants along the banks of the Ginganga are used to the cultivation of sugar cane and understand its cultural requirements. With encouragement, it is felt that the industry can be revived, and, despite the present high cost of machinery, should prove to be a commercial success; (5) That Government be asked to favour the cultivation of sugar-cane within the colony as far as possible and to consider the possibility of granting loans on easy terms for the erection of the necessary factories—large or small. It is urged that these loans should be for fairly long periods, and with low rates of interest. In Mysore the Government, in order to encourage sisal cultivation, are offering, when a sufficient acreage has been taken up and planted with sisal, either to erect factories on Government account or on a co-operative purchase system. Arrangements on similar lines for sugar cultivation in this colony would undoubtedly provide that stimulus which is essential for development; (6) That Government be asked if it could specify the terms under which it would be prepared to lease lands for sugar-cane cultivation under tanks in the drier zones of the colony. It is thought that capital could be interested in sugar cultivation at the present time: and if leases were given on a sufficiently large scale and with a sufficient guarantee, development would be possible. It is thought that a rotation of crops could be carried out, and that it might be stipulated that at least one-half of the area leased to any company or individual under irrigation works for sugar cultivation should be cultivated annually with paddy or other food crops.

Mr. John Slater, of Messrs. John Slater, Ltd., shipowners, and chairman of Amalgamated Industrials, Ltd., has joined the board of Anglo-Baltic and Mediterranean Bank, Ltd.

Lord Montagu of Beaulieu, C.S.I., is to read a paper on "Motor Transport in India" before the Indian Section of the Royal Society of Arts after Christmas, while Sir G. C. Buchanan, K.C.I.E., M.I.C.E., is to read one on "The Ports of India: Their Administration and Development."

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Johnston Line s.s. Cundall, for Piræus, Volo, Salonika, Bourgas, Varna and Constantza, will close for cargo at Liverpool on December 3.

The Prince Line s.s. Soldier Prince, for Tunis, Malta and Alexandria, Jaffa, Beyrout and Haifa direct, taking cargo for Tripoli (Syria), Latakia, Alexandretta, Mersina and Cyprus ports, with option of transhipment at Alexandria, will close for cargo at Manchester on December 5.

The Cunard Line s.s. Sea Serpent, for Piræus and Patras, will close for cargo at Liverpool on December 6.

The Bibby Line s.s. Oxfordshire will leave Liverpool on December 10 for Marseilles, Port Said, Colombo, and Rangoon. This company will also have a steamer leaving London for Rangoon next month.

Shipping at Malta.

(From Our Own Correspondent.)

MALTA, November 13.

Shipping has been brisk during the past week. The most notable arrivals are the Submarines L2, L6, L19, and L20. The U.S. collier Mars has left for the United States, the transport Gloucester Castle for Marseilles, and the Donovan for Mudros and Constantinople. The latest departures are ss. Algerian Prince, s.s. Austrian for Alexandria, and ss. Austral Brook for Sfax; whilst there have been more movements than usual as regards the Fleet. The quantity and nature of the merchandise show that commerce generally is approaching the normal.

November 19.

The latest shipping movements are:—Arrivals.—S.s. Venetian, from Gibraltar; H.M.S. Bagshot and H.M.S. Banchory, from Constantinople. Sailings.—S.s. Serbino, for Alexandria; H.M.S. Spear and Senator, for sea; and Italian s.s. Etruria for Tripoli. The transport Osiris has arrived from Constantinople with the trawler Aurea, whilst the Himalaya has left for Marseilles, the Trent for Mudros, the Asphodel for Naples, and the Tribune for Alexandria.

Shipping Notes.

The launch took place on March 20, from the Wear shipyard of Messrs. William Gray and Co., Ltd., of a cargo steamer built to the order of the British India Steam Navigation Co. Ltd. The vessel, which is 8,200 tons d.w., is of the "B" Standard type, and has been modified to suit the owners' particular trade. The vessel is fitted with triple expansion engines, built by the Central Marine Engine Works, West Hartlepool, and will work under Howden's Forced Draught of 180 lb. pressure. This is the third vessel launched from the new Wear shipyard for the British India Steam Navigation Co.

There was launched from the Wallsend shipyard of Messrs. Swan Hunter and Wigham Richardson, Ltd., the s.s. Kidderpore, which was designed as a "B" Standard ship for the Shipping Controller, and then considerably altered to suit the requirements of the Eastern trade of the Peninsular and Oriental Steam Navigation Co., who acquired the ship from the Government. This vessel is designed to carry 8,250 tons d.w., and has been built under Bureau Veritas and Lloyd's survey. The engines and boilers are being constructed at the Neptune Works of Swan Hunter and Wigham Richardson, Ltd., the main engines being of the direct acting reciprocating type with triple expansion.

H.M. Representative at Tangier reports that a Dahir of the Khalifa of the Spanish zone, published in the *Boletin Oficial* of October 25, promulgates and puts in force a Statute of Competency of the Maritime Service of the zone, copy of which is annexed to the Dahir. The Statute gives wide powers to the Maritime Service in all matters connected with shipping and the shores and the territorial waters of the zone, with the exception apparently of lighthouses and port construction.

The Clan Line have sold their turret deck steamer Clan Fraser to Greek buyers for £145,000. This vessel was built at Sunderland in 1900; she is 2,285 tons net and 3,588 tons gross register.

The s.s. Syrian Prince, which has been built at Sunderland on account of the Prince Line, Ltd, London, proceeded to sea last week on her official trial trip, when both the machinery and the vessel gave entire satisfaction to the owners. The steamer was originally laid down as one of the "C" type of standard steamers, and has been considerably altered to meet the special requirements of the new owners. The principal dimensions are: Length, 342.6 ft. breadth, 46.9½ ft.; depth (moulded), 25.6 ft. giving a d.w. carrying capacity of just under 5,000 tons on a moderate draft of water and being built to fine lines has a steaming capacity of about 11½ knots.

DRAMA-KAVALLA RAILWAY.

An important railway and sea connection is being undertaken by the Greek Government, says an American Consular report. This line will connect up the Salonika-Serres-Constantinople Railway at Drama with the Ægean Sea at Kavalla. At the present time the only outside outlet is in western Thrace, at Dedeagatch, an open roadstead unprotected from the strong southerly winds. The Drama-Kavalla line has been considered a commercial necessity for many years, but under Turkish rule nothing was done. Kavalla is the only important Macedonian port except Salonika, and is the most important tobacco-exporting port in Greece. Drama is a city of approximately 16,000 people, chiefly Greeks and Turks. It is located in a very fertile section, where tobacco and maize are grown easily and profitably. Drama is surrounded by mountains, which furnish a satisfactory water supply. When this new branch is in operation the whole section to Kavalla will develop commercially and agriculturally. Kavalla has a population of approximately 40,000, mostly Greeks. Similar to Dedeagatch, it is exposed directly to the southerly winds, which prevent landing, and usually requires good-sized boats to anchor a mile offshore. Frequently ships are obliged to anchor a few miles west of Kavalla at Lefthera Cove.

An English engineer in charge of the railway survey now being undertaken informs the writer that the right of way will be 43 kilometres (27 miles), compared with 36 kilometres (22.5 miles) by the carriage road. The country is mountainous, which necessitates several tunnels, one of them about 2½ kilometres (1.5 miles) long. The cost of construction will be over twice what it would have been before the war. It is stated that recently the tobacco companies were compelled to pay £60 a ton for tobacco transported on this route by horses or mules. Conditions are now improving.

A conservative estimate would allow at least two years for the completion of this line. Opportunities will exist in Kavalla for harbour, dock, and warehouse improvements, as well as municipal public utility undertakings. The water supply is inadequate. Before the war a French company was planning the installation of an electric light station.

A new bank is to be established in Sofia with the title Banca Commerciale Italiana e Bulgaria.

The traffic receipts of the Suez Canal for the two weeks ended November 15 amounted to 9,800,000 francs, as against 3,100,000 francs last year.

LANCASHIRE COTTON.

Prices Still Rising.

(From Our Own Correspondent.)

MANCHESTER, Wednesday.

Prices through the market continue to go against buyers. Numerous spinners and manufacturers are still meeting with more business than they want. Some sellers are adopting the policy of putting up their quotations after each sale. No news of importance has come through relating to the prospects for the Egyptian cotton crop. Demand for the article has been well maintained. In yarns made from Egyptian cotton prices are distinctly dearer on the week. Most producers have nothing to sell. There is much pressure for delivery from users. Gassed yarns are deeply sold. A large inquiry has been reported for the United States. In cloth for Egypt operations have been somewhat irregular. The reports of disturbances on the other side have been rather unsettling, but business has not been at a standstill. For the several outlets of the Levant quite a healthy trade has been done in a variety of goods. Sized materials for India have been rather quieter, but an increasing business has been reported in finishing and printing styles for Calcutta, Bombay, and Karachi. Useful lines continue to be booked for China, Java, and Singapore, especially in bleaching cloths. A fair turnover has been mentioned for South America. In American yarns for home use trading has not been on a very free scale, but prices remain very stiff especially in twists. Bundles have moved off freely for India and China. Extra hard and coarse counts are still wanted for the Levant, but producers require very long delivery terms.

Big Cotton Mill Deal.

There was something approaching a sensation in Manchester trade circles at the end of last week when it was reported that arrangements had been made for the sale of the firm and business of Messrs. Horrockses, Crewdson, and Co., Ltd., cotton spinners and manufacturers, Preston and Bolton. This is the largest private cotton concern in Lancashire, the machinery amounting to about 10,000 looms and 300,000 spindles, with a large warehouse in Manchester. It is understood that the Amalgamated Cotton Mills Trust, Ltd., has made an offer of £6,000,000. The leading people connected with the Trust are Mr. S. B. Joel, of Messrs. Barnato Brothers, London; Mr. James White, the managing director of the Beecham Trust; and Mr. A. L. Ormrod, stockbroker, Manchester, and chairman of the Dunlop Rubber Co. The shareholders have not yet ratified the agreement, and there seems to be some doubt as to whether they will do so. Other deals in cotton mills have also been reported this week. It is stated that a number of local gentlemen have purchased six large mills at Ashton-under-Lyne which in the past have been controlled by practically the same directors. These companies are the Atlas, Ceder, Minerva, Rock, Texas, and Tudor, the total spindleage being about 500,000. The purchase price is said to be £1,500,000. Although inconvenience in Lancashire is not liked by many people, it is contended that until old factories are placed on a new capital basis to meet the changed conditions since 1914, there is no probability of new mills being built, and an extension of production which is badly wanted.

Mr. James Henly Batty has been elected a director of the Eastern Bank.

COMPANY MEETING.

ANGLO-EGYPTIAN BANK, LTD.

Record Gross Profits.

The thirty-third ordinary general meeting of the Anglo-Egyptian Bank, Limited, was held on November 25 at 27, Clement's Lane, London, Mr. R. H. Foà, the chairman, presiding.

The Secretary (Mr. Geo. H. Soul), having read the notice convening the meeting and the auditors' report,

The Chairman said that in 1914 he was to have succeeded Mr. H. A. Richardson as chairman of the bank, but the outbreak of the war showed both of them that it would be unwise to change the "hand at the wheel," and Mr. Richardson undertook to continue to pilot the ship until the termination of the war. So soon as the armistice of last year was signed, the Chairman continued, his colleagues and he decided that it was imperative that he should pay visits to all the branches of the bank for which he had time, and he accordingly left Glasgow for Alexandria on January 20. He remained in Alexandria only five days, being desirous of getting to the Sudan and out of it before the hot weather set in. He remained in Khartoum a little more than a week, and found their branch there much appreciated. After mature consideration he determined to open a sub-branch at Port Sudan, which was the port for virtually the whole of the Sudan, and this branch would be working within about a week from now. From Khartoum he returned to Cairo, stopping at the important town of Assiout, where he was most hospitably received by some of the principal inhabitants, who urged him to open a branch there, the centre of the cotton-growing district of Upper Egypt, and orders had now been given to the bank's agent in Cairo to do this. He reached Cairo on March 5, and three days later the troubles in Egypt began, and the railways were cut in many places, thereby making it impossible for him to travel about the country as he had intended. During the upheaval two of their branches were besieged, that at Beni-Souef and that at Fayoum; in both cases their agents escaped with their lives, and without any loss to the bank, though he regretted to say that their agent at Zagazig, Mr. Dahan, who found himself in Cairo when the riot began and unable to return to his post by railway, endeavoured to get back by river, and was found shot and drowned near Zagazig three days later. He remained in Cairo a month, and had much to do there. Lord Allenby was most kind, and, although civilian travelling in Syria and Palestine was much discountenanced, gave him every facility for visiting those countries; in Palestine they were bankers to the Army of Occupation, as they were in Egypt. Before going to Palestine he had been asked by many people, clients of theirs and others, to establish branches of the bank in Syria, and he placed the matter before Lord Allenby, who, entirely out of consideration for the susceptibilities of our French Allies, and absolutely in contradiction to the allegations made in some newspapers, did not wish them to extend their sphere of interest into Syria while it could be said that their expansion was taking place because the country was under temporary British military control. In Jerusalem, Jaffa, and Haifa they had been useful not only to the British Army, but also to the natives of the country, and they had enabled the authorities to help agriculture to some extent. He went as far north as Damascus, and was able to see for himself the extraordinary agricultural possibilities of the plain of the Hauran, and after a further brief stay in Cairo reached London on May 22.

It was not his province to criticize the past or the present administration of Egypt, but he might say that Sir Valentine Chirol's appreciation of conditions in Egypt, as published in *The Times*, seemed to him to be absolutely just. Not only had he himself arrived at the same conclusions as Sir Valentine, but men of far wider experience and more intimate knowledge, with whom he was in frequent touch, had over and over again used the same expressions concerning the Government and the country as appeared over Sir Valentine's name.

Turning to the balance-sheet, the Chairman said that the board had record figures to put before them, and added that these figures related to the most inactive period of the bank's whole year. In immediately realizable securities and cash they had £16,000,000 with which to meet liabilities of £18,000,000—a most satisfactory position. (Hear, hear.) The gross profits of the year's trading amounted to the record figure of £326,000, leaving a net profit, including the amount carried forward from last year, of £180,979 19s. 8d. Last year was marked by the distribution of a large bonus in shares which had been accumulating for some years. He regretted that they could not do this for the shareholders every year, but they had returned to their old custom of paying a handsome dividend of 15 per cent., and of adding thereto a *douceur* of 2½ per cent. in the shape of a bonus, the whole distribution being free of income-tax. They were making the usual addition of £10,000 to the reserve fund, and transferring to the reserve fund for the new premises which they were acquiring in London £22,644 1s. If peace became assured, and Egypt was allowed to work out her destiny under the beneficent and benevolent guidance of England, there would be much more hope of prosperity for the country than if the aspirations for self-government in all directions were gratified. In conclusion, the Chairman moved the adoption of the report and accounts.

Mr. Henry A. Richardson seconded the motion, which was unanimously carried, and the proposed dividend and bonus were agreed to.

After the transaction of other business the proceedings closed with a cordial vote of thanks to the chairman, directors, and staff, proposed by Mr. W. H. Skeel and seconded by Mr. Haldin, K.C.

COMPANY NOTES & REPORTS

Bengal-Nagpur Railway.

The report of the Bengal-Nagpur Railway Company for the year ended March 31 last states that £400,000 debentures maturing on June 15 and £374,900 on August 18, 1918, were paid off by the Secretary of State for India. Capital expenditure during the year was £99,270. The gross earnings have increased by Rs.56,94,256, the increase in working expenses was Rs.45,09,819, so that the net earnings have increased by Rs.11,84,417, or nearly 14 per cent. The net earnings amounted to Rs.3,13,17,280, and the surplus profits to Rs.1,50,49,724. The company's share produced £158,257. Shareholders have received as guaranteed interest for the first half-year £1 15s. and an interim dividend of 15s. per cent., together with a bonus of £1 10s. per cent., less tax. In addition to the second half of the guaranteed interest at £1 15s., less tax at 6s. in the £, the directors recommend a further dividend of ¾ per cent. and bonus of 1½ per cent., both less tax at 4s. 9d. in the £, writing off as depreciation of investment account £10,000. The balance at credit of surplus profits account, at the end of 1919, will be about £222,527, as against £206,263 for the previous year. Meeting, 132, Gresham House, E.C., December 4, noon.

Eila Tea.

The report of the Eila Tea Company of Ceylon for the year ended June 30 last states that the profit, after paying interest on debentures, amounts to Rs.30,749, to which has to be added Rs.14,802 brought forward and Rs.5,367 surplus proceeds of 1917-1918 crop, making Rs.50,919. It is proposed to appropriate this as follows:—Dividend of 6 per cent. on the preference shares, Rs.1,680; dividend of 10 per cent. on the ordinary shares, Rs.30,000; bonus to superintendents, Rs.1,500, carrying forward Rs.17,739.

Doomoo Tea of Ceylon.

The report of the Doomoo Tea Company of Ceylon for the year ended June 30 last states that the profit amounts to Rs.23,200, which, with Rs.14,989 brought forward and Rs.1,154 surplus proceeds of last season's crop, makes Rs.39,343. It is proposed to pay a dividend of 7½ per cent., carrying forward Rs.7,843.

Egyptian and Foreign Trust.

An extraordinary general meeting of the Egyptian and Foreign Trust, Ltd., is to be held on December 22 to consider the following resolutions: (1) That the capital be increased to £500,000 by the creation of 300,000 additional ordinary shares of £1 each, ranking pari passu with the existing ordinary shares; (2) that the newly created shares be retained by the directors for the purpose of fulfilling the options mentioned below; and (3) that the directors be authorised (a) for the purpose of paying off existing loans and for general purposes to issue £150,000 Six and a-Half per Cent. Debenture stock repayable any time after January 31, 1925, and not later than January 31, 1940, at a premium of 5 per cent. and conferring on the holders an option at any time before January 31, 1925, of conversion into a like amount of ordinary shares of £1 each at par credited as fully paid; and (b) to enter into an agreement with A. Mitchelson and Co. whereby, in return for underwriting £75,000 of the above issue of £150,000 Six and a-Half per Cent. Debenture stock, A. Mitchelson and Co. are given the option, exercisable at any time before January 31, 1925, to take up 150,000 ordinary shares of £1 each at par.

Mocha Tea.

The report for the year to June 30 last states that the profit on year's working, after taking into account Rs.4,185 for loss on exchange, amounts to Rs.1,34,455, to which is added Rs.10,840 surplus on previous season's crop and Rs.3,454 balance brought forward, making Rs.1,48,750, out of which dividend of 10 per cent., absorbing Rs.45,000, was paid in March. Directors recommended final dividend of 20 per cent., making 30 per cent. for year; bonus to superintendents, Rs.1,000; forward, Rs.12,750. Estimates for new season provide for crop of 740,000 lb. tea to cost Rs.2,51,925 (34.04c. per lb.), and 85,000 lb. rubber, to cost Rs.41,000 (48.24c. per lb.).

Vauxhall Rubber of Ceylon.

The report for the year ended June 30 last states that the profit after paying interest on debentures amounts to Rs.33,953, to which is added balance brought forward, Rs.22,107, and surplus proceeds from last season's crop, Rs.3,826, making Rs.59,886. Dividend of 10 per cent. absorbed Rs.35,000, write off preliminary expenses Rs.15,219, depreciation Rs.5,000, forward Rs.4,667.

Suffragam of Ceylon.

The report for the year ended June 30 last states that the profits on the year's working amounted to Rs.255,039, to which has to be added Rs.84,886 brought forward and Rs.19,295 surplus proceeds of last season's crop. Final dividend of 15 per cent. (making 25 per cent. for year); forward Rs.62,483.

Astra Romana.

The report of the Astra Romana Company for 1915 states that the results of the working during that period which ended at a time when the holdings of the company had been invaded by the enemy were better than those of 1914. The profits amounted to 32,549,000 lei, as against 23,563,000 lei in 1914. 9,685,000 lei has been placed to reserve, and a dividend of 125 lei, as against 100 lei for the previous year, has been declared.

SMALL ADVERTISEMENTS.

A LEADING YUGOSLAV CONCERN wishes to engage a young first-class English Correspondent, introduced in the British trade, to organise and lead its British Department.—Address offers to the Export and Import Company, Ltd., Zagreb (Yugoslavia), Frankopanska ulica 1.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Imports. STAMBOUL, November 8.

The remarkable activity of the preceding week has in no way been relaxed. Good business has been maintained throughout the South Russian ports. During the week, however, there have been some adverse circumstances—for instance, the decline of the rouble, and a violent storm which raged for several days in the Black Sea; but these things have only had a trifling effect on commerce.

Prices have been maintained everywhere in England and in Europe. The recent rise in the price of American cotton at Liverpool has made the position more difficult. New orders are only accepted for delivery in the future, and at prices appreciably higher.

Produce.

The demand for Russia and Roumania still being weak, the colonial produce market has not been at all lively this week. There has been no new arrival, and the prices have remained the same as those quoted last week —i.e., sugar in transit, £64½-£65 per ton; coffee in transit, Ps. 55-57 per oke; petrol per case, £T5.15 to £T5.20, with a tendency to fall.

Exports.

There being a lively demand for export goods, a rather large amount of business has resulted. This would have been even more considerable had it not been for the interruption of traffic on the Eski-Chéhir-Angora line and on the Konia-Kregli line.

Opium.—100 cases were sold during the week at the following prices: Ps. 715-720 per oke, Karahissar druggist, new crop, Ps. 740-750 old crop, Ps. 700-710 second quality and Ps. 900-950 per oke fine (soft). We learn that about 100 cases have likewise been sold at Smyrna. All these sales which have been effected were destined for America and England. The market is firm, with a tendency to rise.

Mohair.—Arrivals, 530 bales; sales, 190 bales; at Ps. 90 per oke, extra quality.

Wool.—Arrivals, 650 bales; sales, 440 bales; at prices varying from Ps. 49 to Ps. 55 per oke.

Silk.—The demand continues brisk, and prices show a new increase at £T15½ to £T16.20 the kilo for Broussa silks. But there is a deficiency in the stock here. Syrian silks are less in demand, the prices being £T10½ to £T11 per kilo.

Cereals.—The arrivals of the week have been fairly important, comprising 150 wagons of wheat, 50 of barley, and 10 sacks of flour. The prices, after various fluctuations, close higher at Ps. 14½ wheat, extra quality (hard and tender); Ps. 13½ first quality, Ps. 12½ Mahlout (mixed), and Ps. 5.50 to Ps. 6 for barley.

Flour.—£T10¼ to £T10⅞ American, sacks of 72 kilo; £T12 to £T12½ native, sacks of 63 kilo.

AYAHS' HOME,

NEW COMPANIES.

Levant Company (Sudan).

The Levant Company (Sudan), Ltd., was registered as a private company on November 19, with a capital of £50,000 in £1 shares. The objects are to take over the whole or any part of the business, property, assets and liabilities of Blagden and Co., of Khartoum, Sudan, and to carry on the business of brokers, merchants, and commission agents, buyers and sellers of goods of all kinds, exporters and importers of the same from and into the Sudan and elsewhere, etc., and to enter into an agreement between H. R. C. Blagden of the one part and the Levant Company, Ltd. (on behalf of this company), of the other part. The subscribers (each with one share) are: T. F. Scourfield, 76, De Vere Gardens, Ilford, Essex, solicitor's clerk; E. J. Jackson, 78, Prince George's Avenue, Raynes Park, S.W.19, solicitor's clerk; S. A. Boyd, 2, Grange Villas, Carew Road, Mitcham, Surrey, solicitor's clerk. The first directors are to be appointed by the subscribers. Qualification, £100. Solicitors: Norton, Rose, Barrington and Co., 57½, Old Broad Street, E.C.

Burma Shan Company.

The Burma Shan Company, Ltd., was registered as a private company on November 21, with a capital of £10,000 in £1 shares. Objects: To acquire any landed property, estates, plantation, forest and other rights in Burma, India, or elsewhere, and to carry on the business of growers, planters, producers, and sellers of and dealers in tea, coffee, cotton, flax, cereals, grain, tobacco, rubber, sessamin, sugar, rice, cinchona, padi, fruit, pepper, silk, bone or other artificial manure, and agricultural and other products, etc., and to enter into an agreement with J. H. Thurston and Sir James G. Scott. The subscribers (each with one share) are: J. H. Thurston, 3, Tokenhouse Buildings, E.C., stockbroker; J. E. Tomkinson, 43, Threadneedle Street, E.C., stockbroker. The first directors are: Sir James G. Scott, K.C.I.E., J. E. Tomkinson, and J. H. Thurston. Solicitors: Benham, Barret, Synnott and Wade, Suffolk House, E.C.

Palestine Oil Industry.

The Palestine Oil Industry "Shemen," Ltd., was registered on November 18 with a capital of £250,000 in £1 shares, to cultivate, manufacture, import, export and deal in all kinds of oil and fat, to engage in the production thereof in Palestine, Syria, the Hejaz and elsewhere; to utilise a process covered by Turkish patents 1869 of February 25, 1911, and March 8, 1911; and to acquire from Ilia Paenson and Mose Wilbushewich an exclusive license to use within the vilayets of Damascus and Beyrout and the mutesseraflik of Jerusalem the patent process and apparatus for converting fatty acids, fats, oils, fish oils and waxes into bodies of higher melting point by the contact method; to acquire and turn to account oil wells and deposits, to produce by electro-chemical or other process hydrogen, chlorine and soda, etc. The subscribers are:—Ilia Paenson, 71, Jermyn Street, S.W., merchant; Mose Wilbushewich, 71, Jermyn Street, S.W., merchant; Hertz Handelman, 21, Albert Hall Mansions, W., merchant: Moisei Skidelsky, 27, Holborn, E.C., merchant; Paul Lindenberg, 16, Fawley Road, West Hampstead, merchant; Simon Milch, 71, Jermyn Street, S.W., merchant; Mrs. Noemi Snowman, 71, Brondesbury Road, N.W.6.

Minimum cash subscription £25,000. The first directors are:—Ilia Paenson (commercial director) and Mose Wilbushewich (technical director). A third director is to be nominated by the "working associates" of the company. The qualification of such "working associate" director is 10 shares; of other directors 5,000 shares. A "working associate" is defined as meaning "any worker, employee or official in the service of the company." All working associates are to be engaged or discharged with the consent of the three directors and are to have a share in the profits in order that each working associate, whatever his work or position, may regard himself as a partner in the entire concern, the fundamental principle of the company being that every working associate devotes his whole energy and knowledge to the furtherance of the interests of the company. The share in the profits is to be a remuneration apart from the regular wages or salary. After payment of 6 per cent. dividend on the shares the balance of net profits is to be distributed as follows:—(a) 20 per cent, among the working associates; (b) 25 per cent. for the formation of a special reserve fund for extending the business; (c) 5 per cent. for the foundation of a provident, widows and orphan fund; (d) 10 per cent. among the directors and members of the advisory board, if any; (e) final balance among the shareholders. Registered office: 24, Holborn, E.C.

Rangoon Trust and Investment.

The Rangoon Trust and Investment Company, Ltd., was registered as a private company on November 15, with a capital of £1,000, in 975 Ordinary shares of £1 each and 1,000 Founders' shares of 6d. each. Objects: To acquire, work and turn to account tea, rubber, cinchona, copra and timber estates, mines, minerals, oils, mining rights, etc. The subscribers (each with one share) are:—T. Pringle, 58, Chancery Lane, W.C., merchant; J. D. Robertson, 4, Roskell Road, Putney, S.W.15, merchant. The first directors are: J. D. Robertson, T. Pringle and P. W. Tolhurst, Glen View, Gravesend. J. D. Robertson is managing director for life. Solicitors: C. Nordon and Company, 56, Moorgate Street, E.C.

Serbian Exploration Syndicate.

The Serbian Exploration Syndicate, Ltd., was registered as a private company on November 12 with a capital of £8,000 in £1 shares. Objects: To acquire freehold and other farms, properties, mines, lands and mineral properties, and to carry on the business of prospectors, explorers, miners, etc. The subscribers (each with 100 shares) are: J. E. H. Lomas, 32 Great St. Helens, E.C., M.I.M.E.; J. W. Davie, 3, Throgmorton Avenue, E.C., member of the Stock Exchange. The first directors are: J. E. H. Lomas and N. C. Stines: Registered office: 32, Great St. Helens, E.C.

The London Jewish Correspondence Bureau reports that a Jewish bank, with the name "Bank Palestinian," has been founded in Constantinople.

The Board of Trade are in receipt of information from H.M. Agent and Consul-General, Tangier, to the effect that the importation of all German goods into the French zone of Morocco is for the present prohibited.

COMPANY RESULTS, Etc.

The directors of the Indian and General Investment Trust have declared interim dividends for the six months ended October 31 last on the preferred stock at the rate of 5 per cent. per annum, and on the deferred stock at the rate of 8 per cent. per annum, payable on December 12.

Mysoro Gold Mining.—An extraordinary general meeting will be held at Cannon Street Hotel, E.C., on December 4, at 12.30 p.m., for the purpose of considering the following resolution:—"That the capital of the company be increased to £610,000 by the creation and issue of 610,000 additional shares of 10s. each to rank for dividend in respect of profits accruing as from January 1, 1920."

A meeting of the bondholders of the Privileged Company to Protect Production and Trade in Currants will be held at Winchester House, Old Broad Street, E.C.2, on December 5, for the purpose of appointing a new trustee in the place of Mr. T. A. Burlumi, deceased. Bondholders in order to be present and vote at this meeting must either produce their bonds at the meeting or can deposit them beforehand at the offices of the company or of the Bank of Athens, in Greece, or of Messrs. Erlangers, 8, Crosby Square, London, E.C.3, in exchange for voting tickets.

The directors of the Lanka Plantations recommend a dividend on the ordinary shares of 10 per cent. less tax at 6s. in £, payable on December 10.

A new branch of the London County and Westminster Bank (Paris) Ltd., has been opened at Nantes (6 Rue Lafayette).

The traffic receipts of the Smyrna-Aidin Railway for the week ended November 1 amounted to £10,244.

An economic agreement has been concluded between Roumania and Serbia by which the former is to furnish benzine and mineral oil in return for tannic acid, says the *Deutsche Levante-Zeitung*.

It is reported that a bank has been established in Neusatz under the title Wozewodschaftsbank, which will deal with the import and sale of foodstuffs and with the grain trade in the Banat, in addition to banking business.

According to the *Deutsche Levante-Zeitung*, the Greek Government proposes to construct a railway line or a direct canal from the Danube to Salonika, or a canal embracing sections of the Danube, the Save, the Morava, and the Vardar, in order to facilitate the transit of Roumanian and Yugoslav goods to Salonika.

H.M. Ambassador in Paris reports that a statement has appeared in *La Vie Financière* to the effect that a syndicate is being constituted with a capital of 100,000 francs for the purpose of examining the question of erecting works in Roumania for the manufacture and repair of railway rolling stock. British firms interested in this matter are invited to apply to the Department of Overseas Trade, 4, Queen Anne's Gate Buildings, Westminster, S.W.1, for the names of the firms promoting the syndicate.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

Egyptian descriptions, with the exception of Government Bonds, have been generally in demand this week, and particularly to-day there has been a good rush of buying orders from Egypt, and in many instances some substantial gains in prices are to be recorded. The firm stand taken by Lord Allenby and the tremendous prosperity of the country are no doubt responsible for the present wave of buying.

In Government Stocks Egyptian Unifieds are about ¾ lower at 75¾, on some rather large selling orders; but the 3½ per cent. preference is only ¼ lower at 63¼.

Amongst Bank shares, National Banks have been in persistent demand, and are closing 5-16 up at 20½.

Anglo-Egyptian Banks have recovered ¼ at 17¾, but, exceptionally, Agriculturals are ⅛ down at 5⅝.

In Railways there is nothing new to report; but there is some quiet demand for Delta Light Preference from Egypt at somewhat under the current quotation.

In Land Shares Aboukirs are 2s. higher at 31s. 6d.; Béhéras have advanced ⅜ to 14⅞; Delta Lands, on a sudden demand, have jumped up ⅓ to 14s. 3d. Foreign Trusts are 6d. harder at 14s. 6d., and Gharbieh Land have put on ⅛ at 2⅜. The feature, however, has been the very large buying during the past couple of days of New Egyptians, which are closing 4s. 6d. higher to-night at 27s. 6d. Sidi Salems are 3-16 up at 2 7-16, and Union Foncières have been persistently inquired for from Egypt, and are closing ½ up at 4⅜.

In Miscellaneous descriptions Egyptian Markets have improved 1s. to 23s. 6d., and Salts and Soda have jumped up 7-32 to £3.

Amongst Greek Securities the 1881 and 1884 Loans have continued weakish, and are both 1½ points down at 62½. Monopolies and 1902 Loans have remained firm with buyers preponderating. The 1890 Loan has dropped a point to 63. The 1914 Loan, after being up to nearly 70, is closing only ½ higher than last week at 68½. Bank of Athens shares have improved ⅛ to 3¼.

In Oil shares Anglo-Egyptian B, after rising rapidly to 5⅜, relapsed again to 5 1-16, and closed 1-16 better at 5¼. Roumanians have dropped 1s. 9d. to 24s. 6d.

NOTES OF THE WEEK.

The wranglings between the Supreme Council in Paris and Roumania are as unedifying as the proceedings of the Divorce Court. As so often is the case with regard to the latter, mistakes have been made by both parties. The Supreme Council has forfeited much of the prestige with which it was originally clothed, by mishandling through ignorance or lack of courage nearly every phase of the Near Eastern Question. When the mischief has been done, it desires to rehabilitate itself in the eyes of the world, and is not meeting with signal success. Its difficulty is still mainly its own ignorance. It requires the Roumanian Government to make up its mind, ignoring the actual position, which is either that there is not a Roumanian Government or that, if there is, it has no mind of its own, or that if it had, it would not know it. In the meantime the Supreme Council is becoming more and more anxious to be rid of a bad job, and the breach between it and Roumania widens.

In the interest of the peace of Europe it would seem to be a wiser policy to appreciate the facts of the situation in Roumania, for which the Paris Conference is largely to blame, and to allow the country its own time to find itself. Thirteen Notes and one special envoy have been sent from Paris to Bucharest in the last three months, and the Supreme Council pathetically complains that the only reply that it has received has been "negative in facts." But all this time Roumania has been in the throes of Ministerial crises hingeing on her relations with the Supreme Council. The more she is pressed to fall into line with the wishes of Paris the more difficult does any final solution of her domestic troubles become. Another Note has now been sent to Bucharest, granting "a further and last delay" of six days to Roumania. But its arrival coincides with the resignation of the temporary Ministry appointed to carry out the elections, and the political situation in the country is of necessity chaotic. It would seem as if the most dignified course for the Supreme Council to adopt would be to give Roumania six months instead of six days in which to regulate her complicated affairs, and to ask for a definitive answer at the end of that period.

M. Venizelos has returned to Greece, and the brief report of the speech that he made on his arrival suggests a strong resolve to lose no time in grappling with the problems that have arisen during his long absence. Only the future can show which of the two policies in regard to Thrace will make for the lasting peace of the Balkans; these policies are to hand it over to Greece because Greek traders can never be kept away from the coastline, or to leave it Bulgarian on the strength of its past history and in keeping with sound economic doctrines. M. Venizelos, it is interesting to note, does not take seriously the alleged insistence of the Supreme Council upon the temporary nature of the Greek occupation of Smyrna. From the fact that Greece had been invited to occupy certain districts of Asia Minor, he said, it is evident that the Council has already decided that the territory of Smyrna should be ultimately assigned to Greece. But, the Greek Prime Minister was careful to add, the successes obtained impose upon Greece corresponding duties; and the first condition is to give the country a good and efficient administration. He promised to undertake radical and systematic reforms immediately after the signature of peace with Turkey, "when all national questions will be finally solved."

The Yugoslav delegates in Paris did not sign the Treaty of St. Germain on November 27. The reason given semi-officially for their abstention was that, by an annexe, it was proposed that the indemnities due to Serbia should be offset by the debts due from the new districts of the Triune Kingdom, and this arrangement was disapproved by the Yugoslavs. Possibly as a result of this fresh hitch, the Prince Regent deemed it advisable to go to Paris himself; and, accompanied by two of his Ministers, he arrived on Monday in the French capital, where it is to be hoped his presence will remove the impression—which appears to have been gaining ground in some quarters of late—that Yugoslavia is not inclined to show such an accommodating spirit as her big Allies would like to see.

In any case, it is fortunate that Prince Alexander should be on the spot, to refute the accusations levelled against Serbians of looting in a very thorough manner in the neighbourhood of Pecs before evacuating it. The district is reported to be "consequently threatened with famine and disaster." Such charges are so easily brought, and those responsible for bringing them so often show such a fine capacity for the manufacture of corroborative detail, that it is satisfactory to learn that in this case an Entente mission left on Monday for Pecs to investigate the charges. Meanwhile Prince Alexander will doubtless have no difficulty in putting the matter in a true light in Paris.

The situation in regard to Fiume and the Adriatic remains much as it was last week. D'Annunzio's "navy" has shown a certain liveliness, which has given rise to great excitement and a good deal of speculation. So far, however, this has not led to any happening of importance; though the Yugoslavs have sent a force to Spalato as a precautionary measure. The Italian Government is reported to have informed the Yugoslav Government that it intends to abide by the decision of the Peace Conference regarding Dalmatia and it will itself oppose any attempt on D'Annunzio's part to attack Spalato. Unfortunately, so long as the poet is allowed to continue playing with fire it is difficult to believe that Rome is both able and willing to arrest all chance of a serious conflagration breaking out.

As was to be expected, the new Egyptian Ministry has come in for abuse of the most violent kind from the Extremists. It has stood its ground, however, and the Prime Minister and his colleagues remain unmoved by the threats which reach them from various quarters. Unfortunately, the rage to which the Nationalists appear to have given themselves up at this fresh indication that they are not to be allowed to have their own way has led to several grave incidents. British officers and British soldiers have been fired at repeatedly in the streets, with the result that several have been wounded and at least one has been killed. In one case, it is satisfactory to learn, a gang of natives who were attempting to ambush soldiers were themselves surprised and arrested. A proclamation has been issued prohibiting the carrying of firearms.

Lord Allenby—who paid a flying visit to Beyrout, to meet General Gouraud—returned to Cairo on November 28, and is handling the situation with great firmness. The fact that he has not hesitated to arrest two sheikhs of El Azhar on a charge of sedition shows that he is determined to bring matters to a head. It is regrettable that the famous university should be used by some of the agitators as a meeting-place, and should have come to be regarded by them, quite erroneously, as a kind of sanctuary. The best Moslem opinion has already shown that it will have nothing to do with sedition or violence; and right-minded Moslems throughout the world will rejoice that sedition-mongers and stirrers-up of strife should be arrested wherever they may be found.

A *communiqué* issued by the War Office recently announced that pilgrim traffic from Tabriz to Baghdad has begun to pass through Suliemania for the first time for many years, and that over 500 pilgrims passed through the town in the week ended October 25. This is gratifying intelligence, and as the *communiqué* remarks, it "bodes well for the future tranquillity of Southern Kurdistan." Nevertheless, it would be well not to build hopes too high on this foundation. The Kurds, even the Southern Kurds, are unlikely to lay aside their racial characteristics and customs all at once, and it is to be feared that the tranquillity of Southern Kurdistan may yet be troubled not a little before it becomes perfect. It is a well-known device in the Near East to allow a pilgrim route or a trade road a certain period of quietness and freedom from brigandage in order to prevent its falling into disuse.

The Mission sent to this country by the Emir of Riadh, Ibn Saud, concluded its visit last week, and left on Friday for the Continent, where the young Sheikh Faisal and his companions are visiting the European battlefields before returning to their home. The Arabs are accustomed to great spaces and to fighting over large areas; but when they are left to themselves their fighting is of a very different character from that which the European battlefields witnessed so recently; and the visit to the "fronts" of yesterday will surely make a deep impression upon men of a race in which imagination is always strongly developed. Sheikh Faisal and his companions will therefore take back with them to the Nejd memories which, passed on from town to town and camp to camp, may help the home-staying Arabs to a better sense of proportion than that which usually marks the desert dweller. If that should prove to be the case, Arabia will have taken a considerable step forward.

Such an effect, however, would be only incidental. The Mission came here, not to study the West, but to congratulate the King upon the Allied victories and to make known Ibn Saud's views regarding certain boundary questions and other kindred topics; and it is satisfactory to believe that, while it may not have achieved all that it aimed at—Oriental Missions seldom do that!—it will undoubtedly have served a most useful purpose. It will have made the actual situation in Arabia clearer to those in this country whose duty it is to study the increasingly important problem presented by that interesting country; and the members of the Mission will have been able—nay, compelled—themselves to look at the case from a fresh, and doubtless more detached, viewpoint than that of Riadh. On the whole, however, the gain has probably been on our side. There was not long ago a tendency, natural enough in the circumstances, no doubt, to regard the Hejaz as all-important, and to conclude that King Hussein would very soon be ruling over a united Arabia extending from Aleppo to Oman and from Aden to Mosul. To-day the facts are better understood, and though we all hope for a united Arabia we hardly expect to see it united in the near future under one ruler.

If the principal Emirs, Sheikhs, and other rulers will only unite to protect their lands from foreign aggression, a good foundation will be laid for the reconstruction of an Arab Empire more splendid and much more lasting than that of the Middle Ages. Ahmed Ibn Thunaiyan, the political adviser to the Central Arabian Mission, pointed out that in August last Ibn Saud displayed great moderation in not advancing on Mecca after inflicting a heavy defeat upon King Hussein's forces. Such moderation is not unknown in Arab warfare, from which the spirit of chivalry has not yet fled; but it is rare indeed. Its exercise by Ibn Saud in the circumstances actually existing at the time affords a happy augury for the future; but it would be unwise to trust too much to the repetition of such incidents. Clearly defined boundaries—and equally clearly defined penalties for trespass—are badly wanted in Arabia, and Great Britain ought to be interested in seeing that they are provided.

So far at least as England is concerned the members of the Indian Joint Committee have no cause to complain of the reception given to their Report. It has not, of course, produced any sudden change of heart among the convinced opponents of dyarchy, but even the stalwarts of the Press are inclined to admit that the Reform Bill has been improved in details, though they still condemn it in the lump, while journals already committed to the principle make a similar recognition in much more cordial terms. So far as we can gather, the attitude of the Press reproduces faithfully that of the community; neither the Right nor the Left has changed position, but in the Centre there is a perceptible drift of opinion towards the scheme as now formulated, and a tendency to agree that dyarchy may prove to be more workable than seemed possible at first.

Our Indian visitors have not been dilatory in announcing their conclusions in regard to the Committee's work. The Extremists were, as usual, first in the field with a declaration of their profound disappointment, but the Moderates were scarcely less prompt in recognising that, despite certain shortcomings, the scheme meets the immediate necessities of the situation, while Mrs. Besant, in her latest *avatar*, dealt faithfully with the claim of the former party to speak in the name of India. It almost looks as if the first elections under the new constitution might be fought on something like a clear-cut issue, between those who will hear of nothing but Abana and Pharpar, and those who think Jordan will suffice for the time

Digitized by Google

being; but, however that may be, there is little doubt that the unanimity of opposition, which was such an unfortunate by-product of the Morley-Minto Councils, is steadily disintegrating, and that India is getting nearer to the stage in which concrete measures are realities, to be weighed on their merits, not summarily condemned on the ground that they are tainted at the source.

One of the most interesting utterances called forth by the Joint Committee's Report was the statement in which Sir Thomas Holland appealed to the members of the Indian Services to stick to their posts, and bring the new constitution into being with the same degree of efficiency which has characterised their work for the last century and more. Such an appeal was worth making, and Sir Thomas gave several excellent grounds, but we do not think he strengthened his case by referring to his own example "in re-enlisting, after enjoying for some years the profitable advantage of freedom from official harness." Sir Thomas, of course, is going out to one of the highest posts in the Government of India, which for some time to come will be little affected by the proposed changes; the men to whom he appeals will in most cases be under the dyarchy, while he will be above it, or, in the words of the old fable, they will be "the toads beneath the harrow," and he will be "the butterfly upon the road." Apart from that small criticism, we can unreservedly welcome his appeal, and we take the opportunity of wishing him every success in his arduous task of organising the new Department of Industries, from which all friends of India expect so much.

The impending reconstruction of the India Office is to be carried out by a new Permanent Chief, Sir Thomas Holderness having decided to retire when the Government of India Bill becomes law. It was widely known that Sir James Meston, or to give him his new title, Lord Meston of Agra and Dunottar, had been designated for this post, and now that he has been prevented from taking it up, there is no very obvious candidate before the public. The special circumstances of the moment call for someone very different from the ordinary Departmental Head, for it is reconstruction and not merely readjustment which is wanted, and we trust that Mr. Montagu will not hesitate to go far afield, if that course is necessary, in order to secure the somewhat rare combination of freshness of mind with long practical experience. The task of reconstruction will be rendered all the more difficult by the premature death of Sir Lionel Abrahams, the Assistant Under-Secretary of State, who has been known for some years as the strong man of the India Office, and who possessed an almost unequalled knowledge of the complicated system of Indian finance.

THE WEEK AT HOME.

The Prince Returns.

The Prince of Wales returned to London from his American tour on Monday. It was a day of depressing fog and gloom, and Victoria Station wore an aspect of almost Stygian darkness, but those Londoners who braved the climate gave the Prince the heartiest of welcomes. A good many public functions await his return, but it is generally understood that his stay in England is not indefinite, and that after a few months he will proceed on a trip to Australia, possibly taking in South Africa or India, or both, on his way out or home.

Until last year the Prince was practically unknown to Londoners, who remembered him as a rather shy boy before the war, and had forgotten that four years of active service made as much difference to him as to other young men. In a few months he has become a well-known and popular figure, who has added to the proverbial Royal gift for saying the right thing the somewhat rare gift of saying it in a striking and unusual manner. He appears to possess a marked individuality of his own; and Londoners, who regard the King as belonging to the whole Empire but are inclined to look on a Prince of Wales as their own particular property, are not sorry to have him back again.

Lady Astor, M.P.

A woman has taken her seat as a member of the House of Commons. Lady Astor was elected for Plymouth by a large majority on Friday, and on Monday afternoon she was introduced to the Speaker by Mr. Lloyd George and Mr. Balfour; an hour or so later she recorded her first vote, which happened to be on a financial question. The newspapers naturally gave long descriptions of the event, and some of them were unkind enough to hunt up the prophecies which distinguished people have made on the subject, from John Stuart Mill, who said that women should have votes but not sit in the House, to Mr. Asquith, who viewed even the prospect of women as voters with horror and apprehension; what he would have said to the prospect of a woman member it is impossible to imagine.

The heavens, however, as one of the picturesque reporters in the Press Gallery observed, have not fallen—they so seldom do. Women members are really less of a revolution than women voters, because nobody believes that we are likely to have many women in Parliament, whereas the woman's vote is strong and can be decisive in almost every constituency; even the general abstention of women from voting in a by-election would probably turn the scale. Lady Astor's return was due to exceptional causes, her own popularity and her husband's long connection with Plymouth as member telling strongly in her favour; but it was the general experience at the general election last December that women would not vote for women candidates. Certainly none of those who stood for English constituencies came anywhere near the top of the poll.

The quidnuncs and party managers, as a matter of fact, are still uncertain as to the ultimate effect of "Votes for Women." The theory that women are naturally conservative and will therefore always vote for the Conservative candidate is strongly held in Liberal circles, which are preternaturally gloomy at the moment; if that is so, the position of official Liberalism, which split again on policy at the Birmingham Conference last week, seems indeed desperate. On the other hand, the Labour organisers believe that the woman's vote can always be secured by a forward policy in matters of housing, sanitation, and other domestic matters, and that this will give them their best chance of getting a majority. They can quote the experience of all woman suffrage countries in support of their views.

Premium Bonds.

The House of Commons has rejected the idea of Premium Bonds. It was supported by Lord Northcliffe and Mr. Bottomley, but the Church and the bankers were both against it, and the Treasury never believed in the project. It is unlikely that anything

Digitized by Google

more will be heard of the scheme, and preparations will probably be made for floating a new Government Loan to clear up the financial position some time in 1920. For the present nobody wants a Government loan. The first quarter of the new year is the distressing period when rates and income-tax demands become due, and local rates have gone up everywhere—in some places they have nearly doubled. So much for the small investor; while the larger industrial interests, which are now floating new issues of several millions every day to extend their business, are particularly averse from the idea of a Government loan competing with new industrial securities at the present moment. There has never been a time when commercial enterprise was so active, and it is understood that the present outburst of industrial issues is not likely to subside for some months. That there is no shortage of money in the country is proved by the fact that most of the new issues are well subscribed, and some have been considerably over-applied for.

"England for Sale."

The estate market is running the Stock Exchange close in these days, and the auctioneers appear to have the greater part of the country under the hammer. Fortunately it is changing hands at an increased price, so that any German professor who argues that England is bankrupt because most English estates are for sale is drawing a wrong conclusion. Partly it is the result of four years' cessation of property sales, and partly it is due to the great transfer of wealth effected by the war. The largest transaction in view at the moment is the town of Weymouth, which is shortly to be offered for sale. Probably anybody who wished to buy this prosperous town as a going concern would be able to do so, if his bank account permitted; but it is expected that it will mostly be purchased in small lots by the inhabitants. Heavy taxation and the difficulties of landlords are making it more and more usual for people to buy instead of renting their houses, and political economists hold that the tendency is on the whole a healthy one.

Einstein's Joke.

Professor Einstein has now explained his theory of relativity in *The Times*, and there are those who say that they understand the explanation; while Sir Oliver Lodge has descended from the investigation of spiritualism and the contemplation of astral bodies to discuss the whole subject in the *Nineteenth Century*. But it is a relief to find that the Professor can make a joke as well as shatter our conception of the universe. He remarks that he furnishes an example of relativity in his own person, for while the English newspapers describe him as a Swiss Jew the German journals call him a German man of science. As to his actual nationality he keeps silence.

The Labour General Staff.

An important development of Labour policy is indicated by a preliminary announcement made this week. It was notorious that during the railway strike the Triple Alliance of railwaymen, miners, and transport workers did not see altogether eye to eye on strategical policy, and it was suggested that the leaders of these great bodies so far shared the weakness of ordinary mortals as to show a certain jealousy of each other. The imputation was denied with an excess of warmth that implied a certain amount of truth in the allegation, but the Labour leaders have now repaired an undoubted weakness in their tactics. Something in the nature of a general staff is to be introduced, which will consider Labour policy as a whole, from the rates of wages and hours to "national programmes" and such weighty matters as nationalisation and a share in the control of industry—the latter already conceded as a principle on the railways.

In addition to this another lesson of the war has been learnt, and Labour is to have its own propaganda department. This will presumably seek publicity for its views in the magazines and daily Press, both by means of articles and advertisements, and possibly by the publication of pamphlets and books. The leaders express themselves as dissatisfied with the comments of the daily Press on their activities and policy, and they are desirous of creating a better "atmosphere" for their work. The value of propaganda depends, of course, entirely on the way in which it is done, and the average Englishman is not particularly easy to persuade. The task before the Labour publicists is therefore not a light one, and there will be general interest to see how they set about it. Some curious developments should result.

New Books.

The past week has been rather a heavy one in the book world. Mr. Hugh Elliot, who will be remembered as the author of a life of Herbert Spencer and a critical opponent of the Bergson philosophy, has published a work on materialism, in which he takes up a wholly monistic attitude, doubts the existence of any purpose in the universe, and wholly endorses the mechanistic and determinist view of life; incidentally he dismisses the hope of immortality as a mere by-product of the struggle for existence. His tone throughout is rather harsh and unsympathetic, and his literary style, like his doctrine, reminds one strongly of Hæckel, the Prussian professor, whose "Riddle of the Universe" was popular in rationalist circles a few years ago.

On the other hand, Mr. C. A. Richardson has produced a book reaffirming the doctrine of spiritual pluralism, contraverting Mr. Bertrand Russell directly and Mr. Hugh Elliot indirectly. He is excessively difficult to follow in many parts of his argument, but he deals at some length with the problem of immortality, which he answers rather hesitatingly and vaguely in the affirmative, and he gives an interesting analysis of those abnormal phenomena in which spiritualism abounds. This is apparently only an introduction to a more ambitious work in course of preparation, in which he proposes to elucidate "the nature of the concrete universal principle of entity" to the limited audience that survives the present essay.

Less heroic readers will probably find themselves more at ease with Mr. E. T. Raymond's new series of character sketches of men of the world. His first volume, "Uncensored Celebrities," made a good deal of noise early in the year, but he by no means exhausted the list of possible and permanent victims last spring, and the new series quite maintains the vivacity of its predecessor.

Another work which has just been issued is the "Collected Poems" of Thomas Hardy. These are not new—unfortunately we can no longer look for anything new from the greatest living master of English literature at his advanced age—but there is a convenience in having collected under one cover the verses which have been scattered through several volumes for half-a-century. Mr. Hardy's philosophy is too stern for him ever to be a popular poet—a fate which he would probably detest—but much of his poetry will live as long as his novels, which is to say that both will last as long as the English language.

Journalistic Novelties.

The present autumn has been noteworthy for the birth of a large number of new weekly journals, mostly of the lighter kind. Whether there is a public for them remains to be seen, but it is the fact that many struggling sheets went out of existence under the stress of war, although some of them changed proprietors, and one of the oldest critical journals, the *Saturday Review*, regained its old brilliancy in the process. There are still rumours of a new daily newspaper, to be run in the Liberal interest in London, but these statements can usually be discounted, and they are less likely to be true now than a year ago. The *Daily News*, which tended towards Labour under its late editor, is now steadily assuming a more Liberal complexion, and the *Globe*, which was strongly Tory for half a century—its previous half-century of Whig convictions is generally forgotten—is now apparently firm in the Liberal fold, after many vicissitudes of fortune. It has the rather dubious honour of having been the only English newspaper of the front rank which was suppressed for a short time during the war, not on account of its opinions, but because of a misstatement of fact.

OCELLUS.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, November 18.

Lord Allenby's Proclamation.

November 15, 1919, should constitute a milestone in the annals of Modern Egypt; for on that day Viscount Allenby issued the following declaration on behalf of H. B. M.'s Government:—

The policy of Great Britain in Egypt is to preserve autonomy in that country under British protection, and to develop the system of self-government under an Egyptian ruler. The object of Great Britain is to defend Egypt against all external danger and the interference of any foreign Power, and at the same time to establish a constitutional system, in which—under British guidance, as far as may be necessary—the Sultan, his Ministers, and the elected representatives of the people may, in their several spheres and in an increasing degree, co-operate in the management of Egyptian affairs. His Majesty's Government has decided to send to Egypt a Mission, which has as its task to work out the details of a constitution to carry out this object, and, in consultation with the Sultan, his Ministers, and representative Egyptians, to undertake the preliminary work which is requisite before the future form of government can be settled. It is not the function of the Mission to impose a Constitution on Egypt; its duty is to explore the ground; to discuss, in consultation with the authorities on the spot, the reforms that are necessary; and to propose, it is hoped in complete agreement with the Sultan and his Ministers, a scheme of Government which can subsequently be put into force.

This declaration has certainly relieved the tension which has been manifest for some time now, not only in the British and European colonies but also amongst those Egyptians who have not been carried away by the extravagant ideas spread abroad by Zaghlul and his associates. Many had begun to fear that the agitation which those "patriots" have been conducting for the past year might not be without its effect on the Home Government, and that the latter might be persuaded to shelve the Milner Mission and adopt a line of action which, in the opinion of those on the spot, could not fail to react prejudicially not only on British prestige but also on the future of Egypt. Fortunately those premonitions have not been realised, and there can be no gainsaying that as a result of this declaration the situation has become very much more clear and definite.

Apart from the re-affirmation of Egypt's status, we now have for the first time a definition of what British policy in regard to this country is—and in this respect both the Foreign Office and Lord Allenby are to be congratulated. We have a pronouncement that "British Protection" means not only the protection of Egypt's integrity, but also the establishment of a constitutional system of government in which, under British guidance and in accordance with the traditions of the Empire, the people can co-operate in an increasing degree in the management of their own affairs; and we have a declaration that the much-hated Mission is coming out not to judge but to advise, and that its sole task is to work out the details of such a constitution in consultation with the Egyptians themselves.

Satisfactory Results.

Nothing can be more satisfactory than this declaration; for it goes a very long way to clear up serious points of obscurity or misinterpretation which have served as capital for the Extremists' campaign, and it defines in a manner that should be acceptable to all instructed and reasonable Egyptians the relative positions which they and the British authorities may be expected to hold in regard to the future administration of the country. In the circumstances it has afforded a unique opportunity for Egyptians placed in high authority to come forward and, by courageously recognising the very liberal promises for the future development of Egypt contained in the declaration, and by accepting the obviously inevitable situation, to give the required lead to the large body of moderates who have been waiting for something tangible around which they could rally, so as to give practical expression to the opinions which they profess to hold, but which they have had to suppress owing to the campaign of intimidation so successfully carried on by the Extremists.

Obviously a cabinet is the centre around which a "moderate" opposition of this description could most advantageously group itself so as to fight the Extremists and stop the mad race towards anarchy which those self-interested people have set in motion. Unfortunately, no such lead has as yet been afforded them, and the publication of the declaration was almost immediately followed by the resignation of the Prime Minister and his colleagues. Said Pasha paid a flying visit to Cairo on Friday, when Lord Allenby communicated to him the declaration, the contents of which had already been made known to the Sultan, when Lord Allenby saw him on his arrival at Alexandria on the previous Monday. The Prime Minister returned at once to Alexandria, had an audience of the Sultan, and next morning, after a long Cabinet meeting, presented the resignation of himself and his colleagues.

Said Pasha's action was, it must be admitted, the logical sequence of the statement made by him in the course of the interview reported in my letter of October 23. But, although it was expected that in the event of the Milner Mission coming out he might find himself forced to carry out his implied threat, there was still a hope that he would be persuaded to regard continuance in office as a patriotic duty.

The Sultan returned hurriedly yesterday, one day before the date officially fixed for his departure from Alexandria—and to-day, after an interview between him and the High Commissioner, it was decided to accept the resignation of the Cabinet. Is is sincerely to be hoped, in the interest of the country itself that there will speedily be found amongst the moderates some sufficiently public-spirited and courageous Egyptians to step into the breach in order to pull the country together and enable it to make a first step towards the realisation, within the very liberal limits set by the de-

claration of British policy now made, of the national aspiration for greater control of the nation's own affairs.

The Extremists.

It was perhaps inevitable that the Extremists should not take lying down a decision which was tantamount to an enveloping attack on their position. Already on Thursday an attempt had been made to stimulate public excitement by celebrating the anniversary of the presentation by Zaghlul Pasha to Sir Reginald Wingate of the country's demand for Independence. In connection with this the students absented themselves from the schools, and the Government, as a consequence, closed them for a week. The sudden visit of Said Pasha to Cairo on the Friday gave rise to rumours of his resignation, which naturally added to the excitement; and on Saturday throughout the day there were minor demonstrations. Sunday, however, things became much more serious, and it was evident that the Extremists had managed to a certain extent to complete their organisation.

From early morning groups of schoolboys paraded the streets shouting the usual catchwords, including this time, in English, "Down with Milner," "God curse Milner.' About noon, the Sultan having arrived and taken up his quarters in Abdin Palace, a large crowd, composed for the most part of roughs, made its way on to the Abdin Square in order to demonstrate. The police tried to stop it, and for their pains were freely stoned. Whilst efforts were being made to disperse this crowd another, composed mainly of students, started to enter the Square from another side. The police tried their best to turn it back, but were again stoned, and the police guard had to open fire. Eventually Egyptian troops had to be requisitioned to clear the Square.

Mob and Military.

A little later the mob, which in the meantime had become very angry, tried to get back to the Square. It attacked the Musky Caracol, where it drove in the police. Ejected from there, it proceeded to the Abdin Caracol, which it literally besieged. Some of the mob entered the station and smashed the windows and broke up the desks, while others seized a motor lorry standing outside and set fire to it, as also to part of the police station. The Egyptian troops proved quite unequal to the task of quelling the disturbance, and British troops had to be called in. They quickly drove the mob away from the Caracol, and so released the Egyptian police imprisoned there. They then cleared the Square with sticks, but at several points were attacked so seriously by the mob that they had to fire to extricate themselves. Numerous casualties naturally ensued, but quiet was quickly restored, and the Egyptian troops were left in charge of Abdin Square, detachments of British troops remaining at the Caracols and patrolling the streets throughout the night.

The firm action of the authorities seems to have had a good effect, for to-day there have been no further disorders, and the funeral of yesterday's victims, which, seven months ago would have been made the occasion of fanatical demonstrations, took place this afternoon without any incident beyond the shouting of the students who followed the procession.

There have been similar troubles in Alexandria, where also the troops have had to be called in, but so far the provinces have aroused no anxiety. There is, indeed, reason to believe that if the authorities maintain the firm attitude which they took up yesterday, troubles such as these will speedily stop; for it is noteworthy that those participating this week consisted mostly of students and rabble, and that the better-class Egyptians have abstained from any outward participation. In other words, both in Alexandria and Cairo, it is the mob which has caused the trouble; and, that being the case, firm action, such as was taken yesterday, will speedily bring it to its senses and remove from it any desire to act as the catspaw of the political element.

YUGOSLAVIA.

BELGRADE, November 24.

The Adriatic problem is looming very large in the public eye, and causing great anxiety. D'Annunzio's theatrical blow at Fiume, even if it finally ends in smoke, has caused widespread trouble and inconvenience by virtually blockading the country, which is in the unenviable position of having a population of some thirteen millions, spread over an extensive area, with a lengthy seaboard, in great need of imports, but with no port; for the two natural inlets, Fiume for the lands north of the Save, and Salonika, for Old Serbia, are in foreign territory. And now the papers are full of d'Annunzio's attack on Zadar, with rumours and threats of an organised attack on Shebenik (Sebenico), even Splijet (Spalato), built on the ruins of Diocletian's old palace, and the Bocche di Cattaro and Montenegro. The natives are in the greatest alarm; Splijet is a stronghold of Slavonic thought, and the further south we go the more shadowy become any traces of justifiable claim on Italy's part. The frightened natives have sent an appeal for help to the Government at Belgrade, while they read with dismay the political news from America.

The Belgrade papers have published statements that England is now taking Italy's part, and the people feel that they are deserted by all their friends. Serbs express surprise that when the Germans murdered a French sergeant in Berlin they were compelled to pay a fine of a million marks, but when Italians knifed French troops like sheep in the streets of Fiume no apparent notice was taken of it; and they draw their own conclusions. Now it is stated that the Italian Government is going to proclaim the annexation of Fiume before their new Parliament meets, for fear of Socialist opposition to their Imperialistic policy. They comment that Italy's Imperialism seems to meet with support from the Allies, whereas if Serbia takes the slightest action in furthering her national interests a chorus of reprobation arises in the Press. Perhaps they are hyper-sensitive; but, after all, Italy is the very last Power that should use force to prevent Serbs, Croats, and Slovenes from following her example of two generations ago.

Some amusement was caused by an Italian apologist explaining that while his nation had nothing but friendly feeling for their gallant Serbian allies they could not forget that the Croats had always been their oppressors. Poor Croats! One would have thought that they had been kept too busy, being oppressed themselves by the Magyars, to have any time or energy left to oppress anybody else; though, of course, Croatian troops in the Austrian army did their military duty in wars of bygone years. But any claim that Italy has to Fiume to-day is due to the deliberate policy of Hungary in separating the town from Croatia, and encouraging the Italian element, so as to keep the Croats in a minority. Italian colonies in Soho and New York are more important and numerous than they are in Dalmatia; though the influence of Italian civilisation is admitted.

The scare about the peace treaty has subsided on the publication of the gratifying news that the Conference has recognised the justice of the claims of the S.H.S. The wording of the highly objectionable Minority clause has been modified, excluding the territories which were Serbian in 1912. Though they would have preferred the date to be 1914, the Serbs feel that they

Digitized by Google

cannot grumble. It has been explained that the League of Nations will act judicially, not in individual, but only in collective cases, and that the Minorities will have all the responsibilities of full citizens. The direct encouragement of *komitaji*-ism in Macedonia is thus removed; the suggestion of possible armed intervention on behalf of Minorities is annulled by an alteration in the wording. The question of the boats is more or less satisfactorily solved, in that craft of less than 2,000 tons will be returned to their original owners, and the fate of larger craft will be decided by a special commission. This favourable result is interpreted as a success on the part of Dr. Ante Trumbitch, Minister of Foreign Affairs, and as a rebuff to the Italians, who, incidentally, are openly accused in the Press of having a definite understanding with Bulgaria and also with Roumania in their common anti-Slavonic interests.

On November 15, the Serbian authorities, in the presence of Lt.-Colonel Malin and other French officers, entered Strumnitsa, and formally took possession of the territory from which the British troops drove the Bulgar Army a little over a year ago. Needless to say, both Serbian and Bulgar authorities claim that the entire population is on their side, rejoicing or depressed, immigrating or emigrating, as the case may be. Probably all they care for is a little peaceful life, for a change. "Turkish" until 1912, oppressed by the tax-gatherers, but otherwise little interfered with except by *komitajis* and propaganda-mongers, "Bulgar" for a few years, now under the Serbs, the people have probably but a rather vague sense of nationality; and, judging from conversations with natives of other Macedonian villages, they do not much worry what their official nationality is, provided they can be allowed to till their soil and herd their stock in peace and reasonable security. The anomaly of Bulgaria owning the valley of Strumnitsa, jutting in as an enclave almost up to the Serbian main line to Salonika, was thrown into violent relief by the incident of May, 1914, when Bulgarian *komitajis*, in possession of Government rations and weapons, suddenly attacked the Serbian frontier guards and cut the line, six months or more before she thought the moment ripe to declare war. The incident must have caused Ferdinand's Government some annoyance.

We hear less of politics now for a change. The Radicals are carrying on an energetic campaign in the provinces, and have submitted a memorial calling upon the Government to summon Parliament. As the present Skupshtina is so evenly divided, this would probably make the work of government impossible, and Dr. Davidovitch will probably postpone the summons till the New Year. Meanwhile, he has changed his Cabinet, as already foreshadowed. M. Kosta Stoyanovitch is Minister of Agriculture, M. Palechek, previously Ban of Croatia, is Minister for the Constituent Assembly, M. Sp. Piletitch is Minister for Public Health, and Dr. Hinko Krizman for Agrarian Reform.

Although Agrarian reform is one of the most controversial subjects here, the two main currents of thought appear to differ only in detail. All parties seem agreed that the peasant should have as much land to work as he can effectively handle. This system has been such a success in Serbia that its introduction in some form is inevitable throughout the kingdom. While the Socialists are said to demand a complete confiscation of estates, the Democrats and Radicals wish to see a proper indemnification of the landlords; the Democrats would give the peasants the land absolutely; but the Radicals appear to favour a kind of long lease, so that an improvident man cannot alienate his property. In Serbia something like 90 per cent. of the population own their own land, but across the river there is a quite different state of affairs. It is stated that in the Voivodina, there are very few small holdings, that 35 per cent. of the landowners hold between one and ten thousand acres, 9 per cent. have over 100,000 acres, while Count Esterhazy alone has 421,000 acres. Statistics for Bosnia and Herzegovina are also interesting; no less than 91 per cent. of the estates of "spahiluks" are held by the old Serbian Mohammedan landowning class, while the balance belongs to "Latins" or Roman Catholics, and the Orthodox Serbian population has none at all. It is clear from this that both in Bosnia and in the Voivodina there is a good case for agrarian reform.

A Serbo-Greek Incident.

The trial of General Dusmanis in Athens is followed in Belgrade with keen interest. His statement in defence that he offered military assistance to Serbia when the *casus foederis* arose, but that the Serbs said it was not required, met with incredulity and amazement here, and this was quickly followed by a *dementi* by M. Balukchitch, who was then Serbian Minister at Athens, and finally by a categorical denial issued in detail by Serbian G.H.Q.

There is little further news from Montenegro, except that that suffering land is in greater distress than usual owing to the recent incessant rains, which have caused the Moracha and Zeta to overflow their banks and flood the flat country round the Lake of Skadar, and the valley of Crmnitsa. This is all the harder as these alluvial plains are the richest parts of that craggy land. In response to the demand for clothing, the Ministry of Food and Reconstruction has sent 4,200 suits of clothes.

BELGRADE, November 26.

Public opinion has been greatly relieved by the announcement that the representative of a friendly Power has given the Government an official assurance that they need apprehend no danger of an Italian attack upon Splijet and the rest of Dalmatia, and that the Adriatic problem will very shortly be settled finally by the Peace Conference in a manner entirely satisfactory to the aspirations and national desires of the Serbs, Croats, and Slovenes. This is welcome news indeed, and it is earnestly to be hoped that this nightmare will soon be dispelled for ever.

TURKEY.

CONSTANTINOPLE, November 18.

Cabinet and Nationalists.

The Cabinet is still hanging together, but, in spite of all official statements to the contrary, there is not the slightest doubt as to its weakness and the inevitability of its approaching downfall. In the first place, the much-advertised agreement that was supposed to have been concluded between the Nationalist Committee at Sivas and the present Cabinet, soon after its formation, is far from having been realised. Mustapha Kemal, the Nationalist leader, has made it abundantly clear that he wants to make the Sublime Porte dance to any tune the Nationalists like to play. This is all very well for the Nationalists, who are somewhere in Anatolia, where High Commissioners cease to trouble; but for those who have to shoulder the burden of responsibility, the position is impossible.

Meanwhile, with regard to the elections, from every part of the country come reports of illegal actions on the part of the Nationalists. In this connection there has been a quite piquant incident. Essad Pasha, an extreme Unionist, accused Mustapha Kemal Pasha of exerting undue pressure in the election campaign. Mustapha Kemal did not deny the accusation, but pointed out that Essad Pasha and his friends were guilty of the same thing, and the Nationalist leader evidently considers that thus everything is perfectly in order. Mustapha Kemal's reply was somewhat virulent; but that is to be regarded merely as a touch of the spur just to show the politicians in the capital who is really master.

The Sultan and the C.U.P.

The Sultan maintains his attitude of uncompromising hostility towards everything that savours of the Committee; but, in the opinion of many people, this is due rather to a determination not to allow the Imperial prerogatives to be usurped by any committee or other arbitrarily constituted body, than to any fundamental antagonism to the essential aims of the Committee of Union and Progress.

Mustapha Kemal himself has never made any secret of the Nationalists' aims—resistance to the peace terms—and in a manifesto to the Allied Powers dated November 11, he proceeded to make certain veiled threats that are not unworthy of attention as throwing some light

upon the quarters from which the Nationalists expect help. After referring at some length to what the Nationalists consider to be Allied breaches of the Armistice conditions, such as the occupation of Smyrna and other places in Anatolia, he states that if the Allies continue to ignore the voice of the nation, the results may be very painful, and that there is reason to believe that these results, which would be a catastrophe before God and before humanity, might involve, not only certain countries, but also two great continents. He concludes by warning the Allies that the responsibility for such a disaster would rest solely with them, since the only object pursued by the Turkish nation, in whose name he professes to speak, is the assurance of its rights to exist in its own land.

There is, no doubt, a certain amount of bluff in the whole Nationalist movement, but there is also no doubt that it is capable of considerable mischief. It is reported that Enver is very active in the Azerbaijan Republic, and there are rumours that he is co-operating with Mustapha Kemal. This is far from unlikely.

A Turkish Rosebery.

With regard to the next Cabinet, it has been authoritatively stated and authoritatively denied that Prince Sabah ed Din, a nephew of the Sultan Abdul Hamid and founder of the Entente Liberale Party, will be invited to assume the responsibility of the Grand Vizierat. Sabah ed Din Bey, to give him his correct title—for as the son of a princess he has no right to the title of prince—is something of a Turkish Lord Rosebery: a very good orator, who never seems to be able to do more than talk. True, Sabah ed Din Bey has not yet had a chance of doing very much; but the condition of things is such that it is difficult to see what he could do to put matters right again. The Nationalists have the whip-hand, and the Parliament that will shortly meet will have a strongly Unionist majority. Once again the opposition to the Committee has lost the battle on account of its besetting sin—a complete absence of a constructive programme. The Entente Liberale have many good speakers and clever men, but their policy is purely negative, and consists solely of opposition to the Committee of Union and Progress. In any case, there is bound to be a Unionist Cabinet as soon as Parliament assembles, perhaps before, and it must not be forgotten that the Unionists are openly Anglophobe.

MALTA.

NOVEMBER 24.

Self-Government.

Malta is beflagged, and is rejoicing. Self-government, as far as local affairs are concerned, is assured. His Excellency, Lord Plumer, took immediate opportunity of informing the Council of the news he had received from Lord Milner, and read out the telegram in full, emphasising the fact that at this early stage no discussions could be allowed. Lord Milner's telegram conveyed the news that His Majesty's Government had decided that the time had arrived when the people of Malta might be entrusted with full responsibility of control over their purely local affairs, the right of control of military, naval and other fortress matters remaining vested, of course, in the Imperial Authorities. Moreover, at a later date a measure of assistance will be given to the finances of the Island, which have been seriously embarrassed by circumstances which have arisen out of the war, and by the subsequent reduction of the garrison and dockyard. The scheme, which will require very careful and detailed handling, is to come into force at the beginning of 1921. These announcements were received with an outburst of enthusiasm. It is to be hoped that the concession of self-government will go a long way to render matters more pacific than they have been of late. Self-government will prove a good thing, no doubt, but financial help will do more, whilst the magnanimous spirit shown by the Imperial Government should go a great way towards wiping out the evil effects of the misguided but turbulent Italian Party. It is worthy of note that whilst during the recent riots the Union (Service) Club was made one of the places of hostile demonstration by the Maltese, it was the scene of great applause this week. Recently the Union Jack was hauled down; now the flag is being extensively waved and exhibited So easily veers public opinion: so short-lived is the memory of a mob.

The Excess Profiteering Act.

This is still a burning topic, and at the request of the signatories from a number of members of the local Commercial community, the Chamber of Commerce is to hold a general meeting for the purpose of discussing the ordinance. All the commercial community is invited, but it is expected that little good will come of their deliberations.

PALESTINE.

JERUSALEM, November 14.

Verghi Temetu, or tax on trade, income, and profits, is being reimposed. This tax, always a difficult one to assess, was more or less a farce, falling, of course, unfairly on the less well-to-do, while the richer classes benefited from easy evasion. There will be little, if any, collection of revenue under this head in the current year.

At Jerusalem the speed of all motor-driven vehicles is limited. It must not exceed eight miles an hour within a mile and a-half radius of the Damascus Gate.

In the summer assizes sentences of fifteen years' penal servitude were imposed in seven case of murder. Next in order, criminal cases included chiefly burglary, highway robbery, forgery, and false evidence.

Warning is given that bank-notes issued by the Eastern Bank, Ltd., of Baghdad and Mosul, are not legal tender, and that such notes are liable to confiscation.

The so-called rebellion of Druses in a northern region has not been a matter of surprise. The old feud between Druse and Maronite is still very much alive, and liable to break out anywhere when sufficient occasion arises.

A race meeting of the 3rd Lahore Division is to be held at Sarfend (Zarepta), on November 29, and should bring together a good assemblage of the sporting element, which is well represented even out here.

The Government Gazette for O.E.T.A. (South) gives much useful information. An interesting table gives the prices, in parallel columns, of about thirty articles of food in the twelve principal centres. Post offices have been opened in twelve places besides Jerusalem, in which British postal orders can now be bought and cashed. Money orders are issued up to £20 and £40, according to country and destination, the fee being one piastre for every Egyptian £1. Inland and foreign newspapers, including many publications, may be registered for transmission on payment of 25 piastres annually. Parcels are accepted and foreign telegrams despatched. Telegrams may now be sent in Hebrew to addresses in O.E.T.A. (South), but must be in Latin characters. The post offices at present are at Bethlehem, Hebron, Ramleh, Nazareth, Tiberias, Acre, Haifa, Gaza, Nablûs, Safed, and Tulkeram.

A Correction.

According to a statement issued by the Agency Generale Balcanique, the Director of the *Kambana* (who is reported to have been arrested in connection with the prosecutions to be undertaken by the Bulgarian Government against those who were in any way responsible for the war) is M. Chrusto Stantcheff, not Stancioff, as previously reported.

The Armenian Delegation has addressed a letter to the Peace Conference demanding the union of the Armenian districts of the Ottoman Empire with the Republic of Trans-Caucasian Armenia, and points out that Arabia and Mesopotamia, which are Musulman countries, and Syria, which in part is also Musulman, have been entirely freed from the Turkish yoke.

ROUMANIA AND THE POWERS.

I.

"The situation of Roumania as regards France, Italy, and Britain, is the same as regards Germany and Austria; that is to say, our Allies have become our enemies as far as foreign policy is concerned." This extract from a recent Roumanian newspaper must cause serious reflexion to those who know something of Roumania, of the part she played in the war, of her sufferings, and of her triumph. Everyone remembers Roumania's dramatic entry into the war on the side of the Allies, her preliminary advance into enemy territory, and her final retreat before Mackensen's army, which occupied the country for two painful years; but it is not generally realised that in the end her territory and population have been enormously increased by the addition of Transylvania, Bessarabia, the Bukovina, and a portion of the Banat. Those who do know this perhaps think that Roumania should be content with the realisation of her dream of nationhood, and ascribe her differences with her late Allies to mere "intransigeance." The question will repay a little study, though fuller knowledge may make us less confident in our conclusions.

The original trouble springs probably from the Secret Treaty which brought Roumania into the war. With indecent haste our Western statesmen promised Roumania almost all that she ever aspired to; behind the back of our Serbian allies, the whole of the Banat was to go to her; her other annexations were chiefly at the expense of our late enemies and were consequently freely promised, perhaps in the expectation that the promises could never be honoured. With oriental instinct, Roumanian statesmen had set their demands at their highest, and must have laughed up their sleeves at the Western Allies, whose ignorance of local and ethnographical questions combined with their zeal to gain a recruit led them to grant all. The overwhelming victory of the Allies produced, therefore, a very awkward situation. The Roumanian representatives arrived at Paris determined to exact all that the Secret Treaty had promised, but by that time the idealism of President Wilson had obscured with a mist of sentiment the frank and greedy realism of the secret treaties. Moreover, when the Big Four began to examine the Treaty they were aghast at the way in which the interests of Serbia had been neglected and at the length of their own promises. Monsieur Bratianu, who led the Roumanian deputation, would accept no compromises, however; and by personal unpopularity and lack of tact gained for Roumania the ill-will of the Big Four, who eventually made a settlement which she has so far refused to sign.

The burning question is the Banat, a strip of territory belonging to old Hungary close to the Danube, with a mixed population of Serbs, Roumanians, Souabes and Hungarians. Roumania and Serbia each claim this fertile province. The Big Four, to begin with, did not know where the Banat was; Mr. Lloyd George in the third month of the Conference had to ask for the Banat to be pointed out to him. Like Solomon confronted with the baby and the rival mothers, the Big Four proposed to cut the Banat in two. The boundary drawn, however, satisfies neither the Serbs nor the Roumanians. Its most objectionable feature is that in order to pass from one part of the Roumanian Banat to another, either by road, rail, or river, it is necessary to cross and re-cross the Serbian frontier. Another source of trouble lay in the League of Nations clauses of the Treaty. The political minorities in New Roumania and the Jews were placed directly under the authority of the League. This stipulation appeared to deny Roumanian sovereignty within her own borders. In the moment of victory, and acutely self-conscious of her new-found power and importance, Roumania was quite unable to suffer such an insult to her authority.

These differences upon the Treaty, however, have all sunk into the background compared with Roumania's treatment of the Hungarian Bolshevists. On few questions has the Council at Paris shown itself more vacillating and ridiculous. The incident began by the Roumanians being asked to furnish troops for an Allied offensive against the Hungarian Bolshevists. This they promised to do, but heard no more until they were themselves attacked. Not unnaturally they advanced against the now retreating Bolshevists and occupied Budapest itself. On a fierce remonstrance from Paris, they offered to withdraw immediately, only to be told that, if they did so, the Allies would hold them responsible for any disorder that might occur as a result of Hungary being left without the protection of an Allied army or police force. In the event the Roumanian soldiers stayed in Hungary throughout the summer and autumn, while an Allied Committee in Budapest made a careful record of every requisition, theft, or crime of which the Roumanian army is accused, and the Western Press vilified our late ally as a brigand and predatory State. Eye-witnesses, military and civil, have testified to the almost exemplary behaviour of the Roumanian army of occupation; although, without doubt, there have been some incidents and events which, to say the least, are characteristic of occupying troops. Even the Jews at Budapest recognise that the Roumanian troops saved them from one counter-revolution after another.

II.

Bolshevism flourished upon another flank of Roumania, in Bessarabia. Indeed, Roumania was almost hemmed in by Bolshevists, and it is remarkable that the infection never gained a footing inside her borders. But the country is mainly an agricultural one, and the rural population is well content. The land of the proprietors has recently been divided amongst the peasants, and though they are to pay for it by instalments this distribution has given great satisfaction. Moreover, the recent harvest has been wonderfully productive. There is now plenty of food, indeed, a surplus, while the prices, though lower, are still very high, so the peasant is amply rewarded for the portion of his crop that he has to sell. His wealth is mainly in stock, consequently he is not bothered with the depreciation of the currency. In towns the salaries and wages have had to increase as the purchasing power of the *lei* diminished, and, though prices are enormous when compared with pre-war figures, it cannot be said that there is any widespread discontent. In addition, the Army is large and well disciplined, and thoroughly able to cope with external or internal enemies. It is amusing to hear our Minister of War claiming that British support to Denikin has saved Roumania amongst other small States from Bolshevism. To a Roumanian such a claim can only appear laughable; in so far as Denikin is strong and likely to succeed his army is a menace. He stands for "Holy Russia, one and indivisible"; he represents in the mind of Roumanians a great power before whom they trembled, and under whom they suffered. If successful, he would take from them Bessarabia; though in the meantime he reassures them by the use of a diplomatic formula. In the early days of October there was a clamour in the Bucharest press for war against Denikin, and those in charge of British policy had better realise the unpopularity that may be gained for us by our support of men and policies in Russia which eventually may threaten the small States upon her borders.

Such an unsatisfactory and complicated foreign situation has necessarily its internal reaction. When early in September the blockade was declared by Paris upon Roumania for her diplomatic sins the Bratianu Ministry resigned, and three weeks of "crisis" followed. For a time it looked as though the National Liberals had fallen from power. There were hopes of the best political elements in Old Roumania uniting with new men from Transylvania and Bessarabia in an endeavour to rule the country in a cleaner and more Western spirit. This would undoubtedly have meant a reversal of her policy in Paris, concessions to her Western allies, and drastic internal reforms. After three weeks, however, no man had been found who could attach to himself sufficient support, and at last a Government of Generals was formed. In reality they were puppets of Monsieur Bratianu; they are admittedly a "stop gap" Ministry meant to rule the country until after the general election had made clear the political complexion of the people. Their policy will merely continue that of Monsieur Bratianu, and Roumania may still be governed by the National Liberals, whose influence extends from politics to finance and commerce in a remarkable manner. The country has been covered with banks, credit societies, and peasant co-operative associations, which are used to consolidate the power of the National Liberal party. Their influence, however, is confined to Old Roumania, and it is possible that the voting power of the new territories may turn the scale.

In the hour of her success, with territory and population nearly trebled, it is a bitter thing for Roumania to find herself in acute difference with former friends. She feels that the Paris Conference was misled by the Americans, who appear to have come over with preconceived notions and almost complete ignorance of European, especially South-European, politics, whose complexities demand a life study. The opportunist mind of Mr. Lloyd George, which leads him to snatch at expedients and forget principles, was a sad disappointment. Nevertheless, she holds her head high, feeling that a great future awaits her. In secure possession of some of the most fertile land in Europe, with ample mineral wealth and natural resources, and with a contented and industrious peasantry, she knows that she will shortly be able to supply the things that Western Europe lacks. Such confidence is not misplaced, and it entitles her to look to the rapid restoration of her economic and political prosperity.

GREAT BRITAIN AND PERSIA.

BANQUET TO PERSIAN FOREIGN MINISTER

The Persian Foreign Minister, Prince Firooz Nosret-ed-Dowleh, was the principal guest at the Persia Society's banquet at the Savoy Hotel on December 2. Lord Lamington presided, and the guests included Sir Hugh and Lady Barnes, Lord Bryce, Sir Harry and Lady Bax-Ironside, Sir Frederick and Lady Black, Sir John and Lady Cadman, the Lady Evelyn Cobbold, General Sir Alexander Cobbe, V.C., D.S.O., and Lady Cobbe, Homayun Ehtesham, Sir Harry and Lady Foster, Khan Noury Fatollah, Sir Charles and Lady Greenway, Capt. and Mrs. Greenway, Capt. J. G. Hogg, Emrad ul Molk and Lady Molk, Hussein Khan Ali Mirza, Lady Marling, Colonel Napier, Dr. Pollard, Emtezamel Molk, Sir John Rees, Admiral Sir E. J. W. and Lady Slade, Sir Percy Sykes, Sir Walter and Lady Townley, Sir Charles Walpole, Mr. C. A. Walpole, Col. C. E. Yate, M.P., and Sir Francis and Lady Younghusband.

After the toasts of the King and the Shah had been honoured, Lord Bryce proposed the health of the guest of the evening. In replying to the toast, H.H. Prince Firooz Mirza Nosret-ed-Dowleh, after a reference to the pleasure it gave him to be present at the dinner of the Persia Society, of which he was himself a member, continued:—

"It is interesting to recall this evening the speech delivered by Lord Curzon at the inaugural dinner of our Society eight years ago in this same place. Lord Curzon said on that occasion that it was good that a society should exist to recall to Great Britain that Persia has had a great and glorious past, that she has charmed humanity by the grace of her poets, by the beauty of her arts, and by the teachings of her philosophers, that she has produced great statesmen and great monarchs, and that she is still capable, provided that favourable conditions are assured her, of reproducing in the future some of these characteristics which have rendered her not only romantic but famous in the past. It was under such auspices at a critical moment in the history of contemporary parliamentary Persia that the Persia Society entered upon its career. This evening, after a long and fateful crisis which for five years of war has arrested every work and every thought in order that all strength may be concentrated on the principal object, that is to say, the struggle of right-minded humanity against despotism and force; at the moment when Great Britain issues from this war victorious and aggrandized, the Persia Society takes up once more its labours and continues its efforts. The moment is so much the more propitious in view of the new ties which will now bind the traditional friendship of England and Persia. Lord Bryce, with his profound erudition and with the great knowledge of a renowned historian, has given you a striking picture of our long and glorious history from its ancient origins. He has given me the assurance of the sympathy of the English people with our efforts to establish a democratic government, and he has been good enough to express the fervent desire of Great Britain to lend us her friendly aid while scrupulously respecting the independence of Persia. I would thank his Lordship for his kind and sympathetic words. My Government has an unshakable confidence in the sincerity and disinterestedness of Great Britain, whose common interests with Persia in the Orient are the surest guarantee of a collaboration fruitful in good results, not only for the two countries, but also for the establishment of peace and concord in Asia. Persia has preserved her national unity and her vitality in spite of all invasions and changes of fortune. She has been vanquished and subjected, and often, indeed, attempts have been made to absorb and subjugate her race and her language. However, she has always in the end eliminated her conquerors; her type has remained permanent and immovable, her language has not only survived, but it has even been enriched and refined. Have we not here a fine spectacle and a great lesson that this indestructible human family of ours is literally stronger than death?

"Persia, conscious of her strength, recognises at the same time her weakness, due to the shackles which up to the present have paralysed her efforts towards progress, and she desires now to advance with all speed on the path of modern realisations. Liberated from the gigantic weights which have pressed upon her shoulders so heavily, she wishes now to stand upright boldly once more, and to forge her future upon the model of her past and of her great history. By her geographical position, and by her intellectual faculties, Persia has always been the missionary of civilisation and of the arts in the Middle East. She desires to continue this rôle, while acting as the intermediary, after having adapted it to the Oriental mentality, for the transmission of the modern culture of the democracies of the West to the countries of Central Asia. She wishes to become once more, as in the past, the emporium of commerce between the East and the West, but to the great regret of those who are enamoured of the picturesque and the lovers of the East represented as the sole trace and the only survival of ancient times, she will do her utmost to replace this time the camel by the locomotive, and the delightful huts and the pleasant tents by those frightful palatial hotels which one decries, but which one likes all the same. I have no desire to be accused of extreme realism, or to be reproached for having ventured on a sphere opposed in its characteristics to the beauties of every kind conjured up this evening by Lord Bryce. I have no wish in any way to underrate the importance of aesthetic and sentimental consideration which have won for Persia the respect and sympathy of the whole world. I am myself a devotee of the literature and philosophy of my country. I recognise not only all the charm, all the grace, and all the profundity which they contain, but I admire above all the salutary and powerful effect of that spirit which has been able to form and maintain throughout the vicissitudes of the age this unconquerable spirit to which I have already alluded. I cannot help saying to you that I am firmly convinced that your great Fitzgerald in the past and our charming and loved Professor Brown in the present, with their works and their fine translations, have done for the *rapprochement* of our two peoples and our two countries much more than all the diplomatists with their compilations of treaties, agreements, etc.

"But side by side with this great field of intellectual and spiritual *rapprochement*—a *rapprochement* very precious and one which we must encourage on both sides—there are other fields of activity more accessible to which we can all aspire. And it is to these above all that I would draw your attention in setting out the desires of Persia. It is towards the economic and material development of the country, in view of its great riches of the soil and under the soil, that I would ask you to consider for a few moments. Some of us here know very well and in a manner more detailed than I do all the resources that Persia is capable of furnishing to enterprise and to capital. Well, Persia looks for that capital and that enterprise in the great centres of the world, and more particularly in England. What greater service could the Persia Society render to the common cause of Great Britain and Persia than to discover these needs, to direct the energies, and to encourage the two sides to come together, to understand one another, and to assist one another? The Persia Society can and must do more. It could not only encourage business, but it could still more advise the men undertaking that business. It could tell them that their interest, the praiseworthy product of energy and capital, is that which comes from a transaction honourable for both parties. The respect of the partner's interests is a more solid foundation, while its abuse or a desire for its abuse, from whichever side it comes and on whatever it may rest, is a thing often ephemeral and always detestable. The Persia Society, in my opinion, with a view to fulfilling the task which it has assigned itself—I mean the bringing about of a *rapprochement* between the two peoples, English and Persian—and in all the branches of modern activity, ought to preach confidence and exalt the acts and the elements which can maintain that confidence. That, I believe, is the finest and most fruitful of programmes.

"This programme exceeds by its very nature even the limit of economic activities, and concerns the policy of the Governments of the two countries as well as the effect of that policy on their nationals. I know very well that the Persia Society has excluded politics from its special field of activity, but it would really be too much to exact of a Persian Minister, although a member of this Society, that he should be prevented from profiting by such an occasion to say a few words on the foreign policy of Persia, the more so as this policy is still all aflame with reality, and that it interests your country in the first degree.

"As a matter of fact, the Anglo-Persian Agreement of August 9 last caused a vast expenditure of ink. It has even had the virtue of exciting some apprehension in certain chancelleries. I will not mention the misunderstandings and the erroneous misinterpretations, for I am certain that the declarations, as terse as they were precise and as cordial as they were frank, of your eminent Secretary of State for Foreign Affairs, and the explanations that I have myself had opportunity to furnish, have sufficed to dissipate all suspicion. The Agreement which we have concluded with Great Britain was the logical result of our ancient traditions of friendship and of concord which themselves flow naturally from the geographical conditions of the countries, and of the position of their political interests

Digitized by Google

on the central plateau of Asia. If we seek to plumb the spirit and the circumstances which have led to the conclusion of this Agreement, we have only to refer once more to the interesting speech delivered by Lord Curzon in this same hall eight years ago. Recognising the enormous difficulties against which Persian statesmen had to struggle after the change of *régime* and during the period of Russian encroachments, Lord Curzon said :—

"'No one realises more clearly than I do that it is for Persian statesmen and Persian Ministers to work out their own salvation. They know the circumstances of their own country, and they do not want gratuitous advice from us. Still, I may be permitted to put myself in their place and to say that if I were a Persian statesman—which, in the present circumstances, God forbid!—I would speak to myself in the following terms at the present juncture: "The first condition which my country wants is tranquillity and confidence." Now, that form of security can only be obtained by the possession by the Government of an organised and disciplined force, acting under the control of the Government and capable of carrying out its orders. I would further say: "Such a state of affairs can only be secured with the aid of those who are competent and trained to discipline the force, and, still more, by the security of regular pay." That brings us to the financial question, and for my part I witness with the warmest sympathy the efforts now being made by the Persian Government to reorganise their finances. Further, if I were the Persian statesman whom I have imagined, I would not hesitate for a moment, if the present resources of my country were inadequate, to obtain financial assistance upon suitable conditions elsewhere. I would not mind in the least going abroad for financial help, for guidance, for experience, for anything that might be useful for my country short of control. All that I would demand in pursuing this policy would be that any assistance I might receive should be absolutely disinterested in character, and that neither now nor in the future should it be directed in the smallest degree against the independence of my country.'

"Such is the spirit in which our agreement has been concluded. It was found in 1919 in Persian Ministers who, without knowing of the speech of 1911 to which I have referred, were imbued with the same ideas. We sought to reorganise our financial administration by engaging in our service counsellors and foreign experts who would not arrogate to themselves any right of illegitimate control, and would apply themselves to form and educate a body of good Persian officials; we desired to bring into existence an armed homogeneous force with the aid of foreign instructors who would devote themselves entirely and exclusively to their task without mixing in politics. We wanted to profit by the occasion to establish our rights before the Peace Conference. We have naturally turned towards England, the traditional and sincere friend of our country, and by a happy chance the same English statesman who has shown himself so sympathetic to Persia during the dark hours through which she passed, exposed to a reign of ultimatums, found himself at the head of the foreign affairs of Great Britain. The two spirits met, and there resulted the agreement that you know. It is realisation of this programme, the loyal interpretation of this arrangement, and the efficient support which Great Britain will furnish conformably to the terms of the agreement to the Persian delegates at the Conference with a view to establishing their claims that will calm all the apprehensions, all the anxieties, and all the susceptibilities aroused in the minds of Persians or foreigners Already in this order of ideas Lord Curzon has repeated and underlined the principles enunciated by him in 1911 in his recent declarations, notably in the course of the address that he delivered on the occasion of the dinner given in my honour last September.

"This, then, is the work of Governments, but it is not sufficient of itself. It must be completed and endorsed by a wise propaganda and an untiring activity in all circles to inspire in the mass of the two nations the indispensable confidence and the real appreciation of their common interests. It is in this sphere that the Persia Society can, and must, exercise its salutary influence, and rise to the height of its task. The better to reach this end, it must have branches in Persia. I shall be happy to encourage as far as in me lies the creation of Persian branches which will feed the parent society in London, and will become a powerful element of *rapprochement*."

PALESTINE EXPLORATION FUND.

The recent death of Mr. J. D. Crace, who had been hon. secretary of the Palestine Exploration Fund since the beginning of this century and on its committee since 1872, and the retirement of Mr. Walter Morrison from the treasurership, which he has held since 1868, make a serious break with the past of the society. The committee has, however, secured Colonel Sir Charles Close, K.B.E., C.B., Director of the Ordnance Survey, to succeed Mr. Morrison, and Dr. E. W. G. Masterman, formerly of Jerusalem and now medical superintendent of the Camberwell Infirmary, to take the hon. secretaryship. The committee has been strengthened by the addition of the Hon. W. A. Ormsby-Gore, M.P., and the Hon. E. Fielding. In view of the close harmony that it is hoped to establish with the British School of Archæology at Jerusalem, Professor J. Garstang, its director, and Mr. Robert Mond, its treasurer, have been invited and have agreed to join the committee. The Fund hopes to make arrangements for the excavation of a very important site as soon as political conditions in Palestine are settled. It is hoped that all the old friends of the society will rally round the Fund again, and make its objects known, that the necessary financial support may be assured to strengthen the committee in the work before them.

APPEAL OF THE CHALDEANS.

With a view to arousing sympathy in the cause of the Assyrian Chaldeans the Chaldean Archbishop of Diarbekr has sent to this country the Rev. J. Naayem, formerly general chaplain to the British and French prisoners of war in Turkey. During the war some 250,000 Chaldeans died as the result of Turkish persecutions, famine, and other causes, and an endeavour is being made to rehabilitate the last survivors of the Chaldean nation. Father Naayem, who has placed the case of his people before the Foreign Office, is forming a British committee with offices at 96, Victoria Street, S.W.1.

The Air Ministry announces that advice has been received from India that Captain Ross Smith, who is piloting the Vickers-Vimy machine in the flight to Australia, arrived at Allahabad at 5 p.m. on November 27, and left for Calcutta at 8.30 a.m. on November 28. M. Poulet arrived at Calcutta on November 26, and left for Akyab (Burma) on November 28.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

Mr. Walpole's lecture on Persia, part of which was recently given in THE NEAR EAST, contained some informative remarks upon sport in Iran. The Persian, of course, is known all over the world as a horseman, but I did not know (until I learned it from Mr. Walpole) that he had developed such enthusiasm for horse-racing. When I was there, there was very little horse-racing, but merely show-riding, firing on horseback, and so on. But now there are annual races, held at the A.P.O.C. Oil Fields, and organised and participated in by the Bakhtiari Chiefs. In Mohammerah and Busreh, indeed, racing is the chief sport among both the Europeans and the inhabitants. The conditions for racing must be extremely favourable: permanent courses can easily be constructed, and the Arab ponies, some of the finest in the world, are as numerous in the entries as the European horses. In addition to racing the Persian has taken up tennis, golf, and billiards. These facts seem very strange to me, but to the out-of-date all new things come as a surprise, I suppose. In what spirit the Persian plays our games I do not know, but I should think that handicaps are necessary for the preservation of his good temper. There are few beside the Englishman who do not mind losing.

***

A few days ago a contemporary—an Irish journal, I think—asked the amazingly sensible and apparently unanswerable question: What is Jazz? Of course, by this time we all should know, but do we? We—that is the less restrained of us—jazz, and we hear jazz bands; but for all the understanding we have of it, we might be reading Einstein or hearing Horatio Bottomley talk. But ignorance of its meaning does not seem to cramp the development of jazz, and for aught I know even wild Turkomans may be jazzing at this moment. How far eastward it has spread I do not know; but the most excellent news that France has given us for some time seems to show that the extension of jazz is not to be infinite. The news is that a league has been organised in Paris against the jazz band, "as being the high road to Bolshevism in music." So that perhaps, after all, we shall be denied the delightful prospect of the Arab and Egyptian rioting in a debauch of syncopated hand-clapping. It seems a pity that France is to have the honour of being the first country publicly to protest against jazz, which, however, cannot be included in Bolshevist propaganda. Bolshevism in music (a vile phrase, and therefore dear to the heart of the journalist) is a quite possible thing; but it can come only through intellectual intricacies, not through the loud simplicities of the nigger. Wouldn't our high society jazzists love to be classed with the Bolshies!

***

I was interested a little while ago to read, in the report of a lecture on "The Folklore of London," given by Mr. Lovett before the R.S.A., that the wearing of blue beads is widely regarded as a prevention against bronchitis. To me the interest lay in the fact that throughout the Near East beads, and especially blue beads, are worn as amulets or charms against the "evil eye." You seldom see an Arab or Egyptian toddler without his, or her, beads; and donkeys, mules, and other domestic animals very often have one or two beads hung on them to bring them luck—or, rather, to keep away bad luck. The custom here seems to be, too, to bury the beads with the owner on death; and—this struck me as most startling—Mr. Lovett stated that he had found instances of the burial of pets with dead persons, "as a survival of the ancient superstition of burying animals so that their dead owners might have the use of them in the future life." This is, of course, just what the Ancient Egyptians used occasionally to do, though they more often buried with the dead person clay figures of the animals or servants that were to serve him in the next world. Who has not seen *ushabiti* from the Egyptian tombs, or pictures or models of the various beasts and furniture that were provided for the use of the departed? But to find such ideas surviving, however dimly, in great, modern London is surely extraordinary!

***

The Constantinople Correspondent of THE NEAR EAST refers to-day to Sabah ed Din Bey as a kind of Turkish Lord Rosebery. But would the Turkish politician take so calmly as the Scot an attempt to sell for the benefit of the State property which actually belonged to him? Lord Rosebery, I see by the *Morning Post*, has written to the Press to point out that the Ministry of Supplies has advertised for sale a farm which actually belongs to him. His lordship adds that he does not attribute this little eccentricity to lawlessness, "but simply to gross carelessness." That is very kind and very charitable. But, ye gods! as a corsair I do admire the M. of S.'s unlimited cheek. We ordinary robbers simply cannot compete with the Government Departments these days.

CORSAIR.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS

Montenegro. November 27.

Mr. R. MCNEILL asked Mr. Lloyd George whether, in view of the fact that more than 3,000 dwellings in Montenegro had been burnt by the Serbian troops in occupation of the country, and that numbers of Montenegrins had been murdered, imprisoned, or driven as refugees to the mountains, he would propose to the Allied Council in Paris that compensation from Serbia should be demanded on behalf of Montenegro for those wrongs, seeing that this Ally had been excluded from the Peace Conference and from the Allied Council.

Mr. LLOYD GEORGE: As the Under-Secretary of State for Foreign Affairs stated on November 24, his Majesty's Government have no confirmation of the allegation contained in this question, and it is not, therefore, possible for me to take the course suggested. In answer to further questions by Mr. McNeill, Mr. Lloyd George added that the Montenegrin situation was one of the most difficult of questions. The people of the country were divided, and it was very difficult to ascertain what their views were and what their condition was. He thought the House was in possession of all the information which the Government had.

Sir J. REES asked whether any special responsibility in regard to Montenegro attached to Great Britain more than to any other of the Allies.

Mr. LLOYD GEORGE: Certainly not. We have to act together.

Egypt and Sudan (Civil Services). November 27.

Major GLYN asked the Prime Minister whether it was proposed to reconstitute the Egyptian and Sudan Civil Services, in view of the depleted condition of those services through casualties in the war and the suspension of recruiting during the war; whether the existing situation was one of the main causes of the present disturbed condition of Egypt, since adequate supervision of native officials was impossible; whether the new obligations of this country to other Arabic-speaking countries necessitated a new system by the formation of a Civil Service responsible for assisting in the good government of all Arabic-speaking countries under a British Protectorate or Mandate; and whether, without improved conditions of service, chances of promotion, and rate of pension on retirement, it was considered probable that suitable individuals would offer themselves for employment in the Civil Serice of Egypt, the Sudan, Palestine, etc.?

Mr. D. WARD: A selection board representing the Egyptian and Sudanese Goernments assembled in London during August and appointed candidates to fill vacancies in the Civil Service of the countries. As regards the second part of the hon. and gallant Member's question, it is impossible to analyse all the causes contributing to bring about the present disturbed condition of Egypt, but it is undoubtedly the case that the absence of sufficient British Civil servants during the war rendered the inspection and control of the work of minor Egyptian officials almost impossible. As regards the third part of the question, the proposal will receive consideration when the extent of our new obligations towards Arabic-speaking countries is determined. As regards the last part of the question, substantial improvement in the conditions of service in Egypt and the Sudan has already been effected, and further improvements are being considered.

Major GLYN: Arising out of the question, may I ask the hon. Gentleman whether Lord Milner's Commission, before they proceed to Egypt, will be able to consider the future government of Egypt with the knowledge that the British Government are prepared to set up a Civil Service which will embrace all Arabic-speaking countries over which we have either Protectorate interests or a Mandate?

Earl WINTERTON: May I ask whether the Milner Commission will be competent to inquire into the grievances, either individual or collective, of the existing British Civil servants in Egypt? Will that be one of their instructions?

These last two questions were not answered.

Topics in Parliament.

The subjoined headings are those given in the official report:—

EGYPT: Alleged Outrages.

INDIA: Ceylon Tea.—Mashuds.—British Troops (Cost).—Child Labour.—Burma (High Court).—Afghan Campaign.—Zhob Valley.—Fractional Silver Coins.—Imports (Japan). TASHKENT (TURKESTAN). BRITISH ARMY: Mesopotamia (Cost of Troops). MESOPOTAMIA (POSTAL FACILITIES). INDIA: Army Transfers.—Temporary Officers (Demobilisation). — Privileged Passages. (November 26.)

MONTENEGRO. LEAGUE OF NATIONS: Status of Egypt. BLACK SEA ARMY. PEACE TREATY: Ottoman Empire. EGYPT AND SUDAN (CIVIL SERVICES). BESSARABIA. INDIA (WAZIRI OPERATIONS). EGYPTIAN GOVERNMENT. SCHOOL OF MEDICINE. (November 27.)

MUSICAL NOTES.

One of the most prominent features of the present season is the amount of British work that is performed. The rather shameful plea that we were martyrs to an ignorant public has been abandoned, and the British composer is getting an opportunity of standing or falling upon his (or, as may be increasingly the case, her) merits. It is true that the absurd campaign, waged in certain sections of the Press, to postulate as a necessity an essential value in British work, will do the nation no good. Moreover, the present disrespect for German music, and consequent respect for Allied music, would, if made permanent, create a host of one-eyed men in the artistic world. But in peace time, art, and especially music, should have no barriers to break down, no obstacles to surmount, and the native composer must start his flat race on the line with all the other competitors.

We have seen to what lengths war-time nationalism in music can take us. Because a thing is French, because a thing is Russian, it is good—this is an axiom which even the British public will not accept. Music is not the monopoly of a nation (it is one of the few things which Internationalism will never be able to corner), but it is universal.

In this connection it is significant to note that Paris decided recently by 4,983 votes to 213 in favour of an immediate revival of Wagner's works. The French do not confuse artistic delights with moral attitudes.

In this universal competition we do not find England handicapped. We get most of the best foreign artists to this country (and our preference of them to our own is not really an essential thing in musical criticism), and opportunities for performances of native work are becoming more and more numerous. Take organisations like the League of Arts or the Glastonbury Festival Players, for example, study the work they are doing, and you will realise how much is being done in these days to make the Englishman interested in music, especially in the music of his own country. Or take the programme of any piano or song recital at any of the important London halls, and you will find a percentage of English names which would have been impossible ten years ago. The outlook and publicity of British work are satisfactory; it is only the ranting nationalist wishing to restrict the music performed in this country to that of Entente and neutral composers who sets up the pathetic wail for more and ever more British work.

It was a disappointment to know that Sir Thomas Beecham could not give us Delius's "Romeo and Juliet," but on the other hand we have Granville-Bantock's "Pierrot of the Minute." Almost wherever you go you can find British music; and everyone to-day knows, even if he does not understand, some at least of the works of men like Holbrooke, Ireland, and Scott.

We are hearing almost overmuch of Russian music just now, but that part which touches the Middle East must be of interest to readers of this journal. A performance of the music of the Russian Orient was given at the Æolian Hall on December 3, but I am obliged to hold over until next week an account of it.

ANDANTE.

THE BALKAN COMMITTEE ON BULGARIA.

Speaking at a meeting of the Balkan Committee, held at the House of Commons on December 2, Mr. J. D. Bourchier said that it seemed impossible to stir any public interest in the Balkans. A treaty had just been signed in Paris which altered nearly all the Balkan frontiers, and made an entire reconstruction of territories, yet this had evoked not a word of comment in the newspapers, nor any protest from those who disapproved of the principles that had been adopted in that arrangement. Not a single member of Parliament had got up to say one word of criticism, censure, or praise. We had in our own time had three treaties affecting the Balkans—the Treaty of Berlin, that of Bucharest, and now this Treaty of Neuilly. The first of these had come to be decried by the whole world; the second was settled by a combination of enemies, who dictated to their solitary foe whatever conditions they chose to impose. It had been almost universally condemned until the recent war clouded people's judgment, and some, of whom he was one, had continued, notwithstanding the war, to maintain that it was a piece of brigandage carried out in haste, reminding one of an assembly of brigands dividing their booty as fast as they could for fear of a policeman coming into sight. It had been got through by Roumania threatening to occupy Sofia if Bulgaria would not give way over Kavalla. This cession of Kavalla had been done at the instigation of the ex-Kaiser; King Charles of Roumania and Venizelos had been willing that Bulgaria should have the port, but the ex-Kaiser wanted by every means to exclude Western trade from Bulgaria to the advantage of Germany. The first thing was to get boundaries on the same lines as nationalities. If this could not be done perfectly, transmigrations and other compromises must be resorted to, but the great thing was to get boundaries corresponding with racial limits; and he had hoped, when he went to Paris, that this principle of nationalities would be respected, and that each race would get its rightful inheritance. But a treaty had now been signed and sent to the Bulgars in which the principle of nationality was thrown aside altogether. Macedonia was by population mostly Bulgarian; the proportions were one-half Bulgarian, a quarter Turkish, and the remainder chiefly Greek, Albanian, and Vlach. There were hardly any Serbs at all, except a few officials and emigrants; and, leaving Macedonia out of account, there were other portions of Bulgarian territory which it was proposed to hand over to other States without the least attempt to give the inhabitants an opportunity to express an opinion as to their own future. Notwithstanding all we had heard about the right to self-determination, they were to be handed over without being consulted to alien and hostile rule. The cession of Tzaribrod to Serbia was especially to be protested against. The case put forward with regard to other regions inhabited by Bulgarian populations which it was proposed to hand over to Serbian rule was that these areas threatened the lines of Serbian military communications. But this could not be true of Tzaribrod, which was only thirty miles from Sofia. On the other hand, Tzaribrod threatened the Bulgarian capital, and if Serbia was allowed to retain the district she should at least be debarred from sending heavy artillery or any considerable body of troops into it. As to the Dobruja, the President of the Congress had formally declared that the question of the Dobruja was not affected by the present treaty; yet Bulgaria was compelled by its terms to accept the frontier of the Treaty of Bucharest, which assigned to Roumania the southern portion of the province. Without having any ethical claim, without having taken any part in the liberation of the peninsula from Turkish oppression, and without asking the permission of Europe, Roumania had in 1913 approriated the Southern Dobruja, which had been given to Bulgaria by the Berlin Congress. In this connection the case of Bessarabia would come up again. Roumania had a right to Bessarabia, but when she got it any right she had to the Dobruja would lapse, for the territory had first been given to her as compensation for Bessarabia. With regard to the northern portion of the country, Roumania might be considered to have a claim on account of the enormous sum of money she had spent in developing Constantza, but as to Southern Dobruja, when Roumania got Bessarabia again she should be compelled to hand it back to Bulgaria. As to Kavalla, Bulgaria should receive territorial access to the port, and this should not be dependent on the goodwill of another State, but should be regulated in accordance with the principles adopted in regard to the maritime outlets of Serbia on the Adriatic and of Poland on the Baltic. His next point was the protection of minorities. Justice demanded that the provisions for the protection of minorities to be imposed on Roumania, Serbia, and Greece should be identical with those imposed on Bulgaria; and this was all the more necessary because the alien elements to be incorporated in the three States first mentioned were incomparably more numerous than those included in Bulgaria. The military arrangements of the treaty also were open to serious criticism. They appeared to have been imposed in ignorance of local conditions and at the instigation of rival States aiming at the ruin of Bulgaria. A long-service army, with a voluntary system of recruitment, was entirely unsuited to a country with a peasant population; it would attract nobody but the offscouring of the towns. It would lay a heavy and unnecessary financial burden on the country, and probably lead to social disorders. Further, the stipulation under which Roumanian, Greek, and Serbian courts-martial sitting in Bulgaria would be allowed to judge Bulgarian subjects in time of peace was calculated to defeat the ends of justice and to cause serious trouble. The promise verbally given to the Bulgarian delegation that these military arrangements should be revised should be put into writing. Last of all, there was the question of atrocities. For five long years we had been taught that atrocities had been committed by Bulgars alone, but everybody who knew the Balkans knew that atrocities had been committed all round. If he could get these points considered and fairly dealt with, we might be able to say that justice had not left the earth entirely.

The following resolution was carried unanimously:—

The Balkan Committee protests against the territorial settlement imposed in the Balkans by the Peace Conference as a flagrant violation of the principle of nationality proclaimed by the Allied and Associated Powers. It especially protests against:—

(1) The enforced surrender of the district of Tzaribrod by Bulgaria to Serbia;

(2) The denial to Bulgaria of territorial access to the Mediterranean;

(3) The omission of any guarantee that the question of the Southern Dobruja will be reconsidered when the attribution of Bessarabia to Roumania arises;

(4) The failure to impose upon Roumania, Serbia, and Greece stipulations for the protection of minorities similar to those imposed on Bulgaria;

(5) The military arrangements of the treaty, imposing upon Bulgaria a voluntarily recruited long-service army, which in a country of peasant proprietors must inevitably lead to social anarchy.

The Committee further enters a vigorous protest against the political use to which reports of atrocities have been put for the purpose of inflicting vicarious punishment on considerable sections of the Balkan populations, and demands that the whole question of atrocities committed in the Balkans during the war shall be investigated by a Commission of the League of Nations upon which no Balkan State is represented.

NEAR EAST BOOKSHELF.

"STONE WALLS."*

Two things prepossess us in favour of this book. First, that the author is a descendant of the bishop to whom is attributed the delightful "I cannot eate but lytyll meate"; and, secondly, that these verses were written in such difficult circumstances, both mental and physical. They were written when the author was a prisoner in the hands of the Turks, and the more important concern his experiences as a captive. (Part of the book, however, and this the duller part, is devoted to thoughts upon Ceylon.)

Yet it is impossible to allow one's prepossessions to carry one away, for Mr. Still's verse is mainly indifferent. At times it is quite bad. There is little passion in his work, and for the most part it is mere echoes. Southey, W. S. Gilbert, and even E. W. Wilcox might have written some of these lines, and of personality or even of individual style there is no evidence. We are sorry to find, for instance, lines like these in the book (having thought that only American females wrote thus):—

Oh, it's hard to seem fearless of death,
And it's hard to be patient of pain;
It's hard to face danger with even breath,
Or to carry a captive's chain.

Again these superfluous verities:—

A man may be clever and yet far from wise;
A man may be stupid and yet may surprise
By the sense he displays when another is ill,
For it takes more than brains a man's nature to fill.

At another time:—

I heard a voice come floating down;
I heard a cuckoo cuckooing.

Such things, of course, are true, but hardly illuminating. Mr. Still can do very much better than this, however. He does not often see with other than the physical eye, but in one poem at least—"The Poppy Fields"—he has had a vision, caught it, and given it to us. At Afion Kara-Hissar he saw the white poppy fields, and they made him speak of a time

When men marched forth for faith to fall
To fight for Jesu's praise.
To fight for Him who never fought,
To make a path to Heav'n with bleaching bones;
Claiming the praise of Him who sought
To lessen human groans.

He sees the picture through and says:—

Oh! fitting emblem of their pride!
Oh! biting symbol of their mad desire!
That opium poppies now wave wide
Where they spread sword and fire.

And he leaves the problem unsolved in peaceful words which Matthew Arnold might have used:—

While from the starry fields of white,
When rain leaves tears in all their glistening eyes,
The bitter breath of strange delight
Floats upwards to the skies.

We have given sufficient extracts to warrant our belief that though most of these verses are not indispensable, Mr. Still is capable of something worthy. When he has learned what to eschew—that is, possibly, when he writes in happier surroundings—he will give us rather a book of interesting poems than a dull human document.

BLOCKADED EUROPE.†

This little book is described as "a record of travels in enemy Europe," including descriptions of Hungary, Austria, Poland, and Germany, as seen in the early months of this year. But it is no mere painting of social conditions, nor is it a narrative of political events; it is quite frankly a work of propaganda. It is the author's thesis that the present (or recently past) miseries of Central Europe are due almost wholly to the Entente's blockade, and that the blockade was maintained to destroy Socialistic experiments. In proof of this Mr. Brailsford brings to bear a lucid style, some telling facts and some very powerful writing. His broad outline of the hungry chaos of these regions and the details with which he adorns his tale cannot but have effect. His enthusiasm is undoubted, and there is no gainsaying most of his facts: and yet we are unconvinced. . . . In the author's mind the case against the Entente was settled before he set out on his travels; and it was not difficult for him to discover those things which he almost wished to find. One receives the impression that his perverse love of and pity for the Germans and Austrians exist chiefly because these two peoples were the enemies of the Entente; and the ordinary Socialist's hatred of French ascendancy is very apparent in his pages. Like the author, we have much sympathy with the sufferings of the Central peoples; but, unlike him, we are human before we are humanitarian.

A NEW BAIN STORY.*

Stories by Mr. Bain always contain those essentials which charm us in fairy tales and very old legends—a simple plot that yet leaves us wondering and disputing about the motives of the characters, and a power to transport us into a world of delicious phantasy and haunting beauty. One can well believe that, as he tells his readers in the introduction to this book, they come to him "suddenly, like a flash of lightning, all together," and that he writes them down, "hardly lifting the pen from the paper," so easy and inevitable are the words in which he unfolds his tale.

In this little volume he tells how the morny-crested god sat with his wife, the Daughter of the Snow, on the banks of the Ganges, and read her the story of a queen, called Táráwalí, who was so beautiful that no man could see her without falling violently in love with her. She did not want this, but, being unable to prevent it, she could not find it in her heart to be anything but kind and gracious, for a little while at least, to these victims to her charm. This earned her a reputation for having many lovers and for being altogether heartless. The Daughter of the Snow, who finds Táráwalí's conduct inexcusable, entirely agrees with this verdict. But the opinion of Mr. Bain himself, put into the mouth of the morny-crested god, is that it was not her fault that every man became bereft of his senses at the sight of her beauty and that she must not be blamed for her sweet consideration of others and her desire to save them from pain, as these qualities made up a great part of her attraction. Her only fault was that she was too kind.

Mr. Bain's descriptions are as good as ever. The queen's garden is indeed a garden of enchantment, and one catches one's breath over the picture he draws of Táráwalí each time she receives the infatuated Prince Shatranjaya. Shatranjaya himself is the true fairy-tale prince, with his youth, his impetuosity, and his wonderful skill in playing on the lute. This book will take its readers on a journey into a far and beautiful country—it will fill them with admiration for Mr. Bain's skill in conveying the impression that the story is an actual translation from the Sanskrit, and it will leave them with much to ponder over in the problem of "The Heart of a Woman," the title which the author gives to the story of the beautiful Táráwalí.

BOOKS RECEIVED.

"Tanks, 1914-1918: The Log-Book of a Pioneer." By Lieut.-Col. Sir Albert Stern, K.B.E., C.M.G. (London: Hodder and Stoughton. 12s. net.)

11	28	Thursday	18	19

Lord Ribblesdale has left Southampton by the steamship Melita for Assam.

Sir John and Lady Lavery have gone to Tangier, Morocco, for the winter.

M. Picot, French High Commissioner for Syria, has left for Alexandretta, en route for Constantinople.

Major-General Raymond Reade, C.B., C.M.G., has returned to England on completion of special duty in Greece.

Captain Sir Charles William and Lady Miles, who have just arrived from India, are staying at Claverton Manor, near Bath.

Viscount and Viscountess Goschen and the Hon. Phyllis and the Hon. Cicely Goschen have left England for India for the winter.

A lecture will be delivered by Professor E. Newberry at 8.30 p.m. on Friday, December 12, in the rooms of the Royal Society, Burlington House, on "The Tombs of the Kings at Thebes."

A service was held at the Russian Church, 32, Welbeck Street, W.1, on December 1, to celebrate the anniversary of the Union of Serbs, Croats, and Slovenes.

After a visit of one week, the Maharaja of Kapurthala left Nice on November 29 for Marseilles, where he will embark for India. He intends to return to the Riviera next spring.

Lord Edward Hay, who has made a good recovery from his recent attack of pneumonia, has arrived in Paris from Sofia. Lady Edward has left London to join him at the Hotel Majestic.

The engagement is announced of Gerald Robert Smith, late captain, attached 93rd Burma Infantry, and Alice Orr-Ewing, fifth daughter of the late John Orr-Ewing and Mrs. Orr-Ewing, of Hazlewood, Weston-super-Mare.

The engagement is announced between Captain John Fagan Nugent, D.S.O., 28th Punjabis, Indian Army, eldest son of the late John Nugent, I.C.S., and Violet Gwendolen, the only daughter of Lionel Cox, of Colombo, Ceylon.

A marriage has taken place between Miss Maria Tabona, daughter of Dr. Tabona, Medical Superintendent of Gozo Hospital, and Mr. G. G. Millard, nephew of Mr. W. C. Millard, the Assistant Secretary to the Government for Gozo.

The engagement is announced of Major Robert Howell, 15th Lancers, Indian Army (attached Royal Air Force), third son of the late Lieut.-Col. Horace Howell, and Mary, second daughter of E. Jodrell Hopkins, 15, Hills Road, Cambridge.

A marriage has been arranged, and will take place after Christmas, between Major R. de Warenne Waller, D.S.O., I.A., second son of Major and Mrs. R. J. Waller, of Hove, and Joyce Virginia, eldest daughter of Mr. and Mrs. Charles Terry, of Hove, Sussex.

The marriage was celebrated on November 22, in Bombay, between Major Shirley V. G. Burroughs, 4th Rajputs, elder son of the late Rev. and Mrs. Burroughs, and Margaret Elizabeth, elder daughter of the late Charles Leicester Davis, of Ceylon, and Mrs. Davis, Blinklonnie, Tunbridge Wells.

Sir James Meston, whose retirement from the Finance Membership of the Governor-General's Council on account of the state of his eyesight was announced on November 10, took his seat in the Upper House on December 3 under the title of Baron Meston of Agra and Dunottar.

Dr. Lanitis and other members of the Greek Delegation from Cyprus, who have been in England for several months, leave London to-morrow to return to Cyprus. Two members of the Delegation will remain for the present in England.

A marriage has been arranged, and will take place in January, between Captain John Martin, M.C., Indian Army, eldest son of Mr. and Mrs. F. W. Martin, Woodlands, Davidsons Mains, and Elma, elder daughter of Mr. and Mrs. Gray M. Muir, of 17, Grosvenor Crescent, Edinburgh.

Reuter's Paris Correspondent writes:—The Prince Regent of Serbia, travelling incognito, arrived in Paris on December 1. He is accompanied by M. Protitch, Councillor of the Serbian Delegation, and M. Stoyanovitch, Minister of Agriculture, as well as by a colonel belonging to his household.

M. Venizelos arrived in Rome after midnight on November 28, and left the following day after a stay of less than 24 hours. He lunched with the King, Signor Nitti and Count Sforza being at the luncheon, and, in addition, had terviews with Signori Nitti and Titoni and General Albricci, the War Minister.

Among the meetings in the Æolian Hall arranged by the Royal Geographical Society are lectures by the following: December 15, "In Northern Anatolia, 1917," by Captain E. H. Keeling, M.C.; December 29, "Serbia and Yugoslavia, before the War and after," by Mrs. Dickinson Berry; and January 19, "Tibesti to Darfur," by Lt.-Col. J. Tilho, French Colonial Infantry.

Our Malta Correspondent writes:—
Judge G. Cremona, LL.D., has been appointed President of the Food Control Board.

Our Belgrade Correspondent writes:—
Dr. Dragutin Koyitch, recently Chargé d'Affaires of the S.H.S. in London, has returned to Kragujevatz.
Dr. Mihail Gavrilovitch, new Minister of the S.H.S. in London, has been decorated with the Order of St. Sava, First Class.
Mr. Ivan Mestrovitch, the sculptor, has returned from London to Zagreb. Arrangements have been made for an exhibition of his work in Holland.

Reuter's Cairo correspondent writes:—Viscount Allenby is back in Cairo after his brief visit to Beyrout, for which he left on November 27. It is stated that he is very pleased with the reception given him, and especially with the complete accord which prevailed between General Gouraud and himself. Lord Allenby expressed the opinion that as regards the Mussulman population a policy of mutual cooperation between the representatives of France and Great Britain was bound to have successful results.

His Majesty's Government, on November 26, gave a farewell luncheon at the Carlton Hotel to the Sheikh Faisal and the members of the Central Arabian Mission. Sir Maurice de Bunsen, who presided, hoped that the visit of the Mission would result in a closer understanding with Ibn Saud the ruler of Central Arabia. The Sheikh Faisal, in responding, expressed his conviction of the excellent intentions of England towards the Arabs, and was certain that his Mission would strengthen the bonds already existing.

Our Cyprus Correspondent writes:—
Mr. Fenn is returning to Cyprus as Registrar General, not having accepted an appointment that was offered in what was German East Africa.
Mr. B. Dickenson has been appointed President of the District Court of Nicosia during the time that Mr. J. R. Holmes acts as Puisne Judge; and also to act as President in the Kyrenia District until further notice.
Captain Fleury is appointed a District Commissioner, on probation.

OBITUARY.

The death occurred on November 29 of Mr. John Rose Troup. He was seventy-one years of age, and was the last survivor of Stanley's Emin Pasha Relief Expedition.

The death occurred on November 14, in Bombay, of Thomas Newton, son of Mrs. Begbie, of 107, The Ridgway, Wimbledon, and the late John A. Begbie, aged twenty-eight.

The death occurred on December 1, from heart failure, of Thomas Charles Howell Spencer, Lieut.-Colonel, Indian Medical Service, retired, aged seventy-three, of Beechview, Kidbrook Grove, Blackheath.

Colonel Edward Smith Bridges, late of the Grenadier Guards, has died at St. Leonards-on-Sea in his eighty-first year. He entered the Army in 1856, and served with the Egyptian Expedition of 1882, when he was present at the battle of Tel-el-Kebir.

Colonel William Chrystie, late of the Royal (Madras) Engineers, died on November 29 at Ramsgate. He obtained his first commission in 1853, and served with the Abyssinian Expedition in 1868, obtaining mention in despatches and receiving the medal. He retired in 1883.

Our Cyprus Correspondent writes:—

A sad accident occurred on Sunday, November 2, by which Captain Gillespie lost his life. He was returning from the English Club to the camp, at Famagusta, with another officer and a private in a car, which collided with a cart. The two occupants were injured, one of them not being yet out of danger.

Colonel A. A. Spottiswoode, late Seaforth Highlanders, died on November 27 at Southsea. He took part in the Egyptian Expedition of 1882. He was also in the Nile Expedition of 1898, when he was mentioned in despatches, and received the fourth class of the Mejidia. In 1908 he was on the North-West Frontier of India, and took part in the operations in the Mohmand country. He was in the engagement at Matta.

Sir Lionel Abrahams, of the India Office, died on November 30. Sir Lionel Abrahams, who was the only son of Mr. Mordecai Abrahams, secretary to the Initiation Society, was born in 1869. After entering the India Office, promotion soon came, and he was appointed assistant secretary to the Indian Financial Committee in 1898, assistant financial secretary in 1901, and financial secretary in 1902, which post he held until his appointment as Assistant Under-Secretary of State for India in 1911. Sir Lionel also served as member of the Departmental Committees on Indian Railway Administration and Finance, 1907-8, and on West African Currency, 1912, and was a member of the Indian Wheat Committee in 1915. He was created C.B. in 1908, and K.C.B. in 1915.

Colonel Sir Henry McCallum, whose death, at the age of sixty-seven, occurred at Camberley on November 24, was a distinguished Governor of great experience and strong personality, one of the many Royal Engineer officers who have held high civil appointments beyond the seas. From 1907-1912 he was Governor of Ceylon. Ceylon prospered during his term of office. There was a very great extension of rubber cultivation; the Colombo harbour works were finally completed, and railway extensions were carried forward, including the Manaar line, designed to bring Ceylon into closer touch with India. It was in this time, in 1910, that the constitution of Ceylon was radically altered by the introduction of an elective element into the Legislative Council. To the interests of the colony McCallum brought general Eastern and special engineering experience, abundant energy as long as his health lasted, and a keen perception of practical possibilities and requirements.

The death occurred on December 2 of Field Marshal Sir Evelyn Wood, V.C., G.C.B., G.C.M.G. He was born in 1838, and entered the Royal Navy in 1852. Two years later he was in the Black Sea, landed with the naval brigade at Balaclava and served before Sevastopol. Next year he was severely wounded in the unsuccessful attack on the Redan, and was then recommended for the Victoria Cross. In 1856 he went to Turkey with the 13th Light Dragoons, but contracted typhoid there, and lay at Scutari for some months. During the next three years he performed distinguished services in India. He continued to put in very meritorious work in various theatres, the details of which are too well known to need recounting. Suffice it to recall his deeds in Egypt, notably as Sirdar of the Egyptian Army (1883-4). Sir Evelyn lived a most active and energetic life, and has bequeathed an abiding influence upon the British Army. Few men have served their country better or in so many places of the world.

NEWS IN BRIEF.

The Pope has appointed Father Albano Goodier, a Jesuit, Bishop of Bombay.

To aid in the fight against typhus in Poland, the Roumanian Red Cross has set aside £800.

Our Malta Correspondent writes:—A batch of sixty emigrants under the new emigration scheme has left on the s.s. Tebe.

A communiqué issued at Athens states that Greek troops have advanced and occupied the new limits fixed for their occupation in the district of Smyrna.

Owing to a collision at Meaux between two motor-cars, the Bulgarian Mission, which was to have visited the liberated districts, was compelled to return to Paris.

An inquiry is to be held in January by the War Inquiry Committee of the German National Assembly into events between the Serajevo crime and the declaration of war.

Letters are now accepted by the French Post Office for Austria, Poland, Czecho-Slovakia, Yugoslavia, Turkey, and those parts of Russia not administered by the Soviet régime.

Admiral Mornet, a Beyrout message states, has made a complete recovery after undergoing five operations as the result of the attempt to assassinate him in August last.

A violent earthquake, lasting 17 seconds, was felt at Smyrna on November 19. Several casualties are reported, and considerable damage was done in the neighbourhood of Balikesri.

The War Office announces that the s.s. Elephanta arrived at Marseilles on November 24. During the voyage from Basra to Port Said 63 cases of influenza were reported, with two deaths.

Our Belgrade Correspondent writes (November 26):—The Serbian Relief Fund is continuing its excellent work, and is now opening a technical school at Topchider for war invalids and war orphans.

On the occasion of the signature of the Peace with Bulgaria enthusiastic peace celebrations were held in Athens. The city was beflagged, and the Royal procession was greeted with enthusiasm.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant.
Bathing Cabins on the Beach. Billiards.
Daily Concerts on the Verandah.

FRIDAY, DECEMBER 5, 1919.

THE INDIAN SYSTEM AND NEW RESPONSIBILITIES.

The West has a cold fit just now. A year ago the triumphant Allies were laying aside their armour and hastening to start work on the foundations of the new world which it was their privilege to design, but twelve months of spade-work have produced the inevitable result; enthusiasms have dwindled, men are measuring achievement against aspiration, they are counting the cost, and in some instances they are pressing upon others the responsibilities which they were but lately so eager to assume. It would be a mistake to attach too much importance to such symptoms as these; reaction was inevitable, and presently the pendulum will swing back again; but there is a definite danger that injury of a permanent nature may result from temporary causes, and that decisions taken in a moment of lassitude may be found to hamper the energies of the workers when that lassitude has passed away. Danger of this kind is, in our view, indicated in particular in the appeals, so common just now, to what is vaguely spoken of as the Indian system; we are told that administrative intervention is inevitable in this region or in that, and the suggestion is offered in seductive terms that, while England may not at the moment have the requisite energy to spare, the Indian system can be applied, and the objective thus reached without unnecessary expenditure of effort. The frequency of such suggestions indicates that the idea is superficially attractive, and consequently we shall not be wasting time if we pause for a little to consider what the Indian system is, whether it is in fact transferable to other portions of the world, and what lessons can be drawn from India by pioneers of civilised administration.

In order to understand the Indian administrative system, the first essential is to realise that it is definitely Indian, that it is the product of Indian mentality and Indian character, and that while at the moment it is inspired by British ideals, the withdrawal of that inspiration could be effected without materially altering its framework. The system as we know it originated in the eighteenth century, when the Mogul Empire, then rapidly disintegrating and no longer able to discharge its vast responsibilites, granted the fiscal administration of Bengal to the Company of English Merchants who were established at trading stations on the seaboard. On the conferment of that grant the Company took over the administration as a going concern, and for some years allowed it to run on the customary lines. The result of that first experiment was unsatisfactory, because the Company was discredited by the conduct of agents over whom its control was little more than nominal, and the momentous decision was taken to appoint Englishmen instead of Indians to a proportion of the administrative posts, the smallest proportion consistent with the degree of efficiency which was desired. Later changes in organisation have been numerous, but they have been matters of comparative detail, and the administrative system of to-day is in essence the system of the Mogul Empire, which was itself based on earlier Indian institutions, but the Mogul system staffed at the head by Englishmen, and inspired in increasing measure by the ideals of its English officers. From the theoretical aspect this Indian system is very far from perfect; in Indian hands it was the instrument of a tyranny as crushing, perhaps, as ever existed in the world; its formal merit is that it is indigenous, and takes due account of the characteristics of the people among whom it grew; and its practical value depends almost wholly on the English spirit which it has acquired. In its daily working it falls far short of the ideals of its directors, and the keenest minds chafe unceasingly at its cumbrousness, at the undue influence of subordinates, at the excessive centralisation and deadening of initiative—in a word, at those features which derive most directly from its Indian origin; but Indian it is, and we do not anticipate any drastic remodelling of the old administrative machine.

The description we have given suffices to furnish an answer to the question whether this system is transferable to other portions of the world. It is not more transferable than the atmosphere in which it thrives, and any attempt to establish it in new conditions is likely to result in either a fiasco or a disaster. India does not offer to the world a ready-made suit of administrative clothing, but she has lessons which the world cannot afford to disregard, and whatever authorities may be charged with the reorganisation of those portions of the East whose fate is not yet formally announced will be well-advised to begin their task by a study of Indian experience, so that they may learn by past failures as well as past successes, and penetrate to the principles underlying the institutions of the present day. A few of these lessons may be briefly indicated. Assuming that the equipment of a country with entirely new machinery is not attempted at the outset, the first essential is that the staff of Englishmen should be numerically strong, and should be employed in an executive rather than an advisory capacity; otherwise the discredit of the old machine will attach to the new men who are not in a position to exercise effective control. Further, the staff should include at the outset an adequate proportion of experienced administrators. There is a science as well as an art of public administration, though it has as yet received but scanty recognition in the schools, and early Indian experience shows that the very best intentions may miss their mark for want of the trained judgment and almost intuitive perception which practice combined with study alone can give. More than this, no considerations of economy should be allowed to hinder the creation of a thinking branch of the administration; India has always suffered, and suffers still, from over-pressure at the top, and an administration which in the current phrase has no time to think is certain to fall far short of the limit of possible achievement. An administration staffed on the lines we have indicated will be able to face its task with quiet confidence; the old clumsy machine will be handled from the outset by competent engineers, able to judge of its capacities and to obtain from it the highest possible output, and meanwhile the thinking branch will be studying it in every detail, deciding what portions can be preserved and what must be scrapped, simplifying its complications, co-ordinating its parts, eliminating waste caused by friction, and ultimately transforming it into a triumph of modern efficiency. Mechanical perfection, however, will be of little use if the right spirit be lacking, and in the matter of spirit the new administrations may look with confidence to India as their guide. The spirit which animated the great men of the past is very far from being extinct; it flourishes to-day throughout India in the face of discouragements which assuredly do not decrease with time, and the traveller who cares to penetrate below the surface of British reticence will find from one end of the country to the other the single dominant ideal of self-less devotion to the interests of the millions who have no other protectors and who are still unable to protect themselves. It is this spirit which the new administrations will have to acquire. Happily its source is no secret, for it is only the highest expression of the genius of the British race, and the schools and universities of England will continue to pour it forth so long as our race endures. Our responsibilities are already great, and we have no desire to increase them, but if new burdens have to be borne, our course of action is clear; we shall not succeed by imitating this system or that, but by applying to each problem in turn the lessons we have already learned, and by giving of our best in heart as well as brains.

AFGHANS AT MERV.

By Lt.-Col. A. C. YATE.

If the ambition of the Emperor William II. has achieved the downfall of his throne and the ruin of his family—events upon which the final seal has not yet been set—marks him as a political volcano *hors concours*, Napoleon, may be, ranks second; but since Napoleon's day science has centupled rapidity of motion and communication, and in like proportion stimulated the momentum of political forces. We still worship at the shrine of the "Armistice," and an impassive majority possibly still worships "Peace"; while on every hand martial, social and industrial convulsion warns us that there is no peace in this world. Look where we will, unrest meets the eye; and is as sure a symbol of danger in the Middle East as elsewhere. We have been complacently looking upon Egypt, Palestine, Arabia, Mesopotamia, Persia and Afghanistan, and even Armenia and Kurdistan, as a vast area of "buffer states" over which *Pax Britannica* will stretch forth its hand and murmur "let there be peace—and prosperity." We are waking up now from that flattering but delusive dream, and rude is the awakening. We have but to add India to this list of countries of the Middle East and "the Land of Unrest" may be stamped across the face of the whole. The labours of Hercules are child's play to the task which awaits the mandatory Power or Powers to whose charge the great territory interposed between Europe and British India is committed. We have just seen the Shah, and we purpose to help him to recreate a prosperous Persia. Just as we were looking to establish and strengthen Afghanistan under the rule of the loyal and friendly Habibullah the assassin's blow convulsed Kabul; and instead of that Central Asian Confederacy which Habibullah had in his mind's eye, we see Bolshevism shaking hands with the Barukzai Amir. It is almost like a dream to look back upon the Vitcovitch who provoked the first, and the Stolietoff who inspired the second Afghan Wars, both emissaries from one autocrat to another; and then watch the Amir of 1919 welcome Bolshevist envoys.

As we study events in Europe and in Asia, and as we reflect that it is at the expense of Europe that these Asiatic countries have been emancipated and brought into touch with the most advanced—I hardly dare to say the best regulated—administration of the era, we ask ourselves: Is it to remodel Asia that Europe has been pouring out all this blood and treasure? Has Christendom been immersing itself in thousands of millions of debt in order that Pan-Islamism and Pan-Turanism may commence their career with a clean balance-sheet?

Afghanistan has, it would almost seem, played its cards well. For a century it has held its own cleverly between British India and Russia. Only the other day we still looked upon the Amir of Kabul as under British tutelage. During the current year the scales have been gradually falling from our eyes, and it may even be admitted that Lord Curzon was right when he said recently in the House of Lords that it was no longer possible to control the foreign policy of the Afghan Government. What happened in 1836 and 1878 and what has happened during the late war are proofs that we cannot against the Afghan will control it. We have had two wars and the makings of a third, and when we look back on the heart-burnings and recriminations to which those wars, and number three above all, have given rise, the policy of giving Afghanistan a free run to enmesh itself in the toils of Bolshevism is, if a devilish, none the less a very salutary idea. Let the Amir Amanullah and his subjects have a good dose of Bolshevism! It will bleed them white!

When the Afghan Boundary Commission went up to Herat and the Murghab Valley in 1884, it was to support the Afghan claim to a frontier which crossed the Murghab near Sari-yazi, about 40 miles north of Penjdeh, where finally Russian and Afghan came to blows. I am aware of no historical proof that any Afghan dynasty or government ever held Merv. Some of us who have visited Merv, and who have followed during the last forty years or so its destinies, must have experienced something like a shock when we took up our daily paper and read: "Afghan troops occupy Merv." For my own part, the shadows of Skobeleff, Alikhanoff, Grodekoff, Lessar, Komaroff, and O'Donovan seemed to loom before me, and my thoughts went back to the latter part of March, 1885, when the Afghan Boundary Commission was encamped at Gulran, a little north of the Paropamisus range, and the Afghan General, Ghaus-ud-din, and his imperfectly armed force faced Komaroff and his Russians at Pul-i-Khishti. Captain C. E. Yate had a few weeks earlier succeeded Colonel West Ridgeway as British representative at Penjdeh. I had Sir Peter Lumsden's permission to join my brother at Penjdeh, and my kit was packed for starting, when the grave news came in, and I was told that I could not go. We all know what followed, but few, perhaps, except those with the Boundary Commission, have realised the danger of Captain C. E. Yate's position after the Russian defeat of the Afghans, or the hardships of his march from Penjdeh to Gulran, when the Saruk Turcoman chiefs escorted him and his party to the limits of their settlement and set him on his road. Nature selected that moment for one of her most tyrannical outbursts, which culminated in the blizzard of the Ausafid Pass. The story is told in my "Afghan Boundary Commission" (Blackwood, 1886), which up to the present has not been superseded by any more carefuly compiled narrative. Sir West Ridgeway, however, has just announced that his "Reminiscences" will give us "the true and inner history of the Commission which never yet has been revealed."

Afghan national feeling was stirred to the quick by that defeat inflicted on Afghan troops by Russians on March 30, 1885. A month later I was at Mashad, and had a long conversation with Sardar Mohammed Hashim Khan, Barukzai, a refugee from Kabul. Tears—and tears with an Afghan are rare—ran down his cheeks as he spoke of that defeat, and added: "Sahib, you English will surely avenge that!" We never did. The Afghans have avenged it themselves. A month or two later I found myself at Kuchan talking to that fine type of a Turk chieftain (dead long ago), Husain Khan, with whom O'Donovan had spent some time prior to his dash for Merv. The fame of O'Donovan (killed finally in the Hicks Pasha *débâcle*) still lived all along that Russo-Persian border from Sarakhs to the Caspian shore at Bandar-i-Gez. At the mention of his name a fervent "Aman-az-u" ("Defend me from him!") burst from the lips of Husain Khan, and when, a fortnight later, I rode the 40 miles from Astrabad to the port of Gez on the Caspian, my guide told me how on the same journey a few years before O'Donovan Sahib heroically wrestled with seven bottles of the wine of Kakhetie.*

It was not till September, 1890, that I myself visited Merv and saw how the Russians were striving to restore to it some of that prosperity which had won for it in the Middle Ages, when it was the seat of a Nestorian Archbishopric, the title of "Merv-i-Shah-i-Jahán," *i.e.*, Merv, Queen of the World. Some four or five square miles of land were planted with young trees, but Russian skill could not coax down from the Murghab River the supply of water which, 1,000 years ago, enabled Merv to maintain a reputed population of 250,000. Curiously enough, as we—General Sir James Hills-Johnes and Mr. C. E. Biddulph were my companions—steamed away from Merv towards Ashkabad and Krasnovodsk, Colonel Sir Colin Scott-Moncrieff, then at the height of his fame as an irrigation engineer, passed us going to Merv to advise the Russians how to make the most of the Murghab as a means of irrigation. Twenty-nine years have gone by since then, and the vagaries of fortune have cast down the Russian from his seat and, as it would seem, raised up the Afghan. An Afghan envoy at Moscow claims access to the Peace Conference at Paris, and now that the Indian Government has cast the Amir

* The claret of the Caucasus.

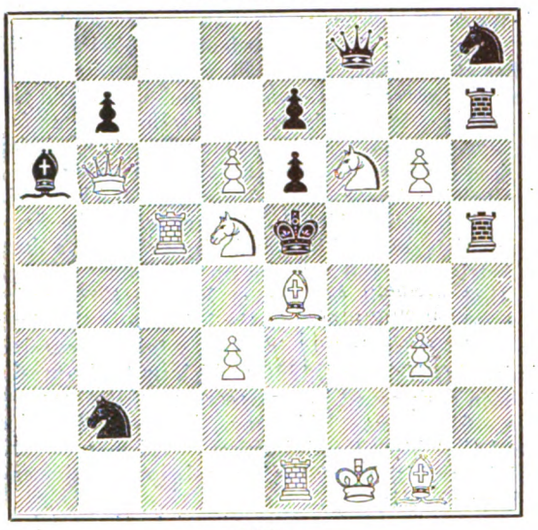
loose, the Court of St. James' will, doubtless, ere long open its doors to his Excellency the Minister-Plenipotentiary, from Kabul. Habibullah, be it remembered, entertained before his death the vision of a Central Asian Confederacy embracing Bokhara and other States. It is possible that Amanullah may achieve this. The Afghanistan of the future may be the ally, but not, as it would seem, the *protégé* of our British-Indian Empire; and it were well if, at this hour, we could reach out the hand of fellowship through Kabul to Bokhara, and thence to friends for whose safety we fear.

CHESS.

PROBLEM No. 5.



White.

White to mate in two.

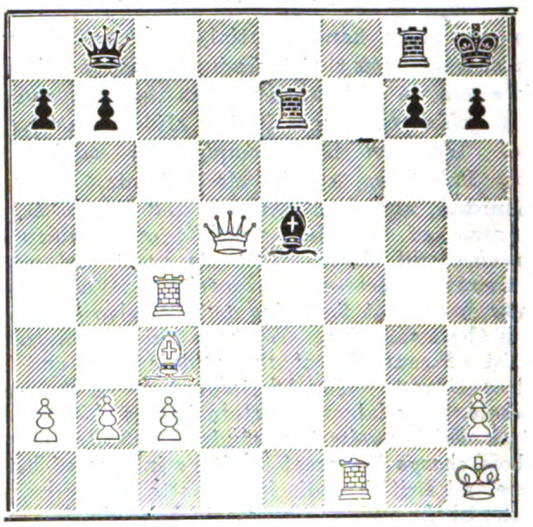
The above problem, by A. J. Fink, San Francisco, took the first prize in one of the competitions of the Good Companion Club.

Solution to Problem No. 4:—1. Kt x P(ch), if Kt x Kt; 2. R (or Q)—Q6 mate, if K—O5; 2. B—B2 mate.

Señor Capablanca's triumphal progress was continued at the House of Commons on December 2, when he met thirty-eight M.P.s and members of the Press Gallery, and won thirty-six of the games, drawing with Sir Watson Rutherford and Mr. A. Strauss. Mr. Bonar Law, who is one of the strongest players in the House, was unfortunately unable to take a board. Señor Capablanca has now left for Ireland, where he is to give one or two simultaneous exhibitions.

The game I gave recently of Charousek was, I understand, greatly appreciated by readers of this column, and I am emboldened, therefore, to give one more example of this master's style, and that, in my opinion, the finest game he ever played. It is the first game he played against Pillsbury, the meeting taking place in the Nuremberg Tournament of 1896. Opening Falkbeer, Counter Gambit; White, Charousek; Black, Pillsbury. 1. P—K4, P—K4; 2. P—KB4, P—Q4 (1); 3. KP x P, P—K5; 4. P—Q3, Kt—KB3; 5. P x P, Kt x KP; 6. Q—K2, Q x P; 7. Kt—Q2. P—KB4; 8. P—KKt4, B—K2; 9. B—Kt2, Q—R4; 10. P x P, Kt—KB3; 11. Kt—B3, O—O; 12. O—O, Q—B4 (ch.); 13. K—R, Kt—B3; 14. Kt—Kt3, Q x KBP; 15. KKt—Q4, Kt x Kt; 16. Kt x Kt, Q—B4; 17. Kt—K6, B x Kt; 18. Q x B (ch.), K—R; 19. B—K3, Q—Q3; 20, Q—Kt3, P—B3; 21. QR—Q, Q—B2; 22. B—Q2, QR—K; 23. Q—Kt3, B—Q3; 24. B—B3, R—K2; 25. Q—R4, Kt—Q4; 26. B x Kt, P x B; 27. Q—R5, B x P; 28. Q x P, R—KKt (2); 29. R—Q4, B—K4, 30. R—QB4, Q—Kt (3).

Position after Black's 30th move, Q—Kt.



31. R—K, R—Q; 32. Q—B5, B—Q3; 33. R x R, B x Q; 34. R x KKtP, R—Q8 (ch.); 35. R—Kt (dis. ch.), B—Q5; 36. B x B (ch.), R x B; 37. R x R, Q—KB; 38. R—Q3, Q—K2; 39. P—KR3, P—KR4; 40. R (Q3)—KKt3, Q—K5 (ch.); 41. R (Kt)—Kt2, Q—K8 (ch.); 42. K—R2, Q—K4, 43. P—KR4, Q—B5; 44. K—Kt, Q x P; 45. P—B3, Q—KB5; 46. R—Kt5, Q—K6 (ch.); 47. K—R2, Q—B6; 48. R(Kt2)—Kt3, Q—K7 (ch.); 49. K—R3, Q—K3 (ch.); 50. K—R4, Q—K5 (ch.); drawn.

(1) B—B4 is now generally played.

(2) Black's game is extremely difficult, but it is a case where anything may happen.

(3) The position at this point has been the subject of much debate. Tarrasch has claimed that 31, R—Q4, wins for white. Mr. P. W. Sergeant, who gives the analysis in his "Charousek's Games of Chess," states, however, that "there appears to be one weak link in this chain of reasoning."

LONDON COUNTY WESTMINSTER & PARR'S BANK LTD.

ESTABLISHED IN 1836.

Chairman: WALTER LEAF, Esq. Deputy Chairmen: SIR MONTAGU TURNER, R. HUGH TENNANT, Esq.

AUTHORISED CAPITAL	**£33,000,000**

RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,741,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests. Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,00 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,500,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·05 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Elsewhere in this issue will be found the prospectus of the Anglo-Persian Oil Company, giving details of the new issues of capital. Three million cumulative 6 per cent. (participating up to 8 per cent.) preference shares are offered at 23s. per share, and subscriptions are also invited for £2,600,000 5 per cent. First Debenture Stock at £85 per cent. In addition, a further 4,500,000 Ordinary shares of £1 each are being issued, to which the British Government and the Burmah Oil Company, Ltd., are subscribing for their respective proportions. At the price of 23s. the yield on the preference shares will be 7⅛ per cent., while the return on the debentures will be 6⅝ per cent. Applications from existing members of the Anglo-Persian Oil Company, Ltd., and the Burmah Oil Company, Ltd., will, it is stated, be given special consideration.

***

During the last few years the company has greatly extended its interests, and the aggregate nominal amount of its investments exceeds £8,000,000, while its fleet of tank and other steamers, tugs, lighters, etc., is valued at over £7,500,000. The present issue is made to provide the capital required for further considerable extensions to the refineries and pipelines in Persia, the completion of the refineries at Swansea, the provision of liquid fuel installations in all important ports for the purpose of establishing a world-wide bunkering business, and the acquisition of a large number of additional tank steamers.

***

The extraordinary progress made by the company is shown by the report for the twelve months ended March 31. The profit for that period, after paying Debenture interest and allowing for depreciation, amounted to £2,010,805, as against £1,308,558 for the previous year and £344,110 for 1917. Of this sum £1,200,000 is set aside to meet the excess profits duty, the allocations to Debenture stock redemption account, preference share reserve, and amortisation reserve are maintained at £80,000, £50,000, and £100,000, but the allocation to general reserve is £200,000 higher at £300,000. The ordinary dividend is raised from 8 to 10 per cent., and £275,528 is carried forward, as against £454,723. Remarkable as the results of this year's working have been, it must be remembered that the company is still in the development stage, and when its full programme has been carried out the return to the Government should prove a very substantial item. I would call attention in this connection to the statement in the prospectus that for the current financial year the net profits will show a further large increase.

***

The outstanding feature of the annual report of the Peninsular and Oriental Steam Navigation Company is the growth of its resources. This year the usual bonus of 6 per cent. to the deferred shareholders is being made in scrip, and not in cash, but it is evident from the report that the only reason for this step is the prudent desire to conserve resources. The results show an improvement on the previous year's figures of about £700,000, but this additional profit has been utilised to increase the company's reserves. In the previous year the allocations amounted to £100,000, they now consist of £450,000 to the contingent fund, which now comes to £1,000,000, £300,000 to the reserve fund, and £50,000 to the provident good service fund. As a result of the appropriations, the net profits are considerably lower at £559,530, as against £726,716, but as against this the amount required for the deferred shares is only £384,027 as against £575,701, and the carry forward is £115,230 as against £91,727.

***

It is now mentioned that during the war the company lost 25 steamers of 186,703 tons. To meet this deficiency eight steamers have been purchased from the Government; five Class B steamers have been contracted for with Harland and Wolff for the Australian emigrant and cargo business, and a contract has been placed with Armstrong, Whitworth and Co. for large mail and passenger steamers of 15,800 tons, and other contracts are being made. The pre-war fleet consisted of 68 steamers of a tonnage of 551,468, and it is notable that the present fleet consists of 63 steamers of 552,717. It remains to add that the extension of the company's interests has been continued by the acquisition of a large holding of the shares in the Orient Company, which will continue to be worked as a separate concern, and also of the bulk of the shares in the Khedivial Mail Company, which will be worked as a separate concern to fit in with the P. and O. services.

***

The Indian railway reports this season have made an excellent showing, and the latest available, that of the Madras and Southern Mahratta Railway Company is no exception. The gross earnings of this line for the year ended March 31 amounted to Rs.6,04,06,900 and the expenditure to Rs.2,90,28,400, increases respectively of Rs.33,24,000 and Rs.23,76,400 on the figures for the previous twelve months. The surplus profits realised £365,200 as against £358,300, and to this has to be added interest on investments making the total £385,550, as against £373,000. In addition to the guaranteed interest of £1 15s. per cent. it is proposed to pay a final dividend of 25s. per cent. and also a bonus of £2 per cent., the latter on account of the favourable exchange, making the distribution for the half-year £5 per cent., as against £3 for the corresponding period of the previous twelve months.

***

A satisfactory report is forthcoming from the Sudan Plantations Syndicate for the year ended June 30. 5,700 bales of cotton were dealt with at the ginning factories—roughly 600 bales more than in the previous year—and the gross profit amounted to £138,900, an increase of £17,700 on the previous figures. There was a rise in expenditure, however, and £14,000 as against £4,100 is allocated to depreciation and the general development account, and the net profit at £59,000 shows a decrease of £600. The dividend is maintained at 25 per cent., and the carry forward is £60,450, as against £35,200.

***

The fact that the British Exhibition at Athens has had such a remarkable success must not be taken by British firms to means that all will henceforth be smooth sailing as regards trade with the Near East. On the contrary, there is going to be the keenest commercial competition in that region in the future. Almost from the time of the Armistice the representatives of other countries have been actively engaged there in preparing the ground for trade development, and the advantage obtained by British traders through the exhibition will doubtless spur on competitors to renewed efforts. In no part of the Near East is trade rivalry likely to be more severe than in the Levant, where America and France in particular are putting forth great efforts to capture trade. France, which has the French-Levant Company to represent its interests in that region, and America have both adopted the practice of sending considerable shipments of goods on consignment, and by that means have established a considerable footing. But British goods have the preference in the Near East if they can be obtained, and I would once again emphasise the point that even at the risk of ignoring the home markets for the time being it is the duty of British traders to do everything possible to supply the immediate needs of these markets, since by so doing they will lay the foundations of permanent trade.

***

I understand that Messrs. Cox and Company, the Army bankers, are to extend their sphere of operations to Egypt, where several branches will be opened.

The Port of Constantza.

Work of Reconstruction.

We have received from a correspondent the following report on conditions at the port of Constantza at the beginning of November:—

The port of Constantza, even in pre-war times, lacked many appliances which were gradually being acquired by the Administration, but everything was interrupted by the war, and when the Roumanian authorities resumed occupation at the end of December, 1918, conditions were worse than when they left it in September, 1916. The enemy destroyed or removed everything that could be laid hands on during the twenty-five to twenty-six months of occupation.

Of the two dredgers, one was sunk, and still remains under water. The greater part of the port was encumbered by sunken craft: sailing vessels loaded with petroleum and benzine in tins and in barrels, others in ballast, barges, and the sanitary boat, etc. The sanitary boat, from which the engines had been removed by the enemy, has since been refloated, and the port engineers are still busy removing the wrecks by refloating or destroying them, so as to render quay berths accessible.

The warehouses in the port are of wooden construction, roofed with sheet iron; they have nearly all been damaged or destroyed during the enemy occupation, but the authorities have repaired some of them, and seven warehouses are at present available for the storage of goods, the superficial area of these seven warehouses being 7,500 square metres, and it is estimated that 10-12,000 tons of general cargo can be stored therein. Constantza possessed only one small crane, of a lifting capacity of 6-7 tons, but this has disappeared, consequently, steamers loaded with heavy lifts must depend upon their own gear for landing same.

There is sufficient depth of water in the harbour for steamers to enter drawing 26 feet, and the channel at the entrance has a depth of 9 metres (30 feet). The U.S. s.s. Black Arrow, which arrived at Constantza about the middle of October, having a draft of 26 feet, was safely moored alongside the quay during a very strong gale. Sixteen berths are available at present for steamers discharging general cargo, and as all the quays where these berths exist have the railway line laid down, steamers fitted with long derricks can lift heavy packages direct into railway trucks alongside.

Two modern grain elevators of a capacity of 30,000 tons each, for storing and loading grain, are built on the quay, and each is capable of loading 300 tons of heavy grain per hour into a steamer alongside. The machinery is of German production, and considered of good finish; it is in good working order, but at present only one elevator can be used, as the other, being looted by the enemy, requires refitting. A third elevator of the same capacity as the other two was built before the war, and is awaiting equipment.

Water for drinking purposes, as also for ships' requirements, is brought alongside steamers as required at the loading or discharging berths by means of an iron barge provided with pumping gear

Petroleum Dock.

A special dock exists provided with four berths for tank steamers loading oil in bulk, the oil being pumped into steamer at the rate of 200 cubic metres per hour (white products), and at the rate of 150 cubic metres per hour (black products), by a pumping station which is connected by a pipe line with the petroleum station.

There are eighteen tank-cisterns for white products, and nine tank-cisterns for black products, of 5,000 cubic metres each. The station is provided with a heating system for warming the fuel oil when the pumping has to be conducted during cold weather. The petroleum station, pipe line, etc., have been repaired, and the complete installation is now ready in every respect for the purpose of loading tank steamers. There is at present 10,000 tons of distillate in the tank cisterns.

The pipe line which conveys the oil from the oilfields to Constantza has also been replaced and repaired. This pipe line in pre-war days was laid across the Czernavoda Bridge, a span of which was destroyed during the war. In order to get the oil across the Danube, the pipe line is laid upon a pontoon bridge, but as this will have to be removed this winter, when ice forms on the river, arrangements are being made to lay flexible pipes at the bottom of the river, so that no interruption in conveying the products from the oilfields may take place.

Unfortunately, the prospects for the transport of general merchandise between Constantza and Roumania proper are anything but favourable this winter. Whilst the pontoon bridge is in position, trains pass over without transhipment, but when this is removed, the only means of crossing the Danube will be by ferry-boat, which can take six trucks across each trip. This means of transport will be quite inadequate to cope with all the traffic, and the ferry-boat will have to stop running when ice sets in and the Danube becomes frozen over. Perhaps, however, it may be found possible to cut a channel through the ice for the passage of the ferry-boat to and fro, or the ice may be sufficiently strong to allow of transport over it. In any case, traffic will be very difficult and very expensive.

DISTRESS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricultural Department, dated November 28:—Our telegram dated November 21. Famine operations have been practically closed in Bihar and Orissa, and famine conditions disappearing in Hyderabad, where village gratuitous relief has been stopped. In Madras famine operations closed in Udayagiri Taluka, and being closed in other areas. Numbers on relief:—Burma: works, 1,450; gratuitous, 100. Bihar and Orissa: gratuitous, 22,177. Feudatory States of Orissa, report not received. Central India: works, 3,300; gratuitous, 4,700. Hyderabad: works, 10,000; gratuitous, 8,000. Madras: works, 32,978; gratuitous (incomplete figures), 56,894.

SUDAN TOBACCO DUTIES INCREASED

The *Sudan Gazette* contains a new Ordinance entitled "the Customs (Tobacco Duties) Ordinance, 1919," providing for the increase of duties leviable on tobacco imported into the Sudan. The new import duties will be taken at the following rates:—On tobacco in leaf mills 500 per kilo, on tobacco in leaf stripped of its petiole or middle fibre and on tobacco manufactured cut or powdered or in cigarettes, mills 600 per kilo, on cigars whatever their quality, mills 600 per kilo.

ROYAL EXCHANGE ASSURANCE.

Mr. E. B. Hiles, who has been fire manager since 1902, has expressed a wish to retire at the end of this year, and the directors have reluctantly accepted his resignation. As from January 1, Mr. Ferrers Daniell, who has acted as joint fire manager since 1912, will continue in the position of manager of the fire department, and Mr. W. T. Greig, formerly the corporation's manager at Buenos Aires, will assume the duties and title of assistant fire manager.

CONDITIONS IN ROUMANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Business with Roumania at the present time is an exceedingly difficult proposition, caused principally by the political outlook, which of necessity has adversely affected the Exchanges. The writer has just returned after a stay of several weeks in Bucharest, and had special opportunities of ascertaining the exact position of affairs.

Previous to the war, undoubtedly Germany and Austria dominated the country commercially and otherwise, and although Roumanians (proper) are very sick of the treatment meted out to them by the Germans during "the occupation"; still, the "commercial" population, which is without doubt pro-German, is anxious and waiting to take Germany to its bosom again.

It is useless for Britain to think she can oust Germany from Roumania commercially unless she at once sets her house in order and goes about the conquest in a practical manner, and it cannot be too strongly pointed out that there is no time to lose, as German goods are already getting in at the "back door," and letters are received daily from German firms offering to resume operations.

There is a great chance now for British goods if the banks will only help English merchants to tide over the Exchange difficulty for a few months. At the present time it would be difficult to find one of the great English banks advancing *anything*, i.e., without *further* security. Surely this is a policy which might well be reconsidered in conjunction with the Government?

At present the politics of the nation are very unstable, owing in a great measure to the better class of Roumanians taking very little interest in the management of their country. The process of evolution will take some time, but it is sure to come, and Roumania, if properly handled, will become one of the richest agricultural countries in the world.

Several missions have been sent from Great Britain, and from various accounts some of them are only a waste of the country's money, owing in some cases to inappropriate selection of members; but the Government is to be congratulated on the appointment of their Commercial Attaché (Mr. Adams), who not only has the interests of British commerce at heart, but has a thorough and practical knowledge, and is most anxious to help British firms at this critical time. This is the spirit we expect to find when we visit our Legation and Consular offices.

What is wanted in the near future is an Agricultural Mission, consisting of hard-headed, practical Scotch and English farmers, with a few of their scientific assistants, to show the people what new machinery and up-to-date methods will do for the country. Such a mission would be of inestimable value, not only to Roumania but also to the commerce of this country.

In closing, it should be pointed out that this is being attempted by America, and we believe with some measure of success in Serbia.—Yours faithfully,

J. MACKECHNIE.

53, New Broad Street, E.C.2.

[We cannot subscribe to the view that the commercial population is entirely pro-German. The Roumanians are in great need of goods, and it is not surprising, if they are unable to satisfy their requirements from Allied sources, that they should feel obliged to take them from any quarter. ED.]

Glimpses of Baghdad.

Pre-War Trade Conditions. — II.

(By A Former Resident.)

The chief currency was the Turkish gold lira (about 18s.), the silver mejidie, the ten, five, and one piastre pieces, and the small copper piastre (*gereush rige*) the Persian gold toman, the silver double and single kran, and the diminutive cumri. The English sovereign and Indian rupee were fairly plentiful, and always readily accepted. The value of the two latter coins, and also of the mejidie, fluctuated slightly in accordance with market supply and demand, but the Persian kran, a coin composed chiefly of base metal, was dangerous to handle in large quantities, a fall in silver tending to depreciate it almost to vanishing point. Money-changing was carried on to a large extent, and was in the hands of the Jews, who would change practically every known coin for a nominal fee. Money-changers were known as *seroffs*, and they had small shops in the bazaars, or would stand in certain busy thoroughfares rattling coin to denote their calling.

Merchants' sterling drafts at three months' sight and four months' date on London against produce shipments were readily negotiated, and were utilised chiefly for the payment of imports, those on firms of undoubted financial standing fetching from one to two per cent. more than smaller concerns' bills. A lot of the Imperial Bank of Persia paper came into the market in payment of goods despatched to Persia, and found a quick sale at top rates. A large exchange business in rupees on India and krans on Persia was another important feature of the market.

The native local merchants were of all classes, acting chiefly in the capacity of agents for up-country and Persian firms, and those of good standing and repute would be sold goods on credit terms to the extent of hundreds of pounds, *cumpiallas*, or trade bills, being given by them in exchange in equal proportionate value at 2, 4, 6, and 8 months, or 80, 160, 240, and 320 days from date of sale. These *cumpiallas*, in case of necessity, could be discounted at the bank or in the bazaars, the usual interest being 8 to 9 per cent. per annum. The bank would accept *cumpiallas* of approved merchants as security, to the extent of 75 per cent. of their face value, against an overdraft on current account, charging a small commission for collection. In rare cases where sales were made for cash a discount of 5 per cent. was generally allowed to buyers.

Manchester prints and cotton goods to the value of hundreds of thousands of pounds, with sugar (European and Egyptian), matches, copper, glass, machinery, etc.; and coarse cloths and Hessian from Indian mills swelled the total yearly imports to well over a million sterling. Manchester goods were used chiefly as mattress and furniture coverings and dress material, and went readily into consumption in all directions. The trade in sugar from Europe, both in loaves and crystals, was enormous, large quantities being absorbed locally, and thousands of cases finding a good market up-country and in Northern Persia districts. The imports of Egyptian sugar were small, owing to restricted output of Egyptian factories, and probably no more than 30,000 cases were absorbed annually. The native had a very sweet tooth, and would always take three or four ordinary lumps of sugar in his diminutive *finjan* (cup) of tea. Matches, chiefly the ordinary Swedish safety variety, were sold retail in the bazaars at the equivalent of 1½d. a dozen boxes, and the buyer would complain bitterly if he found less than sixty sticks in a box.

It was advisable to pack all merchandise destined for Persia in small bales, bags or cases, at the port of origin, in order to facilitate transport by mules and camels, and also to lighten the labour of the many handlings that goods had perforce to undergo on the long road journey.

Most markets were very conservative, the native being full of prejudice and very suspicious of any goods with different trade marks from those he was accustomed to, and difficulties bristled for the merchant wishing to introduce a new brand, despite any claim it may have had to superiority. For instance, the placing on the market of Egyptian loaf sugar, made from cane and consequently sweeter than the French beet varieties (and, therefore, more desirable to the native) was a long and tedious business, and involved considerable monetary loss. The two-kilo loaves were packed in blue paper and twine, and were identical in appearance to the French makes, but the trade mark was different, and this fact, in the mind of the buyer, was not compensated for by its better quality. An Arab of the desert would insist on a knife made by a certain Sheffield firm, and nothing in the world would induce him to take a different make.

Among the chief exports were wheat, wool, mohair, galls, gum, skins and hides, opium, Courci dates, sesame seed and rice. Most of these products were shipped in tramp steamers of 4/5,000 tons direct from Busreh to London. A lot of cleaned wool was sold direct to America, and the greater part of the date crop was bought for consumption in the Levant.

To secure the best wool and grain it was generally found advisable to advance money on the crop some months ahead, and for that purpose a trustworthy native living in a town in the vicinity of the up-country production area, and in close touch with local producers, would be selected to act as agent. He was put in funds for distribution to the various producers either by selling drafts on his Baghdad principals, or, in the event of money being scarce in the district in which he was working, by remittances of actual coin, chiefly mejidies, despatched from Baghdad by mail caravan. The latter was generally a safe method of transport, and specie so despatched could be insured for a small premium in London, where it was looked on by underwriters as an ordinary risk.

Sheep and goat skins in the raw from surrounding districts and up-country found a ready market in Baghdad. Some of the skins were shipped in a dry state with the wool and hair, but the great majority were tanned in a village called Maathem—a mile or so along the road north of Baghdad—and then packed by hydraulic pressure into bales of 250-300 skins and shipped to London, where generally the sheep skins would fetch from 11d. to 1s. 1d. per lb., and goat skins from 1s. 6d. to 1s. 9d., according to quality. The tanning was in the hands of bands of Arabs under the control of a sheikh, and practically the whole village of Maathem was given over to the industry.

The native was a born gambler, and liked nothing better than trying to manipulate markets, though his attempts in this direction were much hampered by the fact that Turkish control of the overland telegraph line was not conducive to secrecy in his operations. No coded message was permitted, and although simple words would be disguised, their interpretation was not a difficult task. The native was an adept at getting information of the most secret business transactions, and no matter how warily the merchant would act, it was not long before his operations were public property. The old game of trying to lower home produce prices by "bear" sales in foreign markets was very risky, the operator finding that producers as often as not got knowledge of his dealings, and squeezed him when the time came to fulfil his obligations.

With the advent of better transport facilities and a general sense of security brought about by the present British occupation of Mesopotamia, no doubt trade conditions have now greatly changed, and one may hope that the British merchant is no longer subjected to the heavy risks that were inseparably connected with the old vicious systems of crop advances and lengthy credit sales.

COMMERCE WITH SOUTH RUSSIA.

H.M. Vice-Consul at Rostov-on-Don reports that an Export Commission has been attached to the Department of Commerce and Industry by the Government of the Armed Forces in South Russia in order to co-ordinate all orders for goods given abroad by the various Government Departments, and all purchases of raw materials intended for export, made in the country for Government account. Henceforth the issue of orders for foreign goods and purchase of raw materials for export by the various branches of the public service and also all public organisations will be subject to the sanction of the Commission. The following will come under its jurisdiction :—(1) Examination of lists of goods proposed to be purchased by the different State Departments and public organisations, and issue of permits for same. (2) Co-ordination of value of purchases with foreign currency and disposal at counter-value of Russian goods available for barter, also terms and conditions of payment. (3) Study of conditions on which it is proposed to procure Russian goods for export abroad. (Permits for export must be obtained from the Export Commission.) The Commission is composed of delegates from all the interested Government Departments. It is hoped in this manner to bring all purchases into line and do away with the keen competition and consequent high prices observable at the present moment.

The Seed-Crushing Industry

Development During the War.

Before the Royal Society of Arts on December 3 Mr. J. W. Pearson, chairman and managing director of the British Oil and Cake Mills, Ltd., read an interesting paper on "The Seed-Crushing Industry." Lord Lamington presided at the meeting.

The seed-crushing trade, Mr. Pearson said, was probably one of the oldest industries in the world, and yet, like many another whose importance had not always been fully realised from a national point of view, it was left for the outbreak of the most devastating war in history to bring about a recognition of its vital importance. At the time of the outbreak of war there were some sixty different firms engaged in the trade in Great Britain, ranging in importance from small country owners with a mill capacity of 5,000 tons of seed per annum to the establishments of the British Oil and Cake Mills, Ltd., whose combined branches handled something like 45 per cent. of the entire industry. The importance of ensuring that oilseed factories should be kept fully at work during the war was quickly recognised, but, curiously enough, it was in the first place at the instance of firms engaged in the soap trade, who pointed out that the supply of glycerine for the manufacture of explosives was dependent upon the maintenance of adequate supplies of oils for soap manufacture. It was therefore considered necessary to include the trade of seed-crushing in the group of "controlled industries" under the Ministry of Munitions. Later on, the other aspect of the trade became more dominant, and the importance of the mills as a source of food supply—firstly, for the production of edible oils required for the manufacture of margarine, and secondly for the cakes so necessary to the production of meat and milk—resulted in the transfer of control from the Ministry of Munitions to the Ministry of Food. While during the days of its early growth this trade was mostly centred at the principal shipping ports, Hull, London, and Liverpool, there had been a gradual extension of factories at the outports.

British Empire's Oilseed Crop.

The major portion of the oilseed crops of the world were produced within the British Empire, and it was interesting to note that while a few seeds, notably linseed, rapeseed, and sunflowerseed, were grown in the Temperate Zone, the remainder were grown almost exclusively in the Torrid Zone, and, therefore, had to be imported by Europe for consumption there. England grew no oilseed crops, and was, therefore, dependent upon import for the whole of her oil production; but the continent of Europe raised considerable quantities of linseed, rapeseed, poppy, and sunflower. The claim to regard the oilseed trade as one of the key industries of the country was surely established when due regard was given to the huge quantities of oil required by the manufacturers of soap, paint, linoleum, varnish, lubricants, and burning oils among the technical trades; and baking, frying, cooking fat, and margarine manufacturers among the edible trades. The total consumption of oils for these purposes in Great Britain was estimated at 600,000 tons per annum.

As the world's requirements in oils and fats grew every day, the story of past development had been the loss to the technical manufacturer of one after another of his markets for cheap oils, in proportion as scientific achievement had enabled each in turn to be rendered suitable for the edible trades; so a substitute had always to be found to replace for the soap pan the oil now used for margarine. A multitude of varieties of less known oilseeds were found in the world in enormous quantity, but they were either in districts at present inaccessible or else in a condition or form that rendered them almost unserviceable; but there was little doubt that in years to come, with future scientific developments and treatment, these would take their place among the important sources of oil supply.

Dealing with the products, Mr. Pearson said that it was in handling the products of the mills that the most interesting developments had taken place in recent years, more particularly perhaps as regards the oil product, as the great and increasing demand for oils and fats of all descriptions during the last century had been the reason for the large increase not only in quantity but in variety. Indeed, many oils which less than a century ago had but little commercial value had now been brought into extensive use, not only for technical but also for the finest edible purposes. The most important developments had been connected with the edible oil refineries.

Oilcakes.

The other product of seed-crushing upon which a few words must be said was the residue or cake so largely used for cattle-feeding. The cakes most ordinarily produced in this country—*i.e.*, linseed cake and cottonseed cake—were so well known as to need but few remarks. It was, perhaps, not generally recognised that cake as a feeding-stuff was not only a concentrated food, but a cooked food. Its intrinsic value depended largely upon the extent of concentration, which varied entirely with the individual seed used. By far the most popular cake in England was linseed cake, which showed no sign of being routed from its premier position even by the introduction of more modern articles, such as sesame and ground-nut cake. Linseed cake served an all-round purpose which was attained by no other, and might be used either as a fattener or a milk producer. For dairy purposes ground-nut cake and coco-nut cake had become exceedingly popular, and would become more so as the industry increased in England. The newer production, palm-kernel cake, was still a difficult market. The residue was unpleasant in the mouth, woody and unpalatable to feel and taste. It was not consumed with relish by either cattle or sheep, and possibly the high proportion of fatty acids in the oil content might have something to do with its slightly unpalatable flavour. As a pig food it had always had an enormous outlet in Germany, and, while its qualities in that direction had been demonstrated over and over again in the last few years, it still remained to be seen whether it would be able to oust barley meal from its position as the pig-feeder's favourite when once the supplies of ordinary feeding-stuffs reached normal level again. When properly ground there was no doubt as to the feeding value of palm-kernel cake, and great efforts would be made to extend its use in England in order to ensure that this country might be able to retain the palm-kernel crushing trade which had been carried on here during the last four or five years, and which previously was almost an entire monopoly for Germany.

A trade round which much debate had centred had been that of the production of cottonseed cake. The practice in England had differed from that in most other crushing centres of the world. The difference in systems was usually described as the production of decorticated cake or undecorticated cake. The American crusher decorticated the whole of his seed, crushing the kernel alone and producing thereby a cake rich in albuminoids and highly concentrated as a feeding-stuff. The shell, however, was largely wasted or had to be sold at a very low price. The practice in England had been to crush the whole seed at one operation, kernel and shell together. This system produced cake of lower value with a lesser degree of concentration, and consequently a more bulky feeding-stuff. It retained, however, certain astringent properties which were highly valued for use with the soft lush grass of this country as a sheep or cattle food, and when fed to grazing beasts it had no effective substitute. The result had been that a relatively higher price was paid here for undecorticated cake than for the decorticated, and consequently the American process had never found favour on this side.

Mr. E. D. Segundo said that cottonseed might for all practical purposes be divided into two categories—the woolly or upland variety and the bald or Egyptian variety. In the case of the bald variety, the long staple cotton was practically all removed in the ginning process, and went to the textile industry; in the case of the woolly variety there was retained by the cottonseed in ginning an undergrowth of short cotton fibres. Of the 12,000,000 tons of cottonseed produced in the world in an average year, 95 per cent. was of the woolly variety. When the woolly fibres were removed they formed a well-known trade commodity called linters, from which was produced explosives, paper, felt hats, and many other things. A recent machine had enabled the defibrating process to be carried a stage further than hitherto, producing a commodity called seed lint, and at this point the woolly seed was reduced to the same condition as the bald variety. So far as the British seed-crusher was concerned, he took the seed in hand at this stage, turned it into oil and cake, and there the process stopped. But the American practice was different. The American decorticated his seed, and, in order to ensure efficient decortification, it was necessary that part of the fibre should be left upon it. The American split the seed, took out the kernel, and produced three products as against the two of the Englishman. He produced the oil, the hulls—which were the remnants of the seed after the kernel was extracted—and a highly nitrogenous and concentrated food in the shape of the decorticated cake.

Cottonseed Utilisation.

A machine, which had only been introduced commercially about two years before the war, separated the hulls into their component parts, hull fibre and shell bran. Linters, seed lint, and hull fibre were all different grades or qualities of the residual fibre left on the woolly cottonseed after ginning, and were all equally available for the production of cellulose, which was the basis of a number of industries, such as the manufacture of absorbent cotton, writing papers, artificial silk, artificial leather, and celluloid. Previously to the introduction of the machines alluded to for the defibrating of the woolly cottonseed, a great deal of the cottonseed produced had been unsuitable for the British seed-crusher; hence it might be considered that this kind of cottonseed was now entering upon a new era in its history. Mr. Pearson had pointed out that until comparatively recently the British seed-crusher was concerned mainly with the production of cake, hence his desideratum had been a raw material containing not too large a proportion of oil. On the other hand, manufacturers on the Continent for some years before the war had gone ahead in the manufacture of edible oils, and had therefore sought out the raw materials which gave the highest percentage of oil. The war had changed a good many things, and amongst others it had entirely revolutionised the ideas of the seed-crusher in this country as regards the primary product of his industry; the richer oil producing seeds had become much more prominent, but they would not force cottonseed into the background. Professor Todd had estimated that to meet the world's requirements there must be a cumulative increased production of 800,000 to 1,000,000 bales of cotton per annum, so we might look for a proportionate increase in the production of cottonseed, and 90 per cent. of it would be of the woolly variety. Whatever might be said about the richer seeds, cottonseed oil was still unrivalled as a means of producing margarine and other edible oils; so, provided the cottonseed was thoroughly cleaned by the seed-crusher before it was treated further, it would take in the near future a far more important place in the category of raw materials than it had held in the past.

Mr. Chadwick, the Indian Trade Commissioner, said that in our tropical possessions we had a very large area of land suitable for the production of ground-nuts, copra, and rich bearing oilseeds. Taking the Empire as a whole, we produce more of the richer oilseeds than of the poorer ones. The fact that crushers in this country had not wanted the richer oilseeds had led India to seek a market for them in Continental countries. Some authorities considered ground-nut cake to be for feeding purposes in no way inferior to cotton cake.

YUGOSLAV CURRENCY PROBLEM.

(From Our Own Correspondent.)

Belgrade, November 24.

The currency problem is still with us. The scarcity of small change, an inconvenience not peculiar to this country, has been met by the issue of a quite elegant one-dinar note. Light is thrown on the scarcity of silver by the recent attempts to smuggle several thousand silver kronen to Paris. This is quite a Turkish characteristic, for it was found that many of the Turkish labourers in the employment of the British Salonika Force had considerable sums in gold concealed upon them, sometimes a hundred pounds or more, which explains the fact that a certain amount of gold remained in circulation in Macedonia right through the war. The marking of the krone begins this week; by this the authorities hope to get to know the exact amount of stamped kronen in the country, which they will recall and replace by the new dinar issue before the New Year. The new issue will be covered by the old Serbian gold reserve, and by a new loan of fifty million pounds recently made jointly by England and France for this purpose. With the granting of this loan the monthly subsidy of nine million francs ceases, and the payment by England and France of the coupons on the old loans, which amounted to forty-two millions a year. The Serbs complain that they have to carry the whole burden of their war debt, which amounts to two milliards, running at 5 per cent. from next year, while defeated Bulgaria has been remitted her war debt to Germany; it sometimes pays to be beaten, the yargue, for they can compare Bulgaria's intact fields with their own ravaged towns and villages and ruined railways.

November 26.

It is notorious that for a long time huge quantities of unstamped krone have been smuggled into the country. From time to time arrests have been made and great quantities of this bad money confiscated; the offenders have in almost every instance been Hungarian Jews or their agents.

Communications.

Communications are still very bad, and there is little prospect of definite improvement until the mass of damaged locomotives is repaired. It is hoped to have two hundred more ready early in the New Year, and there are eighty yet to come back from Bulgaria. The coal shortage is another cause of irregular traffic; the fast train Liubliana-Zagreb-Belgrade was recently taken off owing to a colliers' strike at Trbovlie, and until the train was restored on the 23rd inst. the only communication with Zagreb was by the Orient express, which, of course, is always full. Better things are, however, in view, for it is announced that in a few weeks a sleeping-car service will be run through Belgrade to Nish, whence it will divide to Salonika on one hand and Sofia and Constantinople on the other. This is urgently needed, as the train journey at present to Salonika is a terrible undertaking that daunts the stoutest hearts.

AYAHS' HOME,

28, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. Fletcher, Matron.

PALESTINE NOTES.

Development of Agriculture.

(From a Correspondent.)

While the fog of political uncertainty impedes progress to no little extent a brighter view is being steadily unfolded under the orderly methods of British administration. Every effort is made to get at the root of abuses, and many good measures are being taken to restore, or rather to develop, agriculture, which has suffered so much from the havoc of war, but was always terribly hampered under Ottoman sway by the vexatious restrictions which harassed every branch of this industry.

In the matter of tithes leviable on all agricultural produce substantial reforms are, of course, needed. Many articles will no doubt, be exempted from tithe, and old-fashioned methods of assessment superseded. As regards cereals the existing system of estimation on threshing-floors must be followed, computation on standing crops being very objectionable. Perhaps many of the changes introduced in Cyprus in very similar circumstances under British administration might be repeated with advantage here. There the old method of farming out the tithes, which led to so many abuses, was promptly abandoned. Then the assessing staff of officials was separated from the collecting—a very necessary step. But the system of assessment on open-air threshing-floors was maintained. Any adoption of fixed charges on land is out of the question under the climatic and other conditions in these regions.

Agricultural loans at 6½ per cent. repayable by instalments during five years are providing relief in some cases. Agricultural machinery and appliances are now exempted from customs duty. The exportation of livestock (cows, calves, sheep, and camels) is prohibited until further notice. The protection of olive trees is being enforced, a highly judicious step. Thus any person cutting a tree must preserve one shoot from the root (*tabûn*) and tend its growth. Neglect to do so is a punishable offence, and reports are made by agricultural inspectors. In regions that have suffered most relief is being given to poor agriculturists and field workers by labour on public works when possible. A considerable time must, of course, elapse before husbandry can return to pre-war conditions. But these were notoriously backward, or primitive, at the best.

As regards land and house taxes, the need of a cadastral survey and a revaluation of properties of all categories is, of course, manifest. Also delimitation of forests and determination of State domains. Ottoman records, based on a very old and irregular system of registration, are to a great extent lacking. The cost of creating a Land Registry, and of training an efficient staff will be great. Meanwhile things must inevitably remain in a decidedly chaotic state.

THE GOVERNMENT AND ANGLO-PERSIAN OIL.

In the House of Commons on December 3, in reply to Major Barnes, the Chancellor of the Exchequer (Mr. A. Chamberlain) said: His Majesty's Government at present hold two million £1 shares in the Anglo-Persian Company out of three million ordinary shares, and have agreed to subscribe in the same proportion to the total ordinary share capital for a further three million ordinary shares of £1 each, on which 1s. per share will be immediately paid up. It has been arranged that the remaining 19s. per share on two million shares will be paid up shortly. The calls on the remaining million shares will not be made for some years. Tentative arrangements for financing the call of 19s. per share on the two million shares have been made, and will be embodied in a Bill which will be presented to the House immediately.

LANCASHIRE COTTON.

(From Our Own Correspondent.)

Manchester, Wednesday.

The market is distinctly dearer than a week ago. Rates in yarn and cloth have been put up to a greater extent than the rise in the raw material. Numerous spinners and manufacturers are asking extraordinary prices, but it seems quite impossible to check the enterprise of buyers. A feature of interest has been the striking advance in Egyptian cotton. The upward movement in Alexandria is said to be due to the greater difficulty experienced in securing supplies from the country districts as a result of the labour disturbances. Buying on the spot in Liverpool has been rather smaller. Many people are of opinion that values are now on a very dangerous level. Spinners of Egyptian yarns have raised their quotations to a marked extent. The advance in 60's twist since a week ago is about 12d. a pound, but in certain special qualities 15d. a pound more has been demanded. Many leading sellers have begged their customers not to operate at present, but the undercurrent of demand is very persistent. In cloth for Egypt there has been a considerable inquiry. Some encouraging sales have been put through in sized shirtings. Printed and dyed goods have also been in active request. Remittances from the other side are very encouraging. A healthy turnover has transpired for the several outlets of the Levant. India has done well in miscellaneous fabrics, but the grey staples have attracted rather less attention. Operations for China have been somewhat irregular. Manufacturers are in a stronger position than ever. Shipping yarns have moved off freely for India, China, and Japan. Demand has been well maintained for Near Eastern markets.

Cotton Spinning in 1919.

Mr. Frederick W. Tattersall, of Manchester, has prepared his usual analysis of the reports of Lancashire cotton-spinning companies for the twelve months ended November 30, 1919. The figures show that record profits have been made. In a table of twenty-three companies which issue balance-sheets the total profit is £340,090, being an average profit per company of £14,786. The share capital of these concerns amounts to £945,815, and loans £369,938. The value of the mills, including machinery, is £890,489, the total number of spindles being 2,241,728. The profit on share capital works out at 35.95 per cent, against 34.34 per cent. last year. The profit on share and loan capital combined is 25.84 per cent., as compared with 21.90 per cent. in 1918. According to a table of 100 companies, with a share capital of £4,723,475, the average dividend paid during the twelve months is 21.34 per cent., the amount distributed being £1,007,989. These 100 mills contain 9,182,418 spindles. During the year the directors of twenty-six of these companies have increased the amount paid up on shares by the payment of bonus calls out of profits. The year opened with trade in a depressed state as a result of the slump following the Armistice, but business revived early in April, and since then there has been an increasing trade in yarn, and the margin of profit has steadily widened. It is probable that the stocktaking announcements at the end of December will show even more satisfactory results than those mentioned above.

The traffic receipts of the Suez Canal from November 16 to November 23 amounted to 3,000,000 francs, as against 1,560,000 francs for the previous year.

At the monthly meeting of the "S.P.C.K." the Rev. J. Goodchild will lecture on "Overland to Baghdad—Railway Expansion and Missionary Enterprise."

A branch of the London County, Westminster and Parr's Bank is being opened at 227c, City Road, under the management of Mr. F. Littell (manager, Old Street branch).

M. Huszar, Hungarian Prime Minister, states that communism cost his country 18 milliard crowns (£750,000,000 pre-war), and the Roumanian invasion 36 milliard crowns.

M. Adossides, the Governor-General of Salonika, has returned to Salonika from Athens, where he has been arranging with the Hellenic Government for the development of agriculture, education, and transport in Macedonia.

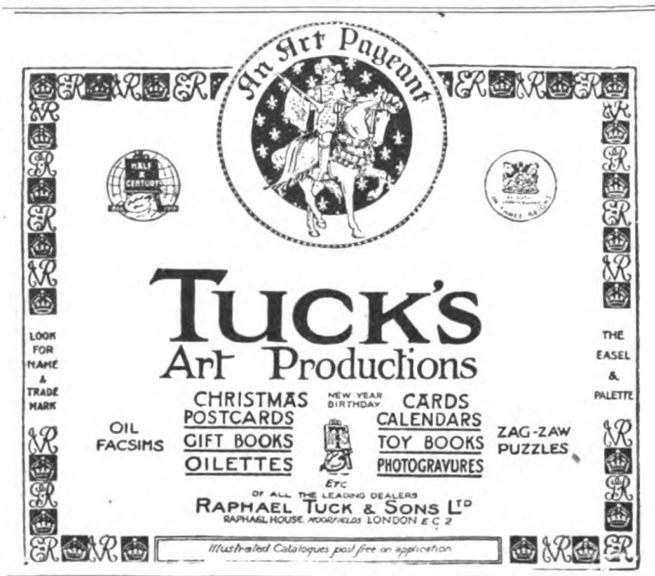
Branches and Agents in the Principal Cities of Greece and the Levant.

The Bank undertakes every description of Banking Business, and by reason of its connections, throughout Greece and the Levant, is in a position to offer to the trade exceptional facilities.

Advances and Collections of B/Ls., Shipowners' Remittances and Disbursements to and from all parts of the World, by cable or mail. Loans on Vessels and other hulk. Bills of Exchange Negotiated. Letters of Credit and Drafts issued on the Principal Cities of Greece and Foreign Countries. Confirmed Credits at Home and Abroad. Loans on Government and other Securities. Loans on Goods and Warrants of Bonded Stores.

AGENTS AND CORRESPONDENTS:—
For the U.K. -LONDON COUNTY & WESTMINSTER & PARR'S BANK, London.
BANCO NACIONAL ULTRAMARINO, London.
For the U.S.A.—NATIONAL CITY BANK OF NEW YORK, NEW YORK CITY, U.S.A.



ROYAL SCHOOL
FOR
Daughters of Officers of the Army.

Patrons
Their MAJESTIES THE KING AND QUEEN
and HER MAJESTY QUEEN ALEXANDRA.
Chairman: LT.-COL. A. GRUBB, J.P.
Vice-Chairman—SURGEON-GEN. SIR WILLIAM TAYLOR, K.C.B.

Daughters of Officers of the Army are admitted to the above Schools according to the circumstances of their parents, at rates of £20, £45, £65, and £80 a year. Granddaughters of Officers are admitted at £45, £65, and £80 a year according to circumstances, and a limited number of daughters of civilians are admitted at £120 a year when there are vacancies. There are 15 Scholarships, open to competition, in the School, of amounts varying from £10 to £20 up to one of £50.

As half of the School consists of pupils on the £15 foundation, which includes both board and education, a deficiency of about £2,500 a year has to be met by contributions, which are earnestly solicited. Donations of £5 5s., giving one vote for life, or subscriptions of 10s. 6d., giving one vote for the year, may be sent to

F. W. T. ATTREE, COLONEL (late R.E.), Secretary.
Office: Panton House, 25, Haymarket, S.W.1.

MOTOR SHOW REFLECTIONS

III.

(From Our Own Correspondent.)

There was only one American car, so far as I could see, offered at £250 or under, against which I noticed four British two-seaters, two two-seaters with a third seat, and one four-seater, offered at prices ranging from £200 to £250. So that here again British prices compared more than favourably with those asked for similar but less well-finished vehicles made in other countries.

Two high-grade British four-seaters were on offer at rather under £350, and two two-seaters and three four-seaters at prices ranging from £250 to £300. There were also two American four-seaters offered at between £350 and £400, but in this class I counted no fewer than nine British two-seaters, one three-seater and five four-seaters. Practically the same thing was noticeable with cars offered above that price and under £500; and what to my mind was the finest American product on view, the eight-cylindered Cadillac, priced at £1,350, was certainly not the equal as regards finish, fittings, or power of many British cars offered at less money. It may be mentioned here that the Cadillac car has a self-starter, electric lighting, aluminium disc wheels with detachable rims, wind screen, luggage grid and tyre-carrier, hood, and hood cover. The most expensive British car was the magnificent Napier at £2,185, and this, in my view, was absolutely the last word in car construction. This is said advisedly after exhaustive examination and a lengthy trial run under adverse weather conditions on both tar macadam and medium and bad country roads.

British v. Foreign Requirements.

When comparing prices and qualities of British and foreign cars, however, it must be borne in mind that we have in England a large motoring public which exists only to a very small extent in other countries; that is, a public which is prepared to pay any price in reason, provided the product it buys is absolutely the best obtainable. The other section, that which desires to buy good quality products at the lowest possible price, is perhaps not so numerous here as elsewhere, and the predominance of this section amongst American and other buyers is the reason why American cars are built in the cheapest manner possible. It is noticeable that an increasing number of British manufacturers are now catering for this section, and, concentrating their energies on one, or at most two, models, are producing or are about to produce these by methods of mass production—a term which is now so familiar as to need no explanation. These models are known in the trade as "quantity" or "production" cars, and here the object has been to produce as fine a car with as well-finished a body as the average man could wish to have, at a price lower in many cases, and certainly no higher in any, than those cars imported into Great Britain.

In these there has been no sacrifice of efficiency, power, or appearance, and a close examination of every "production" model showed that engine, chassis, springing, and all other essentials were constructed on the soundest of engineering lines. It was in this section of cars that perhaps the most noticeable departures from pre-war practice were to be observed, and the effect upon them of aero-engine design was very marked. Weight was cut down to a minimum without the slightest sacrifice of strength, road clearance was good, wheel bases and wheel tracks such as would be suitable for practically any class of road down to the merest country lane, and both home and overseas buyers could invest in one of these cars confident that they were not only getting the fullest value for their money, but were buying a sound proposition which would serve them in good stead anywhere, in any weather, and on any roads.

British Supremacy.

There was actually as much change in the right direction in regard to the construction and finish of the more expensive "luxury class" cars, but here it was not so largely in evidence by reason of the number of other refinements which were added. But whatever the class of car, and no matter what its power and price, it can be confidently asserted that there was not a single model on view which did not compare favourably in every way not only with those models offered before the war, but also with those models which had been sent into the show for the purpose of showing British engineers and British buyers what the workshops of other countries could produce.

I have compared my impressions, derived from an almost constant attendance at the show and an exhaustive examination of every model on view, with those of other engineers, and find a remarkable unanimity of opinion. I have said before that in my opinion there is not only nothing wrong with the British motor industry, but that we know as much about efficiency and engine power and design, road shocks, wind resistance, springing, lighting and starting as it is possible to know in the present stage of development. In several of these respects we are ahead of French and Italian designers and leave the Americans hopelessly in the rear. In saying this I fully admit the many good points of American products, and then say deliberately that with one exception, the Cadillac, there is no American car that, as regards all that goes to make up a car, is even in the same street as our medium cars; and certainly there is not one, so far as I can ascertain, that even begins to compete with such British productions as the Napier, Rolls-Royce, Lanchester, Vauxhall, Daimler, Sheffield-Simplex, Armstrong-Siddeley, Sunbeam, or a number of others that could be mentioned did space permit. Our quantity productions are in the same position, comparatively speaking, and it is certain that the lead thus established will be well maintained now that conditions are more normal.

Weight Reduction.

Speaking more particularly to overseas buyers, I would point out that the elimination of all unnecessary weight in engine and chassis is all to the good. Reduction of weight, as I have said, does not mean a sacrifice of strength, but actually the reverse, in modern car construction. It is practically certain that more will be done in this direction, and that the use of specially selected woods, used either plain or reinforced with steel plates, will be developed. Where steel is necessary, higher-grade alloys, as manganese steel, vanadium steel, chrome-nickel and tungsten steels, will be probably used more extensively in the future, and many parts at present made from ordinary steels may in future be constructed of certain aluminium alloys. Already duralumin is being used to a considerable extent, and it may well be that the monobloc type of engine, in which the cylinders and upper portion of the crank case are cast in one part, will give way to a design in which the cylinders are made with their heads from weldless steel tubes specially forged and machined. Already one large firm is making its engines in this way, and if they stand the test of hard usage—and there is no reason to think they will not—other makers will certainly follow the lead. In this way the cost of construction will be reduced by the elimination of the large casting, as at present an appreciable proportion of castings contain hidden flaws which only come to light under the exhaustive tests and the machining to which they are subjected.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

All such faulty parts have to be paid for by the perfect castings, and their elimination would certainly do much to cheapen the output of the factory.

MISCELLANEOUS TOPICS.

Cotton-Growing in Mesopotamia.

The great possibilities of Mesopotamia for grain and fruit cultivation, it has often been pointed out by us, will open up a very promising business field for the enterprising British agricultural engineer and machinery merchant. This view has recently been further emphasised by the results of practical experiments which have been carried out to test the possibilities of the soil and climate for cotton growing, and which proved that Mesopotamia can also yield large quantities of cotton. The experiments were conducted under the auspices of the Agricultural Department of the Expeditionary Force, and they have given results that are exceedingly encouraging. Judging from these experiments the type of cotton that will thrive best is Middling American Upland, for which there is in ordinary times an immense demand. The specimens actually produced are described as "fairly long" in staple, of good colour, and of high ginning percentage, while the amount of the yield per acre was exceedingly liberal.

Some points in the experiments may be mentioned as of special interest. Alluvial land near Baghdad was sown with varieties of seed imported from India, America, and Egypt. Four varieties of American seed were found to give the best results. Three of these were from cotton acclimatized in India, and well known in the Punjab and Sind under the titles of "F. 285," "4 F," and "Triumph," while the fourth, "Webber 49," was imported from America direct. The yield in amount was remarkable, being over 2,000 lb. of seed cotton to the acre. Taking a third of this as actual cotton or lint suitable for ginning, there is a much higher yield to the acre than in India or Egypt. It must be mentioned, however, that the land selected for the experiment was richer than the average, and that it received better attention in the way of deep trenching and irrigation than the Arabs could give, at any rate for some time. Labour is likely to be an initial difficulty in any attempt at cotton growing on a considerable scale, and artificial irrigation would be necessary. In February and March, before the cotton is sown, the rivers are in flood, and they are low at the time when water is most needed for the young plants. Still, neither of these obstacles is insuperable given a determination to make progress with an enterprise that on the whole should be exceedingly promising.

Petrol from Water.

The recent news of the discovery of a miraculous powder which, it is alleged, turns water into petrol has evidently circulated widely in the Near East, since inquiries are being sent from various parts of that region for particulars, the price of the substance, etc. The fact that there are thousands of motor-cars and other vehicles in the East, most of which, owing to the great scarcity of petrol and its very high price when it can be obtained, have been either locked up in the garage since the war, or only occasionally used, justifies the apparent excitement of the owners at the prospect of being able at a trifling cost to prepare one gallon of petrol at the nearest water tap, pump, or brook. It is not pleasant to lower such hopes, but, unfortunately, experts are not very hopeful of the invention, which according to reports from the place where the mysterious chemical was shown, is very simple. The powder is said to be the invention of a South American, who takes a bucket of water and drops some sort of chemical powder into it—a secret preparation of his own. Then the resultant compound, it is said, is ready to drive even a 20 h.p. limousine at high speed, with perfectly smooth running qualities. The experiments with the new fuel created much interest among motorists, but opinions are divided on the merits of this latest petro substitute. The prospect, however, of replenishing one's motor fuel supply at the nearest parish pump, water-tap, brook, or fish-pond has excited as much speculation among motorists who were watching the experiments on the spot, as among those who heard of it in the East.

It is not the first time that such claims have been made, as a leading motoring authority said, for about eight or nine years ago a similar experiment was made before a number of experts. The inventor filled the glass reservoir of an ordinary oil-lamp with water. A small pill, said to consist of chemicals, was dropped in the water, and when the lamp-wick was lighted, it continued to burn like ordinary oil. Some of the onlookers came away from the experiment quite bewildered, but nothing further was heard of the matter. Another expert in motoring matters said he was very sceptical about this latest discovery, and pointed out that something similar was tested in America in 1917. His concluding remarks are worth mentioning:—"If the present motor-fuel project is the same as the foregoing, I don't think there is much in it, as Americans are usually alive to the advantages of such a thing." It was said that the American inventor and his attorney were, recently, in London awaiting developments, and that a £2,000,000 company was prepared to exploit the invention; but so far nothing is definitely known.

Water Gas.

Apropos of the above American invention, it may be mentioned that in answer to a remark of a British officer that "some of our expert chemists may be induced to investigate the conversion of water into fuel, and that the benefits may be assured to the already struggling community," a correspondent pointed out that, apparently, he overlooked the fact that for many years water has been used as a fuel in the form of water-gas, which is produced by passing steam over heated carbon, and the result of this is the production of $CO+H^2$. These gases are then led to an internal-combustion engine, where, mixed with air, they form an explosive mixture. The application of this principle to motor lorries has already been effected, and it has also been tested out and reported upon very favourably by an Inter-departmental Government Committee, who have expressed the opinion that such portable gas-plants have the following advantages:—(1) Lowest known fuel cost; (2) Large radius of action without recourse to compression or the use of containers; (3) Use of home-produced solid fuel; (4) Low cost of upkeep.

SOUTH RUSSIA'S IRON ORE SUPPLIES.

The British Economic Mission at Rostov-on-Don makes the following report on the Krinz Rig Mines, the output of which region in 1913 was equal to 69 per cent. of the total production for the whole of Russia:—Although there has lately been a certain activity in the region, all mines are at present at a standstill and water pumping has ceased. The stocks of iron ore in mines and factories are:—At the mines, 95,000,000 pouds; at the factories, 35,000,000 pouds. Allowing for a reserve stock of 30,000,000 pouds, there remains 100,000,000 pouds at the disposal of the South Russian factories. There is sufficient for four months' work at full capacity for all factories. The factories have also half-finished material for four months, and are safe-guarded for full-speed work for eight months. One can estimate that stocks will actually suffice one and a-half to two years, as factories will only reopen gradually. If factories are restarted on part-time work, and only the most productive mines worked for the present, it can be reckoned that a large part of the total stock might safely be exported now. The ore at present can be exported by rail through the station Dolinskaia to Nikolaeff, and from there by sea.

TENDERS INVITED.

Tenders are invited for the contracts given below, and must be made by the dates mentioned:—

India Office.—Supply of road bridges, 100, 80, and 60 ft. spans. (Spec., Director-General of Stores, Whitehall.) December 9.

India Office.—Supply of vacuum brake gear. (Spec., Director-General of Stores, Whitehall.) December 10.

Madras Corporation.—Supply and delivery of about 67 miles of English stoneware pipes, from 4 in. to 18 in. internal diameter. (Spec., 5s.; Messrs. J. Mansergh and Sons, 5, Victoria Street, S.W.1.) February 2.

A report has been submitted by the Alexandria Hellenic Chamber of Commerce to the Athens Ministry of the Interior advising the abolition or the reduction of export duties on tobacco exported to Egypt.

The export from India of the following articles is now generally permitted:—Goatskins, raw; goatskins, tanned; hides, buffalo and cow (including calf), raw, partially tanned or tanned; sheepskins, raw; sheepskins, tanned; jute, raw.

Dr J. Collis Browne's Chlorodyne

Of all Chemists. 1/3 and 3/-.

Safeguard your Health with this Reliable Medicine.

Cuts short attacks of HYSTERIA, SPASMS, PALPITATION.

A true palliative in NEURALGIA, GOUT, TOOTHACHE, RHEUMATISM.

GREEK FINANCES.

Control of Exchange Operations.

The following report from H.M Minister at Athens gives particulars of the control of exchange operations in Greece :—

The present Greek regulations relative to exchange operations have attracted a great deal of attention. The Law of September 30 amends previous laws regarding the control of foreign exchange, and in view of its importance to British financial houses. and the difficulties experienced by traders, its main clauses are given below. It is understood that representations have been made by the Greek Chamber of Commerce to the Ministry of Finance with a view to obtaining some modification of the regulations, if not the abolition of all restrictions.

A circular from the Ministry of Finance, dated June 25 (No. 554,907), permits remittances abroad in cases where these remittances concern orders for goods to be imported into Greece, provided that clients deposit a sum equal to 10 per cent. of the remittance as a guarantee that the goods will be sent to Greece. This sum can be reclaimed after permission has been obtained from the Special Exchange Bureau of the Ministry, to which clients are obliged to present proofs that the goods have been imported to Greece against the remittances concerned. The proofs demanded by the Ministry in this respect consist of the following documents :—Invoice-duplicate, bill of lading if possible, and Custom House declaration stating that the Custom House duties on the goods in question have been paid.

A subsequent circular of the same Ministry, dated July 28 (No. 67,532), exempts the members of the Greek Chamber of Commerce from the regulation regarding the deposit of 10 per cent. as guarantee, provided that such members will sign a guarantee undertaking to deposit a sum equal to 10 per cent. in case the goods are not imported into Greece within six months from the date on which the remittance is made by the bank. Such deposits of 10 per cent. are allotted to the public revenues in case the goods are not imported within the period of six months.

Confirmed Credits.

Validity of confirmed credits is fixed for a period of three months (Ministry of Finance Circular, dated September 23, No. 4,155). Customers opening confirmed credits through a bank in Greece must deposit 10 per cent. as guarantee, or a written personal guarantee if members of the Greek Chamber of Commerce, as in case of remittances abroad, except that the period is fixed at three months and not six, as in the latter case.

If for any reason the credit is cancelled, the customer is obliged to pay the bank any difference in exchange; should, however, the exchange be in his favour, any difference must be paid to the National Bank of Greece to the credit of account "Difference on exchange on funds abroad" against the issue of bank-notes (Law published in Government Gazette No. 207 of September 29, 1918). For any extension of the validity of confirmed credits, customers have to apply to the Ministry of Finance, and to present proofs to the Special Bureau that the credits have not been utilised during the period of three months owing to force majeure (Ministry of Finance Circular, dated September 23, 1919).

Bills with bills of lading sent for collection :—Proceeds of such bills with bills of lading cannot be permitted to the senders abroad, unless customers submit to the Special Bureau of the Ministry, through the bank, a Custom House declaration that the relative goods have been imported into Greece. Consequently, banks before delivering the bills of lading to the customers are obliged to ask 10 per cent. of the face value of the bill from them as guarantee, or, in the case of members of the Greek Chamber of Commerce, a guarantee letter stating that the relative goods will be imported into Greece, and not be re-exported into other countries. Such a guarantee is returned to the depositor when he submits the Custom House declaration as stated above, and obtains the permission of the Special Bureau

Exports.

The export of goods from Greece (tobacco, currants, etc.) is permitted only on condition that the exporter gives a guarantee to the Ministry that the value of the goods will be remitted to him within six months, in exchange on Paris, London, New York, Switzerland, Holland, Spain, etc., or that an equal value of merchandise will be imported within that period. Members of the Greek Chamber of Commerce and exporters permanently settled in Greece, are entitled to deposit a letter as guarantee, while from others a cash guarantee of 20 per cent. of the value of the goods is required. This cash guarantee is credited to the Government in case the full value of the goods is not received, or if merchandise of equivalent value is not imported, within the period of six months.

The same measures are taken for goods imported from abroad which are re-exported to foreign countries, viz., deposit of guarantees, etc., etc. (Law of September 17, 1919).

By the same Law of September 17 the import of the following bank-notes and paper money is forbidden :—Roubles, lei, Austrian crowns, marks, and Turkish pounds.

SHIPPING INTELLIGENCE.

Shipping Notes.

It is announced in the report of the P. and O. Company that the board are arranging to fit the passenger steamers now under construction for burning oil instead of coal.

The Suez Canal returns for the second quarter of this year show that the number of passengers was 640, excluding warships and transports, with an aggregate net tonnage of 2,199,086. During the period January 1 to June 30 1,094 vessels, with an aggregate net tonnage of 3,717,772, passed through the Canal.

It is announced that the passage dues for ships in ballast of the Suez Canal Company will be reduced by 2 francs 50 centimes to 6 francs per ton as from March 1. The dues for loaded ships will remain at 8 francs 50 centimes per ton.

The s.s. "Woodara," built to the order of the British India Steam Navigation Company, underwent her trial trip successfully on the Clyde on November 27. The vessel, which has a dead weight carrying capacity of 10,500 tons, realised a speed of 16½ knots. She is insulated throughout in holds and in all 'tweendecks for the carriage of frozen meat.

The Moss line s.s. "Amasis" leaves Liverpool on December 13 for Gibraltar, Algiers, Malta and Alexandria.

Forthcoming Sailings.

The Johnston Line's s.s. Cundall, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza, will close for cargo at Liverpool on December 10.

The Ellerman Line's s.s. Polo, from Liverpool for Bari, Venice, Trieste, and Patras, will close for cargo on December 10.

The Ellerman Line's s.s. Malatian, from Liverpool for Alexandria, will close for cargo on December 20.

The Cunard Line's s.s. Sea Serpent, from Liverpool for Piræus and Patras, will close for cargo on December 10.

The Cunard Line's s.s. Sahara, from London for Piræus, Constantinople, Constantza, Odessa, and Batoum, will close for cargo on December 6.

The Papayanni Line's s.s. Bavarian, from Liverpool for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc.), will close for cargo on December 6.

The Bibby Line's s.s. Oxfordshire will leave Liverpool on December 10 for Marseilles, Port Said, Colombo, and Rangoon. This company will also have a steamer leaving London for Rangoon next month.

ROUMANIAN NOTES.

The petroleum output from September 27 to October 3 was 21,296 tons, and the stock available was 79,196 tons.

The coal output from September 27 to October 3 was 4,152 tons, and the available stock 16,815 tons.

The Ministry of Industry and Commerce are considering the abolition of Customs formalities which are at present imposed on foreign newspapers coming into the country.

There is great activity on the Bourse in respect of shares in banks, insurance companies, maritime and river navigation companies, and several of these are increasing their capital, whilst new companies and banks are being formed and registered, showing that commercial circles in Roumania are preparing for considerably increased business from next year onwards.

An inspector from the Secretariat of the Ministry of Agriculture has been delegated to proceed to Poland to buy about 700 tons of coke. The Minister of Industry and Commerce has modified some of the conditions imposed up to the present in respect of the exports of timber to the effect that in future only half of the valuta obtained abroad must be deposited, which amounts to 100 francs per metre cube. The export tax of 2 per cent. and the State tax of 20 per cent. must be paid as heretofore.

The Red Star Line is establishing a service between Galveston, U.S.A., and the Orient.

It is reported that Japanese firms have been doing a considerable trade in hosiery for Egypt.

The directors of the Bombay Stock Exchange, who recently fixed maximum prices for shares in which there is most speculation, are now stopping all forward business from January 5, says the Bombay correspondent of the *Times*.

SMALL ADVERTISEMENTS.

MINING ENGINEER, A.I.M.M., Fully qualified. Experience, England, South America, and 10 years in Near East. Offers his services, management, erecting plant, reporting, etc.—Address, Engineer, care of Editor, NEAR EAST.

CAUCASUS, Northern Persia and Russian Black Sea Ports. Firm desires representation of British Manufacturers for above areas. Consignment of goods on commission also wanted. A chain of wholesale stores and retail shops throughout these districts ensures satisfactory realisations. Partner just arrived can give full particulars as to most suitable and advantageous articles (particularly textiles and conserved foodstuffs). Those interested, write, W. H. Lacey, Pembroke House, Epping.

The Company has also outstanding £2,400,000 of 5 per Cent. First Debenture Stock. £2 ,00 ,000

ISSUE OF 3,000,000 Cumulative 6 per Cent. (Participating up to 8 per cent.) Preference Shares of £1 each, at £1 3s. per Share, Payable 2s. 6d. per Share on Application; 5s. 6d. per Share (including premium) on allotment; 15s. per Share on 15th January, 1920.

The Preference Shares now offered will, as from the 1st October, 1919, rank in every respect equally with the 2,000,000 Preference Shares already issued and are entitled to a Preferential and Cumulative Dividend at the rate of 6 per cent per annum, payable half yearly on the 31st July and 31st January in each year in respect of the financial half-years terminating on the previous 31st March and 30th September, the first Dividend in respect of this issue (for the half-year ending 31st March, 1920) being payable on the 31st July, 1920. The Shares now offered will also rank for the participating Dividend of 2 per cent. as from the 1st April, 1919.

After payment of the Cumulative Preference Dividend and payment of a Non-cumulative Dividend on the Ordinary Shares for the year at the rate of 6 per cent. per annum, the profits in each year will be applied in payment of a further Non-cumulative Dividend on the amounts paid on the Preference Shares at the rate of 2 per cent. per annum, and subject thereto such sums as the Directors may determine will be carried to a Special Reserve Fund out of the profits of each year, which fund will (unless otherwise determined by an Extraordinary Resolution of a Meeting of the Holders of the Preference Shares) be applied only (*a*) in making up any deficit on the 6 per Cent. Preference Dividend, and (*b*) in the event of a reduction of Capital or a winding-up, in payment of the Capital paid upon the Preference Shares and the premium of 10 per cent. payable in respect thereof, but such reserve may be used as part of the Working Capital of the Company.

Subject as aforesaid, the balance of the profits available for dividend belongs to the holders of the Ordinary Shares.

On a winding up the Preference Shares will be entitled to a preferential payment of an amount equal to 110 per cent. of the amounts paid thereon. The remainder of the surplus assets will belong to the holders of the Ordinary Shares.

Each Preference Share entitles the holder to one vote, and each Ordinary Share to two votes.

AND OF

£2,600,000 5 per Cent. First Debenture Stock at £85 per Cent.

PAYABLE

£25 per cent. on application. £60 per cent. on 8th Jan., 1920

The Debenture Stock is secured by a First Floating Charge on the whole of the Company's undertaking and assets and is redeemable at the Company's option at 5 per cent. premium, either in whole or in part, on the 31st December in any year, on not less than six months' notice, and is redeemable at the like rate in the event of a voluntary winding up for the purpose of amalgamation or reconstruction. The Company will redeem the whole of the Debenture Stock of £5,000,000 outstanding and now offered on or before the 31st December, 1960, at the rate of not less than £125.000 nominal value annually, either by drawings at 105 per cent. or by purchase at or under that amount. The Company has the right to issue further Debenture Stock, ranking *pari passu* with the Debenture Stock already issued or now offered up to a total amount equal to half the amount of the issued capital for the time being.

Interest on the Debenture Stock is payable half-yearly on the 30th June and 31st December, the first payment of interest on the present issue calculated from the 1st January, 1920, being payable on the 30th June, 1920. The Stock is transferable in multiples of £1.

Applications from existing Members of the Anglo-Persian Oil Company, Limited, and The Burmah Oil Company, Limited, will be given special consideration.

Application has been made to the Committee of the London Stock Exchange for permission to deal in the Preference Shares and Debenture Stock after allotment.

PROSPECTUS.

The Company was incorporated in 1909 for the purpose of acquiring and has acquired a Concession granted by the Imperial Government of His Imperial Majesty the Shah of Persia, giving the exclusive right to search for, carry away and sell petroleum, natural gas, asphalt and ozokerite throughout the Persian Empire (except five Northern Provinces bordering on the Caspian Sea) for a period of sixty years from the 28th May, 1901.

The Company, through its subsidiary, the D'Arcy Exploration Company, Limited, of which the Company holds all the Capital, has acquired concessions and options on large areas of petroliferous territory in various other parts of the world, on some of which test drilling operations are being carried out and on others geological examinations are in progress.

The Company and its subsidiary Companies also hold the whole of the issued Share Capital of British Petroleum Company, Limited, British Tanker Company, Limited, Homelight Oil Company, Limited, Petroleum Steamship Company, Limited, and National Oil Refineries, Limited, and practically the whole of the Shares in The First Exploitation Company, Limited, and Bakhtiari Oil Company, Limited, a controlling interest in Scottish Oils, Limited, and various other smaller investments. The aggregate nominal amount of these investments exceeds £8,000,000.

The Company has since its formation carried out in Persia a large amount of exploratory and development work, with the result that large areas of very productive Oil Territory have been proved. The knowledge, which has been gained during these operations has demonstrated that the Concession held by the Company covers a petroliferous area of enormous extent and great richness. The Oil now being produced is all obtained from flowing wells of large volume, and consequently the cost of production is very low.

The crude Oil is of a high grade, containing unusually large percentages of Benzine and Kerosene, good qualities of Lubricating Oils and Mineral Wax, Fuel Oils of high thermal efficiency, and it also yields a satisfactory percentage of Toluol.

Pipelines have been laid from the Fields now being worked to the seaboard on the Persian Gulf; extensive up-to-date Refineries, Storage Tanks, Jetties, etc., have been erected and equipped, and large additions to these are now in progress. The fleet of Tank and other Steamers, Tugs, Lighters, etc., have been considerably augmented during the past year, and is at to-day's market value worth over £7,500,000. Distributing Stations for the sale of the Company's rapidly expanding supply of Petroleum Products are being constructed as fast as material becomes available.

To provide additional funds for Pipelines, Refineries, &c., His Majesty's Government in the year 1914 subscribed at par for 2,000,000 Ordinary Shares of £1 each, 1,000 Preference Shares of £1 each and £199,000 Debenture Stock, thereby securing a controlling interest in the Company. A further 4,500,000 Ordinary Shares are now being issued and the Government and The Burmah Oil Company, Limited, are subscribing for their respective proportions.

The present issue is for the purpose of providing the capital required for further considerable extensions to the Refineries and Pipelines in Persia; the completion of the Refineries of the National Oil Refineries, Limited, at Swansea; the provision of Liquid Fuel Installations in all important ports for the purpose of establishing a world-wide bunkering business, and the acquisition of a large number of additional Tank Steamers.

Up to March, 1916, the Company was more or less in the development stage. Since that time the net profits after paying Debenture interest, allowing for royalties and making liberal provision for depreciation, but not for Excess Profits Duty, were, as shown by the Audited Accounts of the Company:—

For the year ending 31st March, 1917	£344,109
For the year ending 31st March, 1918	£1 308.558
For the year ending 31st March, 1919	£2,010,805

For the current financial year the nett profits will show a further large increase and when the extensions referred to above are completed it is anticipated that the throughput of Oil will be more than doubled and the profits of the Company thereby be further considerably increased.

The whole issue of Preference Shares and Debenture Stock has been underwritten under a Contract dated the 24th November, 1919, and made between the Company of the one part and Messrs. Robert Fleming and Co., of 8, Crosby Square, E.C., and Messrs. S. M. Penney and Macgeorge, of 24, George Square, Glasgow, of the other part, for a commission (including sub-underwriting commission) of 2½ per cent.

In December, 1917, the Company offered for subscription 1,000,000 Cumulative 6 per Cent. Participating Preference Shares of £1 each at the price of £1 2s. 6d. per Share, the whole of which have been allotted and are fully paid. The whole of the issue was underwritten for commissions amounting to £28,750.

Copies of the Contract above mentioned and of the Contract dated the 15th December, 1917, and made between the Company of the one part and Messrs. Robert Fleming and Company of the other part, relative to the underwriting of the previous issue and of the Memorandum and Articles of Association and of the Trust Deeds relating to the Debenture Stock, may be seen at the office of the Company at any time during business hours while the list remains open.

Application for Shares and Debenture Stock should be made upon the forms accompanying this Prospectus and be sent to any of the Company's Bankers, together with a remittance for the amount of the deposit.

Where no allotment is made the deposit will be returned in full, and where the number of Shares or amount of Debenture Stock allotted is less than that applied for the balance of the deposit will be applied towards the remaining sums payable, and any surplus will be repaid to the Applicants.

A brokerage of ½ per cent. on the par value of the Preference Shares and Debenture Stock will be paid on allotments made upon applications bearing Brokers' stamps.

Prospectuses and Forms of Application may be obtained at the offices of the Company, and of The Burmah Oil Company, Limited, in Glasgow and London, and from the respective Bankers and their Branches, and from Messrs. S. M. Penney and Macgeorge, 24, George Square, Glasgow.

Dated 1st December, 1919.

BOARD OF DIRECTORS.

CHAIRMAN:

Sir CHARLES GREENWAY, Bart., 13, Wilton Crescent, London, S.W.

COMPANY NOTES & REPORTS

Anglo-Persian Oil.

The report of the Anglo-Persian Oil Co., Ltd., for the year ended March 31 states that the profit, after allowing for depreciation, debenture interest, home charges and royalty, amounts to £2,010,805, to which has to be added the balance brought forward of £454,722, making a total of £2,465,527, from which falls to be deducted reserve for excess profits duty for all accounting periods up to March 31, £1,200,000. The following appropriations have been made:—Debenture stock redemption reserve, £80,000; preference share reserve, £50,000; general reserve, £300,000; amortisation reserve, £100,000, leaving £735,527. From this the following dividends have been paid:—On the preference shares at the rate of 6 per cent., less income-tax, for the half-year ended September 30, 1918, £60,000, and at the same rate for the half-year ended March 31, 1919, £60,000. The payment is now recommended of the following further dividends:—On the preference shares participating dividend at the rate of 2 per cent. per annum, less income-tax, £40,000, and on the ordinary shares at the rate of 10 per cent. per annum, free of income-tax, £300,000, leaving a balance of £275,528 to be carried forward. The amount payable by the company for excess profits duty for the accounting periods up to March 31, 1919, has not yet been settled with the Revenue authorities. As will be observed, however, a sum has been placed to reserve amply sufficient to cover all possible liability in this respect. In view of the largely extended operations of the company, it has been decided to increase the capital of the company to £20,000,000, and an extra-ordinary meeting was called for November 1 to pass the necessary resolution. The claim against the Persian Government for losses sustained in connection with the cutting of the company's pipe-line in 1915 still remains unpaid, but negotiations for a settlement are now proceeding. The throughput of the refinery in Persia shows a substantial increase on that for the previous period. Work on the extensions referred to in the last report has again been delayed by the difficulty experienced in securing delivery of the large amount of plant and machinery required, and further delay has been caused by the inadequate supplies of labour required in connection with the erection work, but the position is improving, and satisfactory progress is now being made. The work connected with the erection of the refinery at Swansea is proceeding as satisfactorily as can be expected under present labour conditions. The high productivity of the oil fields is fully maintained, but the quantity of crude oil procured has necessarily still to be restricted to the capacity of the existing pipe-lines. Further pumping stations are in course of erection, and a long section of one of the lines is being relaid with pipe of a larger diameter. Every effort is being made to complete these extensive works as soon as possible. The company's fleet of tankers has been further largely increased by the purchase of a number of ready boats, and contracts have been placed for the building of a large amount of additional tonnage. In July, 1919, the company made an offer to the ordinary shareholders of the five Scotch shale oil companies with the object of combining the respective interests and affording a future outlet for the company's oil. This offer was accepted by 98 per cent. of the shareholders of the Scotch companies, and a company entitled Scottish Oils, Ltd., was registered in September with a capital of £4,000,000 to give effect to this combination. The accepting shareholders of the Scotch companies receive payment in preference shares of Scottish Oils, Ltd., and the Anglo-Persian Oil Co., Ltd., has subscribed for the whole ordinary issue of 1,000,000 £1 shares. Since the last general meeting Mr. J. B. Lloyd has been elected to a seat on the board, and Sir Frederick W. Black, K.C.B., who last year was nominated by the Government as their second representative, has been elected an ordinary director. Meeting, Winchester House, E.C., December 8, noon.

P. and O.

The report of the Peninsular and Oriental Steam Navigation Co. for the year ended September 30 states that owing to the delay experienced in connection with the accounts of steamers worked on behalf of the Government, estimates have had to be made in some cases, but care has been taken to frame these on the safe side. Out of the year's results the directors propose to add £50,000 to the provident good service fund. The steamers have been badly knocked about during the war and there has been little opportunity for overhaul. It is necessary, therefore, to put aside a considerable sum which would otherwise have been spent during the year, and an addition of £450,000 has been made to the contingent fund. The directors propose to add £300,000 to the reserve fund instead of paying the usual bonus of 6 per cent. This is only a little more than would have been required to pay the tax-free bonus. They also propose to add another £200,000 to the reserve out of the year's operations. The contingent fund will then stand at £1,000,000 and the reserve fund at £2,000,000. After making these provisions there is a credit balance on the year's accounts, including £91,727 5s. 4d. brought forward from last year, of £651,257 1s. 3d. The directors propose to deal with this balance as follows: 5 per cent. dividend on the deferred stock (of which 2½ per cent. was paid as an interim dividend), £152,000; 12 per cent. dividend on the deferred stock, free of income-tax (of which 6 per cent. was paid as an interim dividend), £384,026 18s. 10d., carrying forward £115,230 2s. 5d. Owing to an appreciation in value of some of the company's assets the directors consider that the amount standing to the credit of the company's reserve funds will admit of the distribution to the deferred stockholders of approximately £200,000 deferred stock *pro rata* to their holdings. Stock certificates for the proper amounts will be issued as soon as possible to those whose names were on the register on November 25, but this will take some time, as the work involved is considerable. There will naturally be some fractions of £1 to deal with in the appropriation of the stock, and these, instead of being paid in stock, will be paid in cash based as nearly as possible on the market price of the deferred stock, but the amount will be trifling. This new stock will rank for dividend as from October 1, 1919, and will in all respects be *pari passu* with existing deferred stock. £59,860 of the first and second debenture stock has been redeemed during the past twelve months, but the company retains the power to re-issue this at any time if necessary. The fleet was depleted to the extent of twenty-five steamers of 186,703 tons by enemy action and other causes during the war. Since the date of the last report the directors have purchased eight steamers from H.M. Government. Five ships of the "B" class have been contracted for with Messrs. Harland and Wolff, suitable for the company's Australian emigrant and cargo business via the Cape. A contract has also been made with Messrs. Sir W. G. Armstrong, Whitworth and Co., of Elswick, for a large mail and passenger steamer of 15,800 tons, and some progress has been made in the construction of this ship, which will also have geared turbine engines. The directors are making contracts for the building of other steamers. In July, 1914, with vessels building, the company's fleet consisted of 68 steamers of a gross tonnage of 551,468 tons. To-day it comprises 63 steamers of a gross tonnage of 552,717 tons. The board are arranging to fit the passenger steamers now under construction for burning oil instead of coal. This will save considerable time in loading fuel and will avoid the discomfort to passengers involved in coaling at intermediate ports. Operating costs have increased by leaps and bounds, and the cost of new tonnage has risen quite 200 per cent. above pre-war level, but despite the uncertainty of the outlook the board feel it incumbent upon them to maintain and increase the fleet, so that they may hold their position in their various trades. The directors regret to report the death of Mr. William Gair Rathbone, who had been a member of the board since 1893. To fill this and another vacancy which occurred last year, the directors have nominated Lord Cunliffe and Lord Chalmers, and, in accordance with the provisions of the charter, they will present themselves for election at the annual meeting. Two directors, Lord Burghclere and Lord Balfour of Burleigh, go out of office by rotation on the day of the meeting, but will offer themselves for re-election. The directors recently had an opportunity of acquiring a large holding of the shares in the Orient Company. The Orient Company will continue to be worked as a separate concern but in close conjunction with the P. and O. and its allies. The fleet of the Orient Company when the purchase was made consisted of six steamers of a gross tonnage of 72,295 tons, all of which are of high class and have been recently built. One of these the Otranto, has since been lost while on service as an armed cruiser. The directors have acquired the bulk of the shares in the Khedivial Mail Company, and while it too, will continue to be worked as a separate concern, it will fit in with the P. and O. and British India Companies' services at Port Said. Steps are being taken to build up the fleet, which suffered severely from enemy action. There are liquid funds in hand sufficient to do this. Meeting, 122, Leadenhall Street, London, E.C., December 10, 11 a.m.

Sudan Plantations.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30 states that the issued share capital remains at £135,000. The debenture capital, on the other hand, has been repaid with the exception of £1,000. The crops handled were as follows:—Zeidab, 2,053 bales, against 2,012. Wad Medani, 3,682 bales, against 3,120. The prices realised for cotton were again satisfactory. The profit and loss account, after deduction of all outgoings, shows a net profit of £59,046, which, added to the balance brought forward of £35,156, brings the total credit to £94,203. A dividend of 25 per cent., equal to 5s. per share (less tax), payable to holders registered December 10, is recommended, carrying forward £60,453 Mr. Alexander MacIntyre has been appointed managing director in place of the late D. P. MacGillivray. Meeting, Winchester House, E.C., December 17, noon.

Barnagore Jute Factory.

The report for the year ended August 31 states that the profit, after making provision for depreciation, is £103,069, and £1,906 is brought forward, making £104,975. Ad interim dividend 10 per cent. and final 20 per cent. on ordinary, writing off cost of land purchased £1,092, transferring to general reserve £4,823, carrying forward £630. Meeting, 28, Fenchurch Street, E.C., December 10, at noon.

By a recent Roumanian Decree-Law, the general Customs Law, the Customs Tariff Law, and the Law on the marking of the precious metals, now in force in Roumania, are extended so as to be applicable in Transylvania, the Bukovina, the Banat, and other territories united to Roumania.

An important addition to the Indian Income-Tax Rules, published in the *Gazette* of September 27 as Section 43 (2) (c) of the Indian Income Tax Act, 1918, affects the position of Indian branches of non-resident companies.

THE NEW EGYPTIAN COMPANY. LIMITED.

INTERIM DIVIDEND OF 9d. PER SHARE (5%) LESS INCOME TAX OF 6s.

NOTICE IS HEREBY GIVEN that the TRANSFER BOOKS of the Company will be CLOSED from the 5th day of December to the 12th day of December, both days inclusive, for the purpose of preparing Dividend Warrants in respect of an interim Dividend of 5 per cent., payable the 13th December, less tax at 6s. in the £.

NOTICE IS ALSO HEREBY GIVEN that COUPON No. 8 will be PAID on and after the 13th day of December.

Coupons should be lodged at the Registered Offices of the Company, Pinners' Hall, Austin Friars, E.C.2, to permit of three clear days for examination, and will be received on and after the 4th day of December.

By order of the Board,
THOMAS DAY,
London Manager and Secretary.

Pinners' Hall, Austin Friars, E.C.2,
2nd day of December, 1919.

Forms for depositing Coupons may be obtained at the Registered Offices of the Company.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are from a recent report of the Imperial Ottoman Bank:—

STAMBOUL, November 15.

Imports.

The rise in American cotton continues at Liverpool and at Manchester. The price of this article has risen this week to from 24d. to 27d. per lb., a rate above the highest price (26d.) realised during the war. Cotton goods of every description have increased in price in the places of manufacture, but this rise has not yet had an effect on the Constantinople market, where the demand for Russia has been weaker than in the preceding weeks. This diminution is mainly due to the low rate of the rouble (Kerensky roubles from 195 to 225).

Three steamers have arrived this week from England.

It is significant that the expenses of unloading—which were £T3 per ton before the war, and which had lately been brought to £T8-£T15 per ton, have just again been increased to double, that is to £T30 per ton.

SUGAR.—A lively demand from the Allied countries has caused a brisk rise in the places of production. Thus the price for Java has mounted to £65-£70 per ton. Here the sugar in customs has risen from £T34 to £T35½ per 100 kilos, with a tendency to rise. The arrivals of the week have been only a dozen wagons. No shipments destined for our port.

COFFEE.—Market weaker; very little business transacted.

PETROL.—The price has moved some piastres. American is quoted at Ps. 500-510 per case. An appreciable fall is expected when the arrivals from Batoum, which are supposed to be imminent, make their appearance on our market.

Exports.

OPIUM.—Some important transactions have taken place in this article, with sustained prices. 140 cases were sold at Ps. 720 per oke, new druggist, at 750/755 old, and at Ps.1,000 per oke, fine quality (soft).

MOHAIR.—Arrivals of the week amounted to 410 bales. Sales about 300 bales, prices being Ps. 72/75 second quality and Ps. 85/90 extra quality. No lots have been exported this week.

WOOL.—Arrivals 200 bales. No sales.

SILK.—Market everywhere firm; prices are still high at £T16.20-£T16.50 per kilo for Broussa silks. The week's sales have only been from 4 to 5 bales owing to lack of stock here. Syrian silks have been entirely neglected.

CEREALS.—The arrivals this week have been relatively weak, the railway company not disposing of sufficient wagons for the transport of the cereals which are abundant in the centres of production. The Constantinople market has therefore only received during the week 82 wagons of wheat and 30 wagons of barley. The rates are at a new height: Wheat from Eski-Chéhir (extra) has risen from Ps. 14½ to Ps. 15½, that of Konia (second quality) from Ps. 13½ to Ps. 14½ and barley is at Ps. 6½ per kilo.

FLOUR.—Native flour is at £T12 per sack of 63 kilo and American at £T12½ to £T13 per sack of 72 kilo.

LONDON PRODUCE REPORT.

Coffee.

5,950 packages were offered at auction this week. The demand was very small, but rates were nevertheless firm. Colombian good bold greenish made 140s., while Costa Rica bold grey greenish realised from 138s. to 141s. 6d. The futures market has been steady. Quotations are: December, 120s. 3d.; March, 117s. 9d.; May 114s.; July, 111s. 6d.; September, 108s.

Sugar.

The demand for free sugar continues, but there are naturally few transactions for future delivery owing to the control of imports after December 27. White Mauritius afloat is quoted 79s., and white Java from 84s. to 84s. 6d.

Oilseeds, etc.

There has been a quieter tone, seeds having been in less request. Linseed, Calcutta to London, November-December, is quoted 51s., ditto, Bombay, 52s. Rapeseed is firm, with Toria quoted 45s. There has been a strong demand for Egyptian cottonseed.

Oilcakes, etc.

There is little fresh to record in regard to oilcakes. Oils have been steady with a tendency to firmness. Linseed has been done at 103s., while rape oil has been strong at 110s., the crude quality being 5s. cheaper.

Sudan Crops.

The following particulars are given in the C.E.B. report for September:—

Gum.

The exports during September were, via Port Sudan, 1,214,407 kilos of hashab of the value of £E57,489; 5,010 kilos of bleached of the value of £E284; and 11,453 kilos of talh of the value of £E346.

Kordofan Province.—5,291 kantars were sold in El Obeid market during the month, as against 6,794 last year. The average price was £E1,374 per kantar of 100 rottles. 3,203 kantars arrived from Nahud, compared with 1,853 last year. There were no arrivals at Rahad and Um Ruaba.

Sennar Province.—575 kantars of hashab and 323 kantars of talh gum were exported from Singa out of store. There has been none on the market.

Cotton.

Red Sea Province.—Tokar: The latest reports show that the prospects for next season are good. A good deal of land that had not been cultivated for some years has been flooded, and should therefore produce a good crop.

Berber Province.—Wad Hamad Basin has been flooded most successfully this year. Operations began early in the month; practically the whole of the upper basin had been drained by the end of the month, and as much of the lower basin as the cultivators were ready to plant. The Gendetto cotton area has now been ascertained to be 596 feddans, and the greater part of it looks extremely well. The maize area so far planted is 417 feddans. This should give a fair crop. There are also 69 feddans of ground nuts, which are progressing satisfactorily. There has also been a little boll shedding in the Kitiab cotton, but it is not so marked as at Kabushia. Planting at the latter place in the middle of May has been a little early, but Kitiab being further north, early cotton probably suits better there than further south. At Tinerab the cotton (about 350 feddans) is on the late side, but it is better than last year. Dura planting is now going on there. Cotton at Darmali is only fair, but a good deal has been picked already up to one and a-half kantars (of 100 rottles) per feddan in some fields. At Miknilab cotton has improved a little, but boll worm is present, and the results are likely to be poor. Cultivators there do so well with dura, and particularly dura stalks, which they sell in Berber market for export to Halfa, that they take no interest in cotton.

NEW COMPANIES.

British Cotton Seed Products.

The British Cotton Seed Products, Ltd., was registered on November 26 with a capital of £250,000 in £1 shares, to carry on the business of manufacturers of fibre, husks, and other by-products from cotton seeds or from decorticated cotton seeds, hulls or otherwise, spinners or manufacturers of and dealers in cotton, silk and other fibrous substances, seed crushers, manufacturers of linseed, cotton seed and other cakes, oil extractors, etc. Agreement with Cotton By-Products, Ltd. The first directors are:—N. B. Foster, 29, Great St. Helens, E.C., oilseed crusher; Major M. B. H. O'Dowd, 46, Bassett Road, W.10; J. W. Pearson, 29, Great St. Helens, E.C., oilseed crusher; W. H. Pinnock, 30, Mark Lane, E.C., merchant; E. C. de Segundo, 17, Queensborough Terrace, W.2, consulting engineer. Minimum cash subscription, £100,000. Solicitors: Cox and Co., 17, Tower Royal, E.C. Registered office: Dashwood House, New Broad Street, E.C.

Petroleum Power Investment.

The Petroleum Power Investment Corporation, Ltd., has been registered with a nominal capital of £1,000,000 in £1 shares (999,800 ordinary and 200 management), to establish or finance oil and other undertakings, also to carry on the business as importers, exporters, shipping agents, and ship owners. The first directors are:—N. E. Holden, vice-chairman British Industrial Corporation, Ltd.; C. A. Bendix, director British Industrial Corporation, Ltd.; A. E. K. Cull, of Richards, Daniels and Co., Stock Exchange; J. G. Raphael, of John Raphael and Co., merchants. Solicitors: Parker, Garrett and Co., St. Michael's Rectory, Cornhill, E.C.

British Armenian Chamber of Commerce.

The British-Armenian Chamber of Commerce was registered on November 22 as a company limited by guarantee, not formed for profit, with an unlimited number of members, each liable for one guinea in the event of winding up. Objects: To promote and extend the trade and financial relations between the United Kingdom and Armenia, to promote the industries and exploitation of the natural resources of Armenia, etc. The following have consented to act as members of the council:—E. A. Brayley-Hodgetts, 36, Elverston Place, Queen's Gate, S.W.7; L. A. Martin, 21, Mincing Lane, E.C.; Sir Robert W. Perks, Bt., 2, Central Buildings, Westminster, S.W.; E. B. V. Christian, 71, Finsbury Pavement, E.C.; R. S. Fraser, 71, Finsbury Pavement, E.C.; Lord Blyth, 33, Portland Place, W.; C. E. Town, "Rozel," New Barnet. Three-fourths of the council must at all time consist of British subjects. Various trade sections are to be formed. Registered office: 1-3, Oxford Court, Cannon Street, E.C.

A. R. Akbar.

A. R. Akbar and Company, Ltd., was registered as a private company on November 26 with a capital of £100,000 in £1 shares. Objects: To take over the business carried on at 59, Whitworth Street, Manchester, as A. R. Akbar and Company, and to carry on the business of general Manchester merchants, manufacturers and printers of and dealers in cotton, linen, silk, worsted, woollen and other textile goods and fabrics, etc., and to enter into an agreement with Agha Reza Akbar. The subscribers (each with one share) are:—Agha Reza Akbar, 59, Whitworth Street, Manchester, merchant; K. Rensham, Cherry Lane, Lymm, Cheshire, merchant's manager. The first directors are:—Agha Reza Akbar and others to be appointed by the subscribers. Qualification, £1. Registered office: 59, Whitworth Street, Manchester.

New Egyptian Companies.

Among the companies recently registered at the Mixed Tribunals of Cairo and Alexandria are the following:—M. de Chamberlaine and Co., with a capital of £E5,000, for transport with auto-motor-cars, Ph. Garozzo and C. Dimitriu, with a capital of £E3,000, for building contracting business, O. S. Mavridès, with a capital of £E6,000, for general trade, and Eliatrou Politi, Scentob S. Politi and Co., with a capital of £E6,700, for trading in Japanese articles.

Nile Steamship.

The Nile Steamship Company, Ltd., was registered as a private company on November 18 with a capital of £50,000, in £10 shares. Objects:—To carry on the business of carriers, coal merchants, ship and insurance brokers, marine insurers, wharfingers, lightermen, stevedores, forwarding agents, etc. The subscribers (each with one share) are:—L. Glen, 153, St. Vincent Street, Glasgow, shipowner; R. Wilson, 153, St. Vincent Street, Glasgow, shipbroker; L. Glen is the first director. Registered office: 153, St. Vincent Street, Glasgow.

COMPANY RESULTS, Etc.

At a meeting of the Beau Sejour (Ceylon) Tea and Rubber Company to be held on December 11, a resoluton will be proposed: "That the capital be increased to £120,000 by the creation of 400,000 Ordinary shares of 2s each."

The Bank of England announces the numbers of 458 Four per Cent. Egyptian Government Irrigation Trust certificates which have been drawn for redemption on January 1, when interest thereon will cease.

The directors of the Consolidated Tea and Lands Company have declared an interim dividend of 10s. per share on the Ordinary shares.

The directors of the Tara Tea Company have declared an interim dividend at the rate of 6 per cent., less tax at 6s. in the £, upon the Ordinary shares on account of 1919, payable to holders registered on November 26.

The directors of the Doom Dooma Tea Company have declared an interim dividend at the rate of 5 per cent., less tax at 6s. in the £, on account of 1919, payable to holders registered on November 26.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

(From Our Own Correspondent.)

Throgmorton Street, Wednesday.

The market has been good again this week, Egypt coming in a buyer again for nearly all the best land shares.

In Government stocks, Egyptian Unifieds and Egyptian 3½ per cent. preferences have been again offered from the Continent, and are substantially lower at 73⅜ and 62 respectively.

Amongst bank shares, Nationals have again been in good demand, and are closing ⅝ up at 20⅞, whilst Agriculturals are inclined to be a shade easier at 5 19-32.

In Land shares, Aboukirs have receded 6d. to 31s. Beheras have advanced ½ to 15⅜, but New Egyptians, although some thousands of shares have been bought for Egypt, are closing 3d. easier at 27s. 3d. Sidi Salems have also been in demand up to about 51s., but no shares have come out yet. Union Foncières have again been persistently inquired for from Egypt, and are closing ¼ better at 4½.

In Miscellaneous descriptions, Salts and Sodas have been as high as 3⅛, but are closing unchanged at £3.

Amongst Greek securities, the 1881 and 1884 have again been very weak, closing at 58. Monopolies and 1902 Loans are unchanged. The 1890 Loan has dropped 5 points to 58, and the 1914 Loan has again been offered from Paris, and has lost 1½ points at 67. Bank of Athens shares have been quite a feature of strength, and are closing to-night 3 7-16, a rise of 5-16.

In oil shares Anglo-Egyptians B closed at 5 1-16, and Roumanian Consolidated at 25s.

NOTES OF THE WEEK.

The Bulgarian Treaty has now been signed by Greece, Roumania, and Yugoslavia, in addition to the Great Powers and Bulgaria herself. Strictly speaking, therefore, the settlement of the Balkans, as distinct from Turkey, Hungary, and the Adriatic question, has been completed, and the four Balkan States — Roumania, Yugoslavia, Greece, and Bulgaria—are nominally at peace with one another, if we take for granted an amicable agreement between Roumania and Yugoslavia over the Banat. From this moment onward the interests of the Peninsula as a whole are centred in the strict observance of peace, and in the cultivation of friendly relations between the different States. It cannot be too strongly impressed upon their Governments and peoples that their individual interests are bound up with those of their neighbours. The Greeks have been encouraged to set great hopes on the possession of the whole coast line of the Ægean Sea; but the inhabitants of Salonika and other ports on the northern littoral will quickly cease to share the general enthusiasm if they find that the whole trade of the interior is deflected from their towns owing to the failure of the respective Governments to arrive at a working agreement.

M. Clemenceau is now a welcome visitor in London, and the French Press is hopeful that his visit will result in speeding up the settlement with Turkey and the solution of the Adriatic problem. The hope will be fully shared here, but in view of the unfortunate hitch that has occurred in America, it almost looks as if France and Great Britain are—voluntarily, of course—in a position where they can do no more than make known their own views. With regard to the Fiume deadlock, at least, it would seem that they have already done this, unofficially. In fairness to themselves, as well as to Turkey, it would surely be well if they and the other Allied Powers followed a similar course with regard to the Ottoman Empire. It is to be hoped that Great Britain's interests will be constantly borne in mind, and that those who are entrusted with the duty of safeguarding them will not be turned aside from that duty by any desire to oblige our friends—or anyone's enemies.

The announcement that the Milner Commission has arrived in Cairo and is getting to work without delay puts an end to a period of suspense that has had an extremely bad effect upon the Egyptians. Nevertheless, things have by no means reached a stage where we need despair of the future, even of the immediate future, and it is quite likely that the Commission's reception will be very much more friendly than has been generally anticipated. Lord Allenby's proclamation has had an excellent effect; and while the extremest Nationalists will probably remain irreconcilable, and may conceivably perpetrate fresh follies, the Moderates have evidently taken heart, thanks largely to the Prime Minister's courageous conduct. Another cause that may contribute towards restoring peace and sanity to the country is the cotton "boom," which will result in enormous sums finding their way into the Nile Valley.

For the moment it would be unprofitable to examine the situation in Egypt in detail, as it is bound to undergo considerable change, one way or the other, in the near future. It will not be out of place, however, to glance at the effect that any change in the status of the country is likely to have upon the Sudan, which, though it is—most unfashionably—keeping its opinions to itself until they are asked for, is known to have tolerably clearly defined views upon its relations with Egypt. It is notorious, of course, that no love is lost between the Egyptians and the Sudanese. The tie of a common religion is not a very strong one in this case, because the Sudanese are inclined to look on the Egyptians as backsliders; and it would be idle to deny that the former regard the latter with a contempt which is more or less heartily reciprocated. The Sudanese know quite well that, if by any chance they should be handed over to the Egyptians without British control, their lot would be very unenviable, and it is not an uncommon thing for them to say that if the British evacuated their country, they would soon rid themselves of the Egyptians once and for all.

As Lord Curzon pointed out recently in the House of Lords, the attitude of the Sudan during the troubles in Egypt has been highly commendable; the Sudanese have declined to be carried away as the Egyptians have been, and "have given notable evidence of their affection towards Great Britain"; and the Sudan afforded shelter and safety to English and other Europeans who found themselves in danger in Upper Egypt. While the more intelligent natives of the Sudan unaffectedly condemn the unrest in Egypt, it seems that they have some hope that it may lead to their release from Egyptian control; and the hope is a very natural one. At present the Sudan Budget and all legislation have to go through the Egyptian departments concerned for approval, and the system does not tend to promote progress. Egypt has

Digitized by Google

admittedly spent a good deal of money on the Sudan, but chiefly for her own advantage, since she must have peace on her southern borders; and it would be easy to make some arrangement by which the Sudan, while receiving financial help as long as may be necessary, should be left to manage its own internal affairs. There are good judges who hold that systems and institutions which suit Egypt can never suit the Sudan, and it is certain that the Sudan itself desires that the ties with Egypt should be loosened rather than drawn tighter. Mr. Balfour told us the other day that the questions of Egypt, the Sudan, and the Canal form one organic and indissoluble whole; but it does not necessarily follow that the Sudan must always remain tied to Egypt's apron strings. The subject would almost certainly repay investigation by the Milner Commission, which might well proceed to Khartoum, if it can possibly find time to do so.

The future of navigation upon the Danube is of such importance to South-Eastern Europe that it is satisfactory to learn that the Inter-Allied Commission for the Danube, which has been sitting at Belgrade, has been making progress with the regulations regarding the traffic. The pilot service at the Iron Gates and the hydro-technical service of the river are to be internationalised, and to be controlled by the Commission; and measures are to be taken for the improvement of navigation and of pilotage on the river generally. Undertakings which may be regarded as international in character are to be studied in bureaux to be created, and the Commission is working hard to ensure that the river shall become in fact an international waterway for commerce.

The grant of the new Constitution has given rise to the liveliest satisfaction in Malta, and Lord Plumer, to whom the islanders chiefly attribute the change, has been the object of several popular demonstrations. Lord Milner, who touched at the island on his way to Egypt, took the opportunity to talk with some of the leading men, and to impress upon them that the new scheme, if it is to be a success, must be made so by loyal co-operation on the part of the Maltese. If the island will now settle down to steady work, and, turning a deaf ear to agitators, make an honest attempt to follow Lord Milner's advice, it should enter upon a period of real progress.

The *Morning Post* reports that disturbances of a serious character took place recently at Damascus, the inhabitants resenting the reported intention of the French to advance to certain points in the interior. As a result, the Syrian Congress nominated itself the Constitutional Assembly for the whole of Syria, and proclaimed the Emir Faisal king of a united and independent Syria. As the report goes on to say that the Emir's Chief of Staff, General Yassin Pasha el Hashimi, was deported from Damascus by Viscount Allenby, it probably refers to events that took place before the British "made over" to the French. In any case, it is obvious that the situation in Syria is unsettled and dangerous.

Last week's proceedings in the House of Commons might well be taken as a model by the brood of new Legislatures which are so soon to see the light in India. The Commons were nearly at their best, and disposed of the complicated measure before them in a workmanlike way. As was only to be expected, individual members led their ewe-lambs before the House, one seeking to save sanitation, another education, from the hungry dyarchy; but one by one the lambs were sent to the slaughterhouse, and the Bill, which had been substantially altered in Select Committee, passed without further amendment and without the formality of a final division. The achievement has been described in some quarters as a personal triumph for Mr. Montagu, and undoubtedly he has increased his reputation by his conduct of the Bill, but the occasion is far too momentous to give much scope for such considerations, and for the moment we are less concerned with personalities than with the light thrown on India's future by the debates.

Three voices in particular deserve our attention—Labour, Lancashire, and what may be called Progressive Unionism. The Labour Party presented once again the familiar combination of high ideals and narrow limitations, and it is characteristic of their attitude that while extensive claims were made on behalf of industrial workers, scarcely a word was said for the much larger body of village labourers, who stand to lose more, perhaps, than any other class. It must be remembered that peasant-farmers constitute a majority of the whole population, and it is quite possible that the agricultural labourers will have to be safeguarded before their employers finally take charge of the country. Mr. Montagu invited some of the Labour Members to go out to India and study industrial problems at first hand, and if any of them accept the invitation, they will do well to look into the conditions prevailing in the villages, and learn what peasants really think about wages and hours of work; such Western ideals as a 48-hours week may take on quite a new aspect in that unfamiliar atmosphere.

Lancashire was represented in the debate by Mr. Denniss, the Unionist member for Oldham, who entered a formal *caveat* against the grant of fiscal freedom, so far as it might operate to the prejudice of the cotton industry. The issue is one which will probably have to be faced in the near future, or as soon as the National Assembly find it necessary to impose additional taxation: the opinions of Indian politicians on this subject are well known, and unless some sudden change should take place, we must expect them to look to the tariff for all the money that is needed. The tariff, however, would be a broken reed if cotton goods—by far the largest item in the list of imports—were left out, and, consequently, the chances are that the first serious clash between English and Indian opinion will take place over this particular question. We have at present no means of judging the volume of English opinion hostile to India's probable claims, but we must take it from Mr. Denniss that its voice will be raised, and it is well to recognise clearly that this is one of the rocks ahead.

It was left to a decidedly progressive Unionist, in the person of Captain Elliot, to lay stress on the greatest danger of all—the danger that dyarchy may develop into oligarchy. One naturally looks to the Labour members to provide the most effective safeguard against such an accident, but, as Captain Elliot justly said, the Labour Party has lined up behind the oligarchs, and the watch over the great experiment must for the present be performed by others. We look confidently to Captain Elliot to take his due share in this task, and we hope the House of Commons will place him on the Joint Committee which in the course of next year will examine the electoral rules. Judging by his speech, he should prove a vigilant watchdog. He said, very truly, that "the man at the bottom looks for his remedy to the man at the top," and the Indian lower classes will, for some time to come, be very much "the men at the bottom," though eventually we hope to see them come into their own.

Before leaving the debates in the Commons, we may note that Colonel Yate maintained to the last his demand for further inquiry, and threw out the suggestion that the Prince of Wales might go out as President of a Commission for this purpose. For the Prince's sake we are glad that he is to be spared such a heavy burden, but we shall not be surprised if his services should be required in India for a somewhat different purpose. Mr. Montagu hopes that the preliminaries will be completed in time for the new Legislative Assembly to meet in Delhi in January, 1921: persistent, though still unconfirmed, rumours assert that the Prince's promised visit to India will take place next winter; and it requires no exceptional perspicacity to suggest that, if all goes well, he will probably be found representing the King-Emperor at the opening ceremony of an Assembly which, for good or evil, marks definitely the passing of the old Indian order.

THE WEEK AT HOME.

A New Political Party.

Mr. Lloyd George's eagerly awaited speech at Manchester resolved itself into a vigorous and generally convincing defence of the Coalition. There must be a Coalition, he argued, since no single party has a clear majority or any hope of one; and no party Government, he declared, could have done so much in so short a time. There have been expressions of dissent in the Press on the part of those who maintain a personal quarrel with the Prime Minister, but the public seems generally satisfied that his apologia and statement of policy routed the critics. Orthodox Liberalism has uttered one or two threats that sound more like groans, but is anxious not to push the quarrel to an extremity, owing to its increasing fear of the Labour Party, which strongly rejects Mr. Runciman's plea for a Liberal-Labour Coalition; and it is possible that some of the few remaining Independent Liberals may yet seek refuge under the Prime Minister's banner.

The Government, indeed, gives the impression of being stronger now than for some months past, partly because it has not been defeated at any by-elections recently, and partly because of its daring move in putting up a Coalition Liberal to oppose Sir John Simon, the Independent Liberal, in the Spen Valley contest. Captain Guest, the Government Whip, who is *capable de tout* in the way of indiscretion, has now definitely asked the Liberals in the constituency not to vote for Sir John, which is rather strong political meat even in these days of coupons.

Most of these manœuvres, as a matter of fact, may be taken as the preparation for the launching of the new Centre or Moderate Party which Mr. Lloyd George is to head, and of which Mr. Bonar Law and Mr. Churchill are to command the Right and Left wings respectively. The party will be a fusion of Liberals and Conservatives, and it expects to attract the bulk of the commercial and professional vote, which before the war was divided between the two. Its natural tendency must necessarily be towards Conservatism, while the stalwart Radicals, who used to find a home in the bosom of the Whigs, will now have to join the Labour Party. The latter are working very hard, but they will have to find somebody with more political *flair* who can strike the imagination of the whole country before they can hope for office. At present they are like a Band of Hope in more ways than one.

The Railway Negotiations.

The railway settlement—if it can be called a settlement when the negotiations are not yet completed—is coming in for considerable criticism. One excellent feature is indeed generally admitted—the fact that no strike is to be called until after a long period of discussion; whether it will prove an effective remedy is uncertain, since the extremists in the Labour world are all in favour of the "lightning strike," and have even threatened one a few days before Christmas. But it is pointed out that the railway operators are aiming at the complete control of the industry, and that they look on the present arrangement as a kind of half-way house towards Syndicalism. So far as can be gathered, there appears to be some truth in the allegation.

On the other hand, it is contended, and seemingly with justice, that the share of the traders and public in the new Control Boards is insufficient. The Government railway managers are represented, and the railway operators; the public are in a decided minority, and if the bureaucrats and the operators combine—as on many matters their interests are the same—the public's position will be that of the nut between the crackers. The arrangement is not likely to pass without some discussion in Parliament, despite the long recess which has been arranged at Christmas.

Meantime, a special Trade Union Congress called this week to discuss direct action and nationalisation has tended strongly towards moderation, and has postponed the demands for immediate direct action. It concerned itself mainly with suggestions for reducing the cost of living, a subject which appeals to all; but its ideas do not seem to have gone beyond the advocacy of subsidies on food all round—an increased subsidy on bread, and further subsidies on milk and other articles. This method, of course, is utterly uneconomic, and it will be impossible for the Government to take such recommendations seriously. It would operate merely to transfer the excessive price of the grocer's account to the income-tax.

Oxford and Cambridge.

The eternal question of compulsory Greek was again discussed at Oxford last week; the proverbial home of lost causes is certainly putting up a valiant fight for the classics. Had it not been for Professor Gilbert Murray, the Modernists would have triumphed long ago, but the distinguished classic, who is a Radical in everything else, is ultra-Conservative as regards his own particular occupation.

Cambridge appears to be preoccupied with a very different problem—nothing less than the bad manners of its undergraduates, which are alleged to have degenerated badly the last few terms. Scandalised complaints have been appearing in the Press about "ragging," "barracking," and similar honoured occupations of studious youth; and Oxford, which has been extraordinarily well-behaved of late—perhaps because many of its students are married, a legacy of the war—carries itself with conscious rectitude and perhaps a little secret envy of the notoriety of Tabland. Some of the severer type of classical dons are understood to put the riotous spirits of Cambridge down to its abolition of compulsory Greek and its cultivation of Science, which is still regarded with grave suspicion at Oxford; but Oxford itself is not exempt from the innovator, since a Correspondence College has been established there which professes to give all the advantages of Oxford culture to any aspiring person by post. The latter appears to have no direct connection with the University, but its establishment is a sign of the passion for education which is becoming more marked in England than before the war.

The University Match.

One of the few obvious manifestations that we are at peace again was the revival after six years of the annual Rugby match between Oxford and Cambridge. The game was played at Queen's Club on December 9. Unfortunately, the conditions were not good, a thawing mist making a frozen ground very slippery. One did not suppose that the play would be up to pre-war standard, and, in truth, there was much more keenness than skill shown. The teams were quite evenly matched, and the win for Cambridge by a penalty goal and a dropped goal (7 points) to a goal (5 points) did more or less indicate the run of the game, though Oxford scarcely deserved to lose. The forwards, upon whom the results of University matches chiefly depends, were good on both sides, and of the backs Oxford, who had three old Blues in their three-quarter line, showed better combination, if no more efficiency, than Cambridge. The ground was packed with the best of English crowds, and was honoured, as usual, by the presence of the King.

The Stores Strike.

A strike at the Army and Navy Stores at the beginning of the Christmas shopping season disturbed and amused London a little during the week. The employees appear to have been badly paid in comparison with others engaged in the distributing trade, and the directors' policy was alleged to have been autocratic. If that was so, they speedily repaired their mistake, for within forty-eight hours of the strike they decided to recognise all the various trade unions representing the staff, a step which has not yet been taken by any of their larger rivals in the same business. Public opinion seems generally to have been in favour of the strikers, and the *Daily Mail* offered to open a fund in their behalf.

Spiritualism Spreading.

The extraordinary revival in the doctrines of spiritualism is indicated by the fact that Sir A. Conan Doyle,

Digitized by Google

who is a fervent convert, has arranged to address a meeting of the Anglican clergy on the subject, and subsequently to undertake a world-tour, presumably with the photographs of ghosts which are his *pièce de résistance* in his portmanteau. He has just returned from a lecturing crusade on the subject in South Wales, where an enthusiastic population, not unaccustomed to religious revivals, has heard him with great interest; his teaching—and his knowledge of the subject—is ridiculed in many quarters, but he could probably fill any hall where he chose to speak, while it is doubtful whether his opponents would gain any considerable audience.

The Spiritualists, like all zealous propagandists, are extremely active in spreading their views. A clergyman, most of whose doubtless admirable discourses are quickly buried in oblivion, no sooner announced his intention of devoting a sermon to Spiritualism than his church was packed, and he received a two-column report in a local newspaper; for weeks afterwards, he told me, with a rueful countenance, his letter-box and study-table were littered with pamphlets *pro* and *con*, protests, recriminations, threats to write to the Bishop if he touched the subject again, and threats not to enter the church any more if he did not at once announce a long series of addresses covering every aspect of the topic.

Spiritualism appears to have quite outstripped Christian Science as the popular creed of the moment, but it is doubtful whether it will last. Any serious examination of its doctrines involves profound philosophical problems, and the atmosphere of the Society for Psychical Research has hitherto been too calm and grave for the emotional and general interest.

The Boxing Match.

The betting had run so steadily in favour of Beckett and against Carpentier before the great boxing match last week that the result came as a general surprise. Carpentier was physically a smaller man in every respect than his opponent, but the slight disadvantage in physique was more than counterbalanced by superior mentality. It was expected that he would adopt forcing tactics from the start, as it was generally admitted that he could hardly stand the strain of going through every round to the finish, but it was certainly not anticipated that Beckett, even if defeated, would be knocked out in a minute and a quarter. It cannot be said that Carpentier's victory was unpopular in England, for he is a general favourite; in France, of course, it has made him almost as much of a hero as Foch or Clemenceau. But it is rather curious that England, which used to be regarded as having a prescriptive right to every sporting championship, should have been beaten by France in tennis and boxing in the same year.

The arrangements are now being made for the match for the world's championship between Dempsey, the present holder, and Carpentier, the aspirant to that honour. There is keen competition between London, Paris, and New York as to the site of the contest; Dempsey frankly declares that he will fight wherever there is most money to be made. Carpentier has preserved silence on that point, but the fact that he has entrusted his side of the arrangements to Mr. Cochran makes it probable that the match will be held in London. Certainly it would be almost impossible to conceive of a greater crowd assembling either in Paris or New York than that which filled the Holborn Stadium and rendered the rest of Holborn impassable for a couple of hours last week.

A few protests have been made against the continuance of these matches by the more rigid moralists recently on the old ground that they are brutalising and degrading. But they seem to be voices crying in the wilderness, for boxing becomes steadily more popular. A curious feature of the matches during the last few years has been the increasing number of women who attend them. This still seems a little odd, even to those who are not very old-fashioned, for ten years ago one would no more have thought of a woman at the Stadium than in the House of Commons. Now we are getting accustomed to both.

The Bookshelf.

The most interesting book of the week has been the Life of Pasteur, which, translated from the French, is likely to become a standard work. The biography makes it quite clear that Pasteur, apart from his extraordinary scientific genius, had a sweet and lovable character, and he was throughout his life the ideal type of French patriot; he returned his degree to Bonn University after the war of 1870 in disgust at the conduct of the Prussians, and he refused the German Order "Pour le mérite" which the late Kaiser wished to bestow upon him many years later. His religious belief never varied from the simple faith of childhood, and although his discoveries, particularly his refutation of the theory of spontaneous generation, were used as a stick in the Science *v.* Religion controversy, he did not himself intervene in those debates.

Some considerable excitement has been caused by the announcement that a very different kind of biography will soon be forthcoming. Mrs. Asquith has been writing her reminiscences, and intends to publish them. She has lived in the centre of things ever since the day when as Margot Tennant she corresponded with Jowett, of Balliol, and if her reminiscences are anything like her letters to her friends, they will be vivacious in the extreme. She should have a good deal to say about the "Souls," the little coterie which included Mr. Balfour and Mr. George Wyndham; but the wits suggest that her political chapters will destroy the last hope of her husband returning to power. The jest is an unkind one, for Mrs. Asquith certainly does not love the new Coalition.

Meantime, the Life of Lord Kitchener, which was expected early in December, is likely to be delayed until the New Year. It will be a large work in three volumes, and the numerous documents it quotes will necessarily make it a book of historical importance.

The most popular novels of the moment are probably those of Ibañez, the Spanish writer, whose "Four Horsemen of the Apocalypse" is to be followed by "Marc Nostrum," a wonderful story of love and submarine warfare in the Mediterranean. The English novels of the autumn have proved extremely disappointing, and Mr. H. G. Wells, who could usually be relied upon for a book, has turned from story-telling to the history of the world from the time the moon parted company with the earth, or a little earlier, to the signature of the Armistice. In his first number—the work is to be published in twenty fortnightly parts—he seems to have got about as far as the mammoth, so the chapters dealing with the Reformation and the French Revolution, which an enticing prospectus promises, seem likely to be a little condensed, and author and readers alike will be a little breathless when the downfall of Germany is reached.

OCELLUS.

The popular Cairo *Sphinx* has resumed publication, and shows abundant signs of vitality. It retains most of its old features, introduces some new ones, and promises yet others, and it is likely to prove very welcome to Cairo's "season" visitors and its residents as well.

We have received from Messrs. Raphael Tuck and Sons some specimens of their Christmas and New Year cards for this season, together with sample wall calendars and books for the young people, suitable for presents. Many of the cards are extremely attractive, and all are produced in the perfect manner which we have learned to expect in Messrs. Tuck's productions. The books, too, especially the painting and model books, are bound to appeal to the little ones for whose amusement they are designed. Messrs. Tuck and Sons have kept up to their own high standard again, and we congratulate them on a wonderful production of seasonable goods.

Major-General Sir George Younghusband has shared with Cyril Davenport the authorship of "The Crown Jewels of England," which has been published by Messrs. Cassell and Co. at 63s. net.

Messrs. Longsmans announce a study of "Indian Nationality," by Professor R. N. Gilchrist, Principal of Krishnagar College, Bengal, with an introduction by Professor Ramsay Muir; and also an illustrated volume containing "The Life and Letters of George Alfred Lefroy, Bishop of Calcutta and Metropolitan of India," by Bishop H. H. Montgomery.

Messrs. Constable have in preparation a book entitled "From Persian Uplands," by Frederick Hale.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, November 25.

The New Cabinet.

The hope expressed in last week's letter, that it would be found possible to form a Cabinet notwithstanding the opposition set up by the Extremists and the difficulties created by the campaign of intimidation carried on by them, has been realised, and on Friday, the 21st, the Sultan signed a decree approving of the formation of a new Ministry which is constituted as follows:—Yussuf Wahba Pasha, Prime Minister and Minister of Finance; Ismail Sirry Pasha, Minister of Public Works, War and Marine; Ahmed Ziwer Pasha, Minister of Communications; Ahmed Zulfikar Pasha, Minister of Justice; Mohammed Tewfik Nessim Pasha, Minister of the Interior; Mohammed Chafik Pasha, Minister of Agriculture; Yehia Ibrahim Pasha, Minister of Education; Hussein Darwish Bey, Minister of Wakfs.

It will be noticed that the new Prime Minister is a Copt. While it is the second time that a member of his community holds the Premiership, he is the third Christian to be appointed to that post since the Ministerial system of Government was introduced. Wahba Pasha has been in the Cabinet since 1912, when it was reconstructed on the resignation of Saad Pasha Zaghlul. He has held the portfolios of Foreign Affairs, and Finance, the latter since 1914; and in each Cabinet his sound advice has always been highly valued by his colleagues. It says much for the personal courage and sense of duty of the new Prime Minister that he should have assumed such heavy responsibilities at such a critical juncture.

The new members of the Cabinet are Yehia Pasha Ibrahim, who has for long held the Presidency of the Native Court of Appeal with dignity and success; Mohammed Pasha Chafik, Under-Secretary of State for Wakfs, who is a very able engineer and owing to his intelligence and ability has for some time been marked out for promotion to Ministerial rank; and Hussein Bey Darwish, who is a respected and talented Counsellor of the Mixed Court of Appeal. The new Cabinet is, on paper, a very much stronger combination than the last one. Unlike the Said Cabinet, it has come into office with a fairly clear definition of policy on the part of the British Government; and, such being the case, it should be able to stand its ground and provide a nucleus around which moderate Egyptian opinion can rally.

At the same time I feel that it would be unjust to pass over without any mention the work done by the Said Cabinet. It came into office last May at a time when the post of Minister had greatly depreciated in prestige owing to the political events of the immediately preceding month. In spite of the determined efforts of the Zaghlul clique and their adherents to harass and irritate those who might hold, or be inclined to hold, office under the existing regime, the Cabinet contrived to carry on and bridge over the period intervening up to the creation of a more definite situation brought about by the recent declaration made by Lord Allenby. By so doing it has undoubtedly rendered an invaluable service to Egypt; although it will probably not be in this generation that this fact will be recognised by the Egyptians.

In all this the greatest credit falls to Mohammed Pasha Said, who in April, 1914, had definitely retired from public life. None knew better than he what difficulties lay ahead of any man who took up the task of forming and directing a ministry, but none knew better how important it was for Egypt that cabinet government should continue. Realising this, he agreed again to take office, and throughout the six months during which his Cabinet lasted, he contrived to combat the campaign of the Extremists and to consolidate the position of his Ministry. He made one unfortunate mistake, in granting the interview to the delegation which visited him early in October and in giving expression to his views in the matter of the coming of the Milner Mission. But just as he has throughout been loyal in his collaboration with us, so he was equally true to the declaration he then made; and at once resigned when he found the eventuality which he foresaw was about to occur. In the circumstances, therefore, it is difficult to blame him for resigning; and in all fairness it should be added that if it has been possible to form a new Cabinet, it is in great part due to the efforts he has made during the intervening week to get the present combination to accept office.

The formation of the new Cabinet has, of course, not been to the liking of the Extremists, who have raised a great outcry against its members. Especially have the Copts expressed their lively dissatisfaction, and have gone to the length of practically excommunicating the Prime Minister. In regard to the latter, their agitation is not improbably due to a fear that the appointment of a Coptic Prime Minister may bring down upon their heads the vials of wrath of the Moslem community, and to a desire to impress their Moslem fellows with the idea of their solidarity with them.

Firm Action by Lord Allenby.

At about the time when the Cabinet was in process of formation and the Extremists were making every effort to prevent a successful result, the High Commissioner sent for Mahmud Pasha Soliman, the President, Ibrahim Pasha Said, the Vice-President, and Abdel Rehim Bey Fahmy, the Secretary of the Cairo Committee of the Zaghlul Delegation; and, informing them that he had come to Egypt to maintain order under the Protectorate, that he would brook no interference with the regular administration of the country, and that he held them responsible to a very great extent for the present unrest in the country and for the campaign of incitement which is being conducted in the Press, he ordered the two first-named to proceed at once to their provincial estates and the third to remain in his house in Cairo, and to abstain from all political activities.

The two Pashas refused to obey the order, and they were consequently arrested and placed on Soliman Pasha's dahabieh, on which they are now proceeding to Upper Egypt. In addition, two other active agitators were similarly warned; one of them obeyed the warning, and the other has had to be arrested.

Action has also been taken in regard to the vernacular Press, two organs having been suspended and others warned. Although the attitude of the Press has throughout been very disgraceful, it should be pointed out that the suppression ordered by Lord Allenby in his capacity of Commander-in-Chief has been decided on, not for political reasons, but because the two papers in question published inflammatory matter appealing to those who were entrusted with the maintenance of public order, *i.e.*, the Egyptian Army and Police, to disobey the orders which they might receive. A somewhat milder tone has been noticeable in the other papers, and it is to be hoped that the hint conveyed by this action will be taken.

General Situation Improved.

The general situation seems to have undergone a change for the better, and there has been no trouble of any description anywhere in the country since the riots in Alexandria. There have been one or two attempts at demonstrations in the provinces, but they led to nothing serious. Similarly, last Friday, a great meeting called by the religious students at the Abu el Abbas Mosque at Alexandria after the usual Friday prayer, dispersed quietly at its conclusion, without any attempt being made to demonstrate. Whether, once the troops are withdrawn from their present positions in Cairo and Alexandria, there will be any further attempts at disorders remains to be seen; but there is every hope that the indications given by the British authorities to stand no further nonsense, and to see that the administration of the country is not interfered with, as it has been during the past months, will not have been without their effect, and that both the rank and file and the political agitators will come to the conclusion that in the circumstances the game is not worth the candle.

The only unsatisfactory feature at the present moment is the attitude of the students. It may be remembered that they refused to attend their schools on the 13th, in order to celebrate Egypt's "Independence Day." The Government thereupon ordered the closing of the schools for a week. Two days before the reopening Lord Allenby, having heard that the students had decided to continue their strike until further notice, issued, under Martial Law, an order calling upon them to return to their schools and colleges on the 22nd, and regularly to continue their attendance until the forthcoming examinations. Otherwise they would not be allowed to sit at those examinations, and the regulations as to age limit, etc., would be applied to those who might be thus excluded. Some of the students resumed their studies on Saturday, the 22nd. the day fixed for reopening; but on the following day they were so intimidated by their defaulting comrades that very few of them have continued their attendance. What they stand to gain from their persistence it is difficult to see, but the main blame lies with the political agitators, who have gained such a pernicious influence over the younger generation, and with the parents, who seem to have abandoned all control over their children. From the moral and intellectual point of view this is most regrettable, and it is to be feared that as a result the coming generation may produce a body of men who, apart from being of no use to their country, will further swell the ranks of the malcontents, and so quite possibly become a serious obstacle to its material progress.

PORT SAID, November 25.

The Canal Anniversary.

The outstanding event last week was the jubilee celebration of the Suez Canal Company, which, on November 17, commemorated the fiftieth anniversary of the opening of the Canal. The decade previous to 1869 may be said to have witnessed the birth of steam propulsion for ocean travel, but the sailing ship was still holding its own, and that era saw the creation of those most wonderful and perfect things of their kind that have ever come from the hand of man—the China tea-clippers. However, with the opening of the Suez Canal, the "floating tea-kettle," as the steamers were then contemptuously called by seamen, gradually ousted the clipper, in spite of the fact that the smell of oil from the engine was said to spoil the tea. Nowadays sailing ships are an interesting and somewhat rare sight, and one of the chief causes of their decay is the Suez Canal.

It had been planned by the Canal Company that all their employees should meet at the offices and then march to the statue of Ferdinand de Lesseps on the breakwater, there to lay wreaths and palms at the foot of the statue. The authorities, however, prohibited the march through the town, so the employees were all transported by water down the harbour to the vicinity of the statue. When the wreaths were placed in position, speeches were delivered, and by a most happy coincidence, Monsieur Jacques de Lesseps, son of Ferdinand de Lesseps, was present, and, in a short speech, thanked those who were there, in the name of the family, for the honour done to his father's memory. The next day all the employees that could be spared, numbering nearly two thousand, were invited by the company to a banquet held in the Casino Palace Hotel. Naturally this taxed the resources of the place to the utmost, but everything went off in a most satisfactory manner, and great credit is due to all those concerned in the arrangements.

The Canal Company have also given the employees a jubilee bonus, averaging one to two months' pay, according to length of service. The method of calculation has led to dissatisfaction in some cases, as the bonus was based on the fixed salary. In the case of the pilots, for example, the fixed salary is small, and the greater part of their pay is for work actually done; and as this pay did not enter into the calculation for bonus, a pilot with, perhaps, twenty to twenty-five years' service got the same bonus as a junior clerk. However, there is a strong feeling amongst the employees that the company will act generously and will rectify this anomaly.

Lucky Port Said.

Happily, although the rest of Egypt has been suffering from a species of Bolshevism, Port Said has been free from all disturbances, possibly, as one soldier who had been studying Arabic expressed it, because the Port Saidians know which side their "*aish* is *zibdaed*."

A committee has been appointed to deal with profiteering. It is to be hoped that its attention will be called to the recent purchase of a large block of flats, the rents of which have been put up 50 per cent. Great indignation is aroused if anyone profiteers in doll's-eyes or rat-traps, but when it came to rents—well, that is another matter, and if people don't want to pay the rents they can live the "simple life" on the beach!

The Coming of Winter.

The winter weather has apparently set in, and for the last three days there has been a certain amount of dust, approaching at times to a *khamseen*; rain has also fallen once or twice.

Shipping has been extraordinarily busy for the last month; in fact, it has been quite like pre-war times in the busy season, when large numbers of ships were going out East with empty holds.

Miss MacInnes, the sister of the Bishop of Jerusalem,

Digitized by Google

and President of the Y.W.C.A. in Egypt, has been to Port Said, and has formed a local committee to carry on the Y.W.C.A. work in the town; and it is hoped that with the help of friends in the place to make it of real assistance for those for whom it is intended.

YUGOSLAVIA.

BELGRADE, November 30.

The Peace Treaty Hitches.

On Friday, in an obscure paragraph in the *Pravda*, there appeared a precise message from Paris that M. Pashitch and Dr. Trumbitch had signed the peace with Austria, that the representatives of England, France, America, Italy, and Japan had done likewise, and that there were also concluded three *aranjmans*, which is now a recognised Serbian word, with reference to Italy's indemnity. The news had scarcely been read by the public, producing apparently little sensation, in spite of the momentous consequences involved, when the *Politika*, which is an afternoon paper, announced "New Difficulties." So the suspense is not over after all, for the signature has been postponed to admit the discussion of certain financial proposals, put forward only at the last minute. Then the delegates naturally felt they could not sign without express instructions from their Government, which raises no objection to the principle of charging the new provinces formerly part of the Austro-Hungarian Monarchy with a proportion of the debt and costs of liberation, but objects to the manner of its incidence, which would bear very heavily on the old kingdom of Serbia. As the difference is merely one of detail and method, and not of principle, it is probable that a formula will be quickly found and the peace signed. Public opinion in Western Europe is often prone to consider that the case of Yugoslavia is on all fours with that of the other new States, Czecho-Slovakia and Poland, created entirely from extinct empires, forgetting that it is really the expansion of Serbia. If one party here had had its way, and the new State had been christened "Greater Serbia," it would probably have had a more sympathetic reception in the West, for even to-day the man in the street has very vague ideas as to the identity of the "S.H.S."

It is stated that the new States that have arisen out of the Dual Monarchy shall contribute a milliard and a-half francs in gold to the Great Powers as the cost of their liberation, and the debt shall run from January 1, 1914, and be proportioned among the new States on the basis of the average revenue for three years of the former Empire, Bosnia and Herzegovina receiving, however, special treatment. Czecho-Slovakia cannot pay more than 750 millions, and 200 millions fall upon Yugoslavia, to be deducted at once from the indemnity, while the Poles and Czechs, who receive no indemnity, will pay their contribution in bonds at 5½ per cent.; until January 1, 1926, only interest shall be payable, after which the capital shall be paid by instalments, so that the debt will be wiped out by 1956. Consequently, if no discrimination is made in favour of Serbia, her indemnity will be debited with a share of this debt, which is not considered fair here. It is stated that the Delegates have claimed in Paris the sum of seventeen milliard francs, with an absolutely irreducible minimum of nine milliards, but the Allies have not yet fixed the amount to be granted. If this claim is considered excessive, it must be remembered that in this war, over and above material losses, Serbia has lost, from battle and sickness, no less than 1,300,000 of her population, which barely exceeded 3,000,000 in 1912. In addition to this "Liberation Tax," Yugoslavia is called upon to pay for the State Domains acquired in her new territories. Finally, Serbia is to receive no cash on account of indemnity until all the Great Powers have received their share.

As a result of a Council meeting held immediately on the receipt of this news, the Government has sent M. Kosta Stovanovitch back to Paris at once, and even the Crown Prince Regent himself has gone to Paris to plead his country's cause, thus following the Royal example so successfully set by Roumania.

The General Election.

Dr. Davidovitch has definitely decided to postpone the meeting of the Skupshtina another two months, and to proceed to the general elections. The latter have been postponed pending demobilisation; for, as the President of Council remarks, who has greater right to vote than the veterans who have fought so long and so well? Unfortunately, the provocative attitude of Italy has made demobilisation impossible so far. The present Parliament has shown its incapacity; besides, the Serbian members were elected twelve years ago, and so can hardly claim to represent the present population. Many a grown Serb has never had an opportunity of exercising his vote, and of those who elected the present Parliament, how many are alive to-day? It is proposed that the general election be held on April 1, 1920.

The Adriatic Danger.

Less anxiety is now felt on the Italian question, but the situation is becoming intolerable. Even her worst enemies cannot accuse Yugoslavia of anything but perfectly correct behaviour during this trying and long-drawn crisis; while Italy, who is old enough and big enough to know better, must bear the entire responsibility for the consequences of her Chauvinistic policy, as well as for the dangerous escapade of the egregious poet. Meanwhile, the people in Dalmatia are undergoing great hardship; at Shebenik (Sebenico), the local command has taken fourteen hostages, and arrests and various brutalities are of daily occurrence. On November 20, the name-day of the King of Italy, a general holiday was proclaimed, including the schools. The Director of Schools in Zlosela, who is not, and never has been, an Italian subject, but a Slav, ignored this order, and gave the usual lessons; he and his wife were promptly arrested, and are still in prison, although they have left a six months' infant alone at home. The local commandant, Major Gracco Golini, sent for Dr. Smolchitch, President of the National Council, and threatened him in vigorous language that the slightest action on the part of the Yugoslavs would provoke a terrible reaction on the part of d'Annunzio's *arditi*, in which the lives of neither women nor children would be spared. M. Buksheg, the Socialist Minister of Food and Reconstruction, recently stated to a journalist from Trieste that Yugoslavia would have demobilised before Christmas, but, in view of d'Annunzio's doings, it was impossible. He added that Yugoslavia would have consented to Fiume being a free town, but under the control of Yugoslavia. He added, too, that d'Annunzio would meet with armed resistance if he crossed the demarcation line.

Miscellaneous.

An official denial has been issued to the statement of the Athens *Radikal* that three Serbian army corps are stationed at Nikshitch, Cattaro, and in Herzegovina respectively to prevent a revolution in Montenegro.

It is well known that the Austrians cleared the country of church bells during the occupation, but they were not able to get them all away, and a store has recently been found which was left waiting removal. Those which can be identified will be returned to their homes, and the remainder distributed among the poorest foundations.

Several arrests of Bolshevists have been made at Novi Sad recently; a plot to overthrow the authorities and establish a communistic system was recently discovered, the conspirators being well provided with arms and seditious literature. Five were condemned to six years' hard labour, and the others released.

To meet the shortage of small change, a half-dinar note has been issued.

Dr. Jovan Tsvijitch (Cvijitch), the eminent ethnologist and geographer, has been unanimously elected Rector of the Universite of Belgrade.

An amusing incident occurred the other day at the Ministry of Commerce. A gentleman presented himself as a Serb who had lived twenty years at Plovdiv (Philippipel), in Southern Bulgaria. The object of his visit was to complain to the head of a certain section that on the brass plate on his door he was described as *nachelnik*—that is to say, chief, and he complained that this is not the Serbian, but the Bulgarian form of the word, which should properly be spelt *nachalnik*. A lively discussion ensued, which resulted in the individual in question being flung out into the street. Of course, the former is correct, the latter being the Bulgarian and Russian orthography.

Dr. Tamljenovitch, formerly Deputy Governor or *Podban* of Croatia, has been nominated *Ban* or Governor, in place of Dr. Tolichek, former *Ban*, who has entered the Cabinet.

It is reported in the *Jedinstvo*, a paper in Novi Sad, that

Digitized by Google

a British officer, Lieut.-Colonel Charles Beatty Moore, in the name of the Allied Supreme Council, invited the Serbian military authorities to evacuate Pechuj and the whole of the Barania. The commandant replied that he was unable to do so without orders from Belgrade.

TURKEY.

CONSTANTINOPLE, November 22.

Anxieties of the Porte.

The request which the Sublime Porte has addressed to the Peace Conference, that negotiations should be commenced as soon as possible, may perhaps be taken as an indication of the embarrassment caused by the prolongation of the Armistice. But there is possibly another reason behind the anxiety of the Turks to know their fate. The Cabinet is to a very great extent obliged to submit to the dictates of the Nationalist Committee at Sivas, and the official request for a speedy settlement has most probably been formulated either at the suggestion or with the concurrence of Mustapha Kemal and his associates, who have very good reasons for desiring to bring matters to a climax as soon as possible. In the first place, the so-called Nationalist movement is clearly less popular than it was in the spring; for the peasantry have had more than enough of military service, and the prospect of serving as "bandolero" soldiers throughout the winter has probably damped the spirits that were galvanized into life by the Nationalist Committee's propaganda.

There is abundant evidence that in various parts of Anatolia, especially in the Konia and Panderma districts, and even in the Sivas district itself, the Nationalist forces are being resisted, not unsuccessfully, by armed bodies of the population; and this counter-movement is decidedly more extensive and stronger than it was a short time ago. Thus the indications are that the longer the crisis is delayed the more difficult will it be for Mustapha Kemal to keep his "forces" together, and the more powerful will the anti-Nationalist movement become. The latter is certainly being actively assisted by the Entente Liberale Party, the Military Union that goes by the name of "Neghiban," and other sworn foes of the Unionists, with whom, rightly or wrongly, the Nationalists are popularly identified. The whole object of the Nationalist movement is to resist the anticipated conditions of peace; and the Sivas Committee is well aware of the fact that the Allied Powers are most unlikely to undertake a winter campaign of guerrilla warfare in the wilds of Anatolia. In the spring, not only will the peasants be unwilling to leave their fields, but conditions will be more favourable for Allied operations.

There seem to be other indications also that the moment is ripe for the *dénouement* of the Nationalist plot. As was pointed out in my last letter, Mustapha Kemal and his associates rely not so much upon their own strength as upon the advantages to be obtained from a general Islamic upheaval. The renewed unrest in Egypt and Afghanistan, combined with Koltchak's defeat, allowing the Bolshevists easy access to Turkestan, are circumstances which, combined, render the present moment most auspicious for taking up the gauntlet, if only the Allies can be persuaded to throw it down.

While in Turkish circles there has been no little elation over the finding of the Smyrna Commission, which emphasised the provisional nature of the Hellenic occupation, Mr. Lloyd George's recent speech had the effect of a cold douche; and a Cabinet Council was specially convened to discuss the situation. The general result seems to have been to divert Turkish hopes of support from the British to the French, and certain French circles in Constantinople are by no means discouraging the growth of that opinion: although the action of the French army which has recently occupied districts in Eastern Anatolia evacuated by the British is scarcely an indication of tenderness for Turkish aspirations.

The Elections.

As the elections proceed it becomes evident that the prophecies of a heavy Unionist majority will be verified. Complaints of all kinds of illegalities continue, and there is no doubt that the Unionists are successfully following their old policy of intimidation and bribery. Interrogated on the subject by an Italian journalist, the Minister of the Interior, Sherif Pasha, scored what seemed to be a palpable hit. "Since you mention the Unionists," said his Excellency, "allow me in my turn to put a question to you: How do you account for the fact that one of the most deeply implicated Unionists, Azmi Bey, the former Chief of Police, has proceeded to Adalia on an Italian ship, and for the further fact that he should be allowed to land unmolested? How do you explain the fact that this offender against the common law should be permitted to ride in the Italian Commander's motor-car and, accompanied by representatives of the Italian authorities, should travel in this way to Burdur?" As the Minister insisted upon the accuracy of his information, there was nothing to do but change the subject.

Turkish Socialists.

The bank strike, which occurred in the summer, was an indication that times have changed in Constantinople, and now we have Turkish Socialists holding meetings at which the speakers are known as "comrades," in the regulation Socialist style. It is rather queer to hear of a "Comrade" Osman Effendi, but it is queerer still to hear him calling upon Turkish "workers" to arise and smash the capitalists! While the Turkish Socialist Party seems to have little political influence, there are indications of the working of syndicalist ideas which may have somewhat disturbing developments. Behind the whole movement there seem to be occult influences at work, not wholly unconnected with political movements outside Turkey. But it is too early yet to make definite statements on the subject.

SMYRNA.

SMYRNA (undated).

The result of the conference held by General Milne in Constantinople, at which both General Bates and Commodore Fitz-Maurice, from Smyrna, attended, has resulted in a decision not to employ Anglo-French troops in the Aidin Valley. It appears that M. Venizelos has succeeded once more in keeping Entente troops, other than Greeks, out of this province, and in arranging that the settlement shall be left entirely to Greek troops. This changeof policy after the Turks had been led to believe that Anglo-French troops would take the place of Greek troops at the front will probably exasperate the Turks still further, and add to the difficulties of the Greeks in making headway in the Aidin Valley. Extreme pessimism prevails in Smyrna business circles, as there appears to be no hope that anv sowing will be done this winter, and hence the export trade will remain paralysed for still another year.

MALTA.

November 28.

Self-Government.

The inhabitants still rejoice, and telegrams are being exchanged conveying congratulations from far and wide, on the grant of self-government, which it is assumed will prove a panacea to cure all ills. It is to be hoped that it will do so. Suggestions as to how the first session of the Legislature should be celebrated (although as distant a date as 1921 has been laid down as being the earliest) are already to the fore. One of the most popular proposals is that the new form of Government should be inaugurated by the Prince of Wales. If this be possible it would be admirable, for, whatever may be said to the contrary, the masses in Malta are devoted to the Royal Family, and such a Royal proceeding would give the Maltese people the opportunity of expressing their devoted loyalty with the same enthusiasm as they did to the late King Edward when he visited the Island as the Prince of Wales. It should be mentioned that the Governor, Lord Plumer, is credited with having done a very great deal in drawing the attention of the Home Authorities to the depleted state of the local Exchequer, and in obtaining a promise of Imperial financial help.

CYPRUS.

The Cost of Living.

There are growing complaints owing to the pressure of high prices. In one district the whole body of Government officials have waited on the Commissioner to represent the impossibility of meeting the demands on present salaries. In some cases, it was stated, officials of the lower ranks could often eat only dry bread, and were obliged to dispose of articles of jewellery, etc., belonging to their wives. "What these officials state," says the *Voice of Cyprus*, "might be urged by all Government officials in Cyprus. All have the same grievous account to give, since all experience similarly deplorable conditions and deprivations." It urges that relief should be given by increase of salaries and bonuses, according to the circumstances of the individuals.

The Cyprus Deputation.

According to the last letters, several members of the Mission, whose programme has been influenced by advice given by M. Venizelos, are returning at once to Cyprus. The others, including the Archbishop, may also return shortly, but may perhaps again visit London. It is expected that the "solution" of the island question should be effected in February or March. The Auxiliary Committee and the supporters appear to be well satisfied with the zeal and activity with which the delegation has carried out its work. It would, however, seem that it might have been quite as efficiently performed by half the number, or less, of the members under the Archbishop. The expenses of the deputation have amounted to about £6.000. So far Church funds have sufficed for the greater part; but the time has apparently come when a further call will be made upon the Greek community. The Greek Dodecanese Committee had, it is said, about £140.000 at its disposal, of which over £60,000 has probably been spent.

The Acting High Commissioner has summoned the Legislative Council for an extraordinary meeting on November 17, chiefly in order to consider a bill to amend regulations as to motor vehicles.

INDIAN CHURCH AID ASSOCIATION.

The Official Organ of the Indian Episcopate.

IN the present critical condition of India and under the shadow of changes which will materially lessen the proportion of Englishmen in the Indian Services, it is imperatively necessary to strengthen the loyal Anglo-Indian elements, upon whom will now devolve the task of maintaining the White Man's reputation for integrity. Ladies and gentlemen, therefore, who have served or resided in India in any capacity are invited to join this Association, the primary ob ect of which is to help the India Bishops to carry on religious and educational work among these classes, upon whom so much depends.

For further particulars apply to
H. P. K. SKIPTON, Secretary, I.C.A.A.
Church House, Westminster, S.W.1.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS

Greeks and Smyrna.

December 3.

Mr. MONTAGU, replying to Lieutenant-Colonel Aubrey Herbert, said: The Greek occupation of Smyrna has certainly led to grave apprehensions lest the Entente contemplated a division or partition of Turkish Turkey—a policy which Indians, both Mussulman and Hindu, and the Government of India, and we who represented them in Paris, have always opposed.

Moslems and Turkey.

Mr. MONTAGU, answering Lieutenant-Colonel Aubrey Herbert, who asked whether the Prime Minister's pledge of January 5, 1918, with regard to the future Peace settlement with Turkey was known in India; and whether unrest in India was due to the fact that the Moslems were not certain if British policy adhered to or repudiated the pledge of the Prime Minister, said: Yes, sir, and I have continually urged upon the Peace Conference the importance to India of a peace consistent with the policy contained in the speech to which my hon. and gallant friend refers.

Georgia.

December 4.

Mr. LLOYD GEORGE, asked by Lt.-Cmdr. Kenworthy if he was aware that the activity of the agents of General Denikin's volunteer army in the Batoum district was causing apprehension among the inhabitants of the Georgian Republic; and if he could state whether the Peace Conference had as yet come to any decision regarding the future of this district, which forms, historically, a part of Georgia, and was of strategical importance to the British Empire, said: His Majesty's Government are aware that in the province and town of Batoum and elsewhere in Trans-Caucasia there is considerable agitation both for and against maintenance of the Russian connection. The answer to the second part of the question is in the negative. It is obviously impracticable to decide the future of Batoum apart from that of Trans-Caucasia as a whole.

Roumania.

December 8.

Mr. BONAR LAW, replying to Lord R. Cecil, said his attention had been called to the memorial addressed by the Roman Catholic, Unitarian, and Calvinistic Bishops of Koloczvar to the Peace Conference, who were taking such steps as might be possible for the protection of religious and racial minorities in Transylvania.

Lord R. CECIL: Is my right hon. friend able to lay before the House any information on this and kindred subjects, so that the House may be given an opportunity really to form an opinion on these very grave incidents which are occurring all over Europe?

Mr. BONAR LAW: It would not be possible to make any statement at present about negotiations with Roumania. My noble friend knows, I think, the exact position in which they stand.

Lord R. CECIL: I did not ask for information as to negotiations, but as to the conditions prevailing in these various countries. I have reason to know that the Government has a great deal of information.

Mr. BONAR LAW: I will consider what my noble friend has said.

Albania.

Lieut.-Commander KENWORTHY asked the Prime Minister when a decision is expected as to the future of Albania; whether it is intended to guarantee the independence of that country as agreed to in the Treaty of London, 1913; and whether there is any British military force, British military mission, or British political mission in Albania?

Mr. BONAR LAW: I am unable to state when a decision will be taken with regard to Albania. This must depend upon the decisions of the Peace Conference. It is not correct to say that the independence of Albania was agreed to in the Treaty of London of May 30, 1913. There is at present a small British Mission at Scutari.

Captain ORMSBY-GORE: If Albania is not recognised as independent, what is it? Is it part of the ex-Austrian Empire, or the ex-Ottoman Empire, or part of Serbia, or part of Greece?

Mr. BONAR LAW: I should not like to answer that, but it is one of the subjects which the Peace Conference is considering.

Topics in Parliament.

The subjoined headings are those given in the official report:—

ROUMANIA (BLOCKADE). DEMOBILISATION: Troops in Mesopotamia. ROYAL INDIAN MARINE (BRITISH OFFICERS' PAY). EGYPT (PASSPORT FACILITIES). (December 1).

EGYPT: Casualties among Population. RUSSIA: Serbian Volunteers. DEMOBILISATION: Soldiers at Busreh, Mesopotamia. BRITISH ARMY: Young Soldiers (Egypt and India). TROOPS IN MESOPOTAMIA (PAY). (December 2).

INDIA: Frontier Operations (Bombing Warnings).—Army Officers (Pensions).—Government of India Bill (Currency Questions). MESOPOTAMIA (SERVICE MEN'S LEAVE). INDIAN TROOPS EMPLOYMENT). (December 3.)

GOVERNMENT OF INDIA BILL. (December 5.)

TURKEY: Peace Terms. ROUMANIA AND BESSARABIA. D'ANNUNZIO'S FORCES. EGYPTIAN CIVIL SERVICE (MILNER COMMISSION), TRIESTE, FIUME, BULGARIA (PEACE TREATY). AUSTRIA (PEACE TREATY). BRITISH ARMY: Officers' Pay (Mesopotamia). AERIAL ROUTE, EGYPT AND THE EAST. GOVERNMENT OF INDIA BILL. (December 4.)

GOVERNMENT OF INDIA BILL. EGYPT. DEMOBILISATION: Troops in Mesopotamia. ARMENIAN REFUGEES. (December 8.)

CORRESPONDENCE.

THE CONDUCT OF GREECE.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Your Sofia Correspondent, in your last issue, wrote that King Boris and the Bulgarian Premier have urged the Xanthi refugees to return to their homes without any fear, because the French and the local authorities would protect them against the "excesses" of the Greeks.

The word "excesses" rather amused me. Since the Balkans are the Balkans, this wrathful expression is in great favour amongst Balkanic peoples, and it is applied generally and from time to time to both "wicked and righteous."

I have just read in the London weekly, *Hesperia*, the following telegraphic information received from Salonika, dated November 17:—"The Bulgarian Deputy-Mayor of Xanthi, M. Perlinkoff, wrote a letter to the General Commanding-in-Chief of the Greek Army of Occupation in Thrace, in which he is not only praising the conduct of the Greek troops, but also testifies that since the arrival of the Greek Army a perfect order reigns in the occupied districts."—I am, etc.,

THEODORE D. MOSCONAS.

32, Oxford Street, Manchester.
November 26.

AN APPEAL TO GREAT BRITAIN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It might be said without any exaggeration that no nation has suffered more than the unworthy and unfortunate Turk, who represents the pathetic relics of the mighty Osmanli empire of bygone days. Country after country has been snatched away from him, and now it is indeed an irony of fate that for the sins of Enver and other German hirelings his very existence should be threatened. No one dare deny that the Turk is not quite innocent in the affair, but that is no reason why he should be treated with deliberate injustice.

The exclusion of the Persian delegates from the Peace Conference, the occupation of Asia Minor by Greeks and Italian troops after Turkey signed the Armistice, the denial of equality to Japan, the Shantung dispute, and the South African scandal, all these prove that invidious distinctions are made in the administration of law and justice. Is it any wonder therefore that the "unspeakable Turk" is now threatened with unbearable injustice? It is a pity indeed that eminent statesmen like President Wilson and others, who are struggling hard for the preservation of the peace of the world, seem to ignore that so long as injustice and inequality are permitted to exist in this materialistic world, war will be inevitable.

That the future settlement of Turkey is complicated no one denies. Hence it is all the more imperative that those who labour hard to solve this problem should be free from all bias. If the politicians of Europe and America are actuated by a conciliatory spirit, and work with sincerity of purpose, where lies any difficulty? If the Sick Man of Europe is now found incapable of governing his subject races, where is the necessity to strangle him to death? If he is guilty of maltreating his loyal Armenian subjects, is it fair to drive him away from his own capital? What London is to Great Britain and what New York is to America, Constantinople is to the Turk. If the Dardanelles, the threshold to Constantinople, were permanently occupied by either Great Britain or France, where would be the necessity to internationalise the only remnants of the Sick Man's heritage in Europe on the pretext that he might give further trouble? When Armenia is given complete autonomy so far as its internal affairs are concerned, and the suzerainty of the Sick Man is confined to its foreign policy and the protection of its frontiers, Great Britain and America can well be spared the trouble of becoming Mandatory Powers. The grievances of the Armenians can be fully redressed if the Turkish and German officers responsible for the massacres committed in that unhappy country are not only given exemplary punishment, but if provision is also made for payment of ample compensation by the aggressors. The chance of the Sick Man doing further mischief will be very remote indeed if he is given to understand that in the event of a recurrence of massacres or any sort of malpractice in Armenia or any part of his territory he will not only forfeit the sympathy of the League of Nations and succour when he is in danger, but also that the place where such cruelties are perpetrated will be declared quite independent of his control.

That Great Britain by right of conquest is entitled to annex Mesopotamia and Palestine no sane person can deny. The wonderful transformation wrought in the fertile valley of the Euphrates proves beyond a doubt that the Englishman is far better qualified for the future government of Mesopotamia than the Turk. To ask Great Britain to restore Mesopotamia to the Turk, where the lives of so many English and Indian soldiers were sacrificed, where millions of pounds have been spent for the progress of a dilapidated country, would be nothing but hypocrisy. And what about the solemn pledges given to the people of Mesopotamia and Palestine by Great Britain?

The solutions for a perennial and honourable peace, honourable to Christendom and the Moslem world alike, can be briefly summed up as follows:—1. Maintenance of Turkish independence and integrity in Thrace, Asia Minor, and the territory occupied by the Turk in the Caucasus, which was forcibly snatched away from him by Russia not many years ago. 2. Withdrawal of Greek and Italian troops from Asia Minor. 3. Payment of a reasonable indemnity to the Allies as penalty for the breach of neutrality by Turkey. 4. Internationalisation or annexation of the Dardanelles by Great Britain. 5. Punishment of officers concerned in the Armenian massacre and payment of ample compensation to the sufferers. 6. Grant of autonomy to Armenia under the suzerainty of the Sultan of Turkey. 7. Grant of autonomy to the people of Mesopotamia and Syria under the protection of Great Britain and France respectively. 8. Grant of autonomy to Albania under the protection of Great Britain or America. 9. Admission of Turkey into the League of Nations, provided she gives satisfactory guarantees for the maintenance of peace and justice throughout her dominions in future and undertakes not to make any sort of alliance with either Germany or Austria. 10. Recognition of the kingdom of the Hejaz as an independent Islamic country free from any sort of mandatory system or Turkish suzerainty.

In the name of fairplay, I appeal to the people and politicians of Great Britain to give their impartial consideration to the subject under discussion. Now is the time for Great Britain to prove that she does not entertain any inveterate hatred towards the whole Turkish nation for the sins of a handful of German hirelings. If Great Britain, which is fortunately the greatest Moslem Empire in the world, will not listen to the pleadings of millions of her Moslem subjects, if she will not heal their wounded pride so far as is consistent with justice and equity, who else is there but the Almighty, in Whom alone they repose their implicit faith? Who can deny that the Moslem subjects of the King-Emperor have been as loyal as any others during the war? Loyal they are to their King and country and loyal they shall be for ever, whether the Sick Man of Europe lives or not.—I am, etc.,

M. A. HAMUD.

Calicut, India, October 22, 1919.

ARMENIA AND GEORGIA.

From an Armenian official source Reuter's Agency learns that an agreement has been signed between the representatives of the Republics of Armenia and Georgia in which it has been arranged either to settle between themselves all political and economic questions arising, or, in the event of their being unable to reach an understanding, to ask the Allied representatives in the Caucasus to arbitrate in the matter. The agreement remains in force for a period of three years. The British and American representatives in the Caucasus have congratulated the Armenian and Georgian Governments on the conclusion of this agreement.

At a largely attended meeting of the executive committee of the National Free Church Council a resolution was passed, and forwarded to the Prime Minister and Lord Curzon of Kedleston, conveying the deep conviction of the Free Churches of this country that a special obligation rests upon Great Britain to secure the safety and freedom of the Armenian people. In order that this end may be secured, it is strongly urged that the terms of the Peace Treaty with Turkey should fix such boundaries of the Turkish Empire as will effectively prevent the possibility of future massacres of the Armenians and secure their freedom and safety.

NEW ROUMANIAN CABINET.

Reuter's Bucharest correspondent, writing on December 8, states:—The new Ministry is composed as follows: Premier and Foreign Minister, M. Alexander Vaida-Voevod; Minister of the Interior, General Averescu; Minister of War, General Rascanu; Minister of Finance and Interim Minister of Commerce, M. Aurel Vlad; Minister of Agriculture, M. Victor Bontescu; Minister of Education, M. Octavian Goga; Minister of Public Works, M. Micael Popovici; Minister of Justice, M. Johann Jelivan. Ministers without portfolios: M. Ralipa, M. St. Pop, and Professor Cantacuzene. The last-named will also be a delegate to the Peace Conference.

TURK AND GREEK.

Sir A. H. Crosfield took the chair at King's College on November 28, when M. René Puaux, one of the editors of the *Temps*, delivered a lecture on "L'Asie Mineure et la Question d'Orient." The lecturer deplored the fact that the Peace Conference had not consulted M. Venizelos as to the settlement of the Eastern Question, since the famous Greek Premier, whose impartiality was above suspicion, had conceived a solution by settling the Eastern Question according to history, geography, and the aspirations of the several peoples.

Although five years have passed since the accession of King Ferdinand of Roumania, his portrait has not yet replaced that of the late King Carol on the national postage stamps. The cause of the delay is the advent of the Bolshevist rule in Russia and the consequent inability of the Roumanian Government to obtain from Petrograd the stamps prepared to its order by the Russian State Paper Printing Office during Kerensky's *régime*. A contract for postage, postage due, parcels post, and charity stamps was placed there by the Roumanian Commission in 1917, the designs being prepared by the celebrated Russian artist Zarin. Postage stamps in large format bearing the head of King Ferdinand were actually printed before the establishment of the Soviet Government, and specimens are in existence, but the stocks have never been delivered to Roumania, and it is believed that the bulk has been destroyed.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

The other night I happened to be at a meeting in which Mr. Bernard Shaw was the chief speaker. Now, admirer (long since disillusioned) of Mr. Shaw as I used to be, it is not every subject upon which I can listen with patience to him talking. For most intents and purposes he is dead to me. But he happened to be speaking of foreign relations; and, as all my readers know, the present state of these troublesome things is a splendid subject for ridicule. Mr. Shaw, therefore, was at his best; he always revels in the discomfiture of others. Well, his subject was Great Britain, France, and Syria. His argument ran like this:—England and France were very jealous of each other, this being due to the divergence of English and French views upon Syria. France looked upon Palestine as an essential part of Syria: England said the two countries were distinct. Palestine should belong to Britain; it was mentioned in the Bible; the Bible was a British document; what further argument was necessary? A most ingenious and typical line of reasoning, is it not? I could not stop to listen to Mr. Shaw's moral; but I have no doubt that it was superfluous.

***

More than once in this disrespectful column I have exposed the absurdities of War Office red-tape. Usually these cases concern individuals, but I have just heard one that might have made a whole army tear its hair at British efficiency. Our army at Salonika had earned the recognition of the Serbians, who quite naturally wished publicly to reward the well-doers. So the Serbian Government prepared in a nice box two hundred of their better-class decorations, and sent it off to our Salonika force. Now that force technically was still in Egypt; to Egypt, therefore, the box duly was posted. There it wandered disconsolately for many months, finding no one to take it for his own. I forget the scheduled number of months which it took our inelastic officials to admit that the Salonika force was no longer the E.E.F.; but, in any case, when the box arrived at Salonika the recipients of the medals could not remember any reasons that could provoke such generosity! They say that Russian war methods were the most inexplicable, but to a foreigner our own methods were scarcely obvious. However, one can laugh at most of these things now; and— who knows—they may have puzzled the Boche even more than they did our Allies and ourselves!

***

Shall we ever be told that we must place the blame for the great war on Armenia or the Armenians? The question is not quite so ridiculous as it doubtless looks at the first blush; for I observe that one of the ex-Kaiser's flunkeys has been telling a newspaper man about an Armenian who exercised some baleful influence over Wilhelm II. The account I read was not very illuminating, but, as far as I could make out, the Armenian in question—whose name is given as "Karamandjan"—was employed by Ludendorff, or his supporters to gain the Royal One's favour for that general; and this he did, or is represented to have done, by hypnotising the Kaiser. The story strikes me as distinctly strange, and if one wished one could very easily pick it to bits. But the interesting thing about it, to my mind, is to find the Germans trying—apparently—to cast opprobrium upon the Armenians. I should have thought that they had done sufficient injury to that unhappy people and that they would blush at the mere mention of "Armenia" or "Armenian." But no! they have their own ideas, and their own ways of putting them into practice. Nevertheless, it is hard luck on any Armenian to be described—and in a headline, too—as "The Kaiser's Evil Spirit."

***

Apropos of the Armenians, it seems to me that they, too, have highly original ways of looking at things. Not very long ago a correspondent of THE NEAR EAST told us what sort of dramatic fare the Armenians of Aleppo provided for the entertainment of their little ones, and of its disastrous if very natural results. More recently we have learned of the private exhibition of a film ("Auction of Souls") designed to bring home to the world the horrors through which the Armenians have passed; and in reporting the exhibition *The Times* remarked:—"Never, probably, has a film left so little to the imagination. To say that horror is heaped on horror is not to exaggerate," etc. I imagine the film will never be approved by English audiences, and, although it doubtless presents a perfectly true picture of what has happened, I very much doubt whether it will not hinder rather than help the Armenian cause.

And now we are told that the Armenians intend to present M. Clemenceau with a silver inkpot for the signature of the Turkish Treaty; and that "it will bear a small funeral urn commemorating the massacres." M. Clemenceau may like to have such a thing on his writing table. I should not!

***

The question of rents—to say nothing of rates, taxes, and "necessities of life"—is vexing the Near East as much as it vexes this country. From Egypt wails are loud and frequent; and I learn that Khartoum, too, is wrath with the profiteering landlord. Referring to the matter a little while back, the *Sudan Times* remarked that "the tenants find no other alternative . . . . but to stop payment of these high rents." How beautifully simple life must be in Khartoum. *Here* the solution is not so easy. As the gentleman said after reading the advertisement heading, "Why pay rent?" "It is just a question of that or having the brokers in!"

***

An evening paper reports that "Mr. Brace, M.P., replying to the Manchester Reform Club speech of the Premier, objected to Labour being regarded as 'howling dervishes.'" A friend of mine suggests that the objection of Labour to the comparison will be as nothing to the objection of the dervishes. Really, Mr. Lloyd George should be more careful, or he will be stirring up fresh trouble for us in the East.

PRESS ON THE NEAR EAST.

Egypt.

The *Nation* of November 29 discusses what *The Times* has called "The Egyptian Peril." It says:—

In the crude sense of the word there is not, and cannot be, a "peril" to the British Empire in Egypt. The Egyptians are not a fighting race: their flat country does not lend itself to guerilla warfare: any violent movement in these days of machine guns, poison gas, and aeroplanes would end only in the massacre of the natives who attempted it. The "peril" is rather of the kind that confronts us in Ireland. A whole people stands solidly opposed to us. The very Ministers who took office and salary from our hands are so worked upon by public opinion that they range themselves against us. The masses of the towns and even the stolid *fellahin* of the villages are to-day, as they never were before, ranged behind the students and the intellectuals who always were against us. The rioting is recurrent, and when the crowds of men have been broken up processions of women confront us with a new problem. In Lord Cromer's day nationalism was a middle-class agitation. To-day organised trade unions use the weapon of the strike against us. The "peril" means simply that by no resource of policy or coercion do we seem able to restore the normal pacific life of a well-governed British dependency. We fail in our self-imposed task, and a failure in the metropolis of Arabic and Islamic culture, at a moment when we are busy in spreading our rule or our influence over Palestine, Arabia, Mesopotamia, and Persia, is certainly a "peril," for it involves a serious blow to our prestige. If we mean to go on, we have to prove over again that we can govern.

It concludes by suggesting a solution of the problem:—

In the first place, we would retrace the error committed when the Egyptian Delegation was excluded from the Paris Conference. The problem of Egypt is an international problem; our solution of it by proclaiming a protectorate by our sole authority was the first mistake. It would be an easy and graceful thing to say that since 1914 the League of Nations has come into being. Let us give reality to the League by referring Egypt to it. That means that Saad Pasha Zaghlul must be heard by its Council. The Protectorate may then be converted into "mandate." If we wish the Egyptians to acquiesce in that we must make terms with them. The "mandate" must be defined and limited. If we must "protect" Egypt, let the word mean what it ought to mean. We insure it against external aggression. If we must watch over our investments, that, again, is a limited task. We must, however, be prepared to make over the civil administration to a fully self-governing Egypt. If European experts are still employed, let it be as the salaried servants, and not as the dictators, of an Egyptian State. As for our garrison, let it be confined to Suez and the Soudan. That would be a compromise very far from the sheer independence which Egyptians demand. A "mandate," however, should have a time limit, and it should be subject to review. From our knowledge of the older nationalism of twelve years ago, we should expect that Saad Pasha would welcome a solution on these lines. No solution which a man so essentially sane and moderate rejects would be worth a trial. We must retrace our violent war-time policy; we must confer with leaders whom the whole Egyptian nation has chosen. The question is largely one of procedure. The procedure which will fail, and deserve to fail, is the dictation of concessions from Downing Street. The real question for us to decide is whether we accept or reject the League of Nations and the ideas for which it stands. Lord Curzon contrived to discuss Egypt without once mentioning the League. If we treat Egypt as a purely British question we have made our own "reservations" to the Covenant with all the egoism but without the frankness of the American Senate.

Mulai Hafid Again.

In the Christmas number of the *Strand Magazine*, Mr. Walter B. Harris gives some excellent stories of the Sultan at Home. Here is one finished pleasantry:—

The Sultan was completely content. He realised that at last, after the sombre pomp of the palace at Fez, he had settled down to modern life and refinement, and had attained "taste." It was his custom to arrive early in the morning and spend his days there, riding down from the Kasbah on a fat saddle-mule caparisoned in purple or pale blue or yellow, accompanied by men on horseback, and with his black slaves running beside him. Two old women—one a negress, the other a white Berber woman—nearly always accompanied him, poised upon fine saddle-mules, and closely veiled. The negress was his old nurse; the Berber woman a soothsayer. Arrived in the garden, the usual series of mishaps began. One of his old ladies would fall off her frisky mule, or the key of the empty house was lost, and an entry had to be made by forcing a window after everyone had fussed about pretending to look for the key for half an hour or so. Then a carpenter would be sent for to mend the broken window, and a slave would suddenly remember that for fear of losing the key he had tied it round his neck on a string, where it still hung, heavily on his chest. Then breakfast would arrive, carried down from the Kasbah on the heads of black slaves—great trays of fresh bread, bowls of milk, sodden, half-warm cakes smothered in butter and honey, excellent native crumpets, and a host of dishes of fruits and pastry and sweets, and tea and coffee on immense silver trays. It was a sort of promiscuous meal, partaken of first of all by the Sultan and his particular friends, then passed on to the "courtiers," and finally handed out of the windows to the slaves, gardeners, and retainers, who completely finished what was left, however great the quantity. By this time the workmen had begun building operations on the great palace a hundred yards or so away, and the ex-Sultan would visit the site, taking a very intelligent interest in every detail. Then back to the villa, where native visitors would be received and literary and religious questions discussed. Mulai Hafid himself is no mean author, and his Arabic verses would, if published at that time, have gained him much praise and many enemies. To-day there is no reason to remain silent. Circumstances have changed. Was it not he who wrote of Tangier:—"In the last day the people of Tangier came to the judgment-seat of God, and the Supreme Judge said, 'Surely you are the least and worst of all people. Under what circumstances did you live?' And they replied, 'We have sinned, we have sinned; but our Government was international—we were ruled by the representatives of Europe.' And the Supreme Judge said, 'Surely you have been sufficiently punished. Enter into Paradise.'"

By anyone who knew and experienced the international government of Tangier these verses cannot fail to be appreciated. Did he not also write the following in his days of contention with the French Government?—"Is not the wisdom of God manifest? Has He not given intelligence even to the dog?—a little less, it is true, than to the elephant, but a little more than he bestowed upon the French Administration."

And here you have him at auction and cricket:—

The ex-Sultan's bridge was peculiar. It would not for a moment be hinted that the irregularities that occurred in the game were due to anything but accident, but these little accidents were very frequent. The ex-Sultan, who all his life had been accustomed to sit cross-legged on a divan, soon tired of sitting upright on a chair. He would become restless and tuck his legs underneath him. Now, ordinary chairs are not intended to be sat in cross-legged, especially by bulky people, and as generally an armchair had been placed for His Majesty to sit in, he would constantly be changing his position and wriggling to make himself more comfortable and to find more room for his capacious legs. These wriggles occasioned at times a decided movement to right or left, and if the players did not hold up their cards—well, it was their own fault. Sometimes he would drop his own cards, and his long sleeve at the same time would sweep the tricks already won on to the floor, and there was confusion in sorting them. Once or twice an ace unexpectedly appeared for the second time in the game, picked up by accident from the floor, no doubt; and as to revokes—but with a plaintive voice the Sultan would say, "I am only a beginner." When he won he was in the highest spirits; when he lost he sulked—but he didn't very often lose. It is a characteristic of the Moors that they hate to lose a game, no matter what they are playing. I have seen the most exciting games of chess, skilfully but quickly played, where the loser has insisted on going on playing game after game, till sometimes in pure desperation his adversary allowed him to win. Mulai Abdul Aziz, Mulai Hafid's predecessor on the throne, had a unique manner of scoring at cricket. When he was Sultan he used to play cricket in the palace at Fez, generally four on each side. The score was carefully kept, but no names were entered. When the game was finished the Sultan himself placed the names against the scores—always, of course, putting his own in front of the largest. Then the name of the player he liked best on that particular afternoon had the second best score, and so on, the lowest being reserved for the person most out of favour. The score-book was religiously kept, and often referred to by the Sultan, who would say, "That was a great afternoon. I made sixty-one runs and Harris made forty-eight. X played abominably, and only made two"; while, as a matter of fact, His Majesty himself had made two and Harris perhaps none, while the unfortunate man who was down in the book as having scored two was probably the excellent batsman who had made the sixty-one that the Sultan claimed. If one is an autocrat monarch one can do anything—even poach your neighbour's cricketing score.

And lastly is a picture of the two ex-Sultan's reconciliation, and of sin finding Mulai Hafid out.

It was always my great desire to bring about a reconciliation between the two ex-Sultans, Mulai Abdul Aziz and Mulai Hafid, but I never succeeded. Mulai Hafid had driven his brother, Mulai Abdul Aziz, from the throne, and naturally his brother had no reason to be grateful to him. At the same time, Mulai Hafid always blamed Mulai Abdul Aziz for having ruined Morocco, and of having sown the seed of the loss of Moroccan independence. There was also the question of etiquette—they naturally could not meet at all, owing to the question of precedence. Mulai Abdul Aziz had been Sultan *first*, and claimed the first place. Mulai Hafid equally claimed it because he had been Sultan *last*. After many unsuccessful endeavours, I persuaded both to agree that if they met by chance on the road they would salute each other and embrace. For months they did not meet, but one day, turning a sudden corner, their riding-mules collided. So taken aback were their two Majesties that they entirely forgot their agreement, and rode away in opposite directions as fast as their mules could carry them. Immediately after the reconciliation—if such it could be called—between Mulai Hafid and the French authorities the ex-Sultan gave a dinner-party to the members of the French Legation and a number of other French officials in a charming villa he had meanwhile taken on the Marshan, at Tangier. Not sure of whom he ought to invite to this solemn repast, Mulai Hafid had left the choice of his guests to the French Chargé d'Affaires, who had sent in a list. The hour of dinner arrived, and so did the guests, among whom was the very capable and excellent Commissaire of the French local police, whom His Majesty had not yet met. The presentations took place, and the Sultan called me aside—I was in attendance—and

Digitized by Google

asked who certain of the guests whom he did not know by sight were. When I informed him that one of them was the French *Commissaire de Police*, he became a little uneasy, and a shadow passed over his face. "What do you think he has come for?" asked the ex-Sultan, nervously. Seeing an opportunity for a joke at His Majesty's expense, I hesitated a moment, and then, with many apologies, informed the Sultan that there had been stories current about his manner of playing bridge. No one, I said, believed them, but naturally the French authorities were most desirous that there should be an end to this false rumour, and had therefore decided, very privately, of course, to bring the *Commissaire de Police* to watch his play on that particular evening. As soon as they were assured that His Majesty's play was above all supicion, an official *démenti* could be given to these disturbing rumours. Mulai Hafid's face wore a look of unusual gravity during the long and sumptuous dinner.

After the guests had adjourned to the drawing-room we sat down to bridge. The *Commissaire*, who was not a player, was purposely invited, without the Sultan's knowledge, to seat himself at Mulai Hafid's side. The game began. His Majesty was terribly nervous. Every time he wriggled in his chair and leant either to right or left he would pull himself together and fix his eyes upon his own cards. Not once did he left his "hand" fall on the floor. Not once did his long sleeves sweep the tricks off the table. Not once did he revoke. He lost game after game, and his distress became painfully manifest.

Between two deals a guest approached and politely asked, "Is your Majesty winning?" "Winning!" cried the now thoroughly upset monarch. "Winning! How can I possibly win with this horror of a policeman watching every card I play?" and the writer had to explain to the assembled company the whole plot.

Mesopotamia.

In *Blackwood's Magazine* of November Major-General Sir George Macmunn, K.C.B., C.S.I., D.S.O., has written an excellent sketch called "By the Waters of Babylon." Here, for instance, is a picture of the British Army by the Tigris. It is drawn with much charm.

The great flat-bottomed boats of the Euphrates, pitched inside and out with bitumen, are the dead spit in their lines of the Ark of Regent Street toyshops, a quaint side glimpse on authenticity of tradition, while the boats that once were Noah's are built by sappers, to whom nothing is sacred, into bridges to take the "forty-pounder" train across the Tigris. Lest anything should be wanting to connect ancient history with modern practice, we note how the water of the Kherka, which flows into the marshes east of the Tigris, famous to this day for its purity, was carried on mules for the use of Darius, in silver flagon "ready boiled for use," as the cuneiform has it.

While the Army lay on the Tigris listening happily to the chunk of the passing steamers up the bends behind that meant to them and their cannon the morrow's meal, the outpost line of the cavalry, lying in front of the echeloned Division, kept watch lest the Turk attempt some night attack. Cavalry days are weary ones. Boot and saddle early when the water is too cold for horses to drink, long halts in the desert, while formations mass in rear or pack wireless sets are erected and dismantled, and patrols hunt mounted Arabs away into the mirage. Disappointing days, too, when the enemy would be out of reach or else lie installed in a network of dry canals, ready to bite if attacked, but to slip away in the night after the manner of rearguards. That day three squadrons had charged home in the wild disorder that canal grids can create, and though losing heavily had ridden back with the glory of action on their sword points, and the surge and thunder of the afternoon had died down to the peace of the tired bivouac. The day was over, and it had but remained to "Battez le tambour à petits coups bas" and

> "Plantez un croix sur son tombeau,
> Gravez son nom son numéro,"

save that among desert Arabs the grave must be camouflaged lest it be desecrated. The long horse lines stretch back to the waggons, and the crunch of corn tells of the satisfaction of rest. In the gun-parks of the horse artillery limber gunners give soothing dollops of petroleum jelly to tired gun-springs, and hot tea to tired muscles.

The sketch ends with a vivid incident:—

A cry and an oath came down the breeze, and two figures came across to the officers' post. A duffidar of Indian cavalry followed by a trooper, came up and reported a prisoner. Some one trying to creep through the line. They had caught him—shot him, apparently. Seemed to be a *badu* (an Arab). "Better bring him along here," said the Intelligencer. "May get something out of him. Don't let them hurt him."

The unfortunate wretch was brought over on a stretcher, and a flashlight turned on him. It was a queer bundle of rags, and the Intelligencer peered over it to find a clean-cut Arab face, with the knit brows of a man who has long stood the glare of the noonday sun. "Why, it is Muhammad Hussein of the Beni Lam!' The bundle moved, and tried to speak.

"This is one of the G.H.Q. agents. He used to be with me."

The stretcher was placed on the ground, and Fearon sent the men off save two, who stood apart leaning on their rifles. Esto, the Intelligencer, talked to him in Arabic, and the Arab tried to raise himself.

"Call one of the men to support him." A Sikh came and raised him slightly.

"Why, look at the man's knees!" They were worn to the bone from crawling on them, torn and bleeding. The Arab commenced to pick at rags round his legs and to speak slowly. The medical officer of the regiment came up, thinking from the shots that someone might need him. As the Arab picked at the rags the medical officer helped. The man's legs were a mass of raw, red sores.

"Baghdad boils?" asked Fearon. The medical officer shook his head. "Burns, man—burns! Burnt with a red-hot iron."

The Arab broke in—

"The Turks caught me. They burnt me all over with a red-hot rifle-barrel, and told me to go back and tell my English friends. I have been crawling for ten days."

And Esto thought of the carvings from Nineveh up the river—of captives held steady with a ring through their lips and a tight cord, while an arrow-point was jabbed in their eyes, and the red-hot irons got ready in the braziers hard by. For has not the Preacher said—

> "The thing that hath been, it is that which shall be; and that which is done is that which shall be done; and there is no new thing under the sun"?

NEAR EAST BOOKSHELF.

INDIAN FINANCE AND BANKING.*

This book appears at an opportune moment, when Indian finance is engaging the attention of the foremost experts on the subject. The position of the author establishes a claim to express an opinion upon the currency and exchange problems with which the India Government have had to contend during the war; but quite apart from that, the views expressed will command the attention and support of all advocates of sound money. In the chapters on Indian currency a complete history of the system is given in a style which cannot fail to arouse the interest of every student of this absorbing topic. In the preface it is stated that the book has no official character whatever, and after perusal we can congratulate the author on its freedom from official jargon and the lucidity with which his arguments are expressed. The volume is one which should be widely read by merchants and bankers, and it is full of particulars which entitle it to become a stand-by for ready reference on Indian currency and the banking system.

The admirable tables of statistics with which the book is supplied are not the least valuable feature, and in this connection special interest attaches to the table on page 33 describing the disposition of Treasury Balances. A footnote is added intimating that the balances for this year and last year are "in addition to the Special Reserve of £20,000,000 in 1918 and £7,000,000 in 1919." In the absence of any information to the contrary, it is to be assumed that these amounts are "Hidden Reserves."

Although it is recorded to the credit of the India Government that they were never forced to proclaim a moratorium, it may not be generally known how near India came to that point towards the end of August, 1914, when several of the banks in Calcutta and Bombay were very heavily drawn upon chiefly by native depositors. A timely return of confidence, however, removed the necessity for approaching Government to act in this direction.

The suggestions for the extension of banking facilities will be endorsed by every business man, because therein lies the remedy for the enormous waste of money for which the hoarding habit is responsible. There can be no doubt that the Indian bank failures in 1913 shook the confidence of depositors to such an extent that it is taking years for the lost ground to be recovered; and the simplest and surest way to restore that confidence lies in familiarising the community with the advantages to be derived from industrial banking on safe lines.

SIDE SHOWS.†

Captain Benn took part in his first side-show, the Gallipoli campaign, not as a flier, but with the Middlesex Yeomanry. His account of the landing of the battalion at Suvla, and of the fighting that followed, is characterised by that grey hopelessness which comes over so many who write of this campaign. He describes the gallant spirit of the men whose high hopes were doomed to disappointment after the weary months which followed the first grim fighting, and during which so many of the troops fell a prey to sickness. He was invalided to Egypt before the final evacuation of the Peninsula, and was here able to gratify his wish to join the Air Service. He became military observer attached to the R.N.A.S., East Indies and Egypt Seaplane Squadron, which was under Commander Sampson, and which, apparently relying entirely on this gallant officer's initiative, carried out many successful raids in the Aden Hinterland, and in Syria. His account of these raids, during which he usually acted as observer to Commander Sampson, is most interesting. Sometimes they worked with the French, and they were doing so when the "flagship" of their squadron H.M. Seaplane carrier Ben-my-Chree, was shelled and sunk in the harbour of the island of Castelorizo by a Turkish battery hidden on the opposite coast. The description of this episode is followed by the best chapters in the book. We read of the panic that ensued amongst the inhabitants of the island, and of the time spent by the author in command of a small force—composed of the crew of the Ben-my-Chree, and of French soldiers—which was stationed in a Greek church near the shore to oppose the expected Turkish landing. Captain Benn's style of writing, which although simple and direct, is as a rule quite uninspired, here seems to take on a different tone, and he makes us see very clearly the stage-like island scenery, and the little whitewashed church with its strange mixed garrison. We share in the spirit of adventure and joy in authority felt by him and his Admirable Crichton of a batman, Stickell.

The whole of this piece of narrative, from the bursting of the first shell to the farewell of the English to their French comrades, is illuminated by the glow of romance. Captain Benn's pride in his little command is almost ingenuous. Here, certainly, he was unhampered by that military system, which he is so very anxious to have his readers believe is fatal to all individuality, and altogether ineffectual.

On his return to England the author trained as a pilot, and, having got his wings, set out under Commodore Sueter to take part in the Adriatic barrage. In October, 1917, however, he came home, and afterwards joined the 51st Wing, which worked with General Plumer's forces, and with the Italian Army in N. Italy. He tells of many exciting adventures during this period culminating in the successful landing of a Secret Service Agent in the Austrian lines by means of a parachute.

Colonel Barker, V.C., was the pilot on this occasion, and the account of this achievement, supplemented by the subsequent adventures of the Italian agent, Tandura, is very enthralling. Captain Benn was surely most exceptionally lucky in the opportunities which he found for exploring the countries in which he was stationed. A good many chapters are taken up with his impressions of Egypt, Cyprus, and Italy, and in his "whole-souled quest of knowledge," the way in which he seizes every chance of conversation with the natives, and his eagerness to impart his not very important discoveries to the world, he reminds us of Stevenson's immortal, Joseph Finsbury.

This book, especially the part of it which deals with the Red Sea and Eastern Mediterranean, and with the author's impressions of Egypt and its Government, should appeal very much to all those who are interested in the Near East.

OTTOMAN LAND LAWS.*

A most useful addition to the library of works on Ottoman Law has just been made by Mr. Stanley Fisher, Puisne Judge of the Supreme Court, and at present acting Chief Justice in Cyprus. It brings into one volume the original Ottoman Land Code (supplemented by later legislation affecting land) and the Cyprus Laws and Rules promulgated since the British Administration was established in 1878. The latter form an Appendix which occupies almost as many pages as the Code.

Mr. Fisher's version is mainly based on Mr. George Young's "Corps de Droit Ottoman" (Oxford Clarendon Press, 1906) and the Greek translation of the "Ottomanikoi Kodices" (1890). He has checked the text with the Turkish original in collaboration with Mustafa Effendi Midhat, of the Idádi School, Nicosia. The Appendix terminates with the important Corporate Bodies' Law of 1908, which enables immovable property to be acquired and registered in the names of corporate bodies in Cyprus. Visitors to the island who desired to ascertain the legal status of companies in what was still Ottoman territory were not infrequently puzzled, and sometimes probably deterred from projected enterprise by the unsatisfactory nature of the existing regulations.

In present circumstances one cannot but feel a melancholy regret that the course of Turkish history, so often re-paved with good intentions, and aiming at the removal of abuses "under a firm law," should not have led to happier results. Take, *e.g.*, the measure which gave foreigners the right to acquire immovable property in the Empire, dated 1284 A.H. (1864 A.D.). Foreign subjects were thereby allowed, "with the same title as Ottoman subjects, to possess such property, urban or rural, anywhere except in the province of Hedjaz." This law was enacted "in order to secure the extension of wealth and prosperity in the Ottoman Empire." The work should be useful in Palestine, where the Land Registry is to be reconstituted. The volume is printed by Mr. W. J. Archer, of the Government Printing Office, Nicosia.

THE SEASON IN EGYPT.

(From Our Special Correspondent.)

Cairo, November 23.

Successful Dances.

The past week has been strangely reminiscent of old times, when one danced five nights out of seven; for during the period we have had no less than four dances, Shepheard's Hotel being the scene of three of them.

Armistice Anniversary was fittingly celebrated by a subscription ball in aid of the Anglo-American Hospital, which had had to be put off from the 11th owing to the delay in the arrival of the High Commissioner. It was in every sense of the word a "Social" event, made doubly so by the fact that it was the first public appearance this year of the new High Commissioner and Lady Allenby. Their Excellencies arrived while dancing was in full swing, and it was quite an impressive sight to see the sudden cessation of all movement, when, as the dance music ceased and the National Anthem was struck up, everyone stood to attention wherever they happened to be. Lord and Lady Allenby remained some time receiving their friends, with many of whom they chatted, and his lordship, who looked in the best of health, seemed to forget his many responsibilities for the moment, and was seen amongst the dancers.

Both ball-rooms were thrown open for the occasion, and they proved none too big. The music was provided by the band of the 11th Hussars, and a very fine buffet was laid out in the Restaurant. The ladies who were responsible for the organisation are to be highly congratulated, not only on the social success, but also on the financial result of their efforts, which must have been very substantial. Where practically all Cairo was present it is difficult to mention names, but during the evening we noticed the Countess of Stradbroke, Sir Foster and Lady Newlands, Major-General Louis and Lady Bols, Brig.-General and Mrs. Wavell, Brig.-General and Mrs. Morris, Sir Reginald and Lady Oakes, Sir Milne Cheetham, Colonel Symes, Lady Willcocks, General Gorringe, Brig.-General Sir Gilbert and Lady Clayton, Mr. Hope Vere, Mrs. Alec Tweedie, Mr and Mrs. Bird, and Lady Palmer.

R.A.F.'s "At Home."

The R.A.F.'s, who are making quite a speciality of this mode of entertaining their friends, were again "At Home" at Shepheard's on Thursday evening, when a most successful dance was the order of the evening. The band of the 11th Hussars were again to the fore, and dancing was kept up until a very late hour, an obliging officer stepping into the breach and providing the music when the band retired and sought supper and a well-earned rest. Amongst the many guests were the Hon. Hampson Gary, Mrs. Tweedie, Gen. and Mrs Wavell, Gen. and Mrs. Burnett, Mr. and Mrs. Peckitt, Major and Mrs. Wethered.

Sir Louis Bols' Farewell.

On Friday evening Major-General Sir Louis and Lady Bols gave a most delightful dance at their charming residence in Ghezireh. It was, alas! a farewell to their host of friends, some of whom they entertained at dinner previously; for it was given on the eve of their departure for Palestine, where Sir Louis takes up his new post as Governor-General. They will be very much missed, and in offering their congratulations to Lord Allenby's able and popular Chief of Staff, every one looks forward to seeing him and his charming wife again.

The week fittingly finished with Shepheard's Saturday "small" dance, which was as well attended as ever. I hear great things promised for Christmas week and the early part of the New Year at this historic caravanserai, which in all probability will soon have to throw open its third story, which has been closed ever since the war. There is a good deal of grumbling at the Government action in retaining the Semiramis and Savoy Hotels, and thus aggravating the local housing question. The former hotel has been reserved for the Milner Mission and the Ministry of Communications. It is contended that accommodation for the Mission could easily have been provided at the Savoy Hotel, where, with a little goodwill and re-arrangement, plenty of room could be found, and where the Ministry of Communications also could at a push have been accommodated until new premises had been constructed. The authorities out here seem, after the conclusion of peace, to be adopting the much criticised procedure followed by the Home Government during the war.

Opera and Races.

Every one is looking forward to the opening of the opera season, which is expected to start towards the middle of next month. After five years of operatic silence, we are evidently going to have a double dose this year—not that anyone will object—for it is announced that a Second Italian Opera Company is shortly coming over, and will take the boards at the Kursaal, whence the Bandman Musical Comedy Company will transfer to the Printania Theatre, which has in the past offered hospitality to many similarly successful ventures.

The third race meeting this week at Ghezireh proved another great success. Several luncheon parties were given beforehand, and, as the High Commissioner and Lady Allenby were expected there was an unusually large attendance. Their Excellencies spent a long time in the Members' Enclosure, and seemed thoroughly to enjoy the racing, which was certainly very good, there being some exceedingly close finishes.

MUSICAL NOTES.

On December 3 at the Æolian Hall, a concert of music of the Russian Orient was held, under the direction of M. Lazare Saminsky, of the Tiflis (Caucasus) People's *Conservatoire de musique*. This concert was of great importance, not because of the mere performance of Oriental Russian music, but because it was a sign of the progressive cultural fusion of East and West. The music of the East is not yet explicable to us all, but it is no longer unknown.

Now the chief link between East and West is, of course, Russia. Since that country has begun to develop musically, its progress has travelled in two main streams, the national and the occidental. In other words, there has been one school which has looked to Russia, and especially to Russian folk-song, and another school which has looked to Western countries, older in musical expression, for the source of their respective inspirations. M. Saminsky's concert was devoted almost wholly to the exposition of the national or local music of the Caucasus.

In his lecture, points of which were exemplified vocally by Miss Zoia Rosowsky and M. Chelminsky, and on the violin by M. Lasserson, M. Saminsky placed great hopes in the growing interchange of culture between East and West. Only recently (he said) has the music of the older nations, like the Armenian, Jewish, and Arab, which hitherto had been absolutely exclusive, been made public. But ignorance of this music is far from being dispelled yet, and this fact must have been felt keenly by most of the English listeners at M. Saminsky's concert.

The music of the Russian Orient was divided into Tatar, Georgian, Hebrew, and Jewish songs. Of these four peoples the Tatars (said the lecturer) are weakest in musical creation. The Tatars of the Crimea are the most gifted, but that is apparently due to the Genoese and Venetian influence which is obvious in many of their folk-songs. Georgia and Armenia have a much richer music, due to their very old culture, which had survived in spite of material vicissitudes. The Hebrews are known the world over for their musical abilities, and their folk-songs are instinct with the deep spirituality of the race.

The prevailing note of the songs of all these peoples is sadness. The reason for this is patent, being easily found in their histories. These nations were often invaded, sometimes overrun, and in part dispersed. Sadness, therefore, is at the beginning and the end of their experience. But their songs are curious in that they have no lilt, no sense of direct rhythm; they meander plaintively, purposelessly in and out of the minor keys, wailing over the rocks of despair and sinking to depths of passionate woe. There is no touch of that exhilaration, no hint even of that occasional jollity, which are such common features of the folk-songs of most countries. One of the Armenian songs, by Komitas (and sung by Miss Zoia Rosowsky), had indeed the rare knowledge and the lightsome gladness of the mountain shepherd; it was an extremely beautiful song, but it had none of that light-hearted joy in which Serbian or Italian mountain songs are written. M. Lasserson played a Hebrew melody by Achron—an exquisite piece well played—but the piercing sorrow of its repetitions was too prolonged. The overwhelming grief of all these peoples is a thing with which we cannot for ever sympathise; we can for a time feel with them, we can always admire them, but we cannot say that indefinitely we will let our hearts be torn by their plaints. Sympathy, like elastic, perishes if too freely stretched.

The second half of M. Saminsky's concert consisted of compositions by himself. Of these, two especially were pleasing, being songs from Pushkin and Sologub. He appears to have assimilated many influences, and his work shows far more vigour than do the folk-songs, of which earlier in the evening he had given an exposition. He is obviously interested in modern work, though his own shows no trace of the unintelligibility of some of his countrymen. It is straightforward, with no meanless subtlety; but as this is the first performance of his work in England, it is too soon yet to judge of it. That apart, it is work of a very great value that M. Saminsky is doing in showing us the music of these oppressed but extremely cultured peoples. The war has made possible the fusion of many cultures, and if the Western peoples cannot so easily as the Russians assimilate the culture of the Oriental peoples, the path will be made much clearer by the work of exposition which M. Saminsky is in England to perform.

Andante.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. December	1919. November		1338. Rabia I.	5680. Kislev.
12	29	Friday	19	20
13	30 December.	Saturday.....	20	21
14	1	Sunday	21	22
15	2	Monday	22	23
16	3	Tuesday.....	23	24
17	4	Wednesday	24	25
18	5	Thursday	25	26

Lady Inchcape has left London for Paris.

Captain and Mrs. Sidney Andrews have returned to Malta by s.s. Mandala.

Sir Charles Des Graz has returned to The Firs, Wimbledon, from Ireland.

Lord Oranmore and Browne left London on Monday for Castle Macgarrett, Co. Mayo.

Colonel and Mrs. Cecil Maddock left London for India on December 5, in the s.s. Morvada.

Lord Plumer, the Governor, has received the degree of LL.D. from the University of Malta.

The offices of the Roumanian Military Mission have been removed to 3, Marble Arch, Hyde Park.

M. Alexandre Cretziano, Secretary to the Roumanian Legation, returned to London on December 8 from Paris.

M. Yovanovitch, formerly Serbian Minister in London, and Madame Yovanovitch will leave London next week for Belgrade.

M. Constantinesco, who has been appointed Attaché to the Roumanian Legation, has arrived in London and entered upon his duties.

Prince Firooz, Persian Minister for Foreign Affairs, who is now in London, has formally notified the adhesion of Persia to the League of Nations.

Lord Milner received on December 3 members of the National Assembly at Malta, who expressed satisfaction with the new Constitution which had been granted to the Island.

With the approval of the Secretary of State for India, the Government of India have appointed Sir Krishna Gupta, K.C.S.I., to serve as a Member of the Army in India Committee.

Prince Nicolas of Roumania celebrated on December 6 the anniversary of his name day. Among his visitors at Eton were M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, and Colonel N. Arion.

The Aga Khan gave a dinner at the Ritz Hotel, Paris, on December 6, in honour of the Shah of Persia. The Earl and Countess of Derby and representatives of all the Allied and Associated Powers were present.

On December 16, at the Æolian Hall, a concert is to be given on behalf of the Armenian Red Cross and Refugee Fund. The concert begins at 8 p.m., and tickets may be obtained from the Hon. Sec., Miss Emily Robinson, 35a, Elsham Road, W.14.

The Bishop of Khartoum, in consequence of the decision arrived at by the Archbishop of Canterbury and Bishop MacInnes as to the necessity of dividing the Jerusalem diocese, has been asked to take charge of Egypt as well as the Sudan. He was agreed to do so, but will continue to make Khartoum his headquarters.

Mr. W. A. Lloyd, who formerly served with the A.I.F. in the Near East, and has since been studying developments in that region, is at present in London. He lectured on his experiences last night at the National Liberal Club.

The marriage of Captain Cuthbert G. Bellord, late of the R.A.F., eldest son of Mr. E. J. Bellord, and Margaret Isabel, elder daughter of Sir Alexander Cardew, K.C.S.I., and Lady Cardew, C.B.E., took place on December 3 at St. James's Church, Spanish Place.

Queen Alexandra has sent a telegram to the Council and members of the Serbian Red Cross Society in Great Britain, expressing her Majesty's sincere thanks for their kind congratulations upon the occasion of her birthday and also on the return of the Prince of Wales.

M. Michel B. Boeresco, the Roumanian Chargé d'Affaires, on December 9 entertained at luncheon the Hon. William Cozens-Hardy, the head of the British Trade Mission to Roumania, Colonel Rosetti, Military Attaché, and M. Constantinesco, the well-known Roumanian engineer.

His Majesty the King of Montenegro, with the Queen, has just left Paris for Cap Martin. At the station, in addition to the President of Council and the Ministers of Montenegro, the Diplomatic Corps accredited to the Court of Montenegro was represented by M. Delaroche Vernet, the French Minister; the Marquis di Montagliari, representing Italy; Sir George Grahame, representing Great Britain; General Gvosdenovitch, Minister Plenipotentiary of Montenegro to Washington, and other officials.

To bid adieu to Yovan Yovanovitch, until recently Serbian Minister in London, and Madame Yovanovitch, who are about to return to their own country, a reception was held on December 6 at the headquarters of the Serbian Red Cross Society, Ennismore Gardens. Princess Christian sent a letter regretting her inability to take part in the reception and expressing appreciation of the work of the Society. Among those present were Lady Kent, Colonel J. T. J. Morrison, Miss Olga Nethersole, Professor Georgicvitch, Dr. Djouritch, Dr. M. Curcin, and many other members of the Council and of the Serbian community.

APPOINTMENTS, ETC.

Our Malta Correspondent writes:—Colonel R. T. Edwards, C.M.G., has been appointed Chief Engineer.

Lieutenant-Colonel Clare Ruxton Uvedale Savile, D.S.O., O.B.E. (Assistant Adjutant and Quartermaster-General, Malta Command) has been appointed an official member of the Executive Council of the island of Malta.

The King has been pleased to approve of the duties of the Secretary of State for the Colonies being discharged by the Parliamentary Under-Secretary of State, Lieutenant-Colonel L. S. Amery, M.P., during the absence of Viscount Milner in Egypt.

The King has given orders for the following appointments to the Most Excellent Order of the British Empire (Civil Division) for services rendered in Egypt and the Sudan:—

EGYPT.

K.B.E.—Mr. F. T. Rowlatt, Governor of the National Bank of Egypt.

C.B.E.—Mr. P. M. Tottenham, Headquarters Inspector-General and Acting Under-Secretary of State, Ministry of Public Works, Chairman of Fuel Committee; Mr. B. Hornsby, Sub-Governor National Bank of Egypt, Alexandria, Public Custodian and Deputy Chairman of Cotton Control Commission; Mr. S. R. P. Carver, Member of Cotton Control Commission; Lieut.-Col. H. G. A. Garsia, D.S.O. (R. of O.), Financial Secretary, Egyptian Army.

O.B.E.—Mr. R. V. Wild, Inspector, Ministry of Finance; Mr. A. W. Keown-Boyd, Secretary to the Residency; Mr. T. W. Russell, Commandant of Cairo Police; Mr. J. McM. Marshall, Inspector of Ministry of Finance and a Member of the Cotton Control Commission; Mr. A. G. Ingram, 1st class Inspector of Police, Alexandria; Mr. A. Wise, Chief Inspector of Nizam, Ministry of Interior; Mr. K. Dowson, Director, Coastguards Service.

THE SUDAN.

K.B.E.—Col. H. W. Jackson, C.B., Acting Governor-General of the Sudan.

C.B.E.—Dr. J. B. Christopherson, Director, Khartum and Omdurman Civil General Hospitals; Mr. J. W. Crowfoot, Director of Education Department and additional member of Governor-General's Council.

O.B.E.—Mr. H. S. Job, Honorary Treasurer of Prince of

Wales's and Red Cross Funds in the Sudan; Mr. K. C. P. Struvé, Sudan Civil Service; Mr. C. E. Lyall, Sudan Civil Service; Mr. R. E. More, Sudan Civil Service; Mr. C. P. Browne, Sudan Civil Service; Mr. J. D. Craig, Sudan Civil Service; Capt. F. Burges, Police Magistrate, Khartoum; Major S. K. Flint, Legal Department, Sudan Government.

OBITUARY.

The death took place on December 6 at Bournemouth of Major W. P. M. Dalzell McLaughlin, of the 107th Pioneers, Indian Army.

Colonel H. M. Sloggett has died at Bournemouth. He took part in the Miranzai Expedition in 1891, receiving the medal with clasp.

The death has occurred of Captain G. R. Bethell, R.N. He saw service in the Egyptian War of 1882, thereby gaining the Egyptian Medal and Khedive's Star.

The death occurred on December 4 at Lambridge Lodge, Bath, of Wyndham Frank Baker, aged sixty-three, late of Tellisford, Ceylon, only son of the late Lt.-Col. Wyndham Baker, R.A., of 9, Marlborough Buildings, Bath.

The death occurred on December 4 of Miss Mary Hall, who was famous as the first woman explorer to make the journey from the Cape to Cairo. She was familiar equally with Australia, the Balkans, and the Near East generally.

The Rev. Frederick C. Hill, formerly rector of Shere, Surrey, died at College Road, Eastbourne, on December 5. He was chaplain with the Burmah Field Force, 1885-7, chaplain at Mercara, Coorg, and Mysore, 1887-8, and chaplain at Bolarum 1888-93.

The death occurred on November 29, at Dardoni, N.W.F.P., of Richard Henry Hedges, Major 106th Pioneers, Brigade Major 47th (Jubbulpore) Brigade, elder son of the late Col. R. A. Manners, Royal Scots, and of Mrs. Manners, and husband of Margery Manners (*née* Thornton), Fairlawn, Eltham, Kent.

The second son, Shivaji Rao, of the Maharaja Gaekwar of Baroda and the Maharani, has died in India from pneumonia. He was a familiar figure at Oxford University in 1911, and afterwards as the Gaekwar of Baroda. Before going up to Oxford he passed the first Arts examination of Bombay University, and followed the B.A. course in the Baroda College. The Gaekwar at Oxford came very near to getting his cricket "Blue."

The Hon. Mrs. S. K. Sinha, daughter-in-law of Lord Sinha, died at Lord Sinha's residence at Ealing on December 9, at the early age of twenty. She was the elder of the two daughters of Mr. A. C. Chaterjee, I.C.S., who has been representing the Government of India at the Washington Labour Conference, and was previously acting as Chief Secretary to the United Provinces Government. Mrs. Sinha was educated chiefly in this country.

The death occurred at Malta on November 27 of Sir Edwin Pears. He was returning to England from Constantinople; but, having an accident at sea, was landed at Malta, and died there. He was born in 1835. About 1874 he went to Constantinople as correspondent for the *Daily News*, and created a great sensation by his account of the Bulgarian massacres of 1876. He settled in Constantinople, and for forty years it was his home. To the history of that city he contributed many notable volumes. As an archæologist, it is said that he knew more than any living man about Byzantine Constantinople. As an author, his chief work was "Turkey and Her Peoples," but he was a frequent contributor to the leading reviews.

NEWS IN BRIEF.

Spain and Bulgaria have recognised the Austrian Republic.

The Egyptian Government has decided to grant a war bonus to the smaller pensioners.

It is reported that a pack of man-eating wolves has appeared on the border of Hyderabad. Seven people are said to have been killed, and their bodies were eaten.

A delayed message from Athens says that the signature of the Peace Treaty was celebrated with great enthusiasm there, huge crowds cheering for M. Venizelos and the Allies.

The Postmaster-General announces that the Indian mail which left Bombay on November 15 has been delayed, and is not expected to reach London before December 16.

Talaat Pasha, the fugitive ex-Grand Vizier of Turkey, is stated to have been in Berlin for some time, and to have been in touch with Radek. Talaat is going on to Moscow.

The Pope has created a new diocese at Patna (India), having its seat at Bankipur. The new see is a suffragan Bishopric to Calcutta, and is entrusted to Jesuit missionaries.

Part of the mail sent from Paris to Balkan countries and Turkey on November 21 by the Simplon-Orient express has been destroyed by a fire which broke out on the train between Belgrade and Nish.

Azerbaijan troops, who had surrounded the Armenian district of Zangezour, have been completely beaten after four days' violent fighting, and retreated, leaving many prisoners, 14 machine-guns, and other supplies.

Circassian bands are in the field against the Turkish Nationalists (Mustapha Kemal's party) in Western Anatolia, and one of them is reported to have inflicted a severe defeat on the Nationalists in the Balikessri district.

Our Malta Correspondent writes (November 28):—Four hundred and fifty German prisoners have just left for the Fatherland. They cheered vociferously, but the non-response on the part of the local population was eloquence itself.

Sixty dismissed officers of the Greek Army, including a few from Görlitz (who surrendered Fort Rupel), have been arrested as accomplices in the plot to murder M. Venizelos. Resolutions from all parts of Greece demand that the guilty be promptly dealt with.

M. Stamboulinski, the Prime Minister of Bulgaria, speaking to a representative of the Paris *Temps*, explained the politics in his country put before everything else the realisation of an *entente* between the Balkan States under the patronage of the great Allies.

An aerial mail service is to be inaugurated between Bombay and Karachi on January 1, by means of which residents of Karachi will be enabled to post home letters at least twenty-four hours after the despatch of the mail steamer from Karachi and yet catch the steamer at Bombay.

A strike against the embarkation of Turkish prisoners of war and internees at Malta for repatriation was recently declared by the crew of the British hospital ship Gloucester Castle. A settlement was effected by the Governor, only sick and non-Turkish—i.e., Jews, Greeks, etc.—prisoners being allowed on board.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.
Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL
(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.
American Bar and Restaurant, Billiards, and Lift.

SUMMER PALACE HOTEL,
GLYMENOPOULO, RAMLEH.
This Hotel is situated near the Beach. Open all the Year.
Every Modern Comfort. American Bar, Restaurant. Bathing Cabins on the Beach. Billiards. Daily Concerts on the Verandah.

FRIDAY, DECEMBER 12, 1919.

ROUMANIA.

From Paris comes the satisfactory news that Roumania has now signed the Treaty of St. Germain and the Bulgarian Treaty, as well as the separate agreement protecting minorities in Roumanian territory. There could be no other termination to the uncomfortable *impasse* which has disturbed the relations between Roumania and her Allies; but the latter will do well not to interpret the happy ending as proof of the wisdom of the Supreme Council's attitude towards the Roumanians. It would probably be more accurate to describe the handling of the Roumanian problem as mainly responsible for the temporary breach between Paris and Bucharest. Certainly it has helped to prolong a situation which ought never to have arisen. Until fuller reports arrive from Roumania it is not possible to know the real inwardness of the more recent happenings. The elections of a few weeks ago failed to provide M. Bratianu with the support that could be regarded as a national endorsement of his policy of passive resistance towards the Allies. At the same time, owing to the abstention of one or more parties, they did not represent the considered judgment of the people as a whole. They were, however, evidence of the growing impatience with a condition of things which, whatever the rights or wrongs might be, threatened to leave Roumania the Ishmael of Europe. The new Cabinet contains many surprises, but it has yet to be learned whether it is more than a temporary expedient or whether its composition is intended to satisfy the wide demand for a radical reform of Roumanian politics and administrative methods. Various references in our Roumanian correspondence had anticipated the possibility of King Ferdinand passing over M. Maniu and selecting another representative of Transylvania as head of the Government. The choice has fallen on M. Alexander Vaida-Voevod, who has associated with him as his Minister of the Interior General Averescu. The inclusion of the President of the People's League is undoubtedly meant to be a bid for the support of the peasantry of the Old Kingdom. Hitherto General Averescu's name has been coupled with that of M. Také Jonescu as the most determined opponent of M. Bratianu; and his presence in the Cabinet ought to be regarded as a guarantee that the policy of nominating a Ministry which is Bratianist in everything but name has not been adopted on this occasion.

With the Paris treaties out of the way Roumania will be in a position to turn her attention to much-needed domestic reform. During the war the national conscience was profoundly disturbed; but with the signing of the Armistice the consideration of internal affairs was relegated to the background, and, taking their cue from their neighbours, the Roumanians became engrossed in claims for territorial expansion. Latterly the Hungarian complication has overshadowed all other questions, and we have seen how difficult it has been for the country's sound common sense to prevail against the natural instinct of self-defence in the face of the mistakes of the Supreme Council. With the return to more normal conditions the spirit of reform evoked by the war will be revived. In the first place the purely material work of extending the machinery of government so as to incorporate the new territories and the Old Kingdom in one administrative unit—if such be the national will—will have to be carried out. Up to the present the Provisional Government of Transylvania has discountenanced all action in this direction, preferring to keep the territory under its jurisdiction free from any possible taint of lax administration. Its willingness now to merge its own individuality in that of the Central Government will depend on the measure of confidence inspired by M. Vaida-Voevod's Ministry. It was at one time M. Maniu's intention to maintain the dual arrangement until a Constituent Assembly representative of the whole of Greater Roumania had framed a constitution for the new kingdom. To meet this requirement, further elections will have to be held, and, therefore, the present Cabinet may have been appointed primarily with this end in view, the Cabinet composed largely of military officers under General Vaitoianu having failed to command the confidence necessary to bring all parties into the last general election. Modifications of the Roumanian Constitution are hedged about with elaborate safeguards, and it is certain that the important work of framing a new constitution for an enlarged Roumania will be no less carefully performed. In the absence of information to the contrary, therefore, we may expect to find that the new Government's first charge has been to get the Paris difficulty out of the way, and then to proceed with the formalities required to give a formal existence to Greater Roumania. When the time comes for the detailed elaboration of domestic reforms it may be possible to entrust the work to a Cabinet more strictly representative of "all the talents."

But if the need for political reform in Roumania is pressing, the urgency for the introduction of economic stability is, perhaps, even greater. In the opinion of Professor I. N. Angelescu, who contributes an article to the official organ of the Roumanian Ministry of Industry and Commerce, the financial situation of the country might well be worse; but owing to the lack of any steps on the part of the State appropriate to the circumstances of the moment, each day sees difficulties created of such gravity that, unless care is taken, Roumania will be heading for "certain disaster." Political conditions have been responsible for the policy of *laissez faire* in the economic sphere, and it is to be hoped that there will now be an opportunity of devoting careful attention to this question and the remedial measures necessary. Greater Roumania is in a most favourable position for laying the foundations of a really great future. The productivity of the old kingdom is an accepted fact, but it is not generally recognised how much this stands to be enhanced by the accession of new territory. Out of a total of more than 25,000,000 hectares of cultivable land, Old Roumania possesses some 10,000,000; but whereas the mean production of crops in it can be reckoned at 820 kilograms per hectare, that of the Banat, with over 2,000,000 hectares of cultivable land, is estimated at 1,370 kilograms; and that of Transylvania, with 5,500,000 hectares, at 1,229 kilograms per hectare. Moreover, while the former kingdom had a comparatively restricted outlook industrially before it, the situation has been entirely changed in regard to Greater Roumania. The conditions necessary for a considerable industrial movement are there, with the presence of raw materials and abundant sources of power. But prosperity will not fall into Roumania's lap without an effort on her part, and between her and the desired goal stands the ugly prospect of Dr. Angelescu's "certain disaster" if the Government of the day does not bestir itself betimes to grapple with the monetary situation. Greater Roumania finds herself confronted with the kronen and rouble superimposed upon her own *leu* currency; all three are seriously depreciated, and each day's delay to deal with the problem serves to aggravate it. The country, however, has come to appreciate its position, and the politicians can be confident that a serious attempt to improve the monetary system will have the whole support of the nation.

ASSYRIANS DURING THE GREAT WAR.

By the Rev. W. A. WIGRAM.

The various Christian "millets" of the Ottoman empire have so unhappy a knack of manifesting just those qualities which every Englishman most dislikes and despises, that it is a pleasure to be able to note one which has played a more manly rôle. This one is the "Assyrian" nation-church (sometimes called "Nestorian" or "Chaldean"), a body which before the war was in a state of turbulent and very precarious semi-independence in the mountains of Kurdistan.

At the beginning of the war this little "millet" (which was insignificant in numbers but important from position) deliberately threw in its lot with the Entente and elected to fight on its side against the Mussulmans, who had just proclaimed the "Jehad." They made this choice in the face of attractive offers from the Turks, who were willing at least to promise anything to these Christian mountaineers, whose home lay on the flank of any possible Russian advance on Erzeroum, if only they would be loyal to the Sultan. The political advantage, at a time when it had proved impossible to hide the facts of the Armenian massacres from European criticism, of being able to point to another Christian "millet" which had thrown in its lot with the Ottoman, no doubt had its weight also. Hence, one may fairly feel admiration for the chivalry of a race of mountaineers, who knew their own danger well enough, and stood by the Entente in spite of it.

Russia had promised support to these allies of hers and ours, but the promise was never kept; in consequence, the Assyrians (after three months of hard fighting and the repulse of at least one great attack by regular troops) were driven by the combination of Turk and Kurd from their mountains, and had to seek refuge in Persia. They accomplished this migration under the leadership of their Prince-patriarch, Mar Shimun (for the temporal power of the Church still survived in Hakkiari, and, like the men of the Black Mountain in Europe, these mountaineers were ruled by an hereditary Bishop), a young man who had already shown himself a devoted leader of his clansmen.

When the position in the mountains threatened to become untenable, the Bishop left his people, to make his way with two guides only through the leaguer of Kurds, to make one last appeal to the Russians for the help they had promised and had never given. When the Russian general could only advise the Prelate to remain in the safety he had won, and not throw away a valuable life by returning to the mountains whither no help could be sent, Mar Shimun refused to remain even one night in security, and went back to live or die with his people.

Now, by a daring flank march, he or his military advisers contrived to evacuate an impossible position and effect a safe retirement (with women, flocks, and herds) to Persian territory. One episode of the march must be recounted. The line of the march ran past the head of a gorge leading down to the Patriarch's old home, the village of Kochanes. Pausing at the crest, he was heard to utter words like those of David in like case, "When shall I drink Kochanes water again?" Four young men of his bodyguard heard the words, and, though innocent of any knowledge of the Book of Samuel, they did exactly what the "mighty men" did in David's day; they turned and fought their way back through the pursuing Kurds, to fill a pitcher with "water of Kochanes" and bring it to their chief, that he might drink.

In the Urmi district of Persia the migrating clans found kinsfolk and partial safety for the moment. When the war followed them there, as it did ere long, and they had to face a combination of Turks, Kurds, and Persians, they were given at least the promise of help from Britain. General Offley Shore, then head of the British Military Mission to the Caucasus, was glad to find helpers where he had least expected any, and recognised them as allies of England, intending to make use of them as a link in the defensive chain he hoped to form from the Black Sea to Baghdad. The utter collapse of Russia frustrated this promising plan, however, and the nation found itself flung on its own resources once more: also they lost their Patriarch, who was murdered, with every aggravation of treachery conceivable, by Simco, Agha of the Shekak Kurds. Nevertheless, they continued to fight, as men do who have their backs to the wall, and, finding another leader in the person of Agha Petros of Baz, they continued their defence for another fifteen months, being victorious in as many as fifteen actions. In these "battles" they showed singular chivalry to any Turk who fell into their hands, and on one occasion released as many as 350 at once, after giving their prisoners a good dinner. It must be admitted, however, that (to quote the words of one mountain warrior), "after the death of Mar Shimun, we took no Kurdish prisoners."

England had not forgotten those whom she once called ally, and in July, 1918, a message of hope was brought to them by an airman (Lieut. Pennington), after a flight daring even in the records of the R.A.F. It had been intended that the nation should continue their defence, and that Britain should send munitions to them from the south, but this plan went awry, and the whole nation started on a second "trek" to the south to fling themselves on British protection. Their sufferings were hideous, for the mob of nearly seventy thousand human beings were almost without discipline, and it was a case of "each tribe for itself." Some, of course, did better than others. The Tiari tribe (wildest of mountaineers even in times of relative peace) not only brought their own flocks through, but even added to them en route! One small sept was kept in order by an Amazonian chieftainess who admonished any erring clansman with a heavy dogwhip. With most, however, it was a case of *saure qui peut*, and nearly twenty thousand out of the seventy perished by the way. Ultimately, however safety was attained and a refuge which, if temporary, was at least secure, was given the tormented nation in the great camp at Bakubah.

II.

The bulk of the Assyrian nation remain, as is well known, in camp at Bakubah at this moment, and the question of their future is part of the whole problem of Mesopotamia. Readers of THE NEAR EAST have already been informed of the fact of their requesting permission to send representatives to state their case in England and Paris, and of their election of a woman, the Lady Surma d'Mar Shimun, as their "vekil" or delegate.

Meantime, these Christian clansmen have not been content to be merely idlers, eating the "bread of King George" without return. A contingent was raised among them for military service, and a double battalion of mountaineers was thus collected, composed of men who declared their readiness to go anywhere and serve against any enemy provided that they were given the British officers whom they knew.

Quite recently this force has done good service in Kurdistan. When the late troubles commenced, the double battalion was attached (at its own urgent request) to the 18th division, for service against the Kurds to the north of Zakho and of Amadia, and they have received high praise both from their divisional commander and from the general to whose brigade of Indian troops they were attached.

These mountaineers have proved themselves throughout of sterling worth, both for actual fighting and for protective work. They have absolutely no fear of the Kurd, and in the few engagements in which they did take part displayed the greatest keenness to come to grips with these ancient enemies of theirs. They also showed a most noteworthy cheeriness of disposition under all the difficult conditions of mountain warfare. In fact, in these their native hills they were admitted to be "extraordinarily good stuff" by competent judges; and as each man had taken the precaution to provide himself with a pair of the rope or woollen-soled sandals they are accustomed to use ("rushikki," is their native name), they were able to move about under far better conditions than the leather-shod Indian troops. Generally, they showed much natural knowledge of the guerilla fighting necessary in that very mountainous country. The discipline which they had acquired in camp at Bakubah proved quite sufficient to allow their British officers to exercise control easily, and crime in the battalion whilst on service has been a negligible quantity.

These Assyrians are now employed on garrison duty in Amadia and in other important places north of Mosul, where they are earning the high appreciation of the military

authorities, and are contributing in no small measure to the maintenance of order and security in those disturbed regions.

If we assume, as now seems probable, that the responsibility for those districts will fall on Great Britain, then it would seem that we have in this little nation an instrument that might be most useful to us in that work, and whose loyalty to us is beyond question—an assertion that can hardly be made of other types in the land.

There may be importance also in the fact that not only are these Christian tribesmen accustomed to bearing arms, but Kurds and other Mussulmans are accustomed to seeing them do so, and, indeed, to the carrying on of feuds with them, feuds which did not always follow the line of religious cleavage, and in which the fighting, though often pretty severe, left little sting behind. "Grass soons grows over blood shed in fair fight," says the local proverb common to both nationalities, and the Assyrians can quite contemplate the possibility of future friendliness with their Kurdish neighbours, provided always that the Turk is not allowed to whoop the one on against the other, for there lies a danger that must be guarded against.

In any case, it has become morally impossible for Great Britain to assume the position that she has no further interest in the lot of a "millet" which she has admitted as an ally, and of whose services she has availed herself against an enemy common to both.

THE SALONIKA LABORATORY.

Mr. F. W. Twort, Superintendent of the Brown Institution, University of London, last week, in the theatre of the Royal College of Surgeons, delivered the first of a series of five lectures on "The Work of the Base Laboratory, Salonika, in 1916." Dysentery, he said, had proved to be a serious problem with our Eastern armies. As early as November, 1914, he was asked by a military authority his opinion on the possibility of an outbreak of the malady among our troops, and the opinion he gave was that outbreaks were practically certain to occur, and that investigations should be carried out so that the condition could be better dealt with when it arose. Accordingly, a scheme of research was drawn up, and submitted to the War Office for approval. Unfortunately the scheme was rejected by the War Office on the ground of expense.

In November, 1915, he was informed that it was proposed to send to Salonika a base laboratory, with several mobile laboratories attached thereto, and he was asked to take charge and to make all necessary arrangements as soon as possible. He was glad to have had a good staff, but he regretted that the War Office did not accept his advice and include a zoologist, as it was obvious that diseases due to animal parasites would occur in considerable number in the Salonika area. He had also reason to believe that a bad error had been made in Gallipoli in diagnosing the dysentery cases in this area as carried by the *amœba* parasite. He complained that the most important recommendations which he made before leaving England and when in Salonika were not adopted.

In conclusion, Mr. Twort stated that the adverse secret report on the work at Salonika, issued from Egypt, under which Salonika was placed, was made, he had no doubt, in order to try to cover the errors that were committed by certain superior officers. He would deal at length with these matters in his next lecture.

A telegram from Budapest says that the French Admiral Fatou has informed the Hungarian Premier that the Inter-Allied Conference in Belgrade has decided to establish the General Secretariat of the International Danube Commission at Budapest, with Commander Escaille, of the French Navy, as Director.

In the House of Commons on December 9 Mr. Churchill stated, in reply to Mr. Forrest, that of the pre-war Turkish Empire, Mesopotamia, Hodeida, and part of Palestine are in the occupation of British troops, and Thrace, Constantinople, and the Straits, and the Anatolian Railway, are in joint occupation of British and Allied troops.

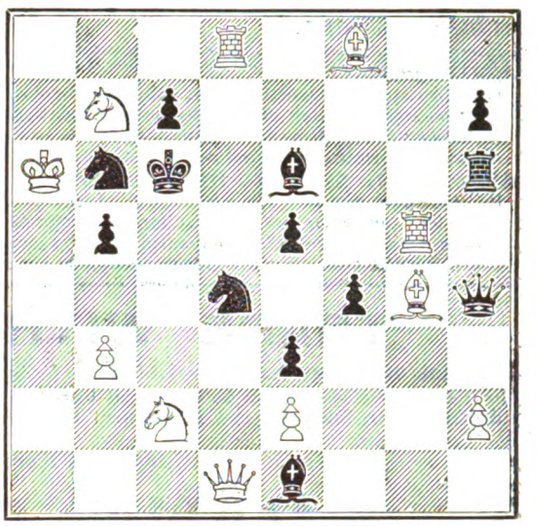
One thousand two hundred and twenty men of various ranks landed at Plymouth on December 9 from the transport "Friedrichsruhe." Included were cadres of the 1/25th London Regiment, 2/6th Sussex Regiment, 2/4th Border Regiment, and 1st Kents, formerly cyclists, but now infantry. All have taken part in the Afghanistan campaign. A contingent of Royal Marines, who have been serving at Constantinople, also returned to Plymouth on December 9.

The Zionist Organisation Central Office states that David Trietsch, the well-known Jewish statistician, estimates the Jewish population of the world at 15,430,000. In the Near East this is distributed as follows:—Roumania, 650,000; Hungary, 450,000; British Isles, 300,000; Yugoslavia, 200,000; Algeria and Tunis, 150,000; Arabia, 130,000; Greece, 120,000; Morocco, 110,000; Turkey, 100,000; Palestine, 100,000; European countries (not separately enumerated), 200,000; Asiatic countries (not separately enumerated), 100,000.

CHESS.

PROBLEM No. 6.

Black.



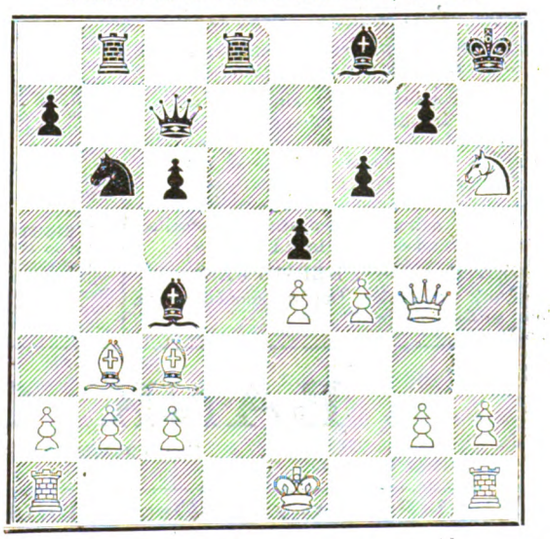
White.

White to mate in two.

Solution to Problem No. 5: 1, R—Kt5, if QxKt (ch); 2, B—B5 mate; if any other move, B—Q4 mate.

The following game was played in the first-class tournament at Hastings between M. Segal, of Roumania, and Mr. G. W. Moses, the former having the move. The opening is the Two Knights' Defence: 1, P—K4, P—K4; 2, Kt—KB3, Kt—QB3; 3, B—B4, Kt—B3; 4, Kt—Kt5, P—Q4; 5, PxP, Kt—QR4; 6, P—Q3, P—KR3; 7, Kt—KB3, B—Q3; 8, B—Kt5(ch), P—B3; 9, PxP, PxP; 10, B—R4, Q—B2; 11, Kt—B3, O—O(1); 12, Kt—K4, KtxKt; 13, PxKt, B—R3(2); 14, KT—R4, KR—Q; 15, Q—Kt4(3), K—R; 16, Kt—B5, B—KB; 17, B—Kt3, QR—Kt(4); 18, B—Q2, Kt—B5; 19, B—B3, Kt—Kt3; 20, P—B4(5), P—B3; 21, KtxRP, B—B5.

Position after Black's 21st move, B—B5.



22, Kt—B5, PxP; 23, BxB, KtxB; 24, O—O, B—B4(ch); 25, K—R, Kt—K6; 26, KtxKt, BxKt; 27, R—B3, Q—Q2; 28, R—R3 (ch), K—Kt; 29, Q—R5, R—Kt4; 30, Q—K2, Q—K3; 31, P—R4, R—Kt4; 32, RxB, PxR; 33, QxP, Q—Kt5; 34, Q—B3, Q—Q2; 35, R—KB, Q—K3; 36, P—R3, R—K; 37, R—K, K—R2; 38, P—KKt4, K—Kt; 39, P—R5, K—R; 40, K—Kt2, P—R3; 41, K—Kt3, Q—Q3(ch); 42, Q—B4, QxQ(ch); 43, KxQ, R—Kt4; 44, P—R4, K—Kt; 45, P—Kt5, PxP(ch); 46, PxP, R—B(ch); 47, K—Kt4, R—B7; 48, P—K5, P—Kt3; 49, R—KR, RxBP; 50, R—R6(6), K—Kt2; 51, R—R3, RxB; 52, RxR, RxKP; 53, RxP, RxRP; and the game was eventually drawn.

(1) Black's development is compensation for the pawn.

(2) A cramping move.

(3) Bold tactics, but justified, as it would be difficult for Black to work up an attack quickly.

(4) Better would have been Kt—B5, then if 18, BxKt, BxB, followed by QR—Kt and Q—Q2.

(5) An excellent move; obviously the pawn cannot be captured.

(6) P—K6 only leads to a draw. RxB is Black's best reply, followed by R—K4.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.
The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,564,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The MINERALS of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·05 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

President. L. EMBIRICOS. *Manager.* D. MIAOULIS.

BANK OF PIRÆUS.

For COMMERCE, INDUSTRY and SHIPPING.

Capital Paid-up - Drs. 5,000,000. Reserve Fund - Drs. 3,095,000.

OFFICES at PIRÆUS and ATHENS.

Every kind of Banking business transacted.
The Bank's connections throughout Greece enable it to offer foreign clients special facilities for the collection of Bills, etc.
Correspondence invited.

BANK OF INDUSTRY OF GREECE.

Head Office: 14, Stadium Street, Athens.

Capital Fully Paid-up - Drs. 15,000,000

The Bank has been established for the encouragement and development of Industry and Commerce, and undertakes every description of banking business.

BANK OF ORIENT.

Capital Paid up - Drs. 25,000,000

Head Office: ATHENS.

Branches: SALONIKA, SMYRNA, ALEXANDRIA, CAIRO, MITYLENE, SERRES, ZAGAZIG, MAGNESIA, PERGAMA, SOMA.

Every kind of Banking Business transacted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Sir Charles Greenway announced at the annual meeting of the Anglo-Persian Oil Company that, while he was unable to state the definite result, it was evident that the new issue of preference shares would be largely over-subscribed, but that the subscriptions for the debenture stock had been somewhat disappointing. He explained that the programme of further developments for which this capital was required included additional pipe-lines and pumping stations to enable the company to transport a largely increased output of crude oil, further extensions to the refineries in Persia, the establishment of a large number of additional fuel-oil bunkering installations in the United Kingdom and abroad, large additions to the distributing facilities of the British Petroleum Company and the Homelight Oil Company, the acquisition of additional tank steamers, the exploration and testing of new territories in various parts of the world, and the provision of £1,000,000 new capital which the company had undertaken to subscribe to Scottish Oils, Limited, which has been formed to put the Scottish shale-oil industry on a more satisfactory basis.

***

Reviewing the year's operations, Sir Charles stated that the amount due from the Persian Government in respect of the claim for losses sustained by the cutting of the pipe line in 1915 had been reduced by the credit of further royalty. During the year they had had to contend against two adverse factors. The company's fleet was under requisition for practically the whole of the year, and the earnings from this source were, therefore, very small, and the profits of the distributing companies were also on a much reduced scale owing to their businesses having been carried on by them on account of the Government on a basis which only gave them a small commission on sales. The excellent results achieved were mainly due to a larger throughput, and to the better prices realised abroad for some of the company's products. In the current year Sir Charles stated that there will be a further increase in throughput, and increased earnings from the fleet, and he thought that they might confidently look forward to a profit of not less than £2,500,000 in the next accounts.

***

It goes without saying that Lord Inchcape's address at the annual meeting of the P. and O. Company is an event eagerly looked forward to by the whole business community. This year he covered a number of matters of great importance to commerce—notably, of course, the question of individual as against Government management of business, in which connection he suggested the prospect that British shipowners might be faced by the competition of the American Shipping Board, which meant the resources of the American Government. "I am not afraid," he said, "but if the Government on the other side of the Atlantic are out to tax the people to build up a mercantile marine at all costs, the outlook for the shipping industry of these islands is anything but rosy." He was hopeful, however, that the United States would leave the shipping industry of the world to look after itself. There was another competitor, he pointed out, in the Australian Government, and he expressed the opinion that if British shipowners had against them the resources of Australia, "it may end in their selling their ships to the Australian Government." Lord Inchcape is convinced that Mr. Hughes's conception of what is good for Australia is wrong, and he believes that Mr. Hughes would be "infinitely better advised if he left the business of the country to those who are in commerce, and allowed his own people to work out their own salvation."

***

On the whole, Lord Inchcape takes a hopeful view of the prospects before British shipping, and he is optimistic enough to believe that the dangers ahead will not materialise. As regards the position of the P. and O., Lord Inchcape mentioned that it now controls 427 steamers with a gross tonnage exceeding two and a-quarter million tons. "The ships are operating," he added, "all over the world. Our wings are well spread." He did not wish to commit himself, but he thought he might venture to say that for the company's year, which commenced in October last, he saw nothing at the moment to prevent their laying a fairly acceptable statement before them a year hence. "The next few years," he said, in conclusion, "have great uncertainties for British shipping, but this I will say for ourselves, unless the whole fabric of society and national security goes to pieces, and unless the people send as their representatives to Westminster men pledged to syndicalism and the confiscation of private property, which I cannot for a moment believe, the position of the P and O. Company, for the time being at any rate, may be regarded as not altogether insolvent."

***

It scarcely needs to be emphasised that the principal need of Morocco at the present time is the development of communications; in particular, of course, the railways. Considerable progress has been made under France in the construction of railways; but, as a writer points out in a contemporary, the lines at present in operation were originally constructed for military purposes, and are of narrow gauge, and as such they are naturally unequal to meeting the needs of a country with a rapidly growing commerce. A broad-gauge line was being constructed from Fez to Tangier when the war broke out, and numerous other concessions for broad-gauge lines have been granted. It is not hoped to finish the Fez-Tangier line until 1924, and I am afraid that the prospects are that for the next few years commercial development in Morocco is likely to be considerably hampered by the lack of adequate railway facilities.

***

The announcement is made of the acquisition by the Algerian Oilfields of a property in Trinidad. The estate, which is about 300 acres in extent, is about two miles from the Talaquite field of the Trinidad Central. Details of this acquisition will be found in another column.

***

The marked improvement in the traffic returns of the Suez Canal Company is reflected in the announcement that from March 1 next there will be a reduction of 2 francs 50 centimes to 6 francs per ton in the dues for ships in ballast. For loaded ships the dues will continue to be 8 francs 50 centimes per ton. From 1884 up to last year there was a concession for ships in ballast of 2 francs 50 centimes per ton, but the continuous decrease in the receipts during the war made it necessary to suspend this concession. Thus from 131,000,000 francs the receipts fell to 90,000,000 in 1915, 76,120,000 francs in 1916, and 61,076,000. The result of changes in the dues was that for 1918 the receipts amounted to 81,000,000 francs. With the ending of the war there has been a considerable increase in the receipts, and it has now been found possible, despite the rise in working expenses, to revert to the former practice.

***

A very satisfactory report is forthcoming from the Burma Railways for the year ended March 31. The gross earnings amounted to the record total of Rs. 40,54,533, while the net receipts show an increase of about 18 per cent. at Rs. 18,36,638. The share of the surplus profits falling to the company was transferred home for the most part at an exchange of 1s. 8d., but a small portion was remitted at a fraction over 2s. The dividend and bonus for the year amount to 8 per cent., as against 7½ per cent. for 1917-18, and 7 per cent. for 1916-17.

***

There was an increase of no less than £463,500 in the revenue of the Eastern Telegraph Company in the past year, but extra expenditure in the maintenance of cables, exchange differences, etc., absorbed £118,900, and the available balance, after provision is made for excess profits duty, Debenture interest, and the Preference dividend is £29,500 lower at £800,200. The dividend is maintained at 8 per cent. free of tax, and £500,000 is again added to the general reserve fund.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Ceylon in 1918.

Effect of War Conditions.

The report on the Ceylon Blue Book for 1918, which has recently been issued, shows that the position of the island during that period was much the same as in the previous twelve months. It was essentially a "war" year for Ceylon, and the factors which operated in 1917 were naturally still more in evidence. As in every other country, prices continued their upward path, while the financial stringency, shortage of freight, and exchange difficulties continued in a greater or lesser degree. There was a marked decline in the volume of trade as compared with 1917, while certain industries suffered great depression, notably the plumbago and rubber industries. The tea industry suffered least, and, it is pointed out, has regained its position as the chief export, while the position of the coconut industries was fairly satisfactory.

The importance of increasing the production of foodstuffs in Ceylon was referred to in the previous report. In the year under review the measures taken for that purpose were continued. These included the circulation of leaflets in the vernacular, and the distribution of seeds. In addition, local committees were formed in each district to further the growth of foodstuffs, and plans were under consideration for the utilisation of irrigable Crown lands, while the Agricultural Department conducted experiments with a view to the introduction of new varieties of grain and new methods in order that the returns from the seed might be increased.

Finances and Trade.

The revenue for the twelve months ended September, 1918, amounted to Rs. 63,933,629, Rs. 130,371 below the estimate, and a decrease of Rs. 3,048,249 on the figures for the previous year. The chief reason for the decline was the falling-off in customs and railway revenue. The expenditure at Rs. 64,944,549 was also below the estimate, but was Rs. 608,878 more than the expenditure for 1916-17, this being chiefly due to payment on account of the second war contribution of £1,000,000 to the Imperial Government. The assets of the island on September 30, 1918, amounted to Rs. 56,189,623, and the liabilities to Rs. 19,069,052.

The value of Ceylon's trade, excluding specie and the value of coal supplied to steamers, amounted to Rs. 389,042,097, as against Rs. 488,284,443 for 1917. Of this total the value of the exports was Rs. 211,325,334, as against Rs. 304,160,457, and of the imports Rs. 177,716,763, as against Rs.184,123,986. Of the total exports Rs. 197,633,194 represents the value of Ceylon produce. The principal exports were: Tea (Rs. 832 lakhs, as against Rs. 957 lakhs), rubber (622 lakhs, as against 1,310 lakhs), coconut oil (157 lakhs, as against 101 lakhs), and copra (127 lakhs, as against 132 lakhs).

There were decreases as regards many of the principal imports. The imports of cement were about one-third the quantity imported in 1917, the amount being 89,299 cwt., as against 244,336 cwt. Confectionery was imported to the extent of only 107,536 lb., as against 353,001 lb. for 1917, and 1,017,441 lb. for 1916. The value of imports of cotton, manufactured and raw, rose by Rs. 3,589,580 to Rs. 18,651,604, and here the effect of rising prices has to be taken into account. On account of the duty imposed as a war measure imports of motor-cars fell to 15. Decreases were recorded in the imports of metals and metal ware, which were valued at Rs. 8,185,440, a fall of Rs. 74,630, and also of spirits and sugar. Finally, it may be mentioned that the imports of rice decreased from 7,754,121 cwt. to 6,472,152 cwt.

A very satisfactory feature of the trade statistics is the high proportion of trade within the Empire. India, as usual, heads the list of Ceylon's chief sources of supply with 38.08 per cent. of the total imports, as against 35.89 per cent. Burma is second with 19.51 per cent., and the United Kingdom third with 16.11 per cent. Japan has risen from the fifth place to the fourth with, however, the slightly smaller figures of 5.14 per cent., while the United States remains sixth with 3.17 per cent. The United Kingdom supplied goods valued at $28\frac{3}{4}$ million rupees, as against the $9\frac{1}{4}$ million rupees of Japan and the $5\frac{3}{4}$ million rupees of the United States. The list of exporting countries is headed, of course, by the United Kingdom with 44.72 per cent., as against 41.07 per cent. in 1917, and 45.89 per cent. in 1916. The United States is second with 17.78 per cent., as against 33.32 per cent., the great drop being due to large decreases in the value of rubber, plumbago, and tea. Next come India, Canada, New South Wales, Victoria, and Egypt, with percentages of 10, 5.85, 4.87, 3.62, and 2.41 respectively. Of the total trade of Ceylon in 1918 79.75 per cent. was with the British Empire, as against 67.74 per cent. in 1917 and 67.47 per cent. in 1916.

Agriculture.

While conditions in the early part of 1918 were unfavourable for tea, seasonable rains fell later in the year, and good crops were realised. The area under rubber continued to expand, and approximately 255,000 acres were under cultivation. New areas were opened, and citronella lands in the Southern Province were being extensively planted with rubber, while the tendency of small owners to plant rubber on lands which were formerly used for growing food products continued, particularly in the Kalutara and Ratnapura districts.

As regards coconuts and coconut products the year opened with low prices and freight difficulties, but the position was improved by the demand for copra for India. Prices ruled high by the end of the year, and after the Armistice there was a further improvement. The crops were, on the whole, satisfactory. There has been little extension in the area planted, and for reasons of economy the application of commercial fertilisers was stopped on the majority of estates.

The area under cacao remained stationary, and the yield was about the average. The cultivation of cinnamon has again become profitable, and the tendency to cut out cinnamon in favour of rubber was not so marked. Increased interest has been taken in the cultivation of the Robusta types of coffee, while the possibilities of vanilla cultivation on a small scale have been investigated, and attention has also been given to the prospects for the cultivation of sisal and other fibres. As regards tobacco, which is the most remunerative crop of the Northern Province, experiments have been conducted by the Agricultural Department with the object of turning out a tobacco acceptable to the European market. Finally, there was a marked extension of the area under food products.

SERIOUS FIRE AT SMYRNA.

(From Our Own Correspondent.)

Smyrna (undated).

A very disastrous fire occurred in the principal street in Smyrna on November 25. The Orosdi Back drapery store, the Credit Lyonnais banking establishment, with adjoining store-houses, as well as the paper store belonging to Athanasoula Frères, were completely destroyed. The Fire Brigade, although ably seconded by Greek troops, and British, French, and Greek naval contingents, was quite unable to stop the conflagration. The total damage is estimated at £100,000, of which not more than half is covered by insurance companies, principally the Austro-German, Ottoman, and Swiss companies. The British companies, who have only lately resumed business in Smyrna, are only interested for about £5,000.

ALGERIAN OILFIELDS.

Acquisition in Trinidad.

In a circular to the shareholders of Algerian Oilfields, Limited, the secretary states that the directors have acquired a considerable interest in a freehold property in Trinidad. The estate, which has been reported on by Mr. J. R. Falconer, is about two miles from the Tabaquite field of the Trinidad Central. A number of natural outcrops occur, it is stated, and a number of geological test pits disclose similar indications of oil, all of which are of the same high grade quality and composition as the Tabaquite. Moreover, the cap rock or cover clay is the same, forming an excellent impervious cover for the oil-bearing formations below. The report in the possession of the directors recommends this estate for immediate drilling operations. The report further states that this should be comparatively easy, as there are excellent motor roads running right up to the property, partly traversing it, while the railway station of Williamsville is within easy reach, and a small river—carrying water all the year round—runs through the property, and therefore economic conditions for oilfield development are very favourable. The estate itself consists of approximately 300 acres, and is a highly-developed cocoa plantation, well equipped with all the necessary agricultural buildings, live stock, etc. The revenue from this alone in normal times is well over £1,000 per annum, while at the present time, on account of the high prices for the products, the revenue is nearly double this amount. A private company, under the title of the Trinidad Esmeralda Estate, Limited, has been formed, in which a 40 per cent. interest has been allocated to the company. The working capital asked for by Mr. Falconer has been provided, and, under his personal supervision, work will be started so soon as the necessary machinery is obtained.

OIL DISCOVERY IN MOROCCO.

Reuter's Paris correspondent reports that it was announced by M. Henri Berenger at a meeting of the General Petroleum Committee on December 6 that petroleum in sufficient quantities to be of commercial use had been discovered at Djebel Tolfat, near St. Jean, in Morocco. There is an abundant gush of oil, which has been collected by makeshift means up to an amount of 3 tons per diem. M. Berenger added that it is intended to sink twelve new shafts in 1920.

It is announced by the London office of the Italian State Railways that the chief normal gauge railways on the island of Sardinia, which have hitherto been worked by a private company, will be absorbed in the system of the Italian State Railways on January 1. The services will be thoroughly reorganised, rolling stock overhauled, and various other improvements effected, and these arrangements will be advanced by the time the tourist traffic commences next spring.

The South Russian Market.

Opportunities for British Traders.

The current issue of the *Board of Trade Journal* contains a survey of the economic situation in South Russia compiled from notes supplied by the British Economic Mission and the British Vice-Consul at Rostov-on-Don, from which we give the following extracts:—

The situation calls for the utmost energy and enterprise if the United Kingdom is to play the rôle that devolves on her in the field of Russian trade and industry. There is at the present time a distinct and unmistakable pro-British tendency. British firms are to some extent competing with each other by offering goods of similar description but at different rates of profit. It is necessary that some supervision should take place in London of outward shipments to Russia in order that no undue competition should occur. It is particularly harmful when, as in the case of the trade hitherto done with the Trade and Industry Department, the same description of goods are brought in on the basis of varying rates of commission from a low 6 per cent. to the high 25 and 30 per cent. Americans, Italians, Czecho-Slovaks, Poles and others have all had Economic Missions or representatives in South Russia.

The transport difficulty lies on the surface, and is recognised by all, affecting the military and economic situation alike. Movements of goods on a big scale will be exceedingly difficult unless locomotives are brought into the country, and determined efforts are made to put workshops in a position to carry out light repairs to the rolling stock—both wagons and locomotives requiring them. In view of the urgency of the problem, investigations are being made to ascertain what industrial concerns are able to assist in effecting light repairs. Some of the collieries in the Donetz Basin and a few other works can undoubtedly render assistance. British locomotive works should turn their attention to Russia in common with the merchants, as Russia will be able to absorb a considerable number of locomotives for some time to come.

Crops.

All reports concur in the excellence of this year's crops. The estimated quantity likely to be available for export after the crops have been safely gathered in is variously stated as follows:—Food Department, 20,000,000 poods; Trade and Industry Department, 60,000,000 poods; semi-official sources, 90,000,000 poods. The Food Department is always careful and understates its stocks. The quantity that should be available for export is almost certain to be 900,000 to 1,000,000 tons of wheat, which is the consensus of opinion on the part of independent and practical men. Economists, financiers and agriculturists are all fully alive to the importance of agriculture to Russia, and that it is the most likely means to contribute to the restoration of the currency. The question has the attention of the soundest men, and many schemes are propounded for the development and extension of agriculture.

The foregoing considerations emphasise the necessity for an adequate supply of up-to-date agricultural machinery. Not only is it essential to renew the stock of implements depleted during the past five years, but the supply of agricultural implements will largely contribute towards inducing the farming population to part with their huge stocks of grain so long withheld and so urgently needed, not only abroad, but in many parts of Russia. Agricultural implements should form a fair share of Britain's exports to Russia, and spare parts should always be available in depot at suitable points in Russia.

There is no general call for relief from outside. Many districts suffer a shortage of food owing to the difficulty in obtaining it from the peasants. While supplies of tea and colonial goods are short, there is enough food for the whole population if properly distributed. In some towns and stannitzas (Cossack settlements) there is an absolute plethora of foodstuffs. The harvest in the Kieff district is good, but inaccessible to the town owing to the presence of the Bolsheviks and of Petlura's troops.

Currency Situation.

The following paper currencies are in use in the Area under the Volunteer Army in South Russia:—1. Romanoff. 2. Kerensky. 3. Don. 4. Ukraine (so-called Karbovantzi). 5. Terek (Bolshevik). 6. Odessa Town Currency.

In Rostoff (1), (2) and (3) are alone accepted. There is no bank rate of exchange, only speculative rates of from 400-500 for cheques, and from 500-600 for banknotes. Only small amounts are offered. In Kharkoff (1), (2), (3), (4) are all at par. In Kislovodsk (3) and (5) are accepted at par, but the latter does not pass anywhere outside Terek Krug. In Novorossisk (1), (2) and (3) are on an equal basis. Speculative rates of exchange are much higher than at Rostoff, but very little actually changes hands. In Ekaterinodar the situation is the same as at Rostoff. In Odessa (1), (2), (3), (4) and (6) are all accepted at par, except in foreign speculative exchange, when the local money is not taken and (4) is 100 above (2) and (3), which are about 50 points above Rostoff rates. On the whole very little of (1) is now met with, and, broadly speaking, only (2) and (1) hold the field at the average rates mentioned for Rostoff.

The following are taken from a Bulletin of Market Prices issued at Rostov-on-Don on September 1 by the Trade and Industry Department of the Don Government. The prices quoted are in Don roubles, for which the rate of exchange on September 1 was approximately 650 per £1:—Serge, ladies', 1 arsh (.77 yard), 800; muslin, 1 arsh, 60-90; stockings (foreign), 1 doz., 600-960; handkerchiefs, 1 doz., 18; tea (substitute), 1 pood, from 800; matches, per case, to 2,100; rice, cleaned, 1 pood, 560; soap, fancy, 1 doz. cakes, from 60; quinine, 1 kilo, to 4,500; morphine, 1 kilo, to 20,000; glycerine, purified, 1 pood, to 700; boots (imitation leather), gent.'s or ladies', 1 pair, 500-600; writing paper, 1 pood, to 40; tin, 1 pood, 4,800; enamel pans (40 litre), each, 650; pitch, 1 pood, 1,500; paint (white lead), 1 pood, 1,200; jute cable, 1 pood, 1,000-1,600.

Market Requirements.

That there is a great shortage of certain goods is evidenced by the statement that none of the following are on the market:—Russian tea, coarse salt, pressed yeast, turpentine, assorted steel, pig iron, electric lamps, window glass, wood and timber.

Subsequent information has been received that part of the needs of the population of 8 millions referred to above have been supplied by imports from abroad; on the other hand, the area to be supplied has now been substantially increased, and in the territory now occupied by the Volunteer Army it may be estimated that a population of at least 18 millions has to be catered for.

The following list of goods required in South Russia was issued in July by the Department of Trade and Commerce of the Government of the Armed Forces in South Russia. It is based exclusively on the needs of the civil population for the six months subsequent to March, 1919, for the area then occupied by the Volunteer Army. Reaping machines, ploughs, harrows, threshing machines, mowing machines, horse-drawn rakes, sowing machines, winnowing machines, spades, scythes, pitchforks, stickles, axes, rakes, hammers, string, various existing varieties. If possible all the above-named machines and implements should be delivered with spare parts. Cotton stuffs, woollen stuffs, cloth, stuffs for lining, tarpaulin, socks and stockings, sacks, thread on reels, thread of other kinds, needles and pins, gentlemen's boots and shoes, ladies' boots and shoes, children's boots and shoes, goloshes, soles, thread for shoe-making, eyelets for laced shoes, boot and shoe laces, steel, iron, lead, tin, zinc, copper, wire, files, leather belts, tubes, paper, pencils, penholders, pens, ink, typewriters, typewriting ribbon, electric lamps (various), electric wire, vitriol, carbolic acid, sulphur and flowers of sulphur, chili, saltpetre, basic slag, superphosphate, colophony (for soap), borax, tea, coffee, cocoa, rice, matches, quebracho extract, and tanning materials.

CYPRUS TRADE NOTES.

(From a Correspondent.)

It is noteworthy that there is some awakening of a spirit of co-operation in the island, and in several directions the people are beginning to move towards joint action in enterprise, without which it is hopeless to expect much advance in the development of local industries.

Asbestos Mining.

The Governor has sanctioned the incorporation of the Cyprus Anonyme Asbestos Company, the articles of association having been submitted under the provisions of the Ottoman Commercial Code. The company will take up work at Kakopétria, in the Nicosia district, north of Mt. Troodos, near the Monastery of St. Nicholas. It also proposes to operate at Apsiou, in the Limasol District, in the hills, about ten miles, as the crow flies, from the port of Limasol. In both places the prospects are held to be promising. The mining works should be of great benefit to the island.

New Currency.

A Proclamation of the Governor empowers the Currency Commissioner to issue further notes for the value of one shilling. The notes so issued are redeemable on June 30, 1920, or before, if the Government so desires.

Notice is given to exporters in the Government *Gazette* regarding preferential duties of Customs in Great Britain and Ireland on goods consigned from, grown, produced, or manufactured in the British Empire. A schedule of preferential rates for all the articles affected is appended to the notice.

Sir Hugh S. Barnes has been appointed a director of the National Mining Corporation.

It is reported that under arrangement with the Commonwealth the Anglo-Persian Company is sending experts to conduct extensive exploration for oil in Papua and German Guinea.

OAKEY'S WELLINGTON KNIFE POLISH.
The Original Preparation for polishing Cutlery.

Engineering.

Motor Show Reflections.—IV.

(From Our Own Correspondent.)

It does not seem that springing, on conventional lines, can be greatly improved; but here again at least one firm has made a marked departure from orthodox methods, and has introduced a type of body suspension which employs coil springs, and which eliminates all tendency to roll, and results in wonderfully steady and smooth running. Lubricating systems have also been considerably improved, and it is unlikely that much further progress can be made in this direction. The same remark applies to valve construction and arrangement, and whilst it is almost certain that the magneto will give place to another form of ignition, at present there seems little or no room for improvement in connection with either magnetos or sparking plugs. The modern carburetter is also practically as perfect as can be devised, and it would seem that the next line for development in this connection will be in the adoption of some form of forced induction by which the required amount of explosive mixture can be forced into the cylinders at any time to meet any conditions of roads or gradients.

Coming to a description of the actual exhibits, after lengthy consideration I feel that pride of place must be given to a 40-50 h.p. model shown for the first time (Messrs. D. Napier and Son, Ltd., Acton, London, W.). This was a 3-cylindered model of entirely new design. During a test run which the writer had recently on this model it was noticeable that the engine ran without the slightest noise or vibration, and appeared at all times to possess a large reserve of power, although some of the gradients were as stiff as any that can be found in the district of the Upper Weald. The noiselessness was, of course, due to the perfect silencing of all moving parts, as well as to the correct design of the exhaust, and the absence of vibration was due not only to the perfect balance of the engine, but also to the stiffness of its construction and the shortness of the engine.

Driving tests carried out demonstrated that the car was as flexible as could be desired in town work, and when negotiating heavy traffic, and the car could be instantly slowed down and accelerated when desired without any changing of gears or fuss. On the level and from a standing start it was perfectly possible to set this car in motion on top gear; this is, of course, a practice to be deprecated, and is one which no experienced motorist would ever adopt, but the fact is mentioned merely to show the amazing flexibility and power of the engine. The gears were remarkably silent; in fact, they were absolutely noiseless, and could be changed without any effort, and when running along quiet country roads the most intent listener could only have detected a faint purr from the exhaust and the suck of the wheels on the road surface.

Every possible road test that the writer could devise was tried in this fine car, and the manner in which corners were swung at high speed to prove stability, and the way in which steep narrow lanes were taken on top gear to prove climbing power would be a revelation to the man who has not previously driven or ridden in one of these latest products of a British engineering shop. It may be mentioned here that an anti-rolling device is fitted to these cars to prevent any swing of the bodywork and consequent strain on attachments when going round corners at speed, and exhaustive tests showed that the device answered as well in practice as in theory, and throughout the tests it was evident that the makers have done the right thing in incorporating everything possible that leads to efficiency and comfort in their car.

MISCELLANEOUS TOPICS.

Piræus Harbour Works.

Engineers and other business men who visited the recent exhibition at Athens were very much surprised to find that the question of town-planning should be discussed in connection with such a beautiful town as Athens. But what they did not mind pointing out and criticising openly was the backward state of the harbour of Piræus, the seaport of Athens. It is not improbable that the responsible authorities of the harbour have heard quite sufficient on this point, at least during the exhibition, and realised the bad effect that such impressions will have in the present circumstances. The Harbour Board, as is known, has been studying the practical means of enlarging the port of Piræus, but probably owing to the war and other troubles nothing has yet been done, although funds are not lacking. At present vessels discharge in the stream, and passengers have to land in boats, with their baggage. It is proposed to build a new Custom House, moles and jetty heads, and erect special appliances of a modern type for discharging cargoes at quays. The submerged rock, which has been a source of danger to vessels in the harbour, has been removed; the quantity of rock removed amounted to 3,000 cubic metres, at a cost of £4,240. The depth of water there is now 8.5 metres (27 ft. 10 in.). British contractors will doubtless be interested in the proposals indicated; and, since the Greeks are gifted with a nice discrimination in the way of choosing the best men to carry out works of this kind, we may reasonably expect that one or other of our leading firms that have had so much experience in this direction will be employed for the work.

Indian Notes.

It is reported that the electrification of the suburban railways within twenty-five miles of Calcutta has been recommended. It will cost £1,000,000.

Whilst several Indian railway systems require additional rolling-stock, about 692 passenger vehicles, and 12,836 goods wagons. Indian shops can only supply 2,500 wagons during the current year. In the meantime, to improve Indian railway workshops, Rs.8,100,000 has been allotted.

The superintendent of stores, South Indian Railway, Negapatam, invites tenders for twelve months, commencing April 1, 1920, for 1,400,000 lb. mineral axle-oil, 358,000 lb. mineral cylinder oil, 40,000 lb. mineral superheated cylinder oil.

INDIA'S COAL INDUSTRY.

The Chief Inspector of Mines in India in his report on the inspection of mines in British India for the calendar year 1918, states with regard to the coal industry:—

In the last report it was stated that the seventeenth million had been reached for the first time. It has to be recorded that in 1918 an output of 19,847,039 tons was reached. This is an unprecedented increase of 2,520,655 tons, or 14.55 per cent. over the output in 1917. Of the total output 18,977,911 tons, or 95.62 per cent., were raised in Bengal and Bihar and Orissa, the percentage of the previous five years being 95.87. In the last report attention was drawn to the appointment, late in the year, of a Coal Controller, and it was stated that his methods of regulating matters did not affect the period under report. In 1918, however, practically the whole of the trade was under his control. One of the first steps taken was to restrict the output of collieries working the poorer class coals. Whether as a result of this or not, the twenty-five largest concerns, the great majority of whom in 1917 showed decreases, as compared with the previous year, showed in the year under report increases in eighteen cases. The general opinion is that the result of the restrictions above-mentioned was to induce labour to these larger collieries, although other causes contributed to a general increase of labour to supply.

All coal, except that of markedly inferior quality, was requisitioned, at prices fixed by the Controller on the basis of cost of production plus a certain profit, the result being that practically every consumer in India received his coal from that officer. There was a certain and very limited amount of free coal of an inferior character, which naturally, under the circumstances, fetched abnormally higher prices, but, as stated, the amount was very limited. The output per person employed during the year was (a) below ground 181 tons and (b) above and below ground 113 tons. The figures for the five preceding years were (a) 178 and (b) 114. Taking each group of coalfields separately, the figures were as follows:—Bengal and Bihar (a) 185 and 182, (b) 115 and 116; Assam (a) 150 and 159, (b) 96 and 106; Baluchistan (a) 76 and 70, (b) 43 and 45; the Central Provinces (a) 122 and 122, (b) 79 and 82; and the Punjab and North-West Frontier Provinces (a) 58 and 72, (b) 37 and 18.

NEW COMPANIES.

Anglo-Yugoslav.

The Anglo-Yugoslav Co., Limited, was registered on December 4 with a capital of £25,000 in £1 shares. Objects: To seek and secure openings for the employment of capital in Yugoslavia and elsewhere, etc. The first directors are:—Lieut.-Col. C. l'Estrange Malone, M.P., Park Lodge, Park Place, Knightsbridge, W.; Major A. R. Row, 22, Avondale Road, Croydon; A. Z. Yovitchich, 116, Gloucester Road, S.W., formerly Serbian Chargé d'Affaires in London. Registered office: 38, Piccadilly, W.

De Sefi, Ltd.

De Sefi, Limited, was registered as a private company on December 3 with a capital of £100,000 in £1 shares. Objects: To carry on the business of manufacturers of and dealers in tobacco, tobacco leaf, cigars, cigarettes, etc. The subscribers (each with one share) are:—B. Sefimio, 10, Berkeley Street, W., tobacco merchant; E. de Castro, Dashwood House, E.C., merchant. First directors: B. Sefimio and E. de Castro. Qualification, £500. Solicitor: T. Trimnell, 71, Lincoln's Inn Fields, W.C.

Bengal Iron.

The Bengal Iron Company, Ltd., was registered on December 5 with a capital of £2,500,000 in £1 shares. Agreement with Bengal Iron and Steel Company (incorporated in 1889) and its liquidator, and to carry on the business of iron and steel makers and founders, mechanical, electrical, and general engineers, etc. First directors:—W. T. McLellan, C.B.E., Mayford, near Woking, engineer; Sir Edwin Grant Burls, C.S.I., Shortlands, Kent (director of Vulcan Foundry Company and John I. Thornycroft and Company); A. Izatt, C.I.E., Balliliesk, Muckhart, Dollar, Scotland (director of Bengal and North-Western Railway, Rohilkund and Kumaon Railway, Delhi Umballa Kalka Railway, Bengal Dooars Railway and Lungla Sylhet Tea Co.; T. Jowett, 51, Savoy Court, W.C., steel manufacturer; H. Steel, Skellow Grange, Doncaster, steel manufacturer; H. Guedalla, C.A., 123, Bedford Court Mansions, W.C., banker and C.A. Registered office: 17, Victoria Street, S.W.

Near East Markets.

LONDON PRODUCE REPORT.

Currants and Sultanas.

Distribution for the Christmas trade is being seriously hampered by the dock and railway congestion. Otherwise there is nothing of interest to report.

Coffee.

A quiet tendency has been noticeable, and transactions have been limited, owing to the different views held by buyers and sellers. Costa Rica has been in fair demand at about 150s., though special qualities have been dealt in as high as 162s. Indian has come to business at from 145s. to 158s., with Mysore round about 152s., while Columbia has been done at from 120s. to 156s., according to qualities. 6,214 packages were offered at auction this week, but there was only a moderate demand. The futures market has been steady. Quotations are: December, 120s. 9d.; March, 118s. 9d. May, 118s. 9d.; July, 110s. 3d.; September, 108s. 9d.

Sugar.

The position is very uncertain. Business has been steady for raw sugar, with Trinidad at from 93s. to 100s., Santa Lucia at from 93s. to 98s., and Manila at from 72s. to 76s. Refined has been in good demand at the fixed prices.

Oilseeds.

The market has continued firm. Indian linseed has been done at 52s., and at 54s. for the best quality, while quotations for La Plata are about 39s. Rapeseed is firm, but there has been little doing, while cottonseed has been easy. Egyptian is 25s. spot, 26s. December, and 27s. January. Indian cottonseed is 17s., at which rate it must be regarded as cheap.

Oilcakes, etc.

The demand for oilcakes has been much below the normal. Linseed cake has been done at from 24s. to 25s., and soya bean cake and decorticated arachis cake are about the same level. Coconut and cottonseed cake are quoted round about 20s., and rapeseed cake is 18s.

Offerings of olive oil are very small, and the price is very high. Linseed oil is firm at 106s. spot. Coconut oil has been done at 100s., and soya bean oil at 98s.

OPIUM MARKET.

Messrs. Barker Bros., Smyrna, report as follows for the week ended November 22:—The sales this week on our market amount to 53 cases at slightly easier prices. To-day we quote:—Slightly selected druggists at 17s. per lb. c.i.f., manufacturing material at 16s. 6d. per lb. c.i.f. 11 per cent., soft shipping qualities at 21s. per lb. c.i.f. The exchange on London and dollars is more favourable. Cheque Ps.345 on London and 1.22 dollars per Turkish paper pound. The arrivals are 1,032 cases, against 67 at same date last year.

Messrs. Barker Bros. report as follows for the week ended November 29:—We have to advise a very active market again this week, with a brisk demand for all manufacturing descriptions. The sales in all amount to 105 cases at 15s. to 21s. per lb., as to quality. The exchange has advanced to 350 piastres per pound sterling for cheque, and dollars are now $1.16 per Turkish paper pound of Ps.100. The arrivals to date are 1,060 cases, against 76 at same date last year.

The Balkan Petroleum Syndicate, Limited, petitioned in the Chancery Division, on December 9, for the restoration of its name to the register, it having been struck off, owing to the war. Mr. Austen Cartmell, for the Board of Trade, offered no objection, and Mr. Justice Astbury granted the petition.

SUDAN CROPS.

The following particulars are given in the C.E.B. report for September:—

Dura and Dukhn.

Kordofan Province.—Seven ardebs of dukhn of 420 rottles (189 kilos) and 57 similar ardebs of dura were sold in El Obeid market during the month at average prices respectively of £4.420 and £3.951 m/ms. per ardeb. Adequate supplies of Government dura were received during the month, and have not been exhausted up to date.

Berber Province.—Prices rose early in the month, the idea being that Government stocks of dura were insufficient, but a fall in Khartoum quickly followed, owing presumably to the production of old stocks in the Gezira, which fall slowly spread to this province.

Halfa Province.—There are fair stocks of grain at Halfa. The maximum price of grain was increased from 10 piastres to 12 piastres per ruba (24 ruba equals one ardeb), and removed on the 13th inst. The price fell to 10-11 piastres per ruba at the end of the month.

White Nile Province.—The towns have remained entirely dependent on Government issues of dura, but some early dura of the new crop is expected to find its way into the market in the course of October.

Blue Nile Province.—Government dura was sold in small ardeb quantities at £3 per ardeb to the poor, and arrangements were made for further issue if necessary. The immediate effect of removing the maximum price was to bring to light the hidden store of dura previously known to exist. For the first fifteen days of the month only 404 ardebs (of 500 rottles) were brought into Wad Medani murada, whereas during the last fifteen days no less than 4,073 ardebs were put on the market.

Khartoum Province.—During the early part of the month the shortage of dura was very acute. After the merchants had been induced to place grain on the market and the restrictions on the movement of such were removed, the acute crisis was passed. The price did not fall for some days, but by the end of the month dura was plentiful, and could be bought at the same price as Government dura.

Sesame.

Kordofan Province.—175 ardebs of 330 rottles (148 kilos) were sold in El Obeid market during the month at an average price of £5,410 m/ms. per ardeb.

Livestock, Hides and Skins.

Berber Province.—The following animals were sold in Damer market during the month:—37 head of cattle, 2,623 sheep and goats. Activity in the sheep market began at the last market of the month.

Red Sea Province.—65 head of cattle and 307 sheep were exported via Port Sudan during the month.

Sennar Province.—No cattle were imported from Abyssinia during the month. Exports by rail: Skins, two tons.

Dates.

Dongola Province.—The date crops have been harvested, and are excellent. The average price of Parakawi dates was about 12 piastres per koila at Argo, Dongola, and Khandak, and about 20 piastres at Kareima.

Halfa Province.—Most of the dates are harvested, but there are few buyers. Merchants are offering 160 piastres per sack. The average of the dates is not so good as last year in most villages.

Rubber.

Mongalla Province, August.—2,259 sheets of rubber were collected during the month, making a total for the year of 7,520 sheets.

Tobacco.

Darfur Province, August.—158 kantars (100 rottles) passed through Fasher market during the month. Trade has otherwise been quiescent.

The Amir of Afghanistan has decided on a large issue of currency notes.

YUGOSLAV TRANSPORT PROBLEM.

(From Our Own Correspondent.)

Belgrade, Nov. 30.

Transport is suffering so severely from shortage of locomotives that goods traffic, except for coal, has been suspended on the lines from Belgrade to Novi Sad and to Skoplie. This will undoubtedly cause a further rise in prices. It is due to the congestion of loaded trucks in various sidings and stations, which cannot be cleared for want of shunting engines.

LANCASHIRE COTTON.

Rising Prices.

(From Our Own Correspondent.)

Manchester, Wednesday.

The tone of the market continues very strong. In most quarters prices are distinctly dearer on the week. The market is undoubtedly a very difficult one for buyers to operate in. All sellers are in a very independent position. The outlook for the Egyptian crop shows very little change. Rather wide fluctuations have occurred in prices in Alexandria and Liverpool. Users have been rather less disposed to purchase. In yarns made from Egyptian cotton quotations have been somewhat irregular and the attitude of sellers depends a good deal upon how the raw material has been bought. All the mills are exceedingly busy. Many salesmen have again refused to quote. It seems quite impossible to satisfy the demand from the United States in fine yarns. In cloth for Egypt there has been a persistent demand from day to day. Manufacturers who can deliver early have no need to seek buyers. Fair lines have been put through in sized shirtings and quite a healthy turnover has transpired in printed and dyed goods. The several outlets of the Levant have also done well. India has provided plenty of inquiry, but Bombay, Madras and Karachi have done better than Calcutta. Rather less activity has been mentioned for China. Home trade fabrics have moved off freely. In American yarns for home consumption a steady trade has been put through from day to day at hardening rates. Export bundles remain active for Eastern and Continental outlets and demand continues to be met with for the Levant.

EGYPTIAN COTTON "BOOM."

There has been great excitement in Alexandria, where cotton has now reached the abnormal figure of 100 dollars, says the Cairo correspondent of *The Times*, in a message dated December 4. At present prices this year's crop represents about £130,000,000, compared with £30,000,000 before the war. Very little cotton remains unsold in the interior, and while some crops have already been disposed of at above 100 dollars, the average, of course, is under that figure. The net return for the Egyptian 1919 crop is estimated at between £90,000,000 and £100,000,000, which, it may be noted, represents over £7 per head of the population.

ANGLO-PERSIAN OIL PROFITS.

In the House of Commons, on December 8, Mr. Swan asked whether any limitation of profits was imposed on the Anglo-Persian Oil Company in consideration of the financial assistance given to that company by His Majesty's Government.

Mr. Austen Chamberlain: No, sir, excepting that the price ruling under the Admiralty contract for fuel oil is subject to reduction in proportion to the profits realised above a certain limit. There is every reason to hope that a substantial saving will be secured by the Admiralty under this head during the ensuing year.

Reuter's Paris correspondent reports that the Supreme Council has decided that Turkish gold reserves in Berlin shall be transferred to Paris.

The Indian mail which left Bombay on November 15 has been delayed, and is not expected in London before the 16th inst.

Company Meetings.

ANGLO-PERSIAN OIL.

The New Capital.

Extension of Company's Operations

The tenth ordinary general meeting of the Anglo-Persian Oil Company (Limited) was held on December 8 at Winchester House, Old Broad Street, E.C., Sir Charles Greenway, Bt., chairman of the company, presiding.

The Secretary (Mr. F. Macindoe) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—We again have the satisfaction of laying before you a most satisfactory statement of the company's position, and with the large extensions of the company's operations which are now in progress or under contemplation, and the growing demand all over the world for petroleum products of all kinds, I think we may look forward with absolute confidence to further largely increased prosperity from year to year as the business of the company becomes developed to an extent corresponding more to its great potentialities.

Balance Sheet.

In dealing with the company's accounts I will follow the usual procedure of first commenting upon the balance-sheet. Taking the first two items you will see that on the debit side there was no fresh issue of either share capital or debenture stock during the year covered by the accounts, but as you are aware we are now making a large issue of capital regarding which I shall later on have a few remarks to make. The next item calling for remark is the amount of £45,266 10s. 3d. standing to the credit of our employees' provident, pension and insurance fund. This was made up of a 5 per cent. contribution on the amount of their salaries by the employees, and of a like percentage by the company, to the employees' provident fund, and of a contribution by the company of £21,030 12s. 2d., the equivalent of 10 per cent. on the salaries, to the pension and insurance fund. You will, I am sure, all be pleased to see that this substantial start has been made in the scheme of which I outlined the details at the last annual meeting, and it will no doubt be gratifying to the employees to know that it is the intention of the board to augment the company's contributions to the pension and insurance fund from year to year as profits increase so that employees may share liberally in the prosperity of the company.

The item of £1,200,000 which has been placed to reserve is an estimate of our liability for excess profits duty for the whole of the periods since the excess profits duty first came into operation. The next item calling for remark is that of "Reserves." These you will see have been augmented by £530,000, and I have no doubt that you will all approve of the prudence which has prompted us to conserve as large a portion of our profits as possible in the form of reserves, instead of disposing of the bulk of them in payment of dividends, particularly in view of the large amount of capital expenditure we have ahead of us.

Coming now to the assets side of the balance-sheet, there is very little, I think, requiring explanation. One item which shows a very large increase is "stocks of stores and materials at field and refinery." This increase is due partly to the growth of our business necessitating the retention of larger stocks, but chiefly to the large increase in cost of all materials, particularly tin-plates, shooks, and chemicals, of which these stocks largely consist. The amount due to us by the Persian Government in respect of the claim for losses sustained by the cutting of our pipeline in 1915 has been reduced by the credit of further royalty. In connection with this item I am glad to say that negotiations of a friendly character are now proceeding with the Persian Foreign Minister, Prince Nasrut-ed-Dowleh, who is now in this country, with a view to arriving at a settlement with the Persian Government of this and all other outstanding questions.

Profit and Loss Account.

Turning now to the profit and loss account you will see that the net profit for the year under review, after making ample allowances for depreciation, and paying Debenture interest and royalty, was £2,010,805 7s. 7d., as compared with £1,308,558 6s. 1d. in the previous year, or an increase of more than £700,000. This is a very satisfactory result indeed, particularly in view of the fact that we had to contend against two adverse factors—viz.: (1) that our fleet was under requisition for practically the whole of the year and that the earnings from this source were, therefore very small, and (2) that the profits of our distributing companies were also on a much reduced scale owing to their businesses having been carried on by them on account of the Government on a basis which only gave them a small commission on sales. The increased profits were due mainly to a larger throughput, and to the better prices realised abroad for some of our products. In the current year there will be a further increase in throughput and increased earnings from our fleet, and I think we may confidently look forward to a profit of not less than £2,500,000 in our next accounts.

The balance remaining at the credit of profit and loss account, after making the various allocations to reserve which I have already referred to, is £527 19s. 8d. Of this sum £120,000 has already been paid away in respect of Preference share dividends, and it is now proposed to declare a further participating dividend on the Preference shares at the rate of 2 per cent. per annum, and a dividend of 10 per cent. per annum, free of income tax, on the Ordinary shares, leaving a balance of £275,527 19s. 8d. to be carried forward.

The Return on Government Capital

When addressing you at the last meeting I pointed out the return which his Majesty's Government were then getting on the capital they had invested in the company. The return to the Government for the year with which I am now dealing, taking into account their interest in the sums which have been placed to reserves, is a very handsome one, and well justifies them in their investment. In addition, as I have previously pointed out, they derive a great financial benefit from the favourable contracts which they have been able to make with the company for fuel oil and other products as a consideration for their investment.

As has been pointed out in the report, the further extensions for which fresh capital was raised two years ago are not yet in operation. When they are completed the throughput will be doubled, and there is every reason for anticipating that the profits will show a corresponding increase.

New Capital.

To provide for the further developments forecasted in my remarks at the last annual meeting, and for others which have since been resolved upon, we have, as you are all aware, just made an issue of £10,100,000 of new capital—£4,500,000 in the form of Ordinary shares, which have all been taken up at par by the Ordinary shareholders, namely, £3,000,000 by his Majesty's Government, and £1,500,000 by the other Ordinary shareholders; £3,000,000 in six per cent. Participating Preference shares, and £2,600,000 in five per cent. Debentures, which have been offered to the public. The two latter issues were offered on what I think may be regarded as extremely favourable terms. I am unable as yet to state the definite results of the issue owing to the enormous number of applications which have to be dealt with, but it is already evident that the Preference shares will be very largely over-subscribed, although the applications for the Debenture stock are, I am sorry to say, somewhat disappointing. To permit of this new capital being raised an extraordinary meeting of the company and meetings of the Debenture holders and Preference shareholders were held on the 1st inst., at which resolutions authorising the increase of the capital of the company to £20,000,000, and the issues I have referred to, were unanimously adopted.

The programme of further developments for which this additional capital is required includes (1) additional pipe lines and pumping stations to enable us to transport a largely-increased output of crude oil; (2) further extensions to the refineries in Persia; (3) the completion of the refinery now being constructed at Swansea; (4) the establishment of a large number of additional fuel oil bunkering installations in the United Kingdom and abroad; (5) large additions to the distributing facilities of the British Petroleum Company and the Homelight Oil Company; (6) the acquisition of a number of additional tank steamers; (7) the exploration and testing of new territories in various parts of the world; (8) £1,000,000 new capital which we have undertaken to subscribe to a company called "Scottish Oils (Limited)" which has been formed to put the Scottish shale oil industry on a more satisfactory basis, etc., etc. These developments are all of a more or less remunerative character, and when they have been brought into operation the profits of the company will be very materially enhanced.

Fields and Production.

The fields from which we are producing still maintain their extraordinary high rate of yield—the only limit to production being the extent of our transport and refining facilities. As you will have gathered, however, from the programme of extensions we have before us, every effort is being made to extend these facilities as quickly as possible to the full economic extent of the capacity of the fields. No fresh fields have been proved since I last addressed you, but the testing operations to which I then referred, and also others, are being carried on actively, and give promise of favourable results.

Refineries and Pipe Lines.

As I have already mentioned the extensions to our refinery and pipe lines in Persia, which have been in hand for some time past, and which, when I last addressed you, we hoped would be brought into operation during the present year, are not yet completed. This has been extremely disappointing to us, but at the same time this delay is scarcely a matter of surprise, since the amount of work involved is very great, and the difficulties in the way of obtaining delivery of plant, and also in the matter of labour, have been extreme. I can only say that our staff in Persia are striving their utmost to bring this work to an early conclusion. The work at the Swansea refinery is also making as satisfactory progress as can be expected under present labour conditions, and we hope to be able to begin operations there some time during the course of the coming year.

As you are all aware, we have recently acquired a controlling interest in the Scottish Shale Oil Companies, through the company to which I have just referred, and have thereby added considerably to our refining facilities in this country. The refineries of these companies have a combined capacity much in excess of the present output of shale oil, and our intention is to supply them with such additional quantities of natural crude oil from Persia or elsewhere as may be necessary to enable the refineries to be utilised to the full extent of their capacity. This will not only effect a substantial reduction in the present refining costs of shale oil, but also, by combining the management of these concerns under one company, largely reduce the costs of administration. By these combined economies we hope to be able to keep alive a home industry giving employment to many thousands of men, which otherwise was doomed to destruction, since shale oil, with present high costs for the labour and fuel required for mining and retorting the shale and the heavy administration expenses involved in working independently a number of companies, each having only a comparatively small production, cannot, even when shale oil is produced in this country, possibly compete with natural petroleum obtained in large quantities either from flowing wells or by pumping.

We have also under contemplation the erection of refineries in other parts of the world, it being a demonstrable fact that to such extent as the products can be disposed of in such countries, it is far more economical to refine the crude oil in the countries where the products are to be sold than in the countries where the crude is produced. This is a point regarding which there has been some difference of opinion in the past among oil producers, but which is now pretty generally accepted as an axiom. So much so,

Digitized by Google

that I understand some of the other big oil producers are now proposing to follow the lead of this company in this respect.

The Company's Fleet.

When I last addressed you the total deadweight capacity of the fleet then afloat was 162,000 tons. To-day it is 250,000 tons, and we have contracted for tonnage to the extent of a further 270,000 tons, bringing our fleet *in esse* or *in posse* up to a total of 500,000 tons. The value of our fleet now afloat, at to-day's market values, is in the neighbourhood of £7,000,000, and when the boats now building or contracted for are delivered, it will amount to not less than £15,000,000. These doubtless seem somewhat large figures, but to provide for the eventual requirements of our business it will be necessary to make still further large additions to our fleet, and no opportunity will be lost of doing this whenever opportunities may occur. In some quarters fears have been expressed that the amount of tanker tonnage available will before long be in excess of the world's requirements, but personally I have no fears at all on this point, as the great expansion in the consumption of petroleum products of all kinds, particularly of fuel oil and of benzine, which is certain to come about within the next few years, and the consequent impetus that will be given to production all over the world, will, in my opinion, give ample employment to all the tanker tonnage that is likely to be produced for many years to come.

Distributing Organisations.

As I have already indicated, the profits of our distributing concerns—the British Petroleum Company and the Homelight Oil Company—were adversely affected during the year under review by the restrictions which necessarily had to be imposed during the war on the sale of petroleum products. Similarly, this year will be adversely affected, although to a smaller extent, but now that all restrictions have been removed we are making very extensive additions to both our coastal and inland depots throughout the United Kingdom with a view to establishing a selling organisation that will be second to none in this country, and thereby securing a position that will enable us to cater for a substantial share of the British trade in petroleum products of all kinds. In the carrying out of this object the old-established distributing organisations which had been created in Scotland by the shale companies recently taken over by us will, it is needless to say, be a very valuable adjunct.

We have been unable, owing to the restrictions I have referred to, to take any part at all in the petroleum trade of this country since the British Petroleum Company ceased to act as distributors of the "Shell" petrol at the end of 1917, but now that all restrictions have been removed, our distributing concerns are again entering the market for this product, our "B.P." brand of petrol—which, I venture to predict, will one day be the most favoured brand among all British motorists—is already on sale at many garages throughout the country, although until our benzine distributing arrangements are more complete supplies will necessarily be limited. These concerns will also act as our distributing organisations in this country for kerosene, white spirit, fuel oil, gas oil, lubricating oils, and all other petroleum products. For the bunkering trade in fuel oil we are registering a separate company, which will be in a position to meet the demands of shipowners for this form of fuel, both for burning under boilers and for internal combustion engines, in a very substantial way.

Political Situation.

The improved political situation between this country and Persia, to which I referred at the last meeting, has since, as you all know, been followed by the conclusion of an agreement between the two countries which will, I venture to think, cement the relations of the two countries for all time, since, on the one part, it ensures the absolute independence of Persia and a prosperous future for her, and, on the other, the permanent establishment of a friendly and independent Power in a part of the world in which this country has important interests. I stated at the last meeting that we then expected to learn of the result of the discussions which were at that time proceeding through our representative at Teheran in regard to the settlement of the various questions outstanding between us and the Persian Government. These discussions were, however, postponed for the arrival in this country of the Persian Foreign Minister, to which I have referred. These questions are now being taken up actively with this gentleman, and I hope that a satisfactory solution of them will be shortly arrived at. The Imperial Commissioner, his Excellency Farid-es-Sultaneh, has lent us valuable assistance during the past year, and I cannot speak too highly of the diplomacy and tact which has been displayed by him in his endeavours to promote not only the interests of his government, but at the same time avoid difficult positions with this company.

The Staff.

Before concluding my remarks, I would again like to express our great appreciation of the services which have been rendered to us by our staff in this country, in Persia, and elsewhere. For some years past our company has been undergoing a process of continuous and rapid expansion, and this has necessarily thrown upon the staff a great amount of additional work beyond that involved in a stationary or gradually expanding business. This additional work has been particularly onerous during the years of the war, when our staff was much depleted, but our employees have one and all responded loyally and ungrudgingly to these calls upon their services, and I am sure you will agree with me that they deserve our warmest thanks. During the past few months, I am pleased to say that we have been able largely to augment our staff, and I hope that this will help to lighten the burden of their labours with mutual advantage to both themselves and the company. I should also like to take this opportunity of expressing our great regret at the death of our old friend and adviser, Sir Boverton Redwood. As you all know, he always took a great interest in this company from its inception—in fact, the company owes its existence very largely to him—and in losing him we have lost a most valued and trusted friend and adviser. I now beg to move: "That the report of the directors, balance-sheet, and profit and loss account for the year ended March 30, 1919, be received, approved, and adopted," and I will ask Lord Inchcape kindly to second this motion

Lord Inchcape: I have great pleasure in seconding the resolution.

No questions were asked, and the Chairman put the resolution to the meeting and it was carried unanimously.

The Dividends.

The Chairman: The next business before the meeting is to declare dividends, and I now beg to move: (1) "That a participating dividend at the rate of 2 per cent. per annum, less income tax, be paid on the preference shares in respect of the year ended March 31, 1919, and that such dividend be paid, together with the dividend at the rate of 6 per cent. per annum for the half-year ended on September 30 last, payable on January 31, 1920; and (2) that a dividend at the rate of 10 per cent. per annum, free of income tax, be paid on the ordinary shares in respect of the year ended March 31, 1919, and that such dividend be also paid on January 31, 1920," and I will ask Mr. Cargill kindly to second this motion.

The resolution was agreed to unanimously.

The Chairman: The next business before the meeting is the election of directors. As you will have seen from the report, Sir Frederick Black, K.C.B., and Mr. J. B. Lloyd have been elected to the board since our last meeting. Under Article 82 of the Articles of Association they now retire and need to be re-elected. Sir Frederick Black is well-known to all of you, and I am sure that you will agree with me that this company has been very fortunate indeed in securing his services, and will heartily support his re-election. Mr. Lloyd is also a valuable acquisition to the board by virtue of his long acquaintance with the oil business, particularly on its financial and commercial sides, and I have no doubt that he will command your support. The directors retiring by rotation are Admiral Slade, Mr. R. I. Watson, and myself. As I am one of the number of retiring members I think it better that this resolution should be proposed by someone else, and perhaps Lord Southborough will kindly move it.

Lord Southborough—Gentlemen, I have much pleasure in proposing that the election to the board of Sir Frederick Black and of Mr. J. B. Lloyd be confirmed, and that Sir Charles Greenway, Admiral Slade, and Mr. R. I. Watson, who retire by rotation and are eligible for re-election, be and are hereby re-elected members of the board."

Sir Hugh S. Barnes.—I beg to second that resolution, gentlemen.

The resolution was carried unanimously.

The Chairman.—The only other matter before the meeting is the election of auditors, and I shall be glad if two of the shareholders present will kindly propose and second the necessary resolution.

Mr. Prothero.—I beg to move: "That Messrs. Brown, Fleming, and Murray be re-elected as auditors for the financial year 1919-20, at such fee as may be determined by the board."

Mr. McCowan.—I shall be pleased to second the resolution.

The resolution was carried unanimously.

The Chairman.—Gentlemen, that concludes the business of the meeting.

Vote of Thanks.

Sir J. D. Rees, M.P.—Gentlemen, I am sure that you would not like to separate without passing a hearty vote of thanks to the chairman. Sir Charles Greenway leads us through a maze of finance in such a fashion that we become at home with figures of unusual and almost unimaginable magnitude. When we see assets of £13,500,000 in the balance-sheet, the capital increased to £20,000,000, and a dividend involving the payment of £2,000,000, we can thoroughly appreciate how much we are indebted to the chairman for taking us through all these figures in such a simple and intelligible way. That, in my opinion, is the supreme merit in a chairman, just as it is the supreme merit in a shareholder to hold his tongue and pocket his dividends when he is fortunate enough to get them. I should like to say, moreover, that I think the shareholders on this side of the table have sufficient imagination to be proud of the wide scope, the ample and statesmanlike management of this vast concern, and I should like to express our gratitude, not only to the chairman and to the noble lords and gentlemen with him on the board, but also to our able agents of this vast concern, now in many parts of the world, for the manner in which they have conducted our affairs and have brought them to a successful financial, and even, perhaps, I might also say, to a politically successful end. A great company like this, of course, flies the British flag and upholds British interests in various parts of the world, and is contributing in no small measure to cement a friendship with Persia, to which in the highest political quarters great importance is attached. I am sure that nobody can fail to notice in the few remarks I have made that I have broken my own rule as to what is the proper conduct of a shareholder by indulging in some remarks myself, but I can retrieve my character by making those remarks as short as possible. I will now propose a vote of thanks to Sir Charles Greenway and the board, and to our agents abroad, for the successful year which now comes to a happy termination at this meeting, and I hope someone will second it, and, when that is done, I am sure the meeting will carry it. (Applause.)

Mr. A. Hurse: I have very much pleasure in seconding the resolution.

The vote was unanimously passed.

The Chairman: Gentlemen, I have to thank Sir John Rees very heartily for the kind manner in which he has referred to the way in which I perform my duties and also to my colleagues on the board. It is needless for me to say that the position which I hold is one that I very much appreciate, and one that I regard as one of the highest honours in the country. The Anglo-Persian Oil Company, I have no doubt, in the course of time, will be one of the most powerful, even if not the most powerful, commercial undertakings in this country, and it will always give me the greatest satisfaction to know that the work which has been done by me and my colleagues has been duly appreciated. (Applause.)

The proceedings then terminated.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

The sixty-first ordinary general meeting of the Bengal-Nagpur Railway Co., Ltd., was held on December 4 at the offices, 132, Gresham House, Old Broad Street, London, E.C., Mr. Robert Miller, the chairman, presiding.

Mr. R. C. Volkers having read the notice convening the meeting and the auditors' certificate,

The Chairman said: Gentlemen, from the accounts you will see that expenditure on capital account was £99,270. The corresponding figure last year was £176,731, which, as you will remember, I remarked upon as being exceptionally low. The further marked decrease is accounted for as to £64,559 by the sale of narrow gauge engines and wagons which were requisitioned by the Government for the Bushire railways for military operations. Even after making allowance for this credit, the total capital expenditure in the year under review is less than that of the previous year by about £12,902. The total actual outlay on new rolling stock was £44,780, as compared with the £451,047 which we spent under that head in the year preceding the war, when our total capital outlay was £917,776, or nearly ten times the figure for the year we are considering. For several years in succession the capital expended on the line has been very much in inverse ratio to the needs of the railway. At the same time the traffic has increased so greatly as to strain our resources in rolling stock to the limit, and to demonstrate the pressing necessity for various works of improvement in the line, if we are successfully to cope with the existing and prospective traffic conditions. We were able at an opportune moment some few months back to place orders in this country for 1,300 broad gauge wagons. Of these 450 have already been delivered by the makers, and we hope to have despatched as many more to India by the end of March next. We have also on order forty broad gauge and five narrow gauge locomotives and forty narrow gauge wagons.

The gross earnings on the past year's workings have exceeded any previous figures. They amount to £4,139,118, and represent an increase of over 10 per cent. on last year's figures, and exceed those of the year 1914-15 by over 51 per cent. The large advance in the gross earnings of over 50 per cent. in a period of five years is partly attributable to war conditions and partly to development of passenger and goods traffic. The working expenses during the year under review amounted to £2,051,300, or an increase of £300,655, roughly 17 per cent., over the previous year's figures. The percentage of gross earnings absorbed by working expenses was 47.95, which is slightly higher than the percentage (46.35) for the previous year. It, however, compares favourably with the percentages of the remaining three of the five years for which details are given on page 5 of the report, which were 48.10 for 1916-17, 49.01 for 1915-16, and 50.32 for 1914-15. The greater bulk of traffic moved was primarily responsible for this increase, but an important item that deserves mention is an increase of £68,163 under the heads of hire and demurrage of foreign stock. Though India has not felt the effects of rise in prices to quite the same extent as we have in England, we must realise that we have now to face a higher rate of revenue expenditure than heretofore. For want of materials, repairs to and renewals of engines, rolling stock and running road have had perforce to be postponed during the war period, for beyond the bounds of economic working, and a very heavy programme of restoration has to be faced in the next few years, with stores and materials at risen and rising prices.

A heavy item of expenditure which has now to be taken in hand is the completion of the strengthening of our main line running road. Now that permanent way materials are again available, even at heavy prices, it has become imperative to push on with the relaying programme, and our present proposals are to relay with 90-lb. rails on steel sleepers sixty miles of the main line during the current year, and a further forty miles in each of the succeeding years. Although we must look for a heavy increase both in capital outlay and also working expenses for some years to come, I do not wish you to carry away the impression that there is necessarily a period of lean years before us. The figures of gross earnings for the first six months of the current year still show an upward tendency, and record an increase of £155,000 over the corresponding figures of last year, and with the additional traffic which we expect to attract from fresh sources, coupled with the rise in exchange, we may look to the future with reasonable confidence.

When I last addressed you I referred to the rich deposits of iron ore which had been proved to the south of the main line at Chakardharpur, in an area which can be reached most easily by the Bengal-Nagpur Railway. Arrangements for the service of this area by a broad gauge line have been pushed rapidly forward. The project has received the sanction of Government, and construction of the line has actually commenced. We have also in hand the extension of the Gurumahisani branch for a distance of about twenty-two miles to Badampahar, to tap further extensive iron ore deposits which the Tata Iron and Steel Company are opening up in order to supplement their output from Gurumahisani. The project of the harbour at Vizagapatam, of which I made mention last year, and the details of the special Act of the Legislature and the supplementary contract between the Secretary of State and the railway, creating powers under which the railway will construct and manage the harbour, have been under consideration and discussion. A large part of the land which we propose to take up in connection with the harbour has been gazetted for acquisition. The early commencement and the rapid completion of this great work are of the utmost importance to the railway and to the proper development of the country which it serves. Concluding with a warm acknowledgment of the staff in India, the Chairman concluded by moving the adoption of the report and accounts.

Mr. A. Brereton, C.S.I., seconded the resolution, which was carried unanimously.

The dividend and bonus recommended were approved, and the retiring directors and auditors were reappointed.

P. AND O.

The Shipping Industry.

Competition of American and Australian Governments.

The seventy-ninth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held on December 10 at 122, Leadenhall Street, E.C., Lord Inchcape (the Chairman) presiding.

The Chairman, after a reference to the powers recently obtained by the Board to issue deferred stock in lieu of dividend or bonus and to the proposed distribution of deferred stock to the amount of £200,000, remarked that, although the deferred stock had during the year risen in the market, the only concern of the directors was to build up their resources against a possible period of bad trade, liberally to interpret their obligations in the carriage of mails, cargo, and passengers, to deal generously with their employees, ashore and afloat, and to give stockholders a reasonable return on their capital. Although the company now controlled 427 steamers whose tonnage exceeded two and a-quarter million tons gross, and whose operations were world-wide, the personnel of the associated companies had remained practically undisturbed, and the respective managements, by co-ordination, were endeavouring to reduce or, at least, to minimise working costs. While shipping was one of the most uncertain industries in the world, the P. and O. and associated companies had for years husbanded their resources, and, without committing himself, he saw nothing to prevent their laying a fairly acceptable statement before the stockholders a year hence.

Government requisition, partial from September, 1914, to March, 1917, complete after that date, was a war measure which could not possibly have gone on indefinitely; the working of the ships by owners for the profit of the Government had been a gigantic undertaking, involving, among other labours, extremely heavy accounting work and the payment over to the Government by the P. and O. and its associates of very large sums. If there had been any profiteering in freight rates and passenger fares, shipowners were not the culprits; under Government control these rates and fares had been advanced by from 19 to 85 per cent.; freed from control last spring, they came down materially. Twenty-six of the P. and O. or British India steamers were still in Government service, including ten of the best ships of the P. and O. fleet; to be deprived of those vessels was a great handicap, and they would be glad to have them again engaged in the work for which they were designed. Foreign competitors, free of requisition, war taxation or excess profits duty, had made enormous profits, but British shipowners, who had philosophically borne their share of the burden of the war, could remember with pride the words of the Prime Minister, that without the British Mercantile Marine we should, as a nation, have collapsed in February, 1915. The P. and O. and associated companies had lost by enemy action 94 ships of 543,530 tons gross, besides old ships sold and losses by marine risk, but by means of ships built, purchased, or building—169 vessels of 1,168,298 tons gross—these losses had been more than replaced. Two fine P. and O. mail steamers, the Naldera and Narkunda, contracted for before the war, but held up by Government requirements, would be delivered, the one in January, the other a few weeks later; four other large mail steamers were building or projected; the surviving steamers of the Morea class were being reconditioned, and he hoped in a short time to see the mail services to the East, the Far East, and Australia restored to their normal regularity.

In the early part of the year, Lord Inchcape continued, he had, with considerable trepidation, contracted with the Government to take over, entirely on his own account, 77 steamers then under construction for the Ministry of Shipping; a second contract involved a further 79 steamers, a third contract other 40 steamers. These 196 steamers totalled 1,400,609 tons gross, and their sale distribution among British owners involved about 33 millions sterling. These transactions, which went through in a most agreeable way, were undertaken, not in the interests of the British mercantile marine alone, but of the whole mercantile community, and so that the Government might be relieved of shipping business. They were concluded without loss to anybody and with no profit to himself or his companies, which got their fair share of the tonnage, but no more. If the Government had been obliged to run these ships on its own account, it would have spelt disaster all round.

When he said a year or two ago that the nationalisation of shipping would involve their retiring from business after selling their ships to others, he had in mind, not Germany, as had been ridiculously suggested, but America. If British shipowners had now to compete with the American Shipping Board, which meant the resources of the American Government, his companies might yet be forced into that position. He had, on Monday night, heard the American Ambassador, in a most eloquent speech, say that he hoped the present cordial relations between Great Britain and the United States would continue for ever. If the United States Government would turn its ships over to private owners and leave those owners to compete with private enterprise in this country, he would not be afraid; but if the American people were to be taxed to build up a mercantile marine at all costs, the outlook for the industry in these islands was anything but rosy. Another competitor had come on the scene. Encouraged by war-time profits, freedom from requisition, excess duty or any other taxation, the Commonwealth Government of Australia had now embarked on ship-owning as a competitor with private undertakings. The British Lines to Australia had built up a fine service of steamers and had maintained friendly relations with shippers for forty years. It was hard that the Australian Government should now step in, with the resources of the Australian people behind them. Merchants disliked the move; they realised that the Commonwealth Government might not stop at shipping; that they might enter other spheres of industrial activity, and by a direct attack on individualism, involve the whole commercial community in serious dislocation and loss. The Prime Minister of the Commonwealth, whom he believed to be actuated by the highest motives, would be well advised to leave the business of his country to those who were in commerce, and

Digitized by Google

to allow his people to work out their own commercial salvation. (Hear, hear.) Sir Joseph Cook, one of Mr. Hughes's colleagues, had recently said that Governments must never get in front of the enterprise of the business man nor stifle his individuality and resource; that a Government's place was behind the business man as a buttress, a strength, a stay, a limitation and a support, and that only so could Australia as a nation hope to face the great tasks ahead. Mr. Hughes could now dispose of the Commonwealth ships at much more than he had paid for them; let him follow the example of the British Government; let him leave commerce and industry to individual initiative—and so adopt the course which had made the British Empire what it was. (Applause.)

He had read the Anti-Dumping Bill carefully and with growing consternation. If we wanted a short legislative cut to commercial suicide or an object lesson in the chaos in which the measure would involve the international trade of this country no more effective measure could be devised. The Government had heard what business men thought about it and had postponed its consideration, never, he hoped, to resume it. At Manchester, the other day, the Prime Minister had declined to say whether or not he liked the Bill, and there was only one inference to be drawn from this. Any measure which sought to rivet on British industry the abomination of Government control, with its paraphernalia of licenses, certificates, affidavits, appeals, argument with Government clerks, and all the worry and delay of justifying every transaction in which business men might be engaged, would be fought unitedly by the entire commercial community.

Although only interested in coal as a consumer, he could tell the stockholders that the cost of bunker coal in London before the war, when prices were governed by free competition, was 23s. a ton: under Government control it cost to-day 105s. He had read the pamphlet of the Mining Association on the proposal to limit the profit on coal to 1s. 2d. a ton, and he agreed with the association that the principle of Parliament arbitrarily limiting the profits of an industry was altogether economically unsound; that it would discourage enterprise and prevent inflow of the capital necessary to industry. If coal mining profits were to be limited, what of other individual profits? What of the farmer, the soap boiler, the cotton spinner, the brewer and distiller? What of the banking and financial houses, the stock and money brokers? What about the oil companies—the Anglo-Persian Company, which promised a profit of 100 per cent. for the present year, on the Board of which he had the honour to represent His Majesty's Government, which held two-thirds of the ordinary capital? What about the pitman on a pound a week, who, by his pushing personality, his brains and capacity, had become general secretary of his union, with a comfortable income? He, himself, had started life with a patrimony of £2,000; after fifty years of moderately hard work he found himself with what some people would call a fortune. If the incentive to work, thrift and development were to be removed, let them limit the profits not only of the legal industry, but of every other industry and profession.

They had acquired during the year an interest of something more than half its shares in the Orient Company, and while that company would continue to be worked as a separate organisation, the linking up of arrangements for repairs and other matters should prove of mutual advantage. After a visit which he paid to the Eastern Mediterranean in the spring they had acquired also the bulk of the shares of the Khedivial Mail Steamship Company. That company lost a number of ships by enemy action, but its large cash reserves were being used to bring the fleet up to date. The Khedivial Company owned valuable wharfage property, workshops, and a good dry dock in Egypt, and, with up-to-date management, possessed considerable potentialities in both cargo and passenger traffic, aided by transhipment facilities with the P. and O. and British India Companies at Port Said.

The company's investments stood well under market prices, and the value of the shares in their allied companies remained at the figure at which they were acquired. In this they were fairly safe, as the companies were perfectly sound and their distributions had been on a conservative basis. Their own ships had been all well written down.

In view of their conviction that adequate supplies of oil would in the near future be possible the world over, they had decided on its gradual substitution for coal. The difficulty of driving large ships at high speed by internal combustion engines had not been surmounted, but they would be able to raise steam for the reciprocating or turbine engine at a cost no greater than that of coal, and with less human labour. Stoking would be abolished, and the conditions of life below deck improve. Delays for refueling would be reduced, and the comfort on board ships to passengers as well as crews increased.

During the year they, with their associated companies, had, including steamers building, added to the united fleets 104 ships of a gross tonnage of 778,284 tons. They had met the obligations of the mail contract to the best of their ability. For five years before the war the company had had 260 mail sailings in each direction between London and Bombay; during the five years ending July 31, 1919, there had been 211 outward and 220 homeward Indian mail sailings, and throughout the war they had never sent an Indian mail, either outwards or homewards, round the Cape. In summarising the domestic events of the year, his lordship expressed the belief that the company and its associates would be able to meet their liabilities for new steamers without having to get deeply into debt. The companies had not made a fortune out of the war; they would, he was safe in saying, have been better off without the war. But unless the people sent as their representatives to Westminster men pledged to Syndicalism and the confiscation of private property, the position of the P. and O. Company need not, for the time being, be regarded as altogether solvent. The Chairman concluded by moving the adoption of the report and accounts.

Mr. Peter Williams seconded the resolution, which was carried unanimously.

The dividends recommended were declared payable on or after December 17, and the retiring directors and auditors were re-elected.

A resolution was unanimously passed increasing the capital by the creation of £200,000 new deferred stock with a view to the distribution of such stock among deferred stockholders.

A vote of thanks to the chairman, directors and staff concluded the proceedings.

IMPERIAL OTTOMAN BANK.

Extension of Activities.

The fifty-second general meeting of the Imperial Ottoman Bank was held on December 10 at Winchester House, Old Broad Street, E.C., the Earl of Bessborough, K.P., C.V.O., C.B., presiding.

The Secretary (Mr. C. E. L. Corthorn) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said that the committee had considerable satisfaction in placing the situation to December 31, 1918, before the shareholders. They would notice the liquidity of the establishment, and that the items "Statutory advances to the Government" and "Participations in advances to the Government," which appeared in the last balance-sheet for a total of £1,700,000 odd, did not appear in this. The first half of the year 1914 found the bank in full activity, one of the most important items being the issue of the Ottoman Five per Cent. Loan of 1914 on the Paris market. This enabled the Turkish Government to discharge important liabilities, and the general prospects were most encouraging. The outbreak of war in August, 1914, however, brought business practically to a standstill, which became more pronounced when Turkey threw in her lot with the Central Powers in the following November. For four years the committee in London and Paris were cut off from communication with Constantinople and Turkey. The English and French members of the direction had to leave Constantinople after the bank's refusal to proceed with new issues of notes for the purpose of making advances to the Ottoman Government. The absence of communication with the major part of the Eastern branches caused a definite decrease in the activities of the agencies of London and Paris. These agencies had, nevertheless, been able to maintain a certain movement, owing to the favourable consideration shown, on account of the Anglo-French nature of the bank's capital and control, by the British and French Governments, in the measures of control which the state of war with Turkey made it obligatory for them to impose. The depreciation of paper currency and the rise in prices had brought about an increase in the general expenses of all undertakings which operated in Turkey. On the other hand, these conditions had made it possible for some traders to improve their credit by paying off their old debts in depreciated money. Agricultural production, thanks to favourable climatic conditions, had been maintained at a satisfactory level, notwithstanding the lack of labour. There was evidence of favourable symptoms in the development of Turkish resources.

These circumstances, which augured well for the future, had led the bank to consider an increase in the activity of its purely commercial side, and in view of this policy of commercial activity one branch was established in 1916 at Marseilles and another would shortly be opened at Tunis. During the war a new branch was opened at Paphos in Cyprus, and it had been decided also to open at Kirkuk in Mesopotamia. The extension of the bank's activity to other regions was also contemplated. The Director-General was taking active steps for the reopening of those branches in Turkey which had been closed owing to local conditions in the course of the war. At the beginning of 1919 the bank proceeded with the constitution of the Bank of Syria, which had just been granted the right to issue the new fiduciary money (the Syrian franc) which was to circulate in Syria. On this subject of development it was with great satisfaction that the committee had received compliments from the representative of one of the leading American banks on being the first bank in any belligerent country to offer them pre-war facilities. This they considered to be an acknowledgment of the activity and devotion of the staff of the bank. The committee had to record their great appreciation of the devotion of the members of the staff who had remained at their posts during these past years, in many cases in positions of great difficulty and occasionally personal danger. Pensions and benevolent funds were formed during the war, and he was sure the shareholders would fully approve the attitude of the committee in including under their terms the dependents of those who had fallen in the war. In conclusion, he could only assure the shareholders that the committee looked forward to the future with every hope of successful results being achieved. They would make every endeavour to retain all those privileges for the bank to which it was entitled under its concession, and to obtain reparation for such infringements as had taken place.

M. Charles de Cerjat seconded the motion, which was carried unanimously.

The members of the General Committee were re-elected, the appointment of M. Jean Boissonnas was confirmed, and a hearty vote of thanks to the committee and the staff, both at home and abroad, concluded the proceedings.

SMALL ADVERTISEMENTS.

GOVERNESS desires Post (India preferred). Usual English subjects; music; French; good knowledge of health massage; fond of children. £70-£80.—H. W., The Ladies' League, 118, New Bond Street, W.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, W., successfully recommends Secretaries, Lady Housekeepers, Companions, Governesses, Nursery Governesses, Lady Nurses, Nurse Companions, &c.

LADY Secretary desires Post. Shorthand, Typing, fluent French, moderate Russian. Accustomed to confidential and responsible work. £45.—A. L., The Ladies' League, 118, New Bond Street, W.

Shipping Intelligence.

Forthcoming Sailings

The Papayanni Line s.s. Maronian, for Malta and Alexandria, taking cargo for Beyrout, Alexandretta, Mersine, Cyprus, etc., will leave Liverpool on January 3.

The Moss Line s.s. Amasis, for Gibraltar, Algiers, Malta, and Alexandria, transhipping for Morocco ports and to Syria and Cyprus, will leave Liverpool on December 13.

The Cunard s.s. Sea Serpent, for Piræus and Patras, will close for cargo at Liverpool on December 13.

The Ellerman Line s.s. Malatian, for Alexandria, will leave Liverpool on December 20.

The Ellerman Line s.s. Barotse, for Gibraltar, Malta, Syria, Smyrna and Constantinople, will close for cargo at Liverpool on December 30.

The Bibby liner Lancashire, which will shortly leave for Rangoon, is heavily booked for passengers, many of whom have been obliged to outstay their furlough in this country owing to difficulties in obtaining berth allotments.

The Anchor Line s.s. Olympia for Bombay will close for cargo at Glasgow on December 23, and at Liverpool on January 2.

The Bibby Line s.s. Lancashire, for Colombo and Rangoon, will close for cargo at Birkenhead on December 23.

The Henderson s.s. Burma, for Port Said and Rangoon, will close for cargo at Birkenhead on December 17.

The Power Line s.s. Petworth will leave London for Morocco ports about the end of the current month.

The Johnston s.s. Norton, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza will sail from Liverpool on December 23.

Shipping at Malta.

(From Our Own Correspondent.)

Malta, November 24.

Seven mine-sweepers from Constantinople have reached port. The Aquarius has arrived from Constantinople, and the transport Isonzo has just left for Marseilles, and the trawler Alexander Hills for Taranto. Tenders are invited by the Admiralty for the sale of the battleship Hannibal (14,900 tons displacement), now lying at Malta.

The latest arrivals are H.M.S. Steadfast, from Alexandria; Silverfield, from Mudros; s.s. Norman Monarch, from New York; H.M.S. Orotava, from Marseilles; whilst the transport Himalaya and s.s. Pengreep have left for the East.

November 28.

There has been special activity during the last few days, and British, Italian, Spanish, Belgian, Japanese, Greek, and Russian craft have arrived and left. The arrivals here include the transport Uhlenhurst, from Constantinople; the paddlers Marchioness of Lorne, Duchess of Norfolk, and Queen IV., from the East; the trawlers James Denton, Gertrude Cappleman, and Danestone, from Mudros and Constantinople; and the Meteor, from Marseilles. Several drifters have just left for home waters, and the Honeysuckle, with M.29 in tow, has sailed for Plymouth.

Shipping Notes.

A trial recently took place at Sunderland of the s.s. Rokos Vergottis, a steel cargo steamer of 5,201 tons gross and 3,310 tons d.w. This vessel has been built by Messrs. Doxford and Sons, Sunderland, on account of Mr. G. Vergottis, Cephalonia, Greece, and is reported to be one of several such steamers ordered by him to be built on the Wear. The speed of the Rokos Vergottis was 12½ knots, the vessel being fitted with Howden's forced draught.

Sir Walter Runciman, chairman of the Moor Line, has authorised the statement that an offer for the thirteen steamships at present owned by the Moor Line from the Western Counties Shipping Co., Ltd., has been accepted, and a contract for the sale of the vessels has been signed. The Moor Line will continue the other branches of their business, and, having obligations which are not to be terminated, they will replace the vessels now sold by others more suitable for their purposes as and when opportunity offers.

Our Smyrna Correspondent writes:—Two lighters laden with British goods, ex Eden Hall and Amatonga, have sunk in Smyrna port.

THE WORLD'S WHEAT SUPPLIES.

The important question of the future of wheat production, with special reference to the Empire, is dealt with at length in the current number of the *Bulletin* of the Imperial Institute. The annual production of wheat in the world prior to the war amounted to about 110,000,000 tons, the largest producers being the Russian Empire, with an output of 22,000,000 tons, and the United States, which provided nearly 19,000,000 tons. During the war the production in Europe as a whole, and in Russia in particular, decreased considerably, but outside Europe there was a great expansion. The acreage under wheat in Canada, the United States, Argentina, India and Australia in 1918 was over 25 per cent. larger than the average acreage for the five years before the war, and it is considered that at the present time there is a sufficiency of wheat, even without the help of Russia, to meet the requirements of the world.

As regards the future also there is reason for optimism. There are vast areas of land suitable for wheat-growing yet to be opened up in Canada, Australia, South America, Siberia, and other countries, whilst the present low average yield of 13 bushels per acre is susceptible of great improvement. In recent years the increase in the world's production has been due, to a great extent, to an increased yield per acre, and there is every reason to believe that with the introduction of improved drought and rust resistant varieties the rise will be even more rapid in the future.

The Alliance Bank of Egypt is opening a branch in Haifa.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director General of Commercial Intelligence, Calcutta, dated November 26:—

Rain general in Burma, Central India, and in Southern India. Light in East Punjab and to the west of United Provinces of Agra and Oudh.

During the week ending November 15, sowing spring crops and harvesting autumn crops continued. Harvesting paddy continued North-eastern and Southern India; commenced Assam; sowings continued Madras. More rain required parts Bihar and Orissa. Plucking tea continued Assam. Tobacco sowings progressed Bengal and Punjab. Cotton picking continued Northern India, Southern India and parts Bombay. General crop conditions good, but rain urgently wanted Punjab.

Bombay cotton market weak. Fully good Broach April-May Rs.541. Piecegoods market firm. Calcutta jute gunny markets flat. Exchange firm but closes quiet.

No change in Bank Rates.

Mymensingh Bhairab Bazaar Railway extension surveys by Gillanders Arbuthnot Company, Calcutta, for detailed survey loop line metre gauge railway from Sararchar to Kishoreganj and reconnaissance survey for feeder lines metre gauge railway (s) 50 miles in Kishoreganj area sanctioned.

December 3.

Rain general Southern India. Light rain in North-Eastern India.

During the week ending November 22 sowing spring crops and harvesting autumn crops continued. Harvesting paddy continued Southern India. Sowings continued Madras. Plucking tea continued Assam. Tobacco sowings progressed Burma. Plucking cotton continued everywhere. General crop conditions good, but rain much needed in North Gwalior, parts Bihar and Orissa, North-Western Frontier Province, and unirrigated crops Punjab.

Bombay cotton market steady. Fully good Broach April-May Rs.544. Piece goods market active and firm. Calcutta jute gunny markets quiet.

No change in Bank Rate.

RELIEF WORKS IN INDIA.

The India Office has issued the following telegram received from the Viceroy, Revenue and Agricultural Department, dated December 5:—

Your telegram dated November 28. All relief works closed in Bundelkhand. Distress considerably decreased in Hyderabad, where relief works continue in one district only. Numbers relieved:—Burma: works, 2,775; gratuitous, 10. Bihar and Orissa: gratuitous, 13,736. Feudatory States of Orissa: works, 567; gratuitous, 33. Central India: gratuitous, 1,500. Hyderabad: works, 7,000; gratuitous, 5,000. Madras: works, 27,349; gratuitous, 54,546.

Mr. S. Webster, the managing director of S. Webster, Ltd., of Moorgate Station Chambers, London, is now on a business visit to the Near East. He will return during this month.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.

SUPPLIES AND PRICES IN TURKEY.

The following are extracts from a recent report received by the Imperial Ottoman Bank :—

The Tobacco Crop.

KAVALLA, October.

The last crop has been very successful in Eastern Macedonia, both in quality and quantity. It is estimated at 7,000,000 okes, or about 9,000,000 kilos. Buyings of the new crops of tobacco have already taken place, and prices are decidedly better than those ruling last year; certain firms who had declared quite recently that they would not make any purchases this year, owing to the high prices, were the first to buy. Several American firms have already bought large quantities of unmanufactured tobaccos, and we are told that in certain villages as much as 15 drachmæ was obtained per kilo.

An upward tendency is also noticed in the price of manufactured tobaccos of previous crops. One Alexandria firm bought 2,100 bales of high-class tobaccos at 32 drachmæ per oke (25 drachmæ per kilo), representing a deal of about 1,000,000 drachmæ. The general opinion is that not only will these prices be maintained, but that they will still be higher, owing to the lack of stocks of Turkish tobaccos in Europe and America.

Consequent on the high prices obtained, tobacco growers are making huge profits. A surprising improvement is already noticeable in the condition of the inhabitants of Eastern Macedonia, and we are of opinion that our region will again soon be one of the most prosperous of the Near East.

A Strike.

Tobacco workmen are very well paid, and last year they succeeded in obtaining very big concessions from their employers. Unfortunately, the more workmen get the more they want. They again went on strike last month. Besides their numerous grievances, they wanted to force the Government to prohibit the exports of non-manufactured tobaccos. But the strike was ill-timed, as in this season tobaccos do not require nearly so much attention as in summer, and the growers held firm. Not only did they refuse to yield to the new exigencies of the workmen, but they cancelled the agreement they had made last year. The result of this attitude was that the workmen gave way, abandoned their new demands, but as employers fear a strike for next summer they are asking guarantees against such an eventuality. The Government is intervening, and it is hoped that a compromise will be reached. It is evident that the constant growing demands of workmen are discouraging growers, and that the consequences may be detrimental to the general interests of our region.

An aerial map of the Sahara is to be made by three famous French "aces."

An aerial mail service is to be inaugurated between Bombay and Karachi on January 1, by means of which residents of Karachi will be enabled to post home letters at least twenty-four hours after the despatch of the mail steamer from Karachi.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiringan Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

COMPANY NOTES & REPORTS

Ceylon and Indian Planters.

The report of the Ceylon and Indian Planters' Association for the year ended June 30 states that after paying debenture interest and all fixed charges there is a balance at credit of profit and loss account of £6,261, to which must be added amount brought forward, £3,384, plus excess profits tax recovered, £6,898, making together £16,543. From this has been deducted the preference dividend for the year, depreciation of machinery and ropeways, cost of tea extensions, and the interim dividend on the ordinary shares at 5 per cent., paid in May last, amounting to £4,378, amount written off coast advance account £5,129, leaving £7,036 plus interest and gain in exchange, £1,035, leaving at credit of profit and loss account £8,071. It is proposed to pay a final dividend on the ordinary share capital of 10 per cent., making 15 per cent. for the year, absorbing £4,400, and to carry forward (subject to return of excess profits tax) £3,671.

Burma Railway.

The net earnings of the Burma Railway Company for the year ended March 31 were Rs.1,23,21,888, compared with Rs.1,04,85,250. The gross earnings exceeded those of the previous year by Rs.40,54,533, and were the highest on record. The working expenses increased by Rs.22,17,896, and the net earnings were more by Rs.18,36,638. The company's share of surplus profits amounted to Rs.26,95,395, and realised in London £225,748. Final dividend of 1¼ per cent. (against 2¼ per cent.) and a bonus of 2 per cent. (against 1½ per cent.), both payable, less tax, on January 1. The sum of £44,000 is held in reserve for estimated excess profits duty, leaving a balance at credit of surplus profits of £157,683 (out of which the company have to pay in January next a sum on account of income tax for assessed surplus profits of 1919-20, which will not be received till June, 1920. This tax is recoverable from the shareholders on the division of this surplus). To this must be added the amount at credit of reserve fund (from surplus profits), represented by securities at cost price, £53,031. The total return, including guaranteed interest at 2½ per cent., amounts to 8 per cent. for the year, against 7½ per cent. for the preceding year.

British India Steam Navigation.

The report of the British India Steam Navigation Company for the year ended September 30, 1919, states that there is available for distribution, after providing for depreciation, £172,052, which (less interim dividends paid in May last) the directors recommend should be distributed as follows:—Dividend of 5 per cent. on Preference stock, £35,000; dividend of 8 per cent. (free of income tax) on shares, £76,576; special bonus of 4 per cent. (free of income tax) on shares, £38,288; leaving balance to be carried forward £22,188. Lord Chalmers and Lord Cunliffe have been elected directors of the company.

Tiflis Tramways.

It was announced at the meeting of November 29 that the directors were without news from Tiflis, but that the shareholders had been called together to consider a motion for the dissolution of the company put forward by a shareholder possessing more than one-twelfth of the capital.

Banque de l'Algerie.

The accounts of the Banque de l'Algerie for 1918-19 show a gross profit of 20,292,606 francs, against 22,018,548 francs for the preceding period. The net profit is 6,434,432 francs, an increase of 100,000 francs on the former account. The disposable profit amounts to 12,077,115 francs. The distribution for the first half-year having been 62,989 francs, the council fixed for the second half a dividend of 63,273 francs. The board anticipates an increase of the dividend for the current year.

North Caucasian.

The report of the North Caucasian Oilfields states that the company are still without any accounts from Russia, and therefore a short statement only of the conditions on the fields is given. In 1918, by decree of the Bolshevist Government, all oil enterprises were declared national property without compensation to the holders, and the district of Grosny in which the company's fields are situated, was freed from the Bolshevist régime by General Denikin's forces in January last. Under the local government which was established in the district the administration was then able to resume possession and at once begin operations for clearing up the disorder. It was then ascertained that the old or western fields were little damaged, and that the wells, which had been shut down, had not been tampered with, although a considerable quantity of material and stores had been stolen. It is believed that plant and machinery can be put into good order in local machine shops. When the Bolshevist revolution took place three wells on the new field caught fire and burned for many months; one well also on the new plots at Solyana Balka was set on fire, but all these fires have now been extinguished and these four wells securely capped, and they are now under control. From the fountain well No. 1, plot 232, a total of 8,000,000 poods has been sold and shipped away, and there is still in stock a quantity of 5,500,000 poods stored in open ambars and reservoirs. At the present time the ruling price of oil, in view of the excessive cost of labour, would not justify the expense of baling from any of the wells. It is estimated that, without drilling new wells, a production of about 150,000 poods per day can be obtained when once baling wells are again put into operation. So far as is known the new property at Eastysu has been well protected by the villagers and is intact, but conditions in the neighbourhood are too unsettled to resume operations. The staff in Russia have rendered splendid service through most difficult times. An increase in the company's capital from £750,000 to £1,000,000 by the creation of 500,000 Ordinary shares of 10s. each was approved by the shareholders in general meeting on April 28. Of this new capital 268,800 shares were offered to the shareholders at par, in proportion to their holdings. A balance not applied for by shareholders has been disposed of for the benefit of the company. Meeting Winchester House, Old Broad Street, E.C., to-day, 12 room.

Eastern Telegraph.

The report of the Eastern Telegraph Company for the year ended December 31, 1918, states that the revenue amounted to £3,365,049, from which are deducted £889,233 for the ordinary expenses and £664,358 for expenditure relating to maintenance of cables, sundry differences in exchange, income and war taxes payable abroad, share of contribution to the pension and superannuation funds, towards depreciation of investments, and payments to staff and other expenses in connection with the war, leaving a balance of £1,811,458. After providing for income-tax and excess profits duty payable in England, interest on mortgage debenture stock, and dividends on preference stock, which in all absorb £1,011,303, there remains £800,155, to which is added £64,370 brought forward, making a total available balance of £864,525. The directors have placed £500,000 to the general reserve fund. Three interim dividends of 1½ per cent. each, a final dividend of 1½ per cent., and a bonus of 2 per cent. have been paid on the ordinary stock, making a total distribution of 8 per cent., free of tax, for the year, leaving £44,525 to be carried forward. Meeting, Electra House, E.C., December 17, 12.30 p.m.

Egyptian Markets.

The directors of the Egyptian Markets, Ltd., have declared an interim dividend of 4 per cent. (less tax at 6s. in the £) for the year ended December 31, 1919, on the ordinary shares, payable December 22, at the Anglo-Egyptian Bank, 27, Clements Lane, E.C.

New Schibaieff.

The report of the New Schibaieff Petroleum Company for the year ended April 13, states that as conditions at Baku had not sufficiently improved to permit of auditors examining the books of the Russian company, the accounts only show the English company's position. No detailed reports have been received from the fields, but from certain returns which have come to hand it appears that the Russian company worked at a loss during the year 1918. The position since the beginning of 1919 has somewhat improved, in as far as the price at which the production was sold slightly exceeds the cost price, excluding amortisation. The gross production of S. M. Schibaieff and Co. for the twelve months ended April 13 amounted to 2,370,140 poods (38,228 tons), as compared with 3,706,707 poods (59,786 tons) for the previous year. The net output for the year 1918-19, after deduction of royalty and quantity used for fuel (March, 1919, being estimated), is 1,209,179 poods (19,503 tons), as compared with 2,123,545 poods (34,250 tons) for 1917-18. Towards the end of August last there were 37 wells in exploitation, with a total daily output of 9,670 poods. Work is being carried on on the oilfields with a view to increasing the production. Wells on Richard plot have been repaired, and it is intended to repair Wells No. 3 on Djakeli and No. 10 on Volchinsky. In accordance with the local manager's recommendation a sum has been authorised for the completion of the wells on the Binagadi plot, and as the directors are advised that the company's neighbours in this district have obtained very good results, they hope for favourable results. As regards the general position, during the Bolshevist rule, which lasted from June to October, 1918, the production, in common with that of all other companies, was very small. It increased after that régime was overthrown, but the directors are not able to bring it to the normal, owing to the difficulties of transport and shortage of money and materials. No progress has so far been possible in connection with the company's claim, presented through the Foreign Claims Office. Meeting, St. Helen's Court, E.C., December 18, 12.30 p.m.

Assam-Bengal Railway register and transfer books will be closed from December 17 to 31, inclusive.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put expert advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

THROGMORTON STREET, Wednesday.

We have had a general reaction this week in sympathy with the other markets of our Stock Exchange, the set back having been due almost entirely to the further depreciation in the Continental exchanges and the appreciation in the American dollar. The result has been some heavy selling from the Continent, and prices are lower all along the line in spite of the fact that here and there Egypt has again been a buyer though on a more moderate scale than recently. Probably the Milner Mission has also engendered a cautious spirit in case of any untoward development; but, apart from politics, all the news regarding agriculture and business in Egypt remains of a most satisfactory character.

In Government stocks Egypt Unifieds have relapsed 5 points to 68¾, while Egypt Prefs. have gone back 4 points to 58. Turkish 4 per cent. (1891) and 3½ per cent. (1894) are both 4 points down at 68½ and 58½ respectively. There has been, also, a drop in Turkish Unifieds of 4½ points to 40.

In Bank shares, Nationals, in spite of some good buying during the early part of the week, came back ultimately to 20⅛, a drop of ⅜, and Agriculturals are closing to-night at 5 5-16, showing a decline of 9-32. Agricultural Prefs. are ⅛ down at 6⅞, and Anglo-Egyptian Banks are considerably lower at 16⅞. Bank of Abyssinias have receded 1-16 to 1 13-16, and Bank of Athens are about 5s. lower at 3½. Ottoman Banks have dropped ⅜ to 9, and Land Banks on Continental sales finish also ⅜ down at 6⅛.

In Railways, Delta Lights are ¼ easier at 6¼, at which price some quiet buying has been in progress.

In Land shares, Aboukirs have remained relatively firm, and are only 3d. lower at 30s. 9d. Some small business has taken place in Allotments at 4. Béhéras, after being well bought for Egypt, finished ⅜ down at 15, and Béhéra Prefs. have dropped 1-16 at 4 5-16. There has been some revival in demand for Egyptian Consolidated, which are fractionally firmer at 2s. 3d. Egyptian Land and General Trusts are a nominal market at 1-32. Egyptian and Foreign Trusts are fractionally lower at 14s. 3d., Gharbieh Lands have dropped 1-16 to 2 5-16, and New Egyptians, after pretty large business, are closing 1s. 3d. down at 26s. Sudan Plantations have dropped back ¼ to 7⅜, and Sidi Salems close 1-16 lower at 2⅛.

In Miscellaneous shares, Alexandria Water are ¼ down at 11¼. Egyptian Hotels are ¼ up at 2, Markets have dropped 1s. to 22s. 6d., and Morum's Stores are 3d. firmer at 18s. 6d.

Among the Oils, Anglo-Egyptian B close 5-16 lower at 4⅜, Roumanians are fractionally quieter at 22s. 9d., and Traians are 2s. down at 11s. 3d

In Greek securities there is again an all-round decline to be recorded, due to Continental selling. The 1881 and 1884 loans are both 2 points lower at 56, while Monopoly also have gone back 2 points to 53½. Rentes are 3½ points down at 46½, and Funding have dropped 7 points to 56. The 1902 Loan is 4½ points down at 58, the 1910 is 2 points down at 54, and the 1914 has receded 7 points to 60.

THE ALEXANDRIA WATER COMPANY, LIMITED.

INTERIM DIVIDEND.

NOTICE IS HEREBY GIVEN that an INTERIM DIVIDEND OF FOUR SHILLINGS per £5 share on COUPON No. 62 is payable on and after the 15th December, 1919, at Messrs. Barclay's Bank, Limited, 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Limited, in Alexandria, upon the making of a declaration as to ownership in the form required by the above Banks, form of which will be supplied upon application.

Dated Alexandria, 14th November, 1919.

By order of the Board,
H. R. C. BLAGDEN,
Managing Director.

The transfer register of the Debenture stock of the Anglo-Persian Oil Company will be closed from December 18 to 31 inclusive.

Owing to the delay in the receipt of the annual documents from India, the reports and accounts of the Champion Reef Gold Mining Company of India cannot be presented at the annual general meeting, to be held this month.

Transfer books of the 6 per cent. first mortgage debenture stock of the British Burmah Petroleum Company will be closed from December 18 to December 31 to prepare the warrants for the interest payable on January 1.

The directors of the Jhanzie Tea Association have declared an interim dividend of 4 per cent., or 4s. per share less tax, for season 1919, payable December 23, 1919.

The directors of the Rajawella Produce Company have declared a dividend at the rate of 12 per cent., payable January next, on the ordinary shares for the past year.

The directors of the Eastern Assam Company have declared an interim dividend of 5 per cent., free of tax, for the year ended December 31, payable on December 20.

The directors of the Nedeem Tea Company recommend an interim ordinary dividend of 7½ per cent. on account of season 1919, subject to tax at 6s. in the £, payable December 23.

NOTES OF THE WEEK.

As a result of M. Clemenceau's visit to London and his conferences with members of the British Government it is understood that Great Britain and France are now in complete accord in regard to the more important points of the settlement of Turkey and the Middle East. The dubious attitude of the United States towards the League of Nations and the likelihood that they will accept no mandate in Asia Minor make it incumbent on the British and French Governments to lose no more time in settling a question that has already been left far too long in abeyance. The approval of the United States Government will still have been sought and obtained for the decisions reached; but it was essential to show the world, and in particular Turkey, that the two Powers are not only in accord, but are quite able of themselves to adjust any point that may have been postponed by the Paris Conference as originally constituted.

In view, however, of the Supreme Council's record, for which Great Britain and France must accept the major responsibility, any satisfaction over the fact that the settlement of Turkey has now been brought within sight will be chastened by uncertainty as to the precise terms of the agreement arrived at in London. Until, therefore, the actual Treaty is made public, we must content ourselves with the reflection that with the lapse of time actual conditions in the territories concerned are conspiring to enforce a reasonable settlement. Eastern matters were not the only subject discussed between M. Clemenceau and Mr. Lloyd George. France is especially interested in a number of economic questions awaiting solution, and this circumstance should have contributed to moderate some of the emphasis hitherto laid on a settlement in regard to the former Ottoman Empire which rather followed the lines of Imperialist aspirations than conformed with the principle of self-determination. The incidents that have accompanied the withdrawal of British troops and the raising of the Tricolour will, it is to be hoped, have convinced the French that their mandate in Syria will call for the exercise of extreme caution and tact on the part of local officials.

The subject of Armenia was raised by the Archbishop of Canterbury in the House of Lords on Wednesday and provided the Secretary of State for Foreign Affairs with an opportunity of recapitulating what had already been done by the Allies for the Armenians. With regard to the future Lord Curzon could not hold out much hope that the United States would accept responsibility for the Armenian State, and he seemed to indicate that the Allies proposed to set up an independent Armenia, and to offer it all the blessing they could, but without the definite protection of a mandatory Power. Whether this is the final decision of the Allies remains to be seen. Possibly the failure of any such incomplete settlement might help the United States to realise how much it had fallen short of its duty to civilisation. In the meantime, steps have been taken to bring about peace between the Armenian Republic set up in Transcaucasia and its neighbour, Azerbaijan, through the mediation of the Allied High Commissioner, Colonel Haskell. Armenian territorial claims stretch from Trebizond to Alexandretta; but Lord Curzon made it clear that the region to be incorporated within the new Armenian State would not include a Mediterranean as well as a Black Sea littoral.

The announcement that a British School of Archæology is to be established in Jerusalem will give pleasure to all those who are acquainted with the facts of the case, and who know what has been done and what has had to be left undone in this field in past years. We hail with particular satisfaction the announcement that a branch of the School at Baghdad is already in contemplation; for, as THE NEAR EAST has repeatedly pointed out, the early sites of Babylonia cry more urgently than any others for early and skilled investigation. In that land of flood and mud every winter works havoc with remains of the utmost value to the trained excavator and archæologist; but Great Britain, which was one of the first in the field of exploration of the ruins, had lately stood aside and left other nations to carry on the work and reap the credit. There is now a prospect—and, we hope, a fair one—of those conditions being changed. The claims of Palestine to further examination need no emphasising here. We are glad to note that the Government, through the Foreign Office, is taking an interest in the proposed School; Professor Garstang, who has been provisionally appointed Director, is well qualified for the post, and the Organising Committee is a strong one in many ways. A good start has, therefore, been made. It rests with the public to do their share to make this new national undertaking a success.

The old saying "no news is good news" probably holds true with regard to the Milner Mission, which has now been in Cairo ten days, and is, very wisely, taking stock of its surroundings before beginning its sittings. As a matter of fact, it is obviously a good move to accustom the Egyptians to the presence in their midst of the Mission, and it is not to be doubted that the

Digitized by Google

members are utilising the period of quiet to get in touch with native opinion of the less noisy kind, through the medium of personal conversations with leaders of moderate opinion. Lord Milner and the other members of the Mission have been received by the Sultan, and have now doubtless paid and received all the customary visits of ceremony.

It is understood that the Mission intends to visit some of the chief provincial towns and centres, and as neither Cairo nor Alexandria can fairly claim to represent the thought and spirit of the country, this is a very wise decision. If it were possible to pay surprise visits to one or two representative villages, such an extension of the plan would almost certainly yield valuable results. The Fellah, without the agitator at his elbow to bully or cajole him, would probably welcome the Mission, and speak his mind out freely; he would be far more likely to do it in his own village than in any other place to which he might be called to offer evidence; and his evidence would surely be of high value to the Mission. It is to be feared that, like the Indian peasant, he is often in danger of being forgotten by the politicians—except when they want something from him—but he is actually the most important person in Egypt.

An attempt to assassinate the Prime Minister of Egypt was made on December 15 by a Coptic student. The would-be assassin first threw a bomb, then fired a revolver, but happily both efforts failed, and he was at once arrested. Perhaps the most significant thing about the attempt is the fact that it was made by a co-religionist of the Prime Minister. The Copts have hitherto usually failed to respond to the lure of the agitator, and as a body they will sincerely regret that some of the younger members of their community have broken away from the old tradition and allied themselves to the party of violence and self-seeking. Unfortunately, it is not possible to persuade ourselves that these moral renegades are always misguided; for while Yussuf Wahba Pasha's assailant will probably be found to fall under that category, the editor of the *Egyptian Circular*, who was recently arrested in London, for deportation to Egypt, was a very astute person, in his own fashion.

The Zibar Kurds, whose territory lies north-east of Mosul, have been taught that the consequences of an attack on British forces are likely to be very different from those of an attack on the forces of the Padishah. It will be remembered that a few weeks ago they allowed their natural lawlessness to gain the upper hand, and indulged in outrages and disorders which culminated in the murder of two British Political Officers. The War Office announces that the punitive operations undertaken against them have now been successfully executed, with slight loss to ourselves, and that civil administration has been restored in the district. The troops engaged in these operations comprised four Indian battalions, a mountain battery, and three companies of those Assyrians of whom the Rev. W. Wigram wrote in last week's NEAR EAST. The impassable nature of the country is said to have proved the greatest difficulty that our force had to encounter. Having regard to that factor, even without taking into account the Kurd's qualities as a fighter, the swiftness with which these operations have been conducted to a successful finish is highly creditable to all concerned. It would be too much to hope, however, that this will be the last expedition of the kind that it will be necessary to despatch.

A curious incident is reported from Deir ez-Zor, a town of some importance on the Euphrates, and the starting point of the desert road, by way of Tadmor, to Damascus. On December 11 this place was suddenly raided, quite in the old-fashioned style, by a certain Ramadhan es-Shallash, who was recently appointed by the Arab Government as Kaimakam of Rakka. The bazaar was looted, Government buildings were set on fire, and British and Arab officials, both military and civil, were imprisoned. The India Office in the *communiqué* in which it describes these events adds: "We cannot doubt that this was done without the consent or knowledge of the Arab Government. It appears that Ramadhan was accompanied by [a] representative of Ibrahim Pasha Milli from the Turkish side of the frontier. Complicity of the Rahba frontier authorities is therefore suspected." And the *communiqué* concludes: "Deir ez-Zor having been evacuated by the Turks and occupied by the British last year in accordance with the terms of the Armistice with Turkey, its forcible seizure is a grave offence against the authority of the Peace Conference, and against that of all the nations concerned."

All this is very true, but it might be as easy to exaggerate the importance of the incident as it would be to minimise it. On the one hand, if the effervescent Ramadhan is—as his name suggests—a desert Arab newly appointed to office, it is quite possible that his exploit was the result of *razzia* fever, so to say; and the fact that his party was accompanied by some of the Milli Kurds rather lends support to this theory. In this case, he and his freebooting friends must, of course, be taught that such proceedings are quite out of date in the new world arranged by the Paris Conference; but, that done, the matter may well be allowed to drop. On the other hand, if the outbreak is connected with the unrest and dissatisfaction caused in Syria by the replacing of British troops by French, the trouble may spread until it becomes extremely dangerous. Unfortunately this would seem to be by no means an unlikely alternative. A recent report refers to the growth of a hostile feeling towards the British, for their support of the French, and the withdrawal from the city of all Europeans. Moreover, two British officers, who lately arrived, are reported to have been warned not to enter the city. It looks, therefore, as if Arab feeling has been so thoroughly aroused by the French occupation, and our support of it, that we may expect further trouble.

Dispatches from General Sir Reginald Wingate describing the military operations in the Hejaz between June, 1916, and January of this year have been published this week. The story they tell is now well known, but it repays reading again, and a study of the dispatches makes it clearer than ever that these operations in Western Arabia played a quite important part in bringing about the defeat of the Turk. A point which stands out boldly from the story is the value of the personal factor in all dealings with the Arab. Thus we read: "Moreover, the reaction of Faisal's success upon his brothers has produced, in emulation, a degree of activity in the southern theatre never hitherto attained," and the influence of the British and French officers over their men was extraordinary.

The Sultan of Turkey has granted an interview to an American pressman, and the result makes somewhat pathetic reading. For the Sultan urges that his people are "honest and gifted," and that they "have many merits, and deserve better than is reported of them." Three of these claims at least will be readily conceded by many people who know the Turks; but when his Majesty remarks that "as soon as peace is signed we shall tackle the solution of our internal affairs," it looks as if the fatal habit of procrastination has not yet been overcome by the Turks. It would no doubt be extremely difficult to accomplish much in the way of internal reforms at the present time, but an honest attempt, however humble, in that direction should, and probably would, carry a good deal of weight with the Allied Powers, if only the Turks were to make it; and the present conditions, difficult though they be, are not entirely unfavourable to an endeavour to introduce reforms in one or two directions. The Sultan and his subjects, however, seem to be unable to do anything of the kind so long as the peace terms are kept back. And though their friends may regret the attitude, they cannot in fairness deny that it is a perfectly natural one.

THE WEEK AT HOME.

M. Clemenceau's Visit.

The political event of the week has been the visit of M. Clemenceau and his discussion with Mr. Lloyd George and other members of the Government of foreign, colonial, and economic policy. Considerable reticence has been observed as to the matters under review, but there is no doubt that the immediate cause of the Premiers' Conference was the situation arising out of the American rejection of the treaty—a matter on which Washington advices indicate that the quarrel between President Wilson and Senate is to be pushed to the extreme limit. There is no doubt that the presence of M. Clemenceau in Downing Street has had a steadying influence on Berlin, which is naturally prepared to take advantage of any division of opinion among the Allies; but it is understood that the Conference also discussed Russian policy—on which it came to no new conclusion—as well as those difficult Near and Middle Eastern matters which lie outside the scope of this column.

In addition, the economic position of France was the subject of debate. It is an unfortunate fact that France has not been able to reconstruct her industry with the same speed as England, for obvious reasons; and the continued depreciation of the exchange, which was entirely unexpected at the beginning of the year, renders it impossible for her to export to us in any quantity, and very expensive for her to buy from us. What, if any, steps have been taken to rectify this position in the way of stabilising the exchange is not publicly known, but it is announced that a French loan is to be floated in London in the near future. The origin of the difficulty appears to lie in the continued postponement of the anticipated American help for France.

M. Clemenceau has evidently not lost his war-time popularity in England, for he was more cordially received by the crowd than by the climate, which has been unusually depressing even for December. But his visit was emphatically one of business, not of pleasure or triumphal processions or popular receptions.

Parliament.

The Government has been uniformly unfortunate in its dealings with the House of Commons during the past few days. The Bill which was to limit the profits of the coalowners was hurriedly withdrawn, after a very damaging debate in which the Labour Party for once really distinguished itself. The Electricity Bill has had its backbone taken out by the dropping of its compulsory powers; the Home Rule Bill for Ireland, like the Anti-Dumping Bill, has been postponed till after Christmas. On the Home Rule policy, indeed, Mr. Lloyd George promises to make a full statement before the House rises; it is, in fact, long overdue. But the prospects that the Bill, whose main outlines are already fairly well known, will settle the Irish problem are very remote.

The present House, however, is apathetic over the Irish question, and it must be admitted that the British public shares its lassitude. Both have been cajoled, and bullied, and urged, and entreated to find a way out, and both would willingly accept it if the Irish could find a solution themselves. The fact that they cannot, and apparently will not, accept any other arrangement, combined with the memory of the Easter Rebellion and other episodes of the war, has had an adverse effect on British opinion, which is also not very favourably impressed by the activities of the Sinn Feiners in America and the floatings of Irish Republican loans. However, it is evident that things can hardly go on indefinitely as they are, for crime and outrage seem to be getting worse, and it is no longer possible to attribute this, as was the case thirty years ago, to poverty. Even in the legendary days of her kings, Ireland was never so prosperous as at this moment.

A Labour Cabinet?

The Labour Party are taking up the challenge recently thrown down to them by Mr. Winston Churchill and others, who expressed a doubt if they would be able to form a Government if called upon. The problem has become one of practical politics since the break-up of the old Liberal Party during the autumn, for Labour is now the only alternative to the Coalition. Mr. Thomas states that Labour is not only ready to form a Cabinet, but to govern the country as best it can, and that, too, with no exclusive eye to the interests of any particular class. The last remark shows true political capacity. Nobody, of course, doubts that Labour could form a Cabinet, and would do its best; what is doubtful is whether it would get a majority in the country, and whether its present leaders are big enough for the task. On this matter the best friends of Labour believe that they are more likely to be successful in ten years' time than at present; and it must be admitted that, whatever the politicians think and the newspapers say, the general sentiment of the country is against an election in 1920. If other proof were needed, the smallness of the polls at recent by-elections should be sufficient to convince the perfervid pro-electioneers; and, indeed, it is probable that any election would merely restore the present Government to power by a somewhat reduced majority. That is not exactly what Labour wants, for small majorities often last longer than large ones, owing to the sense of discipline and keenness engendered.

International Sport.

A challenge has been sent by Oxford and Cambridge Universities to Yale and Harvard for a joint-track team from the two American colleges to race a similar British team. The challenge has, of course, been accepted at once, and the race will probably take place in mid-July, 1920. It will be the fifth of a series which was interrupted by the war; and the fact that each side has two victories to its credit will give an added zest to the contest.

It may be anticipated that challenges will shortly be exchanged for an international rowing match of a somewhat similar character.

Distributors and Wages.

The strike at the Army and Navy Stores has had its inevitable sequel, and applications for recognition of the distributors' trades unions and increases of pay are being made by the employees of most of the great shops. In many cases employers have fully recognised their responsibilities in the past, and the scale of payment has often been higher than in the small retail shops; but there are, of course, exceptions, and use is being made of these exceptions to brand the whole class of employers in the distributing trades as soulless sweaters. A long period of unrest seems inevitable in this department of industry, with the prospect of occasional strikes, but it is by no means certain that public opinion will be with the agitator and strikers indefinitely. The Army and Navy Stores' affair was recognised everywhere as an exceptional case.

So far as independent economists have studied the general question, it seems that the producer gets less

and the distributor more than his share of profit. In some cases, no doubt, the distributor increased his already large profits by underpaying his staff, with the exception of the buyers; but it must be remembered that the bulk of the staff required little specialised knowledge, had no real responsibility, and could consequently be replaced with ease. That is certainly no reason for sweating people, or giving bad conditions of service; but it is a very cogent reason against increasing wages beyond a certain level. The skilled worker, and the worker whose judgment is sound enough to secure him responsibility, will always obtain higher money than the ruck of general assistants.

A New Shipbuilding Centre.

The war woke many an old English port from the contented slumber of centuries to sudden activity. Most of these settled down to sleep again soon after the Armistice, but two at least have determined to "seek not yet repose." Falmouth profited by the practical closing of Plymouth to commerce for five years, and the old Cornish town found its magnificent harbours still capable of dealing with much of the Atlantic traffic of modern days; Poole appears to be still more ambitious, for it intends to build ships as well as sail them in future.

The Dorset port was practically ruined years ago by its narrow entrance and its difficult channels, and the greater enterprise of Southampton left Poole no longer a centre for business, but a kind of annexe of Bournemouth, the home of retired people who wanted quietude, and a centre for trippers intent on seeing the Hardy country. (Poole becomes Havenpool in the Wessex novels, and Egdon Heath lies at its back door.) But during the war even Poole realised that there was such a thing as being alive on this planet, and that there is more active work to be done than catering for tourists. It became a distributing centre for goods en route to France, more vessels entered its placid waters in a week than had previously sailed up the tideway in a year, and Poole seems to have enjoyed the novelty. Whether it will now be able to compete with the great Northern shipbuilding centres on ordinary commercial lines remains to be seen, but at least Dorset means to do its best to live up to its new reputation for ambition.

Rural Changes.

Changes of this kind are not confined to old seaports; they meet the eye in many an unsuspected village. A quiet hamlet in Kent, which regarded a one-horse omnibus as a modernist innovation a few years ago and frankly distrusted the seven-miles distant South-Eastern Railway as a dangerous concession to the craze for speed before the war, is now the near neighbour of an enormous aerodrome, and the inhabitants of its rose-clad cottages are getting accustomed to the motor-bus, the motor-lorry, and the aeroplane. Ruskin would have deplored the change, and if Tennyson had been alive he would probably have written, not of "new men, strange faces, other minds," but of "new motors, strange Fiats, other mud"—for the lorries have broken down old country roads not built for such traffic, and the dust on a dry day and the mud after a week's rain must be seen—unfortunately it is sometimes tasted—to be believed. But the villagers, particularly the young women, seem to like the revolution because it brings life to their doors; and both squire and parson assure me that the revolution in transport has done something to check emigration to the towns, and to allay some of that rather sullen discontent which at times resulted from the dreary monotony of village life.

Catastrophic Prophecies.

There has been an extraordinary crop of predictions recently of the approaching end of the world, probably as an aftermath of the theory that the war was in fact Armageddon. Several of these have been worked out in some detail, and with a pseudo-scientific show of learning; the most elaborate prophecy fixed the time and hour of the catastrophe as the afternoon of December 17, on account of a supposed juxtaposition of the planets of our solar system on a single line being presumed to exert too heavy a pull on the sun. As it always happens in these cases, the facts are all wrong, so one can disregard both the theory and its consequence; but repeated failure does not seem to daunt the prophets or even appreciably to reduce their very small band of followers. It is on record that one man sold his business and parted with his home a year ago on account of a similar prediction, but such extreme cases are probably excessively rare in these sceptical days.

The Week's Books.

There is always a public for autobiography, and the latest book of reminiscences—Sir David Blair's "Medley of Memories"—is certain of a large sale. The author is a Benedictine monk, but that has not prevented him from enjoying life, and accumulating a fund of good stories. One of his best concerns Mr. Gladstone.

The great statesman, almost in the last year of his life, happened to meet an old Etonian, and with a keen memory of his former school, he asked whether the custom of "booing" the headmaster on certain occasions still existed. He was told that it had completely died out. "Sir," said Gladstone—and he emphasised his protest by hitting the table with his fist until the glasses rang—"it is a thousand pities. It was the national privilege of disagreeing with those in authority." The saying was entirely characteristic of Mr. Gladstone's later life.

Another book, "The Erotic Motive in Literature," by Mr. Albert Mordell, is an attempt to illustrate the Freudian psychoanalysis by an examination of English literature; it deals with the subliminal and subconscious selves of Shakespeare, Swinburne, and many other authors. It is an interesting but by no means conclusive attempt to discuss the mystery of genius from a new angle. One would imagine that this kind of book was caviare to the general, but a cheap reprint of the late Mr. Myers' classic work on "Human Personality" seems to show that we are all psychical researchers nowadays. These things run in cycles; for the moment sex is out of date, and souls are all the fashion.

Those whose tastes run on more normal lines may prefer Mr. Charles Whibley's "Literary Studies," an interpretation both sound and brilliant of the great seventeenth and eighteenth century writers; or Dean Inge's "Outspoken Essays," in which one of the most thoughtful clerics of the day discusses modern religious tendencies.

A beautiful collected and uniform edition of Kipling's "Poems," scattered through various magazines and volumes during the past thirty years, follows rather curiously in the wake of Thomas Hardy's "Collected Poems." No two writers are more utterly different in taste, texture, and outlook, and it is a queer coincidence which brings them side by side on the bookseller's shelf in the same week. It is very doubtful whether anybody save the professional critic will buy both authors.

On the mere matter of sales, which is admittedly not the best test of literary value, a typical bookseller assures me that Kipling as a whole sells rather less in peace than in war, Hardy remains serenely unaffected either by peace or war, and that the only author of the front rank who is really losing his grip on the public is George Meredith, the demand for whom has fallen off rather noticeably of late. Probably Meredith's style is now, as ever, the real stumbling-block.

OCELLUS.

THE TOMBS OF THE KINGS AT THEBES

At the rooms of the Royal Society, Burlington House, Professor E. Newberry gave a lecture, on December 12, on behalf of the Egypt Exploration Fund. His subject was "The Tombs of the Kings at Thebes." At the outset the lecturer briefly outlined the history of Thebes, and described the Royal Necropolis and the two kinds of royal tombs that have been found in it: the pyramid tomb and the corridor tomb cut in the rock. He then told his audience what is known about the plundering of the tombs in ancient times. The wealth of gold and silver which they contained led to systematic looting.

The lecturer described some of the wonderful "finds" in the tombs of the kings at Thebes of the last twenty-five years, with all of which he has been associated. A very interesting series of photographs of objects found in these tombs was shown on the screen. These photographs included a perfect chariot, with leather tyres to the wheels; several chairs, with rush-bottomed seats and very beautifully carved arms and backs; a bedstead, a toilet table and jewel casket, a king's leather gauntlet, and a great variety of other objects. One of the most remarkable things found was a piece of woven tapestry bearing the name of Amenhotep II., and having a diapered pattern of lotus and papyrus flowers worked in it.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 2.

Lord Allenby in Syria.

This week Lord Allenby has paid a flying visit to Syria. He left Cairo on Wednesday morning by special train for Alexandria, where he embarked on a cruiser for Beyrout, and he was back at the Residency on Friday at noon. At Beyrout he met General Gouraud, with whom he spent two or three hours. From unofficial travellers who have just returned, I understand that the situation in Syria and Palestine has much improved, and that, while there is still some excitement in Damascus, the relations between the French and the Arabs are very much better than they were a month or so ago.

The Political Situation.

The political situation in Egypt continues outwardly to improve. Whatever intrigues may be going on under the surface, and however active the political agitators may still be, the fact remains that demonstrations have ceased, and that, despite the arrest and segregation of political leaders and agitators, including two prominent Azhar Sheikhs, there has, for some time now, been nothing to disturb public order. Whether the political agitators are reserving themselves for the arrival of the Milner Mission it is difficult to say; opinions differ very much on the point, but at the same time there is a general feeling that the show of firmness on the part of the British authorities, since Lord Allenby's return, has materially diminished the fear of any organised outbreak, and that even if demonstrations are attempted they will be neither whole-hearted nor widespread. The opinion is, indeed, gaining ground that, although a boycott may be attempted, it will fail, and that the Milner Mission—which, it is understood, will be prepared to receive and listen to representative Egyptians, no matter what their opinions may be, and will not confine its inquiries to Cairo and Alexandria, but will move about the country—will find its time fully occupied in taking the evidence of the witnesses ready to come before it.

The New Cabinet.

The declaration made by Lord Curzon in the House of Lords, which has brought the Parliamentary recital of events up to date, is a very welcome contribution to the series of official declarations. With the sole exception that it assigns the cause of the troubles erroneously to economic conditions, it states the position in this country clearly and fairly. While it has quite naturally not been at all to the taste of the more obstinate element amongst the young Egyptians, it is recognised by the Moderates as calculated to strengthen their own position and that of the new Cabinet.

The latter is still the subject of acute hostility on the part of the Extremists, and attacks continue to be made on it *en bloc*, and also on the Ministers individually. During the past few days it has been repeatedly called upon to announce its programme, and deputations have visited the Prime Minister in order to ask him for a statement of his policy. But Wahba Pasha is not the sort of man to be caught. Unlike Rushdi Pasha, who allowed himself to be brow-beaten by students and schoolboys, or Said Pasha, who, despite his astuteness, fell into the trap laid for him last October, Wahba Pasha realises that interviews and declarations of this nature can serve no useful purpose; so he has steadfastly declined to receive deputations or make any declaration whatsoever.

Statements have been made that the new Cabinet accepted office on the promise of certain definite concessions; but it may be taken as certain that no such concessions were made, and that no promises have been given that will in any way alter or modify the declaration of November 15, which remains, and will remain, as the British Government's statement of policy with regard to the future of the country. Having come into office in the present circumstances, there can be no doubt that the new Cabinet has agreed to carry on under the Protectorate with a view to obtaining the most liberal form of self-Government that it is possible to secure from the Protecting Power. Statements of policy on its part are therefore superfluous and only calculated to entangle it in controversial discussions.

The Attacks on British Troops.

The only unsatisfactory feature in the situation is the attacks which are being made with uncomfortable frequency on British officers and soldiers in Cairo. These attacks have been going on for over a fortnight now. At first made in the outlying and less frequented quarters, they have now spread towards the more populous districts. They have in every instance been made after dark and from behind, and the assailants have invariably been able to make good their escape. Inquiry has proved in each case the absence of any private motive, and there is no doubt that these attacks are purely political.

It may be remembered that last spring similar attacks were made on British officers and men, who were followed about until they reached a sufficiently quiet spot, and were then assaulted, and in some cases killed. Everything points, however, to the present series, which has fortunately so far resulted in only one death, being carried out in a much more systematic manner; and whilst the attacks may quite possibly be neither inspired by nor known to the Extremist leaders, they would appear to be the work of a gang of low-class Effendies, who, excited by the happenings of the past few months and what has appeared in the vernacular Press, have taken upon themselves to avenge the imaginary wrongs of their country by shooting at every uniform they come across, always arranging, however, to choose circumstances which would favour their escape.

These attacks have become sufficiently serious for the military authorities to intervene and take special measures to deal with them. In the first place, certain areas where they are most exposed have been declared out of bounds after dusk for British officers and men; secondly, a proclamation has been issued declaring that all permits for the carrying of firearms have been cancelled and must be renewed, and that anyone found in

possession of firearms without a new permit will be liable to be brought before a military court; and, finally, a reward has been offered to anyone who gives information leading to the conviction of anyone who has attempted or intends to attempt the life of any member of the British Forces.

The Situation on the Railways.

The situation on the railways has improved very much, and there are neither signs nor talk of restlessness amongst the men. This result redounds very much to the credit of the general manager and his senior staff, who have spared no personal effort in getting to the bottom of the trouble and removing any real cause for grievance. The scheme of volunteers to take the place of regular workers in the case of a strike has undoubtedly contributed greatly to the attainment of this result. While it may have conduced to decide the weaker men to remain faithful to their employers, it has at the same time shown the agitators behind the movement that any attempt at a general strike would not attain the end they had in view, and that they would do their cause more harm than good by trying conclusions with the railway authorities.

This scheme of volunteer workers has at the same time supplied the country with a guarantee that no matter what may happen in the future the railways will henceforward never be caught unawares. A special section has been created in which complete records are kept up to date of the many thousand volunteers who have offered their services, and where, the lists having been collated and examined by the various departments concerned, a note is kept of the particular work which each volunteer will be called upon to do in the event of an emergency. Whilst effecting the immediate purpose for which it has been created, it will at the same time act as a recruiting agency for a good deal of the unemployed labour which, strange as it may seem, appears to exist at the present moment in the country; and it is with this double object that it has been decided to make this section a permanent addition to the State Railways Administration.

YUGOSLAVIA.

BELGRADE, December 6.

Watching Italy.

Political events in Italy are watched with keen interest in Belgrade. Sensational rumours of a revolution, of the abdication of the King, were received and spread, only to be contradicted. Serbs certainly hope that internal affairs in Italy will cause a change in her chauvinistic policy, and D'Annunzio's proceedings especially are being watched. It is argued that as the Italian Government, out of deference to Paris, has repudiated the poet, the Powers ought to clear him out as the common bandit that he is, if his own Government is incapable of doing so. Serbia's attitude is unprovocative, but she is ready for emergencies. The authorities are having some difficulty in restraining the infuriated Slavonic population of the infested districts, for bands of volunteers are ready, straining at the leash; "if only the Entente would give us the mandate to clear up the business," they say, "we would have D'Annunzio out in a day." Meanwhile, Serbia is blockaded, isolated from the sea, and British goods and private property are detained at Fiume.

CROWE & STEVENS,

Steamship Agents and Commercial Representatives,

PATRAS, PIRÆUS, ATHENS, SALONICA.

The shortage of locomotives is producing a curious and unexpected reaction on foreign politics. M. Kristan, the Socialist Minister, has visited Vienna as a member of the committee which is proceeding to Vienna, Prague, and Berlin to beg, borrow, or buy locomotives, and to arrange for the repair of the hundreds of unserviceable ones which are legacies of the war. The Minister reports from Vienna that the Austrian authorities are willing and able to receive a substantial number for repair, and meanwhile to lend Serbia a fair quantity of serviceable locomotives, if the Belgrade Government will carry out a certain agreement which had been reached but not acted on. Now there is appearing a strong feeling in favour of assisting the Austrian Republic, which is living in very difficult times; for, owing to the food shortage and general discontent, there is a movement in favour of the restoration of the Monarchy, a movement which Yugoslavs very naturally regard with alarm, especially as it seems to be even more pronounced in Budapest. Consequently there is a revulsion of feeling in favour of Vienna, and an inclination to do all they can to assist the Austrians and so support the republican form of government. The Serbs' political instinct is, of course, absolutely right in seeing the enemy not in Vienna nor in the Austrian people, but in the Hapsburgs, who, they had hoped, were by now politically extinct; and the accession of a member of that effete dynasty to the Hungarian throne would be viewed here with dismay. It is feared that the infant Otto will actually be elected King of Hungary, under the regency of the Archduke Joseph, who has shown himself in word and deed to be Serbia's most savage and brutal enemy.

Serbians Disappointed by Paris.

A marked feeling of depression is noticeable among Serbs to-day, due to the treatment that they are receiving at Paris—treatment which they, rightly or wrongly, attribute to the hostile influence of Italy. Events at Fiume, in Montenegro, Dalmatia, and now the attack by Magyar troops on the demarcation line, which has caused loss of life; Roumania's treatment of Serbs left behind at Temesvar, the obnoxious clauses in the Austrian Treaty, which were smoothed over at the last minute; then the crushing financial clauses. Now the Allies have taken away the Pechuj collieries, when there is already a coal famine in the country; and there is also the affair of the Danube steamers, which are being taken from them; and though they will probably finally get just treatment in this respect, they still resent it at the moment. Then they are losing Barania; they see Bulgaria, defeated, released of her war debt, while Serbia herself, victorious, is to be made to pay in full, with interest. Yugoslavia has miles of rocky, indented, inaccessible coast, but no port yet; Fiume is closed to her, and she will probably lose it; Salonika is congested. And the Serbs can assign no other reason than the sinister influence of Italy, who is certainly in sympathy and understanding with the enemies which surround Serbia, Bulgars, Magyars, and now Roumanians, who were previously perfectly friendly.

There is certainly cause for depression, though philosophers may take heart, for the strength of the Serbian people has been her resistance and endurance in defeat. So long as she is surrounded by enemies, Serbia will remain strong and united, but if her frontiers were free from aggression she might sink in the depths of materialism and degenerate in comfort: for the high idealism that is so marked a feature of the national character flourishes best in a soil of adversity.

"Union Day."

On festive days the *Glas Tsrnogorska*, the old Montenegrin official paper, used to appear at Cettigne with a border in the national colours. This pleasing custom obtains, too, in Serbia, but when the *Sluzhbene Novine*, the Serbian official gazette, for December 1 appeared, there was something unusual about its appearance, for the order of the colours in the ornamental margin was reversed. Instead of the familiar tricolour, or *triboiwik*, of red, white, and blue, with the red outside, the order is now reversed, with the blue on the outside;

Digitized by Google

these are the colours, not of Serbia, but of Yugoslavia, the kingdom of the Serbs, Croats, and Slovenes, and December 1 was the anniversary of the proclamation of union. The past six weeks have been so crowded with anniversaries of the tremendous events of that wonderful month last year that one has felt rather bewildered; but little official notice was taken; even the expulsion of the enemy was but feebly celebrated. Now we see the reason, for December 1, Union Day, is to be the great day, and by Royal Proclamation it is for ever to be held as a national holiday. This year the morning broke bright and sunny, and all looked forward to a warm, springlike day: but unfortunately the heat of the previous few days had evoked a thick, damp mist from the Save and the Danube, which came rolling over about nine o'clock, making the air damp and chilly. But the town was gaily decorated with flags, and a military parade was held in the morning, when the recruits of the gallant Moravska Division marched through the town. They are a fine body of lads, well set-up and sturdy, looking worthy to carry on the splendid tradition of this division established during the past stormy seven years.

An Unexpected Attack.

On November 29, at seven o'clock in the morning, a detachment of Hungarian troops, with machine-guns, crossed the demarcation line without warning, near Sabolakasha, and advanced to Dendva. A party of Serbian recruits who were in the town opposed this unprovoked attack, and drove the Magyars off, but the enemy took with them as prisoners a Captain Gregorievijitch and seven gendarmes. Later advices show that the Hungarian detachment was about a thousand strong, and that they attacked at three points. As the onslaught was totally unexpected, they succeeded in occupying two or three villages before they were driven out, at the cost of ten killed, many wounded, and some prisoners. The Serbian population in Prekomurje is in a great state of anxiety, especially as it appears that Paris is going to award this district to Hungary. The political motive of the attack is obvious—that is, an attempt to rouse the natives to a show of dissatisfaction with the Yugoslav authorities: it was apparently timed to coincide with aggressive action on the part of D'Annunzio in Dalmatia. The Serbian Government has lodged a most vigorous protest, and has stopped sending food supplies into Hungary.

The discontent of the Serbs is increased by the repeated request of Lieut.-Col. Moore, who arrived with four other Allied officers at Pechuj and called upon the Serbian Commandant, Lieut.-Col. Djoka Georgevitch, to evacuate the Barania. The Colonel made the only possible reply—that he was unable to evacuate without orders from his own authorities.

It is reported from Bakar, the Yugoslav frontier near Fiume, that the Serbian General Militch has declared that he does not recognise Admiral Millo at Zadar as representing the Italian authorities, since he has been repudiated by his own Government, but as the representative of D'Annunzio, and expressed the hope that the Italian *stationnaire* Puglia will leave Splijet. The Italian officers declared that they did not recognise the orders of the Serbians, but the vessel is reported to have left the harbour.

TURKEY.

CONSTANTINOPLE, December 1.

The Caucasian Republics.

For some little time interest has been growing with regard to the unrecognised republics of the Caucasus, and recent events in connection with the volunteer army's Daghestan expedition have caused considerable consternation among the partisans of the independence of Georgia and Azerbaijan, as well as among certain Turkish circles which are still obsessed by the pan-Turanian idea. The Moslems of Daghestan gave the Russians considerable trouble in the middle of last century, and have never really been content under Muscovite dominion, which deprived the mountaineers of extensive pastures in favour of the Terek Cossacks. Thus, when the Bolshevist revolution demoralised the Cossacks in 1918, the province of Daghestan was declared a republic, and the Cossacks were induced to restore the lands which had been attributed to them. It seems that a further turn of Fortune's wheel has made the Cossacks reluctant to abide by their agreement; and perhaps there may be a repetition of the long guerilla warfare which the Russians had to wage over sixty years ago before they conquered the province.

Of the three other Caucasian republics Georgia is in many respects the most interesting. Although only the northern frontier is in any way defined, Georgia consists roughly of the Russian provinces of Tiflis and Kutais, but also claims Batum, which the Germans had attributed to Turkey in 1918. The Georgians possess a distinct language, and boast of a history that goes back a couple of thousand years or more. They are Christians of the Greek rite, but proclaimed their emancipation from the Russian Church at the same time as they proclaimed their political independence. The whole nation is decidedly anti-Bolshevist, but is very doubtful about Denikin, who is thought to threaten its new-born independence. It is for this reason that the Georgians, although no friends of the Turks, are not unwilling to co-operate both with the Turko-Tatars of Azerbaijan and the Turkish Nationalists. Between them and the Armenians there is no love lost, partly on account of Armenian territorial claims and partly because the Armenian is a very astute business man who controls a considerable proportion of Georgian commerce.

The Republic of Azerbaijan consists roughly of the Russian provinces of Elizabetpol and Baku. THE NEAR EAST of November 7 quotes an important English newspaper which speaks of the Republic of Azerbaijan as including the Persian province of the same name. While doubtless there may be aspirations in that direction, this is an error, though a not uncommon one. Whatever the Azerbaijan Republic may hope for in the future, at present there is not much question of trying to incorporate the Persian province within its frontiers. That would be a morsel which, in view of the Anglo-Persian Agreement, might cause a fatal attack of indigestion. The Azerbaijan Republic is more prudently concerning itself with nothing more than the attempt to obtain recognition of its independence and the inclusion of the Baku oilfield within its border. To this end, although most of the population is of the Shiah sect, and therefore not particularly well-disposed to the

Turks, who are Sunnis, the republic is more than willing to co-operate with the Turks, especially now that their fellow Moslems in Daghestan have had to try conclusions with the Volunteer Army. A delegate of the republic, Yussuf Bey Veziroff, has been in Constantinople for some time, and is said to have established cordial relations with the Turkish Government. Meanwhile, according to the announcements of the local Press, Enver is reported to be in the Azerbaijan, an announcement which *donne furieusement à penser*.

The Position of the Armenians.

The Armenian Republic consists at present of the provinces of Erivan and Kars, and is in a very different position from that of the other Caucasian republics, for it is practically certain that its independence will be guaranteed by one or all of the Great Powers, and there is therefore little to fear from Denikin or the advocates of the reconstitution of pre-war Russia. The President of the Republic, M. Hadissian, was a wealthy Tiflis merchant who abandoned his business interests for the sake of his country. The Armenians are all more or less of Socialist opinions, and there exist two Armenian committees that are said to be tainted with terrorist ideas. Of these the Hinchak party is said to be more extreme than the Dashnak, but it is not easy to obtain precise information in this respect. In any case, the two parties have very great influence upon the Government of the republic; but in view of the commercial instincts of the Armenians and their sound common sense, there can be very little fear of Bolshevist tendencies. There is a good deal of speculation as to the eventual extent of Armenia, and while the claims of Boghos Nubar Pasha may be somewhat extravagant, there seems to be very little doubt that a considerable slice of the Turkish provinces of Van and Bitlis at least will be attributed to the future Armenian Republic. The Turks, of course, swear that they will die to the last man before they will tolerate any such thing; but that is a tale that has been heard before, and, as was pointed out in my last letter, even the Nationalist swashbucklers may have to pipe to another tune next spring.

The Nationalists Attacked.

With regard to the Nationalists, public interest has been aroused by the exploits of one Ahmed Anzavur, a Circassian ex-Major of Gendarmerie, who has been giving the Nationalists a very bad time lately in the Panderma region. He is said to have over a thousand followers, and to have seriously damaged the Nationalist cause. To-day reports of his death which were published yesterday are contradicted, and it really looks as if Mustapha Kemal has found an extremely dangerous opponent.

The Elections.

The elections pursue their weary way, and some indication of the sentiments of the population may be obtained from the announcement that, so far as can be ascertained at present, in the Constantinople area only 7 per cent. of the electorate took the trouble to exercise their privilege of the franchise. The Government announces that the Commissions recently sent to Anatolia to report on the elections report in their dispatches that everything is as it should be, and that there is perfect freedom and tranquillity. One local paper, in a paragraph that must have escaped the censor, remarked that either the Government is wasting time in useless commissions or there is something in the atmosphere of Anatolia that causes "political myopia," which is really a wonderfully apt description of a defect from which all Turkish politicians seem to suffer.

Smyrna: Speculations.

There is a good deal of speculation as to why the report of the Commission of Enquiry into the Smyrna affair has not been published, but the general opinion among the Turks is that this is rather a good sign for Turkey—and there may be something in the idea.

Meanwhile, there is a lull in the general situation, but it is expected that the arrival of Sabah ed Din Bey will stir things up somewhat. *Bakallem!* as the Turks are fond of saying—we shall see.

CYPRUS.

The Pedias Torrent. December 6.

Some anxiety is felt in some quarters of Nicosia in connection with the river Pedias, which skirts the city. This torrent (for "rivers" in Cyprus are but mountain torrents, which nearly all run dry in the summer) comes down at rare intervals with phenomenal volume and force. Some damage was recently caused by one of the floods, and a project has been under consideration for protective work. The Government is now being urged to put their plan into execution without delay, lest a worse evil befall. The Government, on the other hand, is only prepared to defray half the cost, leaving the other to the owner of a mill, whose property is affected. These floods cause frequent damage in the island. They have a way of carrying away bridges and private properties, including gardened terraces. At Limassol some years ago two exceptionally high floods, bringing water simultaneously from several watersheds, overwhelmed the town and caused serious damage and some loss of life. It became necessary to divert the river, across which the town had grown up and formed a barrier, and to construct catch-water drains and other work. The cost, which was heavy, was divided between the Government and the Municipality.

Jewish Refugees.

The Jews who sought safety in Cyprus during war troubles, and who have been settled at Larnaca, are now being sent back to Palestine. They will be taken charge of by Mr. Bowring, Receiver-General, who is expected to be absent for about a month. Major Bayly is to act until his return, while Mr. Northcote will act as Commissioner of Nicosia.

PALESTINE.

JERUSALEM, November 26.

News from Damascus and Beyrout continues to be bad. Reports from Damascus state that the people there, as well as those of Homs, Hama, and Aleppo have resolved to fight for their independence. In Beyrout district several cases of friction between the people and the French Army have been reported.

The following is an incident reported in the *Urdun*, an Arabic paper of Damascus, which throws some light on the events that are happening there. The *Urdun* states that Major Wadman, the British *liaison* officer in Deraa (Hejaz Railway junction) encountered some Arab sheikhs, who were meeting for a conference. He advised them to keep quiet, as the British forces were leaving the country, and informed them that they would be held responsible for any disturbances, adding: "You must know that we have three brigades camping on the boundary, and that we have plenty of aeroplanes and that if you try to cause any opposition and disturbance you will be doomed to destruction."

The sheikhs took their swords from their scabbards and said: "We are not afraid of your soldiers, and aeroplanes; we have decided to ask and to stand for our freedom, and seek nothing but independence."

December 2.

Those who are interested in Palestine exploration and the preservation of monuments will be glad to hear of the active steps that are being taken in preparing the ground for further research. Areas have been assigned to four inspectors, with headquarters at Jerusalem, Beyrout, Aleppo, and Adana. They will collect archæological information of value to the institutions of the Allied Powers "and to the future Government of the country," prevent illicit excavations and trafficking in objects of antiquity, and preserve historical monuments. They will furnish monthly reports, and will apply to the Chief Administrator for any assistance they may require. Although they will not themselves undertake work of excavation, they may submit schemes for the eventual execution of such work, as they may consider desirable. The Inspectors for Jerusalem and Aleppo are Captain Mackay and Captain Creswell. Lieut. Du Boisson takes charge of area 4, Beyrout, and Lieut. Bross area 3, Adana.

As regards Public Health, much is being done in O.E.T.A. (South). The inspection of dispensaries by travelling officers is important. Prophylatic measures, already adopted, will reduce the prevalence of malarial fever. The application, wherever possible, of a regular anti-mosquito campaign on the lines laid down by Sir Ronald Ross would no doubt be of the greatest value in swampy lands and wherever stagnant water breeds the pest. In Palestine much disease originates in water stored in cisterns, both public and private.

There have been a good many cases of rabies, and it would be well to carry out stringent regulations respecting dogs, both ownerless and owned. It is, by the way, an encouraging fact that municipalities are becoming more self-reliant as well as efficient. Little financial aid will be required from the Government.

Digitized by Google

MUSICAL NOTES.

I have remarked before in this column on the generosity of the British public, though this certainly applies more to new artists than to new music. Any new artist, provided that he be not outrageously unorthodox, is certain of a welcome. But in the case of M. Ivan Philippowsky, who gave his first pianoforte recital at the Wigmore Hall on December 15, the welcome was more than warm. There is no doubt that his success was in great part deserved; he is a thoroughly competent technician, and his sense of interpretation a fairly keen one. It is easy, and perhaps not very profitable, to point out the faults of this young performer: the incomplete balance of right and left hand, a prolonged use of the right pedal, a touch far too hard in melodic outline, and an exaggerated cultivation of *rubato*. One or more of these faults was present in his playing of Scarlatti, Schumann, and Chopin; but in the Scriabin pieces with which he closed his programme he was excellent. A wide reputation is within M. Philippowsky's reach; he is a player who will certainly develop; and I think that in a few years' time he will have obtained a leading position among pianists.

Though there is any number of competent British pianists, those who can be placed in the front rank are few. In the last few days I have heard two, one of whom appears to be achieving fame, and the other an artist to whom fame has already come—Mr. Anderson Tyrer and Mr. William Murdoch. Mr. Anderson Tyrer was playing at the Queen's Hall on December 10 with the London Symphony Orchestra, and, frankly, I was disappointed with him. He has descended on London from the North of England with a great reputation, and I hoped to find a master. The concertos he chose were Beethoven's "Emperor" and Tchaikowsky's first (B flat minor). These two brought out both his strong and weak points; he has a beautifully delicate touch, and indulges in uncommon refinement of tone. Indeed, in soft, melodic passages he excels, both in technique and in interpretation. But in loud passages, which in addition to vigour and emphasis require clarity above all, he certainly does not succeed. This deficiency was especially manifest in the Tchaikowsky concerto, in which, despite Mr. Hamilton Harty's judicious conducting, the orchestra sometimes swamped the piano. A few days before, I had heard Mr. Leonard Borwick in the "Emperor" concerto, and the superiority of his performance to Mr. Anderson Tyrer's was very evident. There is more than one way of playing "grand" music; but I doubt if Mr. Anderson Tyrer yet possesses any of them. In his sea every wave is a ripple, and all his shores are sand. He tries to clean out his pipe with the soft touch of a feather, when it requires the hard strength of a penknife. But there is no reason why he should not add virility to tenderness, and I very much hope that he will do so.

Far different was the impression which Mr. William Murdoch made in his recital at the Wigmore Hall on December 13. His playing is very intellectual, and he is not capable of, or perhaps does not choose to indulge in, those very delicate *nuances* which are so prominent in Mr. Anderson Tyrer's restrained playing. He is equally good in Bach as in Ravel; he can play with tremendously impassioned vigour, and also with sparkling lightness. His interpretation of Bach's Chromatic Fantasie and Fugue was magnificent, the contrapuntal work being brought out with irreproachable clarity. Rather unfashionably he included some Greig in his programme (he has just returned from a Scandinavian tour), and this minor romanticism was extremely popular with an audience which, incidentally, was far too small. The last part of his performance was made up of Debussy, Ravel, and de Severac, and to this modern music he applied the intellectual method with complete success. His interpretation of Ravel's "Pavane" (especially) and of the now popular "Jeux d'Eau" was amazingly good. I do not suppose that Mr. Murdoch would excel in the more emotional music (like Chopin's); his touch is scarcely a warm one, and sometimes, especially in trills, mordents, and so on, it is, in spite of its splendid clarity, a little hard; but in his own field he is a perfect artist.

The London Symphony Orchestra is a very popular orchestra, and therefore especially prone to both good and bad playing, according to its conductor. Under Mr. Hamilton Harty on December 10 it played well, though excellence was only revealed in flashes. It was at its best in Mr. Hamilton Harty's "With the Wild Geese," making this intelligible realism quite pleasing, and in Duka's "L'Apprenti Sorcier," in which, however, it appeared to greet the jokes with rather a tired smile.

The taste for chamber music has greatly increased of recent years, and it cannot be said that a sufficient number of chamber concerts are given in this country—at any rate, in London. However, the Harmonic Trio (violin, Miss Dorothea Walenn; 'cello, Miss Edith Vance; and piano, Miss Olive Byrne) are doing something in the right direction. At the first of their three concerts at the Æolian Hall (December 12) they played Brahms' Trio in B (Op. 8), a "Suite sur des chants Bretons," by Jean Huré, and a Trio (No. 2) by Ireland. It was a finished performance, and they appear to have overcome the chief difficulty in this kind of music—the preservation of individuality in the necessary sacrifice to balance. If the piano was a little too prominent in the Brahms, this fault was completely absent from the Breton songs, in which they gave their best performance. As yet their work possesses much more soundness than inspiration; but as their technique is quite adequate for a deeper interpretation I think they will improve very considerably.

ANDANTE.

CORRESPONDENCE.

"AN APPEAL TO GREAT BRITAIN."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—For the last two years the world has been ringing with the discussion of President Wilson's Fourteen Points: yet the world seems to be still a long way from the realisation of the President's ideals.

Now, Mr. M. A. Hamud comes forward from Calicut, expounding his ten points, with regard to the solution of the Turkish problem.

In your last issue, Mr. Hamud makes an attempt to suggest a policy to the British Government. Among other proposals, he advocates granting autonomy to Armenia under the suzerainty of the Sultan of Turkey. It is difficult to see why Mr. Hamud and the other Indians who share his views should be so much concerned about the status of the future Armenia. We Armenians, who are vitally interested in the political settlement of our country, have not dared to suggest a policy to the British Government; still less should we ever have thought of suggesting a policy to any other Government. One would have expected that those who are anxious about self-government for themselves would champion the cause of other peoples who are seeking national self-realisation.

It is a very poor argument to exculpate the Turkish nation from responsibility for the greatest crime in history by attributing this crime to "Enver and other German hirelings."—Yours, etc.,

December 15, 1919. A. SAFRASTIAN.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS

The Near and Middle East. December 15.

In answer to Major Ormsby-Gore, who asked a question regarding the information of a separate department to deal with the supervision of British administration in the Near and Middle East, Mr. LLOYD GEORGE said: It is impossible to take any steps for future administration of countries in the Near and Middle East which are already, or are likely to be, placed under the control of Great Britain until the Treaty of Peace with Turkey has been concluded and the mandates assigned.

Major ORMSBY-GORE: Is it true that Mesopotamia is to be transferred from the India Office to the Foreign Office?

Mr. LLOYD GEORGE: It is not true.

Topics in Parliament.

The subjoined headings are those given in the official report:—

MESOPOTAMIA (WIRELESS OPERATORS). MESOPOTAMIA (REQUISITIONED DREDGERS). (December 9.)

INDIA: Japanese Exports. TALAAT PASHA. ALBANIA. MALTA. GRAIN (BLACK SEA PORTS). (December 10.)

PEACE TREATY: Serbia.—Albania. EGYPT. TURKEY (PEACE TREATY). ANATOLIA. MESOPOTAMIA. (December 11.)

EGYPT (SAYED FUAD EL KHOLI). (December 12.)

ROUMANIA. TURKEY AND PEACE TERMS. MONTENEGRO. GERMAN PRISONERS. INDIA AND MALTA. "EGYPTIAN CIRCULAR" (EDITOR'S ARREST). (December 15.)

TO READERS AND CONTRIBUTORS.

Owing to the Christmas Holidays, THE NEAR EAST will next week be published on Wednesday morning. Matter for publication should reach the Editor by Monday noon at latest.

NEAR EAST BOOKSHELF.

THE UNIVERSAL LORE.*

All the world loves a fairy tale, though some folk are too superior or too busy to admit it. These tales, which were written down for the first time in the original Kermani and Bakhtiari, will delight not only the children, for whom they are mainly intended, but the most fusty old "grown-ups" as well. They are excellently produced, and are illustrated with a marked sense of humour by Miss Hilda Roberts. Of the two sets of tales we like best those from the Kermani, which all begin with "Once upon a time there was a time when there was no one but God," and all end with "And now my story has come to an end, but the sparrow never got home." These seem particularly delicious to us in their love of sure inconsequence. They are of a land where

The maidens are princesses, with glorious shining tresses,
And their faces, like the moon, are pure and bright;
And though the day is thund'ry, there is luck for all and sundry,
And whatever seems all wrong is coming right.

The illustrations deserve a separate word. There is no Oriental subtlety, nor any attempt at rich colour in them, but they have a direct simplicity and a vivid sense of fun which will certainly appeal to children. In short, the tales and their illustrations are such that no parent, if happiness in watching the result of a gift count at all, should fail at once to give this book to his children. No present could be more seasonable, and, we may add (having in mind these days when the mastery of children over their parents is so evident), more successful.

FASCINATING JANN.†

This is a book which should certainly make a strong appeal to those "wonder-loving boys and girls" for whom it is primarily intended. The stories are full of marvels and adventures, and they are told with a simple directness that is refreshing. "Grown-ups," too, who love the East for its colour, its atmosphere, and its readiness to believe in that which the foolish "superior person" is fond of referring to as "nonsense," will find the stories pleasant reading, with a true Oriental flavour. Willy Pogany's illustrations add to the attractiveness of the book, though he sometimes makes us feel that *his* Orient has been borrowing ideas from Paris or Vienna; and the publishers have done their part admirably, giving us good paper and particularly pleasant type.

"WAY OF HEALING."‡

Miss Estelle Blyth is an original writer of so much charm that at first sight one is inclined to regret what looks like a waste of her time in the compilation of such a book as this. But examination shows that, although there is no original matter in the little volume, it is nevertheless stamped with an individuality that is rare in an anthology. It is, in fact, an excellent bit of workmanship. "Those who know suffering," for whom it is intended, will find it friendly and helpful in just the right way, and will feel correspondingly grateful to Miss Blyth. It is well printed and very attractively got up; and while small enough to do duty in place of a Christmas card, is valuable enough as a gift for any discriminating person.

INNUMERABLE EDITIONS §

The story of a girl without a speed-limit. The heroine says very early in the book: "God made me a woman. Why, only He knows." She dances, rides, shoots with a revolver, smokes cigarettes like no one else in the world; and she is moved by an Arab singing Amy Woodford-Finden. This perfect masculine girl knows nothing of love and cares less; her end, therefore, is obvious. She is "kidnapped" (how sweet a euphemism!) by an Arab chieftain, and learns a good deal from this experience, though the precise number of times that misfortune befalls her we have omitted to register. In the first weeks of their co-existence she says to Ahmed, the handsome chieftain: "I hate you, do you understand? I hate you! I hate you!" Afterwards she says to him: "I am not afraid of anything with your arms round me, my desert lover. Ahmed! Monseigneur!" Of course, that is not the whole tale; the Arab, for instance, turns out to be an Englishman, and there is much that will delight concerning pyjamas, kimonos, riding breeches, silk shirts, and all the rest of the essential "features." We therefore predict for the book innumerable editions; in other words, the complete fulfilment of its passionate purpose.

* "Persian Tales." Translated by D. L. R. Lorimer and E. O. Lorimer: With Illustrations by Hilda Roberts. (London: Macmillan and Co., Ltd. 20s. net.)

† "Tales of the Persian Genii." Retold by Frances Jenkins Olcott. Illustrated by Willy Pogany. (London: Harrap and Co. 6s. net.)

‡ "Way of Healing." A little book for those who know suffering." Estelle Blyth. (Cambridge: W. Heffer and Sons. 2s. 6d. net.)

§ "The Sheik." By E. M. Hull. (London: Eveleigh Nash Co. 7s. net.)

A REAL "BOYS' BOOK."*

Lieut.-Colonel Brereton is to boys of this generation what G. A. Henty was to boys of yesterday—and surely no praise could be higher! "With Allenby in Palestine" is a book to win the heart of any boy who loves a good yarn, and it will rank among its author's best: the plot and characterisation alike are good, and the local colour is well done. Englishman and Scotsman, Turk and German play their parts as any self-respecting young Briton would expect them to play them; and the greater story on to which this particular "yarn" is deftly attached by the author is fine enough and, happily, romantic enough, too, to come up to youthful expectations in a way which some phases of the Great War, alas! certainly cannot do. The very book for a present to a boy.

THE GORDON MEMORIAL COLLEGE.

We have received from the Honorary Secretary of the Gordon Memorial College, Khartoum, a copy of the report and accounts of the College for the year 1918. It gives a brief review of the progress made at this excellent institution during the war, showing the satisfactory condition of the college, despite the difficulties experienced in maintaining efficiency. We hope to deal more fully with the report in an early issue.

A Moscow message states that as the left bank of the Ural River in the Iletz region has been cleared of White Guards, the construction of the Uralsk-Iletz railway has been resumed. This line, when completed, will give direct communication between Saratoff and Tashkent.

Lady Inchcape has returned to London from Paris.

The Prince Regent of Serbia has left Paris for Cannes.

Sir S. Dias Bandaranaike, of Ceylon, has arrived in England.

Sir James and Lady Ritchie are leaving to-day for India for three months.

The Emir Faisal will sail from Toulon in the warship Waldeck Rousseau almost immediately.

Mirza Sir Daoud Khan, Persian Consul-General in India, is proceeding to Paris to join the Shah's staff.

A new decoration, the "Military Star of Sultan Fuad," has been instituted as a reward for distinguished services by officers of the Egyptian Army.

General Franchet d'Esperey has arrived at Salonika, and had long conversations with the Greek Commander-in-Chief and the Governor-General of Salonika.

Admiral Sir Ernest Troubridge, Admiral Commanding on the Danube, President of the Inter-Allied Danube Commission, has arrived in England from Budapest.

Dr. Mihailo Gavrilovitch, the newly-appointed Minister of the Kingdom of Serbs, Croats, and Slovenes to the Court of St. James, is due to arrive in London to-day from Paris.

M. Yovanovitch, the former Serbian Minister, was entertained to a farewell dinner on December 15 by the members of the Yugoslav colony. M. Chedo Miyatovitch, a former Serbian Minister, presided.

Rajah Sir Hari Singh of Kashmir was received by the Prince of Wales on December 11. Lieut.-Colonel Sir James Dunlop-Smith, Political Aide-de-Camp to the Secretary of State for India, was present.

King Alexander of Greece has thanked M. Venizelos for his efforts on behalf of the nation, and expressed a desire to confer upon him the Order of Military Virtue, but M. Venizelos declined the honour.

Commander Alfred Stead, R.N.V.R., the Secretary of the Inter-Allied Commission for the Danube, is now demobilised. In January he will be succeeded by Commander de l'Escailles, of the French Navy.

On the occasion of the anniversary of the birthday of the Prophet, General Gouraud, the French High Commissioner to Syria, visited the Omar Mosque at Beyrout. He has since left Syria for a visit to Cilicia.

Under the auspices of the Legation of the Kingdom of Serbs, Croats, and Slovenes, a service was held in the Russian Church, Welbeck Street, on December 15, to commemorate the birthday of the Prince Regent Alexander.

Sir George Roos-Keppel, upon his appointment as a member of the Council of the Secretary of State for India, and Father Nicholai Velimirovitch, Bishop of Chackak, had the honour of being received by His Majesty on December 16.

A solemn service of intercession on behalf of Christians in Russia and Near Eastern countries was held on December 18 in St. Paul's Cathedral. It was also a service of thanksgiving for the liberation and reunion of the Serbian people. The Rt. Rev. Nicholai Velimirovitch preached the sermon.

Sir George Grierson, Ph.D., whose great Indian Linguistic Survey is now nearing completion, has been elected a Correspondent of the Institute of France (*Académie des Inscriptions et Belles Lettres*).

At the Æolian Hall on December 16 a variety concert was given in aid of the Arménian Red Cross and Refugee Fund. The organiser, Mr. H. Papazian, had secured for it more than a dozen artistes, all of whom gave their services voluntarily.

A Constantinople telegram states that on the eve of his departure for England, Major-General Rycroft, Chief of Staff of the Black Sea Army, was decorated by General Franchet d'Esperey with the insignia of Commander of the Legion of Honour.

Sir Henry George Richards, on behalf of the United Provinces of India Special War Fund, has given a donation of £5,000 to the Star and Garter Committee of the British Red Cross Society for providing a special memorial in the new "Star and Garter."

At the meeting of the United Kingdom Branch of the Empire Parliamentary Association on December 15, it was announced that a proposal is under consideration for a visit to India next winter by a delegation of members chosen from the Imperial and Dominions Parliaments.

The Persian Minister has left London for Switzerland, and will be absent for several months. His brother, Mirza Hussein Khan Alaï, ex-Minister of Public Works, accompanied him. During the absence of the Minister, Mirza Abdol Ghaffar Khan Emad-ol-Molk will act as Chargé d'Affaires.

Among the officers who attended the Investiture held by H.M. The King at Buckingham Palace on December 11 was Major Charles A. M. van Millingen, of the Rifle Brigade, elder son of the late Professor Alexander van Millingen, M.A., D.D., the Byzantine archæologist and writer. Major van Millingen received the Military Cross and Bar.

The Government of India, in a telegram delayed in transmission, have asked the Secretary of State to convey to Lady Abrahams their great regret at the loss of Sir Lionel Abrahams, "whose valued advice and experience were for so many years placed ungrudgingly at the disposal of His Majesty's Government for the conduct of India's financial problems."

Our Jerusalem Correspondent writes (November 26):—Major-General Watson, Chief Administrator of O.E.T.A.(S.), has been appointed Inspector-General of Service Troops in India, and has proceeded to England on a short leave. His successor, Major-General Sir Louis Bols, K.C.B., K.C.M.G., D.S.O., formerly Chief of the General Staff of the E.E.F., has arrived and has taken over his duties.

The Great Priory of the Order of the Temple of England and Wales, by command of the Duke of Connaught, the Grand Master, have forwarded to Mr. Evelyn Cecil, Secretary-General of the Order of St. John of Jerusalem in England, the sum of £1,657 13s. 8d., as a contribution to the fund raised for reinstating and endowing the British Ophthalmic Hospital of the Order at Jerusalem, destroyed by the Turks on their evacuating Jerusalem.

It is proposed to raise a Memorial, to the Officers, N.C.O.'s, and men of the 60th London Division, who fell in the Palestine campaign. As Jerusalem was surrendered to the Division, the memorial, in the form of a cenotaph, will be erected there. About £1,200 will be required, and subscriptions may be sent to Lieut.-Colonel H. Streatfeild, D.S.O., 19a, Charles Street, Berkeley Square. The Lord Mayor has sent a donation.

A model of the Palestine Memorial to be erected on the Mount of Olives by the Egyptian Expeditionary Force is on exhibition at McLean's Gallery, 7, Haymarket. The design is that of Mr. W. J. Palmer Jones, of the firm of Messrs. Grant and Palmer Jones, 11, Buckingham Street, Strand. The competition for the best design was open to all ranks of the Egyptian Expeditionary Force, and the designs submitted by Mr. Palmer Jones, who served as an officer in the Egyptian Labour Corps, was accepted by Lord Allenby as the most meritorious. The Memorial Fund Committee have received £10,000, and £5,000 are still required. Subscriptions should be sent to the Palestine Memorial Fund, National Provincial Bank of England, Savoy Court, Strand. All interested in the memorial are invited to inspect the model, which has been made by Mr. H. W. Palliser, sculptor, Hornsey Rise, N.

Mr. Montagu (Secretary of State for India) gave a dinner at the Savoy Hotel on December 15 to Sir Thomas Holderness, in connection with his retirement at the end of the year from the office of Permanent Under-Secretary for India. The dinner was in recognition of nearly half a century of service to India. Among the seventy-seven guests invited to meet Sir Thomas were some who have been his chiefs in India and at home, including Earl Curzon, Viscount Morley, Lord George Hamilton, Mr. Austen Chamberlain, Viscount Sandhurst, Lord Hardinge of Penshurst, Lord Islington, Lord Harris, and Lord Lamington.

APPOINTMENTS, ETC.

M. Sophoulis, Deputy for Samos, a Liberal, has been elected President of the Greek Chamber.

The Secretary of State for India has appointed Mr. William Stantiall to be Secretary in the Public Works Department of the India Office.

At Oxford, on December 11, Mr. Richard McG. Dawkins, Fellow of Emmanuel College, Cambridge, was elected Bywater and Sotheby Professor of Byzantine and Modern Greek.

The King has appointed Mr. William Malcolm Hailey, C.S.I., C.I.E., to be an Ordinary Member of the Executive Council of the Governor-General of India, in succession to Baron Meston of Agra and Dunottar, K.C.S.I., LL.D., V.D.

OBITUARY.

The death occurred on December 1, at Cannanore, Malabar, India, of John Archibald Iver Macpherson, of Sunti Koppa Coorg, formerly of Newcourt, Topsham, Devon, eldest son of the late Surgeon-General Duncan Macpherson, in his seventy-third year.

The death of Sir John Jackson, the famous engineer, is announced. His firm was responsible for the Great Hindieh barrage across the Euphrates, and for many other works which have served to enrich Mesopotamia. Further details will be found elsewhere.

Two friends of Sir Edwin Pears, who knew him well in the interesting old Constantinople days before the war, have sent us the following paragraphs of appreciation of this, in many ways, truly remarkable man:—

"Sir Edwin Pears died at a ripe old age, with the infirmity of failing sight growing upon him, and with some disappointment in his heart, one must believe, that the affairs of the Near East he knew and loved so well were still in such a disturbed and unsatisfactory state. He was on his way, as he hoped, to spend his last days with his family in some healthful and, at the same time, beautiful and peaceful retreat in his native land. That this hope was unfulfilled is one of the saddest thoughts in connection with his passing onward. But, although he was not permitted to reach his home shores, it is a consolation to all his friends that his last sleep is on British soil, or, at least, under the protection of the flag that meant so much to him, and that used to float above his beautiful summer home at Prinkipo on all high holidays and whenever occasion permitted.

"He was a citizen of the world, though Constantinople claimed him as a resident the greater part of his full, active life. And though he died full of years as well as honours, it was not old age that brought his life to an end. His physical powers may have been gradually failing, but his mind was as alert and keen, his memory as phenomenal, his humour as varied and mellow as in his more active days. He was taken before life had become a burden to him, when his counsel was still sought, and while he was still able to respond to the appeal of editors of various publications for articles on subjects that his wide experience and research made him especially well fitted to contribute.

"One might say that few Anglo-Saxon men of learning passed through Constantinople in recent years before the great war without at least calling upon Sir Edwin, and, more than likely, being entertained at his hospitable home. He was generous to a degree with his gifts; no interested sightseer to old Byzantium but was welcome to the knowledge that was his by token of long residence and long study of the place and its history. Apart from his legal work, as many as five volumes dealing with Near Eastern subjects, old and new, should be placed to his credit. He could speak, could lecture at a Constantinople college or in a drawing-room at a moment's notice and without notes, exciting as much interest there, where people were *au courant* with his subject, as in England or in the cities and colleges of America, where he was called upon to deliver a series of lectures three winters ago. The Americans found him as familiar with the history and classics of their country as with those of his own England and the lands of the Near East.

"Sir Edwin had the gift of making friends and of keeping them, and he will be missed by a large circle on both sides of the sea. Whatever the future may have in store for Constantinople, one can say with both truth and emphasis that the Anglo-Saxon colonies there will be the poorer for the loss of this eminent Englishman and conscientious student of the great Near Eastern questions."

NEWS IN BRIEF.

Practically all the German, Austrian, and other prisoners except Turks have now been repatriated from Malta.

Owing to the collapse of a wall in a cinema at Ben-Kemba, Tunis, sixteen persons were killed and eight injured.

Baron Jules de Bornemisza, former Hungarian Consul-General at Bucharest, will be Hungarian Minister at Berne.

From January 1 the Simplon express will run as a through train, with dining car and wagon-lits, from Paris to Bucharest and Belgrade.

A Moscow message states that a special Soviet train, named "The Red East," has left for Turkestan to organise the Soviet institutions there.

A Moscow message states that nine trains with cotton have been dispatched from Turkestan. Two trains of sixty-one wagons have been sent to the oil districts.

The Lord Mayor of Melbourne has sent to the Lord Mayor of London £2,000 for the Armenian Refugees' Fund, being an additional contribution by the citizens of Melbourne for this charity.

A telegram from the Georgian Government alleges various acts of hostility by General Denikin's warships against Georgian vessels, and states that protests have been lodged with the foreign missions at Tiflis.

A party of Swiss subjects have arrived in Switzerland from Tiflis, where they were engaged in the rearing of cattle. During the war they were often near starvation, and all their belongings were stolen by Tartars.

It is announced that the Roumanians commenced to take over the Dobruja from the French on December 2. When the evacuation by the latter is completed the Roumanian 10th Division will be in occupation of the whole district.

Mr. Cecil Harmsworth (Foreign Under-Secretary) states that the British Mission under Colonel Jacob, which was detained by Arabs whilst on its way to visit the Imam Yahya at Sana, is reported to have arrived safely at Hodeida, the chief port of the Yemen, on the 13th inst., and to have left the same day for Aden. No further details are available.

Official Hungarian estimates put the damage done by the Roumanians in the three counties of Trans-Danubia at 864,000,000 kronen (£36,000,000 pre-war), of which total the Roumanians have, in all, restored only two and a-half million kronen.

FRIDAY, DECEMBER 19, 1919.

THE OLD INDIA AND THE NEW.

The Government of India Bill has not, as we write, formally become law, but its acceptance by the House of Commons, and the reception accorded to it in the Lords, justify the anticipation that the scheme elaborated by the Joint Committee will be brought into operation, and that the Empire stands charged with the conduct of the greatest political experiment which has ever been undertaken. The successive stages in the development of the project have been recorded from time to time in this journal, and it is not our present intention to recapitulate them, or to enter into any of the complex details with which the Bill is loaded; but in view of the momentous importance of the measure, primarily to India, and through India to other countries in the East, it may be well to review the general position, to indicate briefly the conditions which, in our opinion, have rendered changes inevitable, and to estimate the prospects of the new departure. Young India is prone to dwell upon a glorious if somewhat misty past, and to ignore the dark years that lie between, but this intervening period is of vital import to the statesman, because it reveals the origin of the problems of the present day. For something like a thousand years India as a political entity did not exist; the coasts and the land frontiers lay open to invaders, who were free either to devastate the country and retire with the spoils, or to establish in it foreign dynasties based upon the ruthless exploitation of the inhabitants. When the Mogul Empire, the latest of these exploiting dynasties, was finally wrecked by the excess of its own tyranny and greed, the state of India was indeed desperate, and it fell to a company of English merchants to gather up the fragments and piece them gradually together into the framework of an ordered polity. The men on whom this burden was laid were not at first chosen for the work they had to do, nor were they consciously inspired by any definite ideal; they groped and they blundered, but gradually the work was done; the horizon widened as they went forward: and the fruit of their labours is the India which we know. The coasts and frontiers are now defended; internal peace is established, though the disturbing forces have not yet been finally eliminated; Law is firmly seated on the throne; the national income is increasing, and its distribution, though still very unequal, no longer violates the first principles of justice; fresh ideas have penetrated into the country, and have made a definite impression on the mentality of at least the leading men: in a word, a new India has come into being, and it is impossible to withhold sympathy from those who think that, where such work has been successfully accomplished, nothing is needed beyond its continuance on existing lines.

That view, however, though it is natural, is in our opinion mistaken, because it is incompatible with the new ideas which we ourselves have introduced. Two of these require particular attention, one of them obvious to the world and spreading rapidly downward from the top, the other as yet barely noticeable but gradually rising into the consciousness of the masses of the people. Nationalism, the first of these ideas, needs no definition at this stage of the world's history; in India it is pursuing its normal course of development, and whereas twenty years ago the few minds affected by it sought merely a share in the administration, to-day a much larger number demand a voice, if not the only voice, in determining the policy by which the administration shall be guided. Meanwhile the masses of the people are just beginning to feel that all is not right: oppressed beyond measure for at least a thousand years, and even to-day receiving less than their due share of this world's goods, they are becoming a little uneasy, and the ferment introduced by British precept and example is already manifest in the bubbles which here and there break the smooth surface of submission. Now if timely steps are not taken to harness these new forces for India's good, it is to our mind as certain as anything can be that they must gradually coalesce to form a torrent of unreasoning hate, by which the country will be devastated and all our work will be undone. The justification of the new constitution is that it takes these forces into account, and provides a period of transition during which the privileged classes may learn how to serve, while the masses are learning to be master in their own house. Of these two lessons the latter is by far the harder, but both must be learned if the work already done is not to be wasted, and if India is to journey on the road of progress on which her feet are set: time is essential for their due assimilation, but none of us is in a position to estimate the time that is available.

Such are the considerations leading us to the conclusion that new constitutional machinery is imperatively required. With the details of that machinery we are no longer concerned; probably not one single student is entirely satisfied with the final result, but the time for discussion has passed, and the future of India depends, humanly speaking, on the way in which the new measure is worked. Of one thing we may be quite certain: like all other constitutions, this one depends on the goodwill of those who have to work it, and to-day our main purpose is to appeal for goodwill. We recognise fully that at the outset things will not be easy; settled habits will require alteration, and ardent desires will have to be kept in check; the pace which will be too fast for some will be too slow for others; and should everyone insist on the logical developments of his own particular views, the machine would quickly fly in pieces through internal stress. Regarding one of the most important classes, we are happily in no doubt, for we can safely accept Lord Meston's assurance that the Indian Civil Service is resolved to make the new order a success. Of the unofficial British element in India we are not less confident, but we would remind our countrymen that at this juncture something more than passive acquiescence is required; their representatives must take a more active share in the business of the Councils than has been usual in the past, and the reduction of official representation must not be allowed to result in any weakening of the expression of British ideals. As regards the rapidly growing number of Indians who are interested in political questions, we think the indications are reasonably satisfactory; the majority, probably the overwhelming majority, are prepared to co-operate in working the new constitution, and all we would urge on them is to remember that this resolve has to be maintained in the face of individual disappointments or party rebuffs. The individual must indeed count for something, and the party must count for more, but India counts for more than all parties combined, and it is India's future that is at stake. Lastly, we appeal to the many Indians of wealth, position, and prestige who now stand aloof from public affairs. India requires their help, and their action may well be decisive for the future. In the old India they were content to give silent approval to the actions of the administration; in the new, they must not only think, but speak. Political life will now be a reality, not a shadow, or a game, and while no single class may shrink from the new burdens, the heaviest responsibility rests on the men who can lead; if they will take it up, we believe that the future may be faced with reasonable confidence.

GREAT ROUMANIA.

(From a Bucharest Correspondent.)

There is a fascination about Roumania, the country of great plains watered by the tributaries of one of Europe's mightiest rivers, plains rising gently to a fringe of mountains clad with primæval forest, the haunt of bear and boar and wolf. Roumania, the land of stirring history, of centuries of fighting for freedom, from the days when Rome's legions left their impress on Dacia and gave to its people the Latin tongue and mind, to the days of the victorious advance of Roumanian troops in the van of Russia's armies, marching against the Turks, and, quite recently, the final effort which set free "Roumania Irredenta"; for to all good Roumanians Roumania was not only the old kingdom but all those territories where the Roumanian race had settled since the earliest days of history.

To understand the problems which face Great Roumania in its task of reconstruction it should be remembered that the Roumanian race was not divided by natural barriers but by the arbitrary boundaries put up by foreign oppressors. The Carpathians were not a frontier in the earliest history of the race, but rather a refuge in times of trouble, when waves of barbarians rolled in from the East or surged up from the plains of Hungary. When those troubles had passed, the Roumanians came down from the wooded mountains and continued their task of cultivating the plains. So rose the duchies of Moldavia and Wallachia, and so also the smaller settlements in Ardeal, as Herodotus and Strabo designated Transylvania. Unhappily the Roumanians to southward of the Carpathians were too much harried by enemies from south and east to afford adequate protection to their kin across the mountains; they fell under Magyar domination and remained so until they threw off the Hapsburg yoke a year ago. It was comparatively easy to shake off the domination of the beaten Magyars; it is infinitely more difficult to remedy the ills caused by their oppressive rule, and this is the great task of those who are responsible for the future of "Roumania Mare."

The reconstruction of the old kingdom of Roumania itself is no mean undertaking. The country was overrun by German armies which left desolation in their wake when forced to retire. Western Europe does not appreciate sufficiently the heroism of Roumania during the time of Mackensen's occupation of the country. Only a narrow strip was left to the Roumanians; and this would have gone, but for the pluck of the remnants of Roumania's fighting forces, which, sadly depleted of warlike stores, and badly "let down" by their allies the Russians, yet held up the advancing Germans, every man in the fighting line (for the defection of the Russians had left to the Roumanians no reserves). The people, too, braced to resist to the end, encouraged the Government to hold out, and so, though peace was forced upon her, Roumania's honour was saved.

The same dogged spirit informed the Roumanians of Transylvania and Bukovina; they held firm to their language and traditions and to the ties of race, and finally, after a successful rising against their oppressors, proclaimed, at Medias, their allegiance to King Ferdinand.

There is, then, in the personal factor, as presented by the Roumanian race, a promise that they will overcome the many difficulties that beset them, and take an honourable part in the resettlement of Europe. It will be an important part, too, as their geographical position shows. Now that the Dardanelles are open, and likely to remain so, there will be a stronger tendency towards the Black Sea from Central Europe, and the way leads through Roumania. The task before Great Roumania is twofold; first, to consolidate the country; secondly, to direct it into the right way in its relations to the outside world. In both tasks Roumania encounters some difficulties not inherent in her actual internal conditions, but rather caused by the Western want of understanding of Eastern European conditions. Thus, many difficulties have arisen in addition to the already considerable number which the inner aspect of the case presents. The atmosphere of uncertainty and unrest which prevails in Eastern Europe especially is entirely due to ill-considered interference in one case with the private affairs of smaller sovereign States; on the other hand to the want of firmness when one or other of the Great Powers strikes out a line that disregards all the principles in support of which the free countries of Europe went to war.

The inner political problem of Great Roumania is complicated, but very interesting, and her aspirations are worthy not only of sympathy but of help on the part of nations which have gained their present standing under much less trying conditions. In the first place there is much work to be done in old Roumania, socially as well as materially; the country has suffered considerably. Material damages can be repaired; in this Roumania requires assistance, not alms but business. Like other Eastern European States, the country has been visited by many peripatetic missions since the Armistice made it possible for the "Indispensables" of the great Western Powers to travel abroad in safety, and these missions have opened Roumania's eyes to Western altruism—they prefer business. Socially and morally, Roumania suffers like the rest of us. There is the same discontent, due largely to the high cost of living, the same disinclination to work, and the same relaxation of civic discipline. At bottom these phenomena are due to the prevalent and generally justified distrust of political leaders of Roumania. The distrust mingled with amusement which the political leaders of Roumania feel (though they do not express it) towards the Olympians of the Supreme Council, is communicated to the workers of all classes, whose opinions may be gathered from the results of the last general election.

There are also reminiscences of Oriental methods due to the Sultan's former suzerainty still lingering in Old Roumania's political life; and these can only be cured by time and by closer relations with such peoples as have not suffered under that unclean influence. It is this latter cause that is retarding the assimilation by Great Roumania of the "minorities," and it affects even the Roumanians of Ardeal and Bukovina. It is necessary to form a very clear conception of the Transylvan Roumanians in order to understand the complicated questions now in process of solution. The Roumanians of Ardeal and the Bukovina, and also those of the Roumanian portion of the Banat, live almost entirely on the land. They are peasants, hard-working and frugal, strong and obstinate. They have generally been considered stupid by the Hungarian and German town-dwellers to whom they sold their country produce; but in this the town-dwellers were mistaken; the Roumanian is anything but stupid. He loved the land he lived on, and was content with the work it demanded, so comparatively few Roumanians left the land in pursuit of other employment. Moreover, the Habsburgs discouraged this, so very few Roumanians went into the liberal professions—it was hardly worth it as the Hungarian Government never allowed even the ablest of them to rise to any high position in Government employ. The effects of this policy are making themselves felt now. The leaders of Roumanian thought in the unredeemed territories managed the revolution of November, 1918, and also succeeded in forming a provisional government, but they are proving unequal to the task of administration and reconstruction. It is not to be wondered at, for the work has to be done by Roumanians who have hitherto held subordinate positions and have, therefore, been unable to acquire the necessary experience. These men are on the whole good types of the Austro-Hungarian official class, honest and hardworking; but the centralised system of Austro-Hungarian administration has tended to kill imagination and initiative. They are further handicapped by the fact that they have had to keep on as subordinates a number of Hungarians who were formerly their superiors in rank, and who certainly considered themselves such in every other respect.

(To be continued.)

PRESS ON THE NEAR EAST.

India.

The *Morning Post* of December 12 devotes a characteristic leader to the Government of India Bill. It says:—

The people of India have not been consulted on the Bill, nor have the people of England been consulted. The announcement of August 20, 1917, made by Mr. Montagu in reply to a question by a private member has been used throughout as if it settled the principle both for India and this country. Any suggestion that the measure should be deferred or amended is treated as if were a proposal to break faith with the people of India. It is important, then, to remember that the people of India never asked for this Bill, that they have never been consulted on the subject, and that they do not want it. As we have said, the National Congress—the body which Mr. Montagu mistakes for Indian opinion—have declared against it beforehand, and it is safe to say that they will not be satisfied with it when they get it. Those non-Brahmins who have contrived to force their way to England to give evidence have declared emphatically that the Bill places them under an oligarchy of Brahmins, whose tyranny they dread. Lord Ampthill points out that in Madras this powerful and exclusive caste—to whom the people of India are unclean—are only 3 per cent. of the population, yet occupy 80 per cent. of the places in the public services and the Councils of the country. The advocates of the measure pretend that it will weaken the caste system; Lord Ampthill states, on the contrary—and we believe that he is in agreement with expert opinion on this subject—that the Bill will greatly strengthen the caste system, since it will add fresh political and administrative power to the vast powers, social, religious, and official, already possessed by the Brahmins. The view of the non-Brahmins is that we are handing them over to the rule of the Brahmins and standing by with a club to see that they obey.

Bolshevism and the East.

In the *Glasgow Herald* of December 3, Miss Louise Peralta discusses the new Persia and the problem of the Middle East. Her conclusion is this:—

The Entente and the world are faced by two alternatives. They will buttress Islam, according recognition to the principles demanded by its leading jurists; or they will attempt dismemberment of the temporalities of Islam and drive the whole outraged mentality and spirituality of the Middle East into union with the Bolsheviks. The warning cannot be too loudly uttered that Bolshevism, an invertebrate thing at present, will find its backbone in the East. From the days of the Tartar horde until the hour of Turkomanchai, the Mid Asian peoples regarded the Slav with inexpressible contempt. Just before the outbreak of the great war it was with amazement—now somewhat tempered—that their listeners repeatedly heard professors of a celebrated Muslim college in the Middle East assert the unconquerable innate savagery of the Slavic peoples, by whom, notwithstanding their brilliant attainments in art, music, and literature, these Muhammadan doctors affirmed a permanent civilisation to be unachievable. Those of us who know the East and its thought are convinced that the Muslim does not fondly desire co-operation with the Jew. Both Muslim and Jew are, however, Aryan-Semites. Many of the cities of the Nearer Middle East, notably Mosul, are metropoli of toleration, within whose walls Muhammadan and Hebrew live on easy, half-brotherly terms. Finally, Islam is at this moment forced to the wall. Muhammadans are of all peoples and tongues in the East. Just as the Arab of the Plains of Irak is laying aside his feud with the Kurd of the hills because of their common inheritance of the great desert tradition of freedom, so are the Muslims of the Middle East—Sunni, Shi'a and Wahabi—becoming at one, bound together by what is still to-day a living, proselytising faith. It is unbelievable that the world can pause before the alternatives; can hesitate as to which is incomparably for the good of humanity: a buttressing of the nations living according to one of the great divine manifestations vouchsafed to mankind, or the submersion of the world under a deluge of the decadent.

Syria.

The *New Statesman* of December 13 deals with the anxiety, both local and widespread, of the Syrian situation. It says:—

The excitement has since been considerably calmed by the announcement that it is not the intention of France to extend her military occupation, and the Emir Feisul is able to exert a moderating influence. But no one imagines that Feisul is likely to exert any moderating influence for a moment longer than it is in his interest to do so. The really critical point will be reached when the Turkish Treaty appears. In the meantime, French chances in Syria are not improving. It is idle to pretend that the majority of Syrians are not hostile to the French. And it is equally idle to suppose that we can prevent that hostility, though we can, of course, take care to avoid any action which will increase it. There is no doubt that Syrian nationalism is a strong and a growing force. Nor is there any doubt that the Emir Feisul means that it shall play its part—and his. We believe, as we have said before, that we have done a risky thing in opening up the prospect of an Arab Empire to the Sherif of Mecca. It will need the most delicate diplomacy on our part if it is to turn out well for the peace of the Middle East.

IN NORTHERN ANATOLIA.

At the Æolian Hall, on December 15, Captain E. H. Keeling related to the Royal Geographical Society how he, with two brother officers, managed, fifteen months before the Armistice, to escape from the hands of the Turks at Kastamuni. He gave a description of the town of Kastamuni and their daily life there. After a futile attempt (he said) to make the prisoners get their meals at a restaurant in which he had an interest, the Commandant left them to make their own arrangements for food, and they were permitted to visit the bazaar, to go for country walks, and to play football. A remarkable fact was that they could cash cheques on London up to any amount with the local tradesmen, though the cheques were not presented for payment till long after the last prisoner had left Turkey—a striking tribute to British credit.

Captain Keeling went on to describe how he and his party were recaptured and rescued. Suddenly from a wood (he said) bullets came in quick succession, as the result of which one of the guards was shot dead and three were wounded. The rescue party consisted of two Circassians, a Georgian, and an Armenian, and the leader—a Circassian—explained that he and his comrades were not brigands in the ordinary sense, but were outlaws who, hating the Young Turk Government, and being resolved not to serve against the English, had taken to the mountains with the idea of joining the Russians. Rajeb Bey, as he was named, had been once a gendarme officer, but he had taken to politics and had been sentenced in 1913 to ten years' imprisonment for his share in the murder of the Grand Vizier. While in hiding near Sinope he had heard of the recapture, and had arranged the ambush for the purpose of rescue.

Sir Francis Younghusband, who presided, announced that the Prince of Wales, who had shown the greatest interest in the adventures of Captain Keeling and his comrades, and had expressed his admiration for their bravery and resourcefulness, had consented to become vice-patron of the Royal Geographical Society, and they hoped soon to have an opportunity of welcoming his Royal Highness.

A BRITISH SCHOOL OF ARCHÆOLOGY.

The proposals for the founding of a British School of Archæology at Jerusalem have become facts, and a very strong Organising Committee has been formed, including the Archbishop of Canterbury, Viscount Bryce, Sir Charles F. Close, Sir Arthur Evans, H. R. Hall, G. F. Hill, D. G. Hogarth, R. A. S. Macalister, E. W. G. Masterman, W. Morrison, W. M. Flinders Petrie, and Sir George Adam Smith. The Chairman of the Committee is Sir F. G. Kenyon. While the Palestine Exploration Fund will continue its work as before, the objects of the School will be:—1. To facilitate the researches of scholars. 2. To provide instruction and guidance for students. 3. To train archæological excavators and administrators. 4. The School will assist in every possible way the excavations and explorations of the Palestine Exploration Fund. It may from time to time undertake investigations on its own account, and such operations would be conducted in harmony with the work of the Palestine Exploration Fund. The scope of periods and subjects of study will be unrestricted, ranging from the Stone Age and the early civilisations of Amorites and Canaanites through all the history of Palestine and Syria, and their relations with the nations around them, down through the Græco-Roman Age to the Arab Conquest, the Crusades, and the later Mohammedan period. The subjects will include all those for which archæology provides material: Art and Antiquities of all kinds, the History of Ancient Religions, Topography, Geography, and other relevant studies. A site for the building of the School in a very favourable position in Jerusalem has been provisionally secured. Meanwhile, work will be begun in temporary quarters which the present administration has undertaken to place at the disposal of the School. With the object of expediting arrangements, the Committee have provisionally appointed Professor J. Garstang as director.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The alteration in the exchange value of the rupee from 2s. 2d. to 2s. 4d. was practically a foregone conclusion, in view of the continued rise in the price of silver. Even with the present increase, it is at least a moot point whether the rising rupee—to use an apt phrase—has reached the top of the curve, for in the short time since the latest change there has been a further appreciation in the value of the metal. But it is dangerous to prophesy in this matter, for the high price of silver is dependent on some very uncertain factors. As I have had occasion to emphasise before, these constant alterations in the value of the rupee have a most injurious effect on trade. It is the uncertainty that matters, and while that exists exporters from India are naturally operating under a most serious disability.

***

The report of H.M. Senior Trade Commissioner in India, Mr. T. M. Ainscough, O.B.E., on the "Conditions and Prospects of British Trade in India at the Close of the War," which has just been published, will be the subject of an article next week, and I will merely say here that Mr. Ainscough's authoritative and careful survey of the position of the Indian market should be absolutely invaluable to British merchants and manufacturers. India is the most important market in the world for British goods, and during the war there have been many changes in the trade of the country, and, as I have had occasion to remark, other nations have had a unique opportunity of obtaining a foothold in the market. "Many of these changes," Mr. Ainscough states in a covering despatch, "very considerably weaken our position in the market, and call for special efforts and revised methods and organisation in order to meet them." It may be hoped that the report will have the result of bringing before the business community the fact that the conditions have altered, and that other times demand other measures.

***

In the article on "The Athens Exhibition," which appears on page 708, in this issue, our correspondent remarks that "it is significant of the changed outlook that many firms who did not exhibit have now admitted that they are sorry they did not take part." Naturally, for they have been hearing the glowing accounts of exhibitors of the great openings for trade in the Near East! As showing the impressions of those who did exhibit, I quote from a most interesting article on the exhibition in the *Winged Arrow*, the house journal of Messrs. Wood-Milne, Limited, and George Spencer, Moulton and Co., Limited, written by Mr. J. T. Magee, who attended the exhibition on behalf of these firms. "The Exhibition," he writes, "was a gigantic success, a veritable triumph of British skill and organisation. . . . The exhibition has done much to link up the Near East more closely with Britain. Never before in the history of Greece was the name of England more respected than it is to-day. . . . On the whole, I am firmly convinced that the Near Eastern market is one that should be assiduously cultivated by British manufacturers, and I think the Federation of British Industries deserve more than a passing word of credit for their foresight in organising the exhibition."

***

His many friends in the Near East will learn with great regret of the death of Sir John Jackson, the eminent engineer and contractor. In the course of his long and distinguished career, Sir John Jackson undertook many constructive works of the first importance in this country, chief among them the extension of the Admiralty works at Keyham, while his services were frequently employed in various parts of the Empire and by foreign Powers. To his work in the Near East these pages have borne frequent testimony, and it was his great undertaking in Mesopotamia more than anything he did, perhaps, that impressed itself upon the imagination. In that region he was engaged in carrying out Sir William Willcocks' irrigation scheme for the Turkish Government, and completed just before the war the great Hindieh barrage across the Euphrates. Further developments in that region and in the Lebanon district, where his firm was undertaking irrigation works for the Imperial Ottoman Debt, were, of course, stopped by the war. But the Hindieh barrage stands as a lasting monument to one who was destined to carry the emblem of modern civilisation to the home of one of the oldest known civilisations.

***

A feature of special interest in the address of Lord Bessborough at the general meeting of the Imperial Ottoman Bank was his reference to the extension of the activities of the bank. During the war new branches were opened at Marseilles and Paphos, and to these are to be added branches at Tunis and at Kerkook in Mesopotamia, while developments in other regions are contemplated. As regards the bank's position, Lord Bessborough drew attention to the liquidity of the establishment, and to the fact that the advances to the Government, which in the last balance-sheet represented £1,700,000, no longer appeared, and while he made no mention of the prospects of the resumption of dividends, shareholders will no doubt draw their own conclusion from his assurance that the committee looked forward to the future with every hope of successful results being achieved.

***

A most interesting cinematograph film was shown at Manchester last week, illustrating all the processes of cotton spinning and weaving from the opening of the bales of cotton to the production of clothing. This is the first time that anything of the kind has been attempted, and the special circumstances at present affecting the Lancashire cotton industry naturally invest the film with particular interest.

***

At the general meeting of the Sudan Plantations Syndicate, the chairman, Mr. F. Eckstein, was able to give a most encouraging survey of the company's position. They had every reason, he said, to be satisfied with the last year's results. Zeidab produced 8,495 kantars as against 7,738, Barakat produced 8,079 as against 5,743, and Tayiba produced 7,179 as against 6,953, while as to prospects for the coming year, he pointed out that they had under cotton at Zeidab 3,300 feddans, at Barakat 2,056, and at Tayila 1,710, or 7,066 feddans as against 7,164. At Zeidab, where picking is in full swing and the first shipment of 400 bales is already on its way home, the crop promised, he added, to equal, if not to exceed, that of last year. Picking at Tayiba and Barakat would commence towards the end of the month. The managing director cabled that at present the plants looked well, so that they might look forward to a very promising crop, and therefore to corresponding results.

***

Turning to the agreement with the Sudan Government, Mr. Eckstein said that the rough outline of the agreement was that it established a three-cornered partnership between the Sudan Government, the syndicate, and the natives of the Sudan, which meant and had the inestimable value that all three parties were equally interested to make that important enterprise the greatest possible success. "I cannot emphasise the importance of this part of the arrangement too strongly," he added; "in fact, I consider this the bull point of our agreement." As to the outlook for the syndicate under the agreement, Mr. Eckstein pointed out that it was not to be expected that cotton would remain for ever at the present high rates; on the other hand, it was also fairly certain that good long-stapled cotton would command for a number of years to come high prices. All their estimates were based on very moderate figures, and all he would like to say on this point was that with ordinary luck they should be able to pay dividends which would leave the shareholders well satisfied.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST., LONDON, E.C.2

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

THE EARL OF BESSBOROUGH, K.P., C.V.O., C.B.
E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.

The Athens Exhibition.

Outlook for British Trade.

(From a Correspondent.)

It would not be going too far to say that the point of view of British manufacturers with regard to trade with the Near East has been profoundly modified as a result of the remarkable success which has attended the Exhibition of British Manufactures at Athens, organised by the Federation of British Industries. When the project of an exhibition was first mooted it was evident that there was a considerable lack of appreciation among the business community with regard to the vast amount of trade that might be reached by exhibitors. There was also a very widespread feeling that adequate scope for trade could be found in meeting the enormous demand for home consumption without embarking on doubtful adventures in comparatively unknown fields. Again, some manufacturers, while not unwilling to enter the Near Eastern markets, counselled delay. "Why have it so early?" was the cry, and doubts were expressed whether an exhibition could be held so soon after the Armistice. But to listen to this cry would have been as short-sighted as the policy of those traders who believed, in concentrating on home trade at the expense of all else, oblivious of the fact that while the home market can always be regained without much difficulty a really unique opportunity of securing a firm foothold in foreign markets is an event of a lifetime.

Well, the exhibition has been held, and the enterprise of the Federation has been repaid by what can only be described as a tremendous success. Practically all the manufacturers who exhibited admit that they have taken an enormous amount of orders, and also that there are simply colossal trade openings waiting to be picked up in Greece and the Near East generally by anyone who can spare goods to meet the requirements of that market, or even a portion of them. And it is significant of the changed outlook that many firms who did not exhibit have now admitted that they are sorry they did not take part!

The Question of Agents.

A matter which has been brought to the foreground as a result of the activities of British manufacturers in connection with the exhibition is the question of the appointment of agents. Those in a position to judge claim that experience shows that the most successful British firms are those who appoint a sole representative who is able to give practically his whole time to the development of a particular trade. The view is taken that the collective representation so favoured in the Near East is not altogether satisfactory from the point of view of the manufacturer, since when a firm is overloaded with agencies there must be a danger that the interests of some of the manufacturers concerned may be neglected. There is a very satisfactory alternative, it is emphasised, to the appointment of agents, namely, the combination of a number of firms engaged in different undertakings of a similar character into an agency. An outstanding example of successful union on these lines is afforded by the Associated British Manufacturers (Near East), Limited, which comprises a number of firms engaged in various forms of constructive work whose interests do not clash. In what may be termed the "mixed" agency there can also be no clashing, it is true, but it is maintained, and possibly with good reason, that the representation of firms engaged in a given category of undertakings such, for instance, as engineering, is bound to be more successful than that of firms producing many products which have little or no relation to one another.

Banking Enterprise.

If there is one factor more essential to the success of British trade in the Near East than any other it is the provision of adequate facilities by British banks, and it was most satisfactory to note that banking interests were well represented at the exhibition by Barclays Bank, which rendered very valuable assistance to the exhibitors in general. Enterprise of this kind cannot be too highly praised, and Barclays is entitled to every congratulation on the excellent lead it has given. Now that the ice has been broken, so to speak, perhaps some of the other great joint-stock banks will turn their attention to the Near East.

Goods in Special Demand.

"What trades did best at the exhibition?" is a question that is naturally of great interest to those firms who were not represented at Athens. Textiles were chiefly in demand, as was only to be expected, and jewellery, small engineering tools, chemicals and fertilisers, soaps, and perfumes were also in great request. As regards engineering, the immediate sales were not of such importance as the inquiries received, which were very large and varied.

Roughly it may be stated that about 75 per cent. of the exhibits at Athens will not have to be taken back. Had many exhibitors wished, they could have taken vastly greater orders than they did, but these were purposely kept within controllable dimensions in view of the fact that their output at the present time is limited. It is sincerely to be hoped that the orders that were taken will be executed within a reasonable time. If this is only done, there is every promise of splendid trade to come in the Near East. A great impression has undoubtedly been made, and it is up to manufacturers now to follow up the openings which are awaiting them.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following weekly cabled news received from the Director-General, Commercial Intelligence Department, Calcutta, dated December 10 :—

During week ending November 29 sowing spring crops and harvesting autumn crops continued. Harvesting paddy continued North-eastern and Southern India. Sowings continued Madras. Plucking tea continued Assam. Wheat sowing progressed Punjab. Cotton plucking continued everywhere. General crop conditions good, but rain much needed to north-west.

Bombay cotton market irregular. Fully good Broach April-May Rs. 564 eight annas. Piecegoods market steady. Calcutta jute market firm, gunny market quiet but steady.

STRANGERS' HOME FOR ASIATICS,
WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.
"I was a stranger and ye took me in."
CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD; 4, LOMBARD STREET E.C.

CONDITIONS IN ROUMANIA.

Excellent Maize Yield.

We have received the following report on conditions in Roumania from Messrs. Watson and Youell:—

The Ministry of Domains reports that the maize crop is a very good one. It is not yet gathered in most districts, and it is still too soft to permit of its transport. In some districts it is reported that sales are taking place on the fields at 300 lei per metric ton. The Roumanian press report that the superabundant yield of maize causes difficulty in winter storage owing to insufficient material for constructing ricks. One of the largest grain merchants in Roumania writes that his firm "expects to export in the spring a large quantity of maize, the crop being excellent."

The prohibition of grain exports continues, and from recent reports little or no wheat of this year's crop is likely to leave the country. The autumn sowings could not be conducted under normal conditions. The quantity of rapeseed and colza available for export was about 10.000 tons, and a good portion of this, we understand, has been sold to Italy, and must have been shipped by this time. About 5,000 tons of grain were booked lately at 60s. per unit on special Dancon terms, prompt shipment for the Continent. Our Constantza house reports under date of November 28 that the pontoon bridge will shortly be removed when transport of goods to and from Roumania proper will have to rely upon the barge ferry, which carries six railway trucks per trip, and can make three to four trips per day, say, a total of 200 to 240 tons per day.

Storage room at Constantza is scarce, and there is an active demand for warehouses, rents for which have risen sharply and are still on the rise. There is great scarcity of fuel, and oilcake is being used for heating purposes, especially in the Dobruja. It is selling at 50 lei per ton, and the demand is much greater than the supply. Firewood is being brought by sailors, and fetches 350 lei per ton f.o.b., which is equal to about 500 lei per ton delivered.

There is little or no movement at Constantza yet. The steamers of the Roumanian Maritime Service land small quantities of cargo, and those of the Lloyd Triestino (ex-Austrian Lloyd), calling at Constantza on their way to and from the Danube, land and ship a few packages and passengers.

The weather towards the end of November was frosty, and it was reported in London about ten days ago that ice had formed on the Danube. This could only be a short cold snap, as we have not heard of any impediment to navigation, which does not usually close before the end of the year.

There is great congestion on the dock quays at Galatz, chiefly arising through the supply of railway trucks having been suspended for about seven weeks, the rolling stock having been requisitioned for the transport of troops. The landing of cargo ex steamers, therefore, is conducted under enormous difficulties, and at unprecedented cost. In view of this congestion and the lateness of the season it may be necessary to discharge some of the cargoes into lighters, but this will only be done as a last resort. Some steamers destined with cargo for Galatz have managed to make arrangements with consignees to proceed to Braila to discharge, where conditions are more favourable.

The Yugoslav Government have decided to send to the United States of America a Commissioner to study financial and other questions which may interest and concern the two countries.

Engineering.

MOTOR SHOW REFLECTIONS V.

(From Our Own Correspondent.)

The exhibits of Messrs. Napier and Son at the show consisted of a 40-50 h.p. chassis with a polished finish; a similar six-cylindered chassis with a limousine-landaulette body; a 40-50 h.p. chassis with a sporting phaeton body; and a 40-50 h.p. chassis with a coupé-cabriolet body.

I was able to have a few minutes' conversation with my friend, Mr. H. T. Vane, the managing director of the company, at the show, and he informed me that the Napier six-cylinder car still holds more than four times as many Royal Automobile Club certificates as any other make of six-cylinder car, a fact which speaks for itself as to the general merit and excellence of this production.

A short technical description of this engine may be of interest to many readers. Of course, the use of aluminium has cut down the weight considerably without any sacrifice of strength, and has also permitted the gain of a good deal of power. In fact, the new model develops quite 50 per cent. more power than a pre-war chassis of the same weight. All working parts of the engine are enclosed, and the valves, which are of the overhead type, are mounted on a single detachable head, which, when removed, permits the condition of the pistons and cylinders being seen. In this way all the valve gear can be removed for regrinding or other attention without it being necessary either to dismantle the engine or lift the cylinders from the crank chamber.

It must be mentioned that the chassis itself, apart from the engine, gears, and transmission, is lighter by several hundredweight than the pre-war chassis, this reduction in weight being also gained without any reduction of strength. As a matter of fact, the Napier Company inform me that the chassis is not only lighter but considerably stronger than before, and the car can consequently be depended upon for use on rough roads and under adverse conditions.

The chassis is a standard model complete with electric starter, dynamo for lighting, a four-speed gear and reverse, and a silent drive to the back axle. The springing is by long cantilever springs encased in leather gaiters to prevent the admission of wet or road grit. The wheels are of the detachable wire type, made by the Rudge-Whitworth Company, and are fitted with Harland dual rims and heavy Dunlop tyres.

In the limousine-landaulet body the wings and panels are of special aluminium alloy, and the total weight of the carriage work has been reduced; this type of body actually weighs less by 25 per cent. than a similar pre-war body. It has accommodation for six people including the driver, and is the first landaulet body to be fitted with a "V" type wind-screen, which adds greatly to its appearance.

A similar high-grade British production is the Rolls-Royce chassis and completed cars. This firm, whose reputation is now world-wide in connection with aeroplane and airship engines as well as automobiles, inform me that in future they intend to produce only one model of chassis. This will be fitted with a 40-50 horse-power engine, the bore and stroke of which is 4½ by 4¾ ins. The wheel base of the car will be a fraction under 12 ft., and the size of the wheels will be 895 by 135 millimetres. A Rolls-Royce automatic carburettor will be fitted, and the ignition will be by means of a Watford British-made magneto. The standard chassis includes a self-starter, the necessary batteries and dynamo, a switchboard for the electrical work, all wiring, a spare detachable wire wheel, a Klaxon electric horn, four tyres fitted to the wheels, and a well-fitted tool-kit, containing all necessary tools of best quality. There will also be an ample supply of spare parts and an instruction book. The purchaser can arrange with the company for a moderate fee for an inspector to visit the car once yearly for three years in order to make a close inspection and to give a complete report as to condition. Free instruction in the driving and care of the car will also be given at the Derby works of the company to all purchasers who care to avail themselves of the offer.

It must be made clear here that the 1919 Rolls-Royce chassis is not actually a new model so far as essentials of design are concerned. It is really the old pre-war model, which was so well tested and found so satisfactory, brought up to date in as many respects as were capable of any improvement. In connection with it one of the most striking innovations is the self-starter made by the firm, and which embodies many new and desirable features. The only similarity this starter bears to others on the market is that the power for starting is derived from a high capacity and exceptionally strongly built accumulator set, which is kept up to full power by a dynamo, and which feeds the electric lighting circuits and also provides the battery ignition. I am informed by Mr. Claude Johnson that both the efficiency and the silent running of this starter have been the subject of a considerable number of tests and experiments, and it can be relied upon as an appliance in which all these considerations have been dealt with in a most successful manner. The technical details are perhaps a little too mathematical and abstruse to be dealt with fully, but it may be said that the motor of the self-starter actually drives the engine through the clutch and gear-box, and that all that has to be done to put it in action is to press a conveniently placed knob.

Although every user of a Rolls-Royce car is convinced that their pre-war chassis left nothing to be desired in the way of power and sweetness of running, yet the company have derived a great deal of knowledge and experience from their extensive and remarkably successful work in connection with aero-engines, and have embodied the whole of this, so far as was practicable, in their new chassis.

Oil and oilseeds can now be exported from India, the Indian Government having removed the embargo.

MISCELLANEOUS TOPICS.

Drawbacks of Concrete Ships.

It is admitted now that war exigencies alone were responsible for the attention bestowed on concrete shipbuilding during the war. But whatever may be the opinion now in this direction, it is evident that in the Eastern Mediterranean ports, owing to the great scarcity of shipping and to the hopeless efforts to obtain at present either new or secondhand iron ships, the concrete ship is still considered as a very economical and good substitute, and thus some good concrete ships, it is said, have already been built in local shipyards. For those, however, who are over-enthusiastic about this newest style of vessel and have no patience to wait until the British shipyards are ready to take up their orders and to execute them with rapidity, a few notes, comparing the two systems, may be of interest. Except for rapidity of building and cheapness of construction, the concrete ship is distinctly inferior to the steel ship, and although the prime cost may be less the working cost is very much greater because the weight of the concrete necessitates stronger engines. According to an estimate, a steel ship of 4,484 tons cargo-space displaces 1,750 tons and is driven by an engine of 1,240 h.p. at a speed of nine knots, while a concrete vessel of equal capacity has a displacement of 2,020 tons and needs 1,350 h.p. for a speed of nine knots. The steel ship costs £34,800, the concrete one £30,340. Working expenses for a month's voyage for the steel ship would be £1,089; for the concrete, £1,129. Should the concrete vessel be driven by motor power, it compares better with the steel steamship, but compared with a steel motor-boat the concrete motor-boat is at a still greater disadvantage. There are some, however, who declare that the new shipbuilding process is only in the initial stage of development, and hope that improvements will be made as time goes on—just as was done with iron and steel boats. This is not, of course, improbable, and is a matter which the thoughtful Mediterranean shipowners, who want *now* a strong ship, may take into consideration.

Export of Cars.

The Board of Trade returns show that during the eleven months ended November 30 the total value of motor-cars, chassis, and parts exported from this country was £4,493,363, as compared with £3,270,909 and £2,736,397 during the corresponding months of 1918 and 1917 respectively. The number of cars and chassis was less this year than in either of the two previous years, being 1,865 against 2,694 and 2,125, the increase in the total value of exports being in respect of tyres and parts.

TENDERS INVITED.

Tenders are invited for the contracts given below, and must be made by the dates mentioned:—

Great Indian Peninsula Railway Company.—Supply of (1) steel rails, (2) cast-iron pot sleepers, (3) copper rods, (4) acid open-hearth steel boiler plates, and (5) firebricks and fireclay. (Spec., Nos. 1 and 2, £1; No. 3, 10s.; and Nos. 4 and 5, 7s. 6d.; Secretary, 48, Copthall Avenue.) December 31.

Madras Corporation.—Supply and delivery of about 67 miles of English stoneware pipes, from 4 in. to 18 in. internal diameter. (Spec., 5s.; Messrs. J. Mansergh and Sons, 5, Victoria Street, S.W.1.) February 2.

Egyptian Ministry of Education.—Supply of 180 blue linen overalls (jackets and trousers), for the Technical School, Boulaq, Cairo. A copy of the adjudication and a list of measures can be inspected at the office of The Near East, 1, Devonshire Square, E.C.2.

The traffic receipts of the Smyrna-Aidin Railway for the week ended November 22 amounted to £8,692.

The traffic receipts of the Suez Canal from November 24 to December 5 amounted to 6,370,000 francs, as against 2,750,000 francs.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 20 amounted to £E17,922, making the total for the year £E211,605. The corresponding figures for 1918 were £E13,612 and £E219,109.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests.

Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,00 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·05 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅔ of a yard, stremma = ·242 of an acre.

BANK OF NATIONAL ECONOMY (of Greece)

Head Office: ATHENS.

Branches:

PIRÆUS, SYRA. PATRAS.

Capital Paid Up - Drs. 10,000,000

Fully represented in all parts of the world for all kinds of commercial, financial, and shipping business.

COMPANY MEETING.

SUDAN PLANTATIONS SYNDICATE.

Gezira Cotton Areas.

Increase of Capital Foreshadowed

The twelfth ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held on December 17, at Winchester House, Old Broad Street, E.C., Mr. F. Eckstein (the chairman of the company) presiding.

The Acting Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—Before dealing with the business part of our meeting to-day, it is my duty (and a very sad duty it is) to refer to our late colleague and managing director, Mr. D. P. MacGillivray, who died in London after a very short illness in February last. Mr. MacGillivray joined us in 1907, after having acquired by purchase the interest of Mr. Leigh Hunt, one of the pioneers of our syndicate. At that time we were only concerned in the working of the original 10,000 feddans concession at Zeidab, about 180 miles north of Khartoum. He at once put all his energy and ability into the work there, but soon realised that, although we were able to grow good cotton, a still more favourable and larger field for cotton, which would benefit the Sudan, our Lancashire friend, and our syndicate, would be found south of Khartoum, in what is known as the Gezira district. With characteristic perseverance he tried to impress on the authorities in the Sudan the importance of this area, so eminently favourable for cotton growing on an extensive scale. This induced the Sudan Government to establish an experimental station there, and it entrusted our syndicate, and particularly its guiding spirit, Mr. MacGillivray, with the management. The results of this test station were so encouraging, and so impressed both the late Lord Kitchener and the Sirdar, Sir Reginald Wingate, that plans were prepared for the irrigation and cultivation of the Gezira, and it was then arranged that the syndicate should have the management of this large enterprise. The war, unfortunately, postponed its execution. It is a melancholy reflection that with the happy advent of peace and the consequent resumption of work after the successful termination of our negotiations with the Sudan Government, our late managing director should unfortunately not have been spared to see the fruition of his devoted labours. The shareholders of our syndicate—large and small—owe him a great debt of gratitude for the work he has accomplished in season and out of season in a trying climate. They have lost a most capable director, the board a loyal and trusted colleague, and I a dear personal friend.

Now, gentlemen, presuming that you will take as read the accounts and report of the last year, which have been in your hands for some time, I will move their adoption by this meeting. My task in doing this is once more a pleasant one, as not only have our financial results been satisfactory, but also our long-debated and long-deferred agreement with the Sudan Government has been finally settled. I will refer to this more fully later on.

Balance Sheet.

Turning first to the balance sheet, you will find share capital unchanged and our debenture debt redeemed, with the exception of £1,000, which we are unable to pay back, as this belongs to the estate of a deceased American gentleman, whose executors have so far not taken out probate in this country. Reserve account and share premium account are the same as last year, but to the Gezira reserve account we have added £6,000. On former occasions I have given you full explanations regarding this account. Creditors in London, £25,421, include £14,397 provision for postponed repairs. The item of Sudan creditors, £58,088, is made up of £44,304 due to tenants, £1,784 deposits of our staff, and £12,000 outstanding accounts (including research farm, £2,500). The amount of £26,700 owing to the Sudan Government represents its share in the Tayiba station profits, and has since been paid almost entirely.

On the credit side of the balance sheet you will find concession and land account the same as last year, and the general development account about £10,000 less, which I will explain presently. Buildings account is £2,000 higher and canalisation the same as before. From pumping plant, agricultural implements, ginning factories, tugs, and barges we have made the usual writings off. Cotton figures as an asset of £147,579, exclusive of £130,620 already received and absorbed in the accounts. This has all since been disposed of at this figure. Other stocks in the Sudan include live-stock, seeds, and stores, light implements, and supplies. Debtors in the Sudan (£8,060) are represented by:—£395 19s. 10d., loans to tenants against 1920 crop; £6,088 5s. 1d., working account; and £1,576 13s. 5d., sundry accounts. Our cash position is good and steadily improving.

If you will now look at the profit and loss account you will see that our income shows a sum of £138,946, against £121,292, and transfer fees £237, against £5 in the previous year. On the debit side general expenses and cultivation expenses are somewhat higher, as you can well understand. We have again made a provision of £5,400 for postponed repairs. Every penny of this amount is earmarked, and will be spent to keep our plants in first-class order. As last year, we propose to pay a well-earned bonus to our staff, and I feel sure shareholders will readily agree to the £3,000 set apart for this purpose. The total sum written off this year amounts to £13,950, against £4,102 last year. The reason for this increase I will explain when I deal with our agreement with the Sudan Government. Our net profits (£59,064) are, within a few hundred pounds, the same as last year.

To sum up, we have every reason to be satisfied with our last year's results. Zeidab produced 8,495 kantars, against 7,738 kantars in the previous year. Barakat produced 8,079 kantars, against 5,743 kantars in the previous year. Tayiba produced 7,179 kantars, against 6,953 kantars in the year before. Shipping facilities were quite satisfactory.

Crop Prospects.

As to our prospects for the coming year:—We have under cotton at Zeidab, 3,300 feddans; Barakat, 2,056 feddans; Tayiba, 1,710 feddans; in all, 7,066 feddans, against 7,164 in the past year. At Zeidab picking is in full swing, and our first shipment of 400 bales is already on the way home. The crop promises to equal, if not to exceed, that of last year. Both at Tayiba and Barakat picking will commence towards the end of the present month. Our managing director cables that at present the plants look well, so that we may look forward to a very promising crop, and therefore to corresponding results.

Agreement with Sudan Government

It gives me particular pleasure to be able to tell you to-day all about the long delayed and much discussed agreement with the Sudan Government, which was signed in London on October 17 between myself, representing the syndicate, and Colonel Sir Edgar E. Bernard, for the Government. The rough outline of this agreement is that it establishes a three-cornered partnership between the Sudan Government, our Syndicate, and the natives of the Sudan, which means and has the inestimable value that all three parties are equally interested to make this important enterprise the greatest possible success. (Applause.) I cannot emphasise the importance of this part of the arrangement too strongly: in fact, I consider this the bull point of our agreement. The object is, as you know, cotton growing in the Sudan by irrigation in the area situated between the Blue and White Nile south of Khartoum, and called the Gezira. The Government supplies the land and the water, and receives for this 35 per cent.; the native does the cultivation, and gets 40 per cent.; we undertake the entire management, the marketing of the crops, do the minor canalisation, supply the machinery, buildings, offices, ginning factories, and receive 25 per cent. of the net profits. The agreement is for a period of 10 years, starting from the day on which the Government can supply us with water sufficient for 50,000 feddans of cotton, and it has a clause providing an option for a further four years.

The whole scheme comprises in the first instance an area of 300,000 feddans—one feddan is equal to about one acre—of which 100,000 are to be under cotton, and I may remark here that from our past experience we have learned that a three years' rotation of crops is the best and most profitable course to follow. In other words, we shall have one-third of the 300,000 feddans under cotton, one-third under green crops, of which the native gets the full and undivided benefit, and one-third lies fallow. Our endeavour now is to be ready for planting 50,000 feddans with cotton the moment the Government can supply us with the necessary water.

You will want to know what this agreement costs us. Firstly, two of our directors, one of whom is, alas, no longer with us, and a certain number of our old staff in the Sudan had an option on 15,000 of our shares at par for a number of years, only exercisable in case this agreement became an accomplished fact. This option has now been exercised. Secondly, we abandon an option we had with the Sudan Government on 10,000 feddans of land in the Gezira. Thirdly, we pay to the Sudan Government a sum of £32,500, against which the Government frees our syndicate from the obligation of subscribing £500,000 at par under an old agreement dating from pre-war times. You may perhaps remember that the late Lord Kitchener, who took such a deep interest in the Sudan, and, I may incidentally say, in our syndicate, caused a Bill to be passed through our Houses of Parliament for a Sudan Government loan of two and a-half million pounds, which he hoped to issue at par at 3½ per cent. It was in this loan that Lord Kitchener stipulated that we should subscribe the above-mentioned half-a-million. In addition we are writing off from development account the sum of £8,086 10s. 9d., which represents expenses incurred during the last seven years under the heading "Gezira Scheme."

Now, quite apart from this, we have naturally to find a considerable amount of working capital, and to achieve this it is the intention of your Board to increase our capital and to offer in the first instance, say, 150,000 shares—that is, one new share for each old share to the shareholders at a moderate premium. When our plans in this respect are complete we shall have to call you together again to obtain your sanction for such an increase and corresponding issue. The Sudan Government is also advancing to us as a loan and have already paid to us a sum of £400,000, which is to be used entirely for the erection of further ginning plant, buildings, offices, steam ploughs, in effect all necessary machinery, and one of the conditions of the agreement is that the Government has to take over these items on the expiration of our tenure at a valuation. We have to find the money for the minor canalisation, the ordinary running and working expenses, as well as for advances to the natives, etc.

The Outlook.

The question which naturally interests you is, what will our syndicate make out of this agreement? A direct answer to this, I am afraid, would be in the direction of a prophecy. Gentlemen, there is an old saying, and a very true one, "Never prophesy unless you know." Unfortunately, cotton growing, like agriculture everywhere, is a business subject to various and varying climatic conditions, as well as to the fluctuating prices of the product. The old shareholders of our syndicate are only too well aware of our experiences at Zeidab—our first and original cotton-growing station, which belongs to us—namely, that you get good years and also lean years, but we never once had a complete failure of a crop. (Hear, hear.) For the last few years we have had, in all, about 7,000 feddans under cotton, and we have been able to pay you what I consider good dividends, and at the same time to strengthen our financial position, thanks chiefly to the high prices of cotton. Against that we had rather a larger staff than we actually required, for the simple reason that we used all our three stations as a training ground for our inspectors in view of the coming bigger scheme. It is not to be expected that cotton will remain for ever at the present high rates; on the other hand, it is also fairly certain that good long-stapled cotton such as we can grow and do grow in the Sudan, will command for a number of years to come high prices as compared with the pre-war values. All our estimates—and we

have taken exceptional care in framing them—are based on very moderate figures, and all I would like to say on this point is that with ordinary luck we should be able to pay you dividends which will leave you well satisfied. (Applause.) This short synopsis gives you, I think, the salient features of the project on which your directors have expended many years of anxious work and thought. If any shareholder is desirous of further information, and will call at our office, either I or my colleagues, or the secretary, will be only too happy to supplement what I have stated now.

The Management.

From the directors' report you will have gathered that we have appointed Mr. Alexander MacIntyre managing director in the Sudan, in place of the late Mr. D. P. MacGillivray. Mr. MacIntyre has been with us even longer than his predecessor, and he has been our manager for many years. He is not only fully qualified for the position he now occupies, but he enjoys the full and absolute confidence of us all here and, I may say, of the authorities in Khartoum. In place of Mr. MacIntyre, we have appointed as manager in the Sudan Mr. H. Poyntz Wright who has likewise been with us for many years. He is a first-class agriculturist, knows all our requirements and has the full confidence of your Board. Again I wish to put on record the Board's unqualified appreciation of the loyal and efficient services rendered by our staff. I have to apologise for the absence of two of our directors, Sir Lionel Phillips, who is on his way to South Africa, and Mr. Arthur Hutton, who has to preside at another meeting to-day, and is therefore unable to be with us. Mr. Alex. MacIntyre is at his post in the Sudan. I propose that the report and statement of accounts be received and adopted, and I beg to ask my colleague, Mr. Hannay, to second the motion.

Mr. D. M. Hannay seconded the motion, which was carried unanimously.

The Chairman then proposed: "That a dividend be declared for the year ended June 30, 1919, upon the issued shares of the company at the rate of 25 per cent. (5s. per share), less income-tax, and that such dividend be payable to all shareholders registered at the close of business on December 10, 1919.

This was seconded by Mr. F. Wise and unanimously agreed to.

The Chairman next moved that Mr. J. A. Hutton, Mr. F. Wise and Mr. Alexander MacIntyre be re-elected directors of the company.

Lieut.-Colonel S. H. Pollen, C.M.G., seconded the motion, and it was unanimously adopted.

On the proposition of Colonel Douglas Jones, seconded by Mr. H. W. Morrison, Messrs. Cooper Brothers and Co. were re-appointed auditors.

Mr. Morrison moved that the directors' remuneration for the past year be £300, with an extra £100 for the Chairman.

Colonel Douglas Jones seconded the motion, which was passed unanimously, and the proceedings then terminated.

Near East Markets.

LONDON PRODUCE REPORT.

Currants and Sultanas.

The position is much the same. Distribution is proceeding as quickly as is possible in view of the congestion at the quays and on the railways.

Coffee.

An easier tendency has been evident in the market. Transactions have included Costa Rica at 150s., Guatemala at from 120s. to 126s., and Nairobi at 125s. At auction, 1,238 packages were offered, and met with a fair demand. Costa Rica good bold greenish came to business at 149s., while the prices for bold varied from 135s. 6d. to 146s. 6d. The futures market is steady. Quotations are: December 124s. 6d., March 120s., May 115s. 6d., July 112s. 9d., September 110s. 9d.

Sugar.

The market for the raw commodity has continued to be very active. Demerara has been done at 100s., while crystallised Mauritius has realised 118s. Other quotations include Trinidad at 105s. and Barbados at 95s. The sugar production for 1919 is estimated at 16,561,000 tons.

Oilseeds.

Linseed is closing rather quietly, with La Plata at 40s. January-February, and 39s. 3d. February-March. Rapeseed has been a firm spot, though there has not been much doing. Cottonseed has been fairly firm, with Egyptian at 26s. December.

Oilcakes, etc.

There has been little doing in oilcakes. Linseed oil closes easier at 107s. 6d. spot. Rape oil, ground nut oil, and cottonseed oil are firm, with the last-named at 98s. for crude and 110s. for edible. Soya bean oil is also a firm spot.

EGYPTIAN CROPS.

This bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in November:—

Maize (Nili).

The weather was favourable. Harvesting is now general, the bulk of the crop having been cut down. The yield, as foreshadowed last month, is proving satisfactory in Middle and Upper Egypt, but is a little below the average in Lower Egypt.

Rice (Sêfi).

Harvesting is nearly over, and threshing and winnowing are in progress. The yield is a little below the average in Beira and Gharbiya Provinces

Rice (Nili).

The early-sown crop in Faiyûm is above the average, while the late one is below. The yield in general is about the average.

Sugar Cane.

Weather favourable and water supply ample. The crop is in good condition, and continues to be cut for local consumption only. Stalk-borer was noticed in Giza, Minya, and Asyût Provinces.

Bersim.

Weather favourable and water supply ample. The first cutting of the early-sown crop is being grazed in some provinces. The severe attack of cotton worm and cut worm reported last month has subsided, but the considerable amount of resowing that took place has delayed the crop about fifteen days. The large amount of inferior seed used for resowing is bound to tell on the quality of the crop.

Wheat, Barley, and Beans.

Weather was favourable and water supply sufficient. Ploughing, sowing, and watering are in active progress, and the greater part of the sowing has been early. The early-sown crops have germinated well.

Helba.

Sowing is still going on in some provinces. The early-sown crop is being cut in some parts for human consumption.

COMPANY RESULTS, Etc.

Coupon No. 29 of the preference shares of the Société Anonyme du Behera will be paid on and after January 1 at the National Bank of Egypt, Alexandria, Cairo, and London (6 and 7, King William Street, E.C.4).

Mortgage Company of Egypt.—Warrants in payment of dividend on 5 per cent. cumulative preferred shares for the half-year ending December 31 will be posted on that date. Books will be closed from December 15 to 31, inclusive.

The directors of the Imperial Bank of Persia have declared a dividend for the half-year ended September 20 last of 5s. per share, free of tax, payable December 30.

The ordinary general meeting of the Egyptian Salt and Soda Company, Limited, will be held at the offices, 5, Rue Adib, Alexandria, Egypt, on December 30.

An an extraordinary meeting of the Anglo-Egyptian Bank held on December 16 the resolution altering the articles of association increasing the directors' remuneration, and passed at the meeting on November 25, was confirmed as a special resolution.

The directors of the Empire of India and Ceylon Tea Company have declared a dividend of 9d. per share on the Ordinary shares, less tax at 6s. in the £ payable January 1.

The directors of the East Indian Coal Company recommend a dividend of 15 per cent. for the half-year ended October 31, payable January 2.

The ordinary general meeting of the Crédit Foncier Egyptien will be held at Cairo on January 13.

SUPPLIES AND PRICES IN TURKEY.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

KERASSUNDE, November.

Exports.

In normal times this district exports nuts, haricot beans and eggs, the last two commodities in small quantities. Now only the export of nuts is permitted, and that is not done on a large scale.

The new crop which appeared on the market towards the end of August is estimated at about 20,000,000 kilogs, and the surplus for export is estimated at about twelve to thirteen million kilogs.

CAIFFA, November 18.

The approximate prices per kilo, in milliemes, of commodities exported in the current year are: Wheat, 37 to 47; barley, 16.5 to 17.5; red lentils, 24; white lentils, 29 to 29.3; chick peas, 20.5 to 21.5; maize, 21 to 21.5; sesame, 70 to 72; and oil, 150 to 160.

The production of the above-mentioned has been very small this year, except for barley, chick peas, and to a lesser degree lentils, of which the crops have been satisfactory.

The yield of oil will be particularly small. It is probable that a large part, if not the whole, of the sesame crop will be utilised here or exported to neighbouring districts for the manufacture of oil for food and also lighting.

A large part of the crop of chick peas has been exported to Egypt, Malta and Greece. Very little has gone to Marseilles on account of the fall in the franc.

STAMBOUL, November 20.

Manufactures.

The market is firm in the centres of production, and prices continue high in England, Italy and Spain where our merchants chiefly make their purchases.

Here there has been a decline in purchases for Russia and the Black Sea, and prices are in general comparatively lower than those of Manchester, owing to transactions carried out earlier. An increase in prices is all the same to be expected in view of the firmness of European markets and the recent rise in exchange, the pound sterling having risen from 338 340 to 364 365.

Produce.

Sugar.—At the commencement of the week the market was more active on the news of an important rise in centres of production. Java sugar in transit rose from £76 to £82 per ton. But the local authorities having intervened to fix a maximum price of £T41 per 100 kilos, the market has weakened, and the price is now £78 per ton. There have been no arrivals this week. Stocks are rapidly decreasing on account of the large consumption and the strong demand for Russia and Roumania.

THE ALEXANDRIA WATER COMPANY, LIMITED

INTERIM DIVIDEND.

NOTICE IS HEREBY GIVEN that an INTERIM DIVIDEND OF FOUR SHILLINGS per £5 share on COUPON No. 62 is payable on and after the 15th December, 1919, at Messrs. Barclays Bank, Limited, 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Limited, in Alexandria, upon the making of a declaration as to ownership in the form required by the above Banks, form of which will be supplied upon application.

Dated Alexandria, 14th November, 1919.

By Order of the Board,
H. R. C. BLAGDEN,
Managing Director.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

YUGOSLAV COMMERCE.

Regulations Affecting Exports.

A Decree of the Council of Ministers of the Kingdom of the Serbs, Croats, and Slovenes, published in the *Official Gazette* of November 9 (and in force from that date), established revised regulations affecting the exportation of goods from Yugoslavia. The decree supersedes all regulations previously issued concerning exports. The following articles may be exported from the kingdom in any quantity and without payment of export duty :—Fresh, dried, and pickled vegetables; fresh and dried mushrooms; ground cayenne pepper (paprika); garlic; seed onions; fruit of all kinds, fresh or dried; dried maraschas (cherries); tomato preserves in casks; dried figs; carobs; coffee substitutes; laurel leaves and berries; hops and hop meal; fruit jams; opium; cocoons; cattle and pig hair and bristles; fresh and salted fish; lobsters; oysters; sieves; cane; medicinal plants; pyrethrum chrysanthemum, fresh or ground; sumach; maraschino; cognac; slivovitza (plum brandy); komovitza (brandy distilled from the grape refuse left in the wine press); wine; mineral waters; waste from the manufacture of starch, beer, and oil; preserved fish, meat, vegetables and fruit in hermetically sealed receptacles; magnesite; lime; cement; pyrites; antimony metal and antimony oxide; bauxite, crude or refined; sodium sulphate; carbide of calcium; per-ferro-manganate; tartar; glue; glaze; fusel oils, unpurified; carpets; lace and embroideries of all kinds; feathers; cordage; hats of straw or otherwise knitted; products made from animals' intestines; straw knittings; wickerwork of all kinds, grids and sieves; wooden toothpicks; wooden soles and heels; wooden walking sticks; wheelwrights' products; wooden penholders; kitchen utensils of wood; products made of horn; books; printed matter; pictures; goods made of stone; millstones; stones for sharpening, hollow-grinding and polishing cutlery; fine pottery products; wrought iron nails; zinc sheets; lead; black copper.

The following goods may be exported in any quantity on payment of the export duty specified in the schedule annexed to the decree :—Lamb and kid skins; skins of wild animals; timber for building purposes. The following goods may be exported up to the amounts specified, and on payment of the export duty specified in the schedule, annexed to the decree :—(a) Wheat and wheat flour—up to 80,000 tons; (b) maize, maize flour and semolina—up to 120,000 tons; (c) haricot beans, peas, lentils—up to 150,000 tons; (d) hay, straw and lucerne—up to 20,000 tons (provisional limit); (e) hemp and flax—up to 2,000 tons (provisional limit); (f) cattle—up to 20,000 head. (Milch cows, cows for breeding purposes, heifers and calves are exempted.) Any quantities of fresh or prepared beef exported are to be set off against the 20,000 head of cattle allowed to be exported, specified weights of meat being regarded as the equivalent to one animal; (g) goats and sheep (together)—up to 30,000 head; (h) pigs, live or slaughtered—up to 25,000 head. Any quantities of fresh or preserved pork, bacon or lard exported are to be set off against the 25,000 head allowed to be exported, specified weights of such products being regarded as the equivalent of one animal; (i) horses for slaughtering purposes—up to 2,000 head (provisional limit).

The export of all other articles not specified above is prohibited; but special provision is made for goods already despatched for export, and the export of which was licensed, at the date of publication of the decree, and for raw materials if imported in order to be re-exported in a manufactured condition. Goods the export of which is permitted may in principle be exported only against payment in good currency. By special permits, such articles may be exported by way of exchange for other goods; for that purpose the exporter is bound to procure a certificate from the Centrale de Devizes that good currency has been obtained. The export duty is to be levied in silver dinars or in kronen respectively and according to the rate of exchange fixed by the Minister of Finance every ten days.

ON 'CHANGE.

THROGMORTON STREET, Wednesday.

We have had a sharp turn round in our market this week for Egyptian securities, after some fresh weakness in the early part of the week, and the market is closing very strong to-night.

In Government securities, Egyptian Unifieds are signally strong to-night at 73, a rise of 4¼, and the 3½ per cent. preferences are up 3½ points at 61½.

In bank shares, Agriculturals, after dipping to 5, have recovered smartly to 5⅞, an advance of 1-16. The preference shares have been an exceptionally dull market, and are ⅛ down at 6¾. Anglo-Egyptian Banks have also been a weak spot, and are ⅝ lower at 16¼. Ottoman Banks have firmed up ¼ to 9⅛, and National Bank of Egypts after dropping to 20 (sellers) finish ¼ up at 20⅜.

In Railways there is nothing new to report.

As regards Land shares, Aboukirs have been exceptionally dull, closing 1s. down at 29s. 9d. There has been a demand for Béhéras from Egypt, and also locally, and the price closes ¼ up at 15¼. Béhéra Preferences are rather dull at 4⅛ xd., and Delta Lands have receded 4½d. to 14s. Egyptian and Foreign Trusts are 6d. lower at 13s. 9d., and Gharbieh Lands have dropped ⅛ to 2 3-16. New Egyptians, after dropping to 25s., are closing very strong to-night at 27s. 3d., a rise of 1s. 3d. In Sidi Salems there is a rise of 1-16 to 2 9-16, with a certain amount of business passing. Sudan Plantations, after being easier, finish ¼ up at 7⅜. Union Foncières have remained a firm spot at 4½.

In miscellaneous descriptions, Abyssinians are 3d. down at 7s., and Alexandria Waters are ¼ lower at 11. Salt and Sodas, after being lower, have recovered, and leave off unchanged at 3. Mörums have dropped 6d. to 18s.

In Oil shares, Anglo-Egyptian B are 3-16 higher at 4 15-16, and Roumanians fractionally firmer at 23s.

In Greek securities we have again to record a sharp decline all round. The 1881-1884 and Funding Loans are all 6 points down at 50. The 1887 Loan has dropped 3½ points to 50, and there has been a similar decline in the Rente Loan to 43. The 1910 Loan has dropped 4 points to 50, with some small business at an even lower level, while Currant Bonds are 1 point down at 93. The 1914 Loan has exceptionally recovered 2 points to 52 on a cessation of selling from the Continent.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Moss Line s.s. Amasis, for Gibraltar, Algiers, and Malta, will leave Liverpool on December 20.

The Ellerman Line s.s. Malatian, for Malta and Alexandria, will leave Liverpool on December 20.

The Cunard s.s. Cypria, for Gibraltar, will close for cargo on December 23.

The Johnston line s.s. Norton, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza, will close for cargo at Liverpool on December 23.

The Prince Line s.s. Cyprian Prince, for Tunis, Malta, and Alexandria direct, taking cargo for Cyprus and Syrian coast, with option of transhipment at Alexandria, will close for cargo at Manchester on December 23.

The Ellerman s.s. Barotse, for Gibraltar, Malta, Syra, Smyrna, and Constantinople, will close for cargo at Liverpool on December 30.

The Bibby Line s.s. Lancashire, for Port Said, Colombo, and Rangoon, will leave Liverpool on December 24.

LANCASHIRE COTTON.

MANCHESTER, Wednesday.
(FROM OUR OWN CORRESPONDENT.)

The market continues decidedly strong, and prices have again advanced. More spinners and manufacturers are adopting the policy of putting up their quotations after each sale. Supplies of yarn and cloth available at the moment are far below the requirements of customers, and producers experience no difficulty in securing very profitable rates. Fluctuations have again occurred in Egyptian cotton prices. It is said that spinners in the United States have not yet satisfied their wants. The spot sales in Liverpool have been rather smaller. The crop outlook continues healthy, but according to some people there is a possibility of the yield not being quite so large as at one time expected. More money has had to be paid for most counts and qualities in Egyptian yarns. The undercurrent of demand remains healthy, but owing to the shortage of supplies there has been some irregularity in the trade done. Steady buying has occurred in piece goods for Egypt and the Levant. Favourable reports are being received as to clearances abroad. Special prices have now and again been paid for quick delivery. Shippers to India continue to give increased support in a variety of cloths. A few more lines have been put through for China. Printing cloths have been active for South America. American yarns for home use have moved off fairly freely from day to day at hardening rates. Plenty of demand continues to be reported in bundles for India and China, and special sales have been put through for Japan. The spinning employers have decided to pay a special bonus to the workpeople. The payments will be made on three dates in January, February and March, the total amount being £3 for operatives under the age of 16 years to £9 for males over the age of 21.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams : "Trabanque, London."

CAPITAL : Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

NOTES OF THE WEEK.

In the House of Commons on December 18, Mr. Lloyd George made a definite statement with regard to Turkey and peace terms. After explaining once again that the delay in this matter had been due to the Allies' desire that America should take part in the settlement, he announced that, as there were no indications of America coming in in the near future, the Allies had made up their minds to act forthwith. "We consider now," he declared, "that we are entitled to proceed to make peace with Turkey, and we propose to do so at the earliest possible moment." Preliminary discussions between ourselves and France had, he thought, been very promising, and he was hopeful that it would be possible to submit the terms of peace to Turkey at an early date.

While it is much to be regretted that the United States should not yet be able to come to any definite decision in this matter, it must be acknowledged that Europe could not afford to leave the question open much longer. Great Britain especially is urgently concerned to have it settled as quickly as possible, and France was becoming distinctly anxious regarding it. The Premier's announcement has, therefore, been hailed with unfeigned relief on this side of the Atlantic at least. What lines the settlement will follow cannot even yet be foretold with any certainty. Mr. Lloyd George, it is true, made a pointed reference to the impossibility of leaving the Turk as gatekeeper of the Straits, after he had treacherously shut them in our face at the critical moment; but he gave no hint as to who is to have the post thus, presumably, to be rendered vacant; and cynics may suggest that the porter may yet be given another chance. Perhaps it will be true wisdom in this case to "wait and see."

On the same occasion, Earl Winterton emphasised the necessity of remembering that the Arabs were as much our Allies as were the French or the Belgians. Speaking with warm feeling, natural in one who had served with them in a combatant capacity, he declared that no single small people had so well vindicated their right to independence; and he repudiated indignantly the suggestion that the Arab movement had been "organised by us on a *quid pro quo* basis," the fact being that the Arabs were fighting the Turks as we were. We welcome the statement, as indicating that the friends of the Arabs in this country do not intend to let their claims be forgotten.

Speaking last Friday at a dinner given by Indian residents in London in honour of Mr. and Mrs. Montagu, the Aga Khan gave eloquent expression to the views of Indian Moslems upon the Turkish Question. That question and others bound up with it are, he declared, vital to the 70 million Indian Moslems; and he pleaded that Turkey should be granted a generous peace, that "the unborn members of that remarkable and historic race" should not be punished "for the errors of a handful of men who allowed themselves to be dominated by the cajolery and threats of Germany." There is, as our Constantinople Correspondent points out this week, some danger of this argument being overworked; but it must be remembered that the view which it expresses was very widely held in this country, and even—unless memory plays us false—expressed more than once by responsible statesmen, when Turkey first joined in the war. In any case, the earnest desire of Indian Moslems must be a matter of real concern to British statesmen; and it is satisfactory to know that the Moslem view has been steadily borne in mind by the Empire's representatives on the Paris Conference, who have done their best to secure just treatment for Islam in all respects.

Latest reports make the incident at Deir-ez-Zor appear more serious than it looked at first. The raiding Kaimakam, Ramadhan es-Shallash, now appears as an ex-Secret Service agent of the Turks, and there can be no serious doubt that he is once more playing the old game in a slightly different guise; while his associate, Ibrahim Pasha Milli, is definitely identified as the leader who successfully set his wits against those of Abdul Hamid over the question of the Hamidieh cavalry. Such a combination bodes no good to the forces representing law and order, and the statement that "the whole affair is attributed to a Turkish intrigue . . . having for its object the embroilment of Anglo-Arabian relations" seems likely to prove only too true. At the time of writing, the most recent news is that a considerable body of troops is moving down the Euphrates, and that there is a possibility that they may come in contact with a British force.

Happily, the official Arab attitude is perfectly loyal and correct. The Emir Faisal, in his own name and in that of the Arab Government in Damascus, has formally repudiated knowledge of, or complicity in, the attack on Deir-ez-Zor. He has also ordered that the offenders, if arrested, are to be handed over to the British authorities; and has issued a *communiqué* to the Arab press denouncing them as rebels. More than this could

Digitized by Google

hardly be expected of the Damascus Government, which finds itself at the present time confronted by extreme difficulties that have been brought about by the substitution of French for British troops. It would be an unfortunate *dénouement*, indeed, if recent developments should lead to the Arabs and Kurds uniting against any *giaour* intrusion in Syria and Mesopotamia. But stranger things have happened in Turkey, and the agents of the Committee of Union and Progress have certainly achieved wonders lately, thanks chiefly to the long delay in settling the question of Turkey's future.

Some particulars of the cowardly attack upon the Prime Minister of Egypt have now reached this country. They indicate that Yussuf Wahba Pasha probably owed his life to the presence of mind of his chauffeur, who, apparently recognising the danger at once, manipulated the car with a dexterity that baulked the assassin's aim. The Minister himself showed considerable courage, and would not allow the outrage to turn him from his day's work. The Sultan, Lord Allenby, and the Ministers hastened to congratulate him on his escape, and it is probable that the attempt—which is universally condemned outside Egypt, though the Egyptian Press is strangely reticent on the subject—will eventually strengthen his own position and that of his Ministry. The student who made the attempt is described by *The Times* correspondent as being of the "exalted type," of which Egypt would seem to have a very full share; and, so far from showing any just appreciation of his act, he "smiled as he was led off." It is to be hoped that he and his like will soon be taught that crime is no laughing matter.

The extreme Nationalists and their backers worked hard to bring about a general strike on December 17, bending their energies chiefly on an endeavour to induce the Government employees to come out. The officials, however, had been warned that if they struck they would not only forfeit their pay, but would incur other penalties; and very few of them hearkened to the voice of the agitator. Some six hundred railway workshop men stopped work—and will find some difficulty in resuming it, thanks to the authorities' firm attitude; while the cab-drivers and lawyers are also making holiday. Another incident in the anti-British demonstrations is the presentation of a protest by the officials of El Azhar, who allege that British troops have violated a mosque. The facts appear to be that the building was actually entered by soldiers in pursuit of students who had been stoning them, and who continued to do so after entering the mosque; but that they were withdrawn almost immediately by an officer when the character of the building was recognised, and no damage whatever was done to the building. *The Times* correspondent suggests that the incident was the result of arrangement, for propaganda purposes. If the suggestion is correct, as it probably is, it is a pity that the authorities of El Azhar should allow themselves to be made use of in such fashion.

The later stages in the progress of the Government of India Bill proved to be uneventful. There had, of course, been rumours of a secret mobilisation of those reserve forces in which the House of Lords is so rich, but nothing of the kind appears to have been attempted, and when the time came for the crucial amendment, aimed at the principle of the dyarchy, the number of votes recorded in its favour was exactly five. It was in accordance with the fitness of things that this amendment should have been proposed by Lord McDonnell, one of the master-bureaucrats of the nineteenth century, and a man to whom the new India owes much more than she is likely to acknowledge just yet; but apart from his speech, there was nothing very remarkable in the proceedings in Committee, while the "debate" on the Third Reading was practically limited to some compliments to Lord Sinha—compliments which were undoubtedly deserved. The formal amendments introduced in the Lords were accepted without discussion by the Commons, and so the Bill was passed, and the great experiment is fairly under weigh.

As yet we have heard nothing of the feelings aroused in India by the smooth progress of the Bill, but the deputations of politicians to this country were, in one sense, representative, and probably their expressed views may be taken as fair samples of what is being said and thought in the East. The Moderates here are as nearly enthusiastic as it is the nature of Moderates to be, and since they claim to speak for the overwhelming bulk of intelligent public opinion, they are doubtless already preparing to undertake the burdens of office. We fancy that beneath the enthusiasm we can detect a note of astonishment, and even trepidation, at the ungrudging response which has been given to their claims; but they are already too experienced politicians to allow such feelings to appear in public, and in truth their proper place is the closet rather than the platform. Whatever their private feelings may be, they have our cordial good wishes for the journey which now lies before them; the road has never been trodden before, and they will find rough places as well as smooth, but at any rate it leads in the direction which they wish to follow, and stout hearts and clear eyes will carry them far.

If the Moderates seem to be shaping as the Ministerial party, the Congress deputation is beginning to present the appearance of a not very responsible Opposition. To them the Bill is "totally inadequate," and we fear that when the new Legislative Councils meet they will find some hard things to say of the men who now welcome it. Indian politicians have hitherto had little experience of criticism or invective directed against themselves, and we cannot deny that there will be a certain piquancy in the situation when the issue is fairly joined; at any rate, we may anticipate that the Councils will lose their reputation for somnolent dulness, and that in a year or so the debates will be better worth reporting than has been usual in the past. Western experience seems to establish the principle that practical politicians are all the better for tolerably thick skins, and the acquisition of that equipment is the most seasonable wish we can offer to both sides.

It may be desirable to explain in a few words our attitude towards the proceedings of the Commission which has been inquiring into the disturbances in the Punjab. We recognised in May that an inquiry was inevitable. Now that it has taken place, we are content to await the Commission's findings; and we see no advantage in discussing the incomplete reports of the evidence which have reached this country. Some of our contemporaries have taken a different view, and while admitting that the whole matter is *sub judice*, have demanded that somebody should be hung in the meantime, the choice of the victim being apparently determined by individual preferences. This line of action does not commend itself to us, and our only reason for referring to it is to dissociate ourselves from what we regard as a departure from a sound and wise tradition; the Commission will have to decide whether the exceptional action taken by the authorities was justified by the circumstances in which they were placed, and until their decision is published, discussion of particular incidents can serve no useful purpose.

TO AMATEUR PHOTOGRAPHERS.

The Editor will be glad to consider photographs of Near Eastern scenery, types, places of interest, etc., etc., suitable for reproduction in THE NEAR EAST. *When desired, payment will be made for the right of producing such photographs. Readers should state, when forwarding pictures, whether payment is desired or not.*

Photographs should be sent either packed between stout cards or rolled in a cardboard tube, and should on no account be folded. Titles and notes should be attached to each photo, and should be very clearly written.

THE WEEK AT HOME.

Lord French and Ireland.

The attempt to assassinate Lord French has filled the country with horror. Outrage and murder in Ireland have been steadily increasing during the past few months, but this latest attack on the Viceroy himself has every sign of careful planning on the part of numerous conspirators. It is bound to have a most unfortunate effect on all the projects for Irish reform, and it will probably lead to an indefinite postponement of the schemes for Dominion Home Rule. It is certain to stiffen the Government policy, since it necessarily deprives Ireland of much of that fast diminishing stock of sympathy which many Englishmen had come to feel for the country before the war; and it is not improbable that it will have some reaction on the recent alliance of the official Labour Party in the Commons with the small band of Nationalists. The latter, it need hardly be said, repudiate the crime as strongly as the Unionists.

A Short-Lived Scare.

Home politics have been slack during the week, and some of the Lobby correspondents have been driven to fill the gap by predicting a General Election in February. The most reasoned prophecy appeared in the *Daily News*, from Mr. A. P. Nicholson, the most experienced, and usually the most sane of politicians; it is only charitable to suppose that the forecasts of the end of the world led him to the logical supposition that the Government would not in that event survive much longer.

It must be confessed that the public refused to take the thing much more seriously than a Christmas ghost story. The Government has been in deep waters of late, and has suffered several embarrassments; but the country hates the very thought of a General Election, and would rather bear the ills that it has for some time longer than fly to others that it knows not of.

The most serious trouble of the Cabinet at the moment is the judicial decision that its Imports Regulation was illegal. The regulation was founded on an old Act which prohibited the importation of arms, ammunition, *or any other article*, and the Government construed "any other article" to be, in fact, any other article whatever that they chose to name. It is extraordinary that the Law Officers of the Crown should have forgotten the existence of *ejusdem generis*, which limits the application of subsequent words to matters contained in the preceding clause; "any other article" obviously applies to articles connected with arms and ammunition, and cannot be held to include sewing-machines, typewriters, or anything whose importation the Board of Trade chooses to prohibit.

The Government are to appeal against the decision, but the appeal is only a matter of form. While the appeal is pending they will be getting ready new legislation to fill the gap in trade policy.

State Housing.

The Government appears to be singularly unfortunate in its housing policy, and Dr. Addison, the Minister responsible for housing schemes and eventually, let us hope, for houses, is becoming almost as favourite a target of criticism and abuse as the Geddes brothers. The difficulty is likely to grow more acute, for the population is increasingly rapidly, despite the pessimists who discuss the birth-rate, and the congestion in industrial areas is an increasingly serious question. Meanwhile, the present uncertainty has practically stopped private building, and the prospect of fixing economic rents on a tolerable basis does not improve.

It is beginning to look as though Parliament would have to prolong the Act restricting any increase of rent, owing to the hopelessness of remedying the shortage of houses in any reasonable time; but the Act, though necessary in the circumstances to prevent the wholesale ejection of tenants, will in the long run aggravate the evil, since it prevents the property owner from obtaining a fair interest on his capital, now that the expenses of repairs are so exorbitant; and that in itself prevents building. On the other hand, if the restriction were removed, the immediate increases of rent which would be the consequence would at once force up the cost of living again, and lead to further demands for correlative increases of wages, which the Government hopes to avoid.

Increased Pensions.

Old-age pensions, which before the war were five shillings a week and during the war were raised to seven shillings and sixpence, are now to be increased to ten shillings a week. Nobody will begrudge the aged poor their bonus, which is, in fact, only a recognition of the increased cost of living. It will add ten millions a year to the national expenditure, which in these days is not a very large sum in the annual budget.

But it is noteworthy that this increase releases Mr. Austen Chamberlain from his pledge. A few weeks ago he stated that no further taxation would be necessary next year, *if* no further additions were made to expenditure by the House of Commons during the current financial period. Most people forgot the *if* at the time. But the addition has been made, and now the patient taxpayer knows what to expect.

The Shopping Crowds.

Oxford Street and Regent Street have been immovable this week with Christmas shoppers, and one sympathises with the man who advertised in *The Times* Agony Column for a suit of armour to protect him from infuriated females intent on presents. Jewellery and books seem to be the leading favourites this season: and the present writer found a celebrated bookshop guarded by a policeman at the door to regulate the crowd. As each attendant seemed to have a dozen customers at once, the situation looked hopeless; but fortunately the book required was near the entrance. It was the work of a moment to take it from its shelf, slip the necessary seven-and-sixpence into the policeman's hand, and vanish. For a brief second the man of law looked reproachful at this uncovenanted addition to his duties, but then he smiled reminiscently. "They can call it Peace Christmas if they like," he said; "I found it quieter in the trenches."

Doctors' and Dentists' Bills.

The doctors having put up their fees fifty per cent., it seems likely that the dentists will follow suit. But the dentists are in a peculiar difficulty that does not touch the doctor, for while every doctor must be qualified by law before he can practise, the dentist has only to provide himself with a bogus degree from an American or, if he chooses, an Ethiopian college that exists more in the imagination than in reality, and he can at once begin operations on the public. More than half the dentists who practise in England are, in fact, unqualified, and so strong is their influence that a Bill which was to make registration and degrees compulsory seems to have been dropped. It is not suggested that all the unqualified men are inefficient, but it is the fact that the advertising quack usually makes a larger income than the qualified dentist, who is forbidden by professional etiquette to announce his painless extractions in the papers; for the public is often unable to distinguish the one from the other. On that account alone it may be difficult to raise fees. But although nobody but the dentists would regret that fact, it is likely to have an unfortunate effect in reducing the applicants for the dental profession, which ought to be largely augmented in numbers. The late war showed that bad teeth were responsible for half the sickness of the country, and doctors who have studied the subject and can speak with authority say that if everybody went every six months to the dentist many thousands of years would be added to the life of the country. But not one man in a hundred goes unless his tooth aches.

Higher Club Subscriptions.

The latest trial that rising prices have brought is a general increase of club subscriptions. The Constitutional has notified its members that the annual subscription will be raised from seven to ten guineas; and since the Junior Carlton, the Conservative, the Devon-

Digitized by Google

shire, St. Stephen's, Union, and United Services have also sent out similar notices recently, it is clear that every institution of the kind will have to revise its rates in an upward direction. The step was inevitable, in view of higher rates and taxes and establishment charges, which it is impossible to meet out of increased charges in the coffee-room, but members will grumble and pay. Not many are likely to resign, for the club habit, which seemed to be diminishing before the war, is now more firmly fixed than ever. Even the older and sturdier institutions, which were too dignified to hunt for, far less to cater for new members, and which were then notoriously in rather low water, are now understood to have a reasonably good waiting list, while the more popular institutions are usually uncomfortably crowded.

Not many, perhaps, would go so far as the cynical husband, who remarked that it was worth much more than ten guineas a year to escape the horrors of home; but with exorbitant restaurant charges and impossible hotels, the club in these days is more of a necessity than a luxury. One of the incidental difficulties that faces club secretaries is the excessive demand for bedrooms from their members. The accommodation is heavily overtaxed, and the old rule that no member could have a room for longer than a week when it was required by another member now has to be strictly enforced.

One particular club, whose resident population was so comfortable that it sent an ultimatum to the secretary, refusing to be ejected for "mere casual country members," had the difficulty solved by the purchase of another house in the neighbourhood, to which every member who stayed longer than a week was summarily banished. But, alas, the new house proved so comfortable that it, too, became crowded, and the difficulty is as acute as ever again—unless the secretary buys another house.

Theatre Prices.

The theatres are also announcing a further increase in their prices, mainly in the more expensive seats. Undoubtedly their expenses have increased, and while the stars still get those exorbitant salaries which make a Cabinet Minister or a Judge a relative pauper in comparison, the rank and file of supers, beauty chorus, and the rest are less inadequately paid than of old.

But the theatre is an industry *sui generis*. Never, in the opinion of critics and public alike, has the drama been so bad; and most of the plays now showing are frankly miserable stuff, whose only recommendation is that the acts are extremely short and the intervals extremely long. The theatres are crowded, nevertheless, and it is often impossible to book seats for days ahead, while new theatres are being planned and speculative managers and producers were never so busy. While the public is content to swallow the fare that is set before them, no improvement in the quality can be looked for.

Hospital Finance.

Long advertisements and public appeals have begun to indicate to the community the plight of the great London hospitals. It is rather wonderful that they have succeeded in carrying on so long under adverse conditions, for food, coal, and everything else have doubled in price, and the cost of drugs has more than trebled since 1914. It has been suggested in some quarters that the public are reluctant to subscribe, owing to the possible establishment of a State medical service and the conversion of voluntary hospitals into State-supported institutions, but that does not appear to be the case, for at a recent dinner £50,000 was given towards the funds of a single hospital. Even that was only a quarter of what was required. It is noteworthy that the Prince of Wales, following the example of his father and grandfather, is taking a keen personal interest in the appeals for funds.

The Butter Mystery.

In some future age some grave historian, reviewing the many unsolved problems of the year 1919, may perhaps decide that the greatest mystery of all was the practical disappearance of butter from the British breakfast-table. The ration has become less and less, and it is now stated that it may possibly be withdrawn altogether in 1920; even the miserable ounce per week per head may vanish. The farmers say the fault is not theirs, and suggest that if the dairy industry were decontrolled and the price incidentally put up to four shillings and sixpence the pound they could again produce butter. An uncharitable section of the public suggests that there are people who have an interest in forcing the sale of margarine, and that the only way to make the consumer tolerate margarine is to ensure that he forgets the existence of butter. Whatever the truth of the matter may be, the absence of butter is causing some anxiety among the doctors, who recognise that it is a food essential to bodily health, and it is suggested that the Government would be well advised to listen to their warnings, in view of its effect on the national vitality.

The Week's Books.

The most interesting of the week's books is Mr. Bligh Bond's resuscitation of the monk of Glastonbury, in "The Hill of Vision." This excellent ecclesiastic, who has become extremely popular in spiritualist circles, purports to be a spirit who died in the middle ages, and after a presumed slumber of several centuries he kindly revealed to Mr. Bond the site of a buried chapel at Glastonbury by means of automatic writing. At any rate, Mr. Bond excavated in accordance with instructions, and the chapel was there or thereabouts. But the intelligent old monk also foretold, it seems, the beginning and the accurate date of the end of the war—it was a pity he was not in the War Cabinet—and the record of these latter revelations is now published. He talks like a sensible man, and has evidently kept up with the times pretty well, since he uses a good many words in his familiar conversation which were, to say the least, not generally current in his own day. It is perhaps unfortunate that his predictions of the Armistice were not announced in 1917 instead of 1919; we should have given a good deal to know the final date in that gloomy year.

It is perhaps rather unfair to mention in the same breath "The Road to En-dor," by Lieutenant Jones, who took the trouble when a prisoner of war to fake his own psychic revelations "pour épater les bourgeois," or at any rate to impress the Turk. But it is a comforting thought that he found it as easy to mimic spiritualism for his own purposes as Father John of Glastonbury to reveal the future; it may be taken as a proof that what our ancestors could do in the spirit we can do in the flesh. To that extent, therefore, we can hardly be called degenerate.

A book of another kind that will find many readers is "The Letters of Donald Hankey," whose war sketches, under the name of "A Student in Arms," attained so just a celebrity. A "Life of Mrs. Gladstone" should also be added as a pendant to Lord Morley's classic biography of the statesman; and, in a very different genre, another volume of Lord Fisher's reminiscences, which will be eagerly read and perhaps not less eagerly abused—a fact for which the author will care nothing at all. Mention may perhaps also be made in this place of the Life of John Murray III., the publisher, a too brief memoir of a very considerable man; and some will enjoy "Theodore Roosevelt's Letters to His Children." But this last book should be held in reserve, pending the full-length biography of the energetic President which is expected early in the New Year.

The novels of the day are generally flat, stale, but from the publishers' point of view not unprofitable, if all that one hears in literary circles be true. However that may be, the critics are agreed that Mrs. Humphrey Ward's "Cousin Philip" is hardly up to her usual level; but Mr. Marmaduke Pickthall's "Sir Limpidus" is being praised in many quarters. For sheer literary merit, Sir T. G. Jackson's "Six Ghost Stories" are easily ahead of anything else in current fiction; but they should not be taken as a nightcap except by the very strong-minded.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 8.

The Political Situation.

There is little change to report in the political situation. Some other more or less active Nationalists have been ordered to proceed to their estates, and another vernacular organ has been suspended. The segregation of active Nationalist agents in the villages is an admirable measure, since these gentry, when by themselves, are, as often as not, quite prepared to remain quiet, and only make trouble when they congregate together and gain courage from contact with one another in a place like Cairo. In the case of one of these active Nationalists, Sinnot Bey Hanna by name, he is not really a man who carries much weight, but he has of late made himself somewhat of a nuisance, and it is amusing to note that an Egyptian lady at Assiut has written to the Press, stating that instead of dabbling in politics, Sinnot Hanna could better employ his time by trying to repair the damage done, four years ago, to the widows and orphans of Upper Egypt by the failure of the native banking house, of which he was one of the principal partners.

The paper now suspended is *Misr*, which has distinguished itself for some time past by the violence of its language, far exceeding that of the two sheets recently similarly treated. The effect of this official action is making itself manifest in the tone of the Press, which, although still truculent and bitter, is trying its best to trim its sails to the new breeze. As a sign that a saner spirit is arising, it is noteworthy that the Mouled Ennabi (the Birthday of the Prophet), which always attracts great crowds wherever celebrations are organised, has passed off without any trouble anywhere.

The students have nearly all returned to their studies, and are reported to be quite quiet. Their attitude has been utterly childish, and without assisting in any way the present political problem it has seriously prejudiced their careers. They were given a chance to return to grace by the order issued by Lord Allenby ordering them to resume their studies on October 23. They took a week to make up their minds, but by delaying their compliance, they have now forfeited the right to sit at the special examinations fixed to be held next month, and will therefore lose another year of their scholastic career; and some of them will not be able to complete their studies, owing to the age limit. Efforts are being made to get the authorities to relent, but it is very much to be doubted whether, after the very good warning given them, any departure will be made from the terms of the High Commissioner's order. Indeed, it would be very regrettable if such an action were taken, for it is time that the students—and their parents—had a severe lesson.

The Alexandria Tram Question.

The Alexandria tram question is still without any solution, although so much was said about the municipality taking over the services itself, and the plight of the Ramleh residents is going from bad to worse. After vainly trying to enforce higher rates despite the opposition of the municipality and the refusal of the passengers to pay them, the Ramleh Company decided to return to the old tariff, and all went well. Recently, however, they have put the new rates into force again, and about three days ago they suddenly reduced the service to a skeleton one. As a result, the majority of the Ramleh residents have now to make their way into Alexandria to business as best they can, while the few cars running are so crowded that scarcely any fares can be collected. The state of affairs has indeed become nothing short of a scandal. That an important suburb should be put to incalculable inconvenience in this manner and be practically cut off from the city merely because the concessionnaire-company chooses to flout the authorities and to take the law into its own hands is a thing unheard of, and would not be tolerated in any European city. If a satisfactory settlement could be arrived at with the Cairo Tram Company, which had similar pretensions to higher fares, it should surely have been possible long ere this for an agreement to be come to with the Alexandria companies, and it is certainly high time that the Alexandria municipality justified its existence and put an end to a situation which is as undignified for it as it is prejudicial to the interests of its citizens.

TURKEY.

CONSTANTINOPLE, December 8.

The General Situation.

After the Armistice in 1918 the principal argument of Turkish apologists was that Turkey had been the victim of a clique of criminals who had deceived the whole nation and had plunged it, against its will, into the war, on the wrong side. At present very little is heard of that argument, which until a short time ago was repeated *ad nauseam* by statesmen, journalists, public officials, and every Turk with whom one discussed the matter. This is just as well; for the results of the elections, so far as known at present, mean, if they mean anything at all, that the policy of the infamous Committee of Union and Progress has the sympathy of eighty per cent. of the voting section of the Turkish nation. Out of the thirty-five deputies elected up to the present, twenty-eight are well-known Unionists of no uncertain colour. That they were elected under pressure is no argument, for if the great majority of the nation were not in sympathy with Unionist ideals and methods, pressure would have been unavailing. At the same time, one must take into consideration the fact, pointed out in last week's letter, that only a very small fraction of the electorate has voted. The whole of the Opposition parties refused to take any part in the elections. It is possible that this policy was deliberately adopted for the purpose of forcing the Unionists, who made the war, to sign the treaty that will leave Turkey without an Empire. If this is so, it is somewhat incon-

sistent to call for the suspension of the Parliament on the grounds of the illegalities committed in the elections. However, you never can tell: even Bernard Shaw could not invent more extraordinary paradoxes than the Turkish mind.

The general situation seems to become more complicated every day. Last week's letter recorded something of the adventures of Ahmed Anzavur, the Circassian who has gathered together a small army of his Circassian brethren, and is making things particularly unpleasant for the Nationalists. But it would be a mistake to suppose that his is the only movement that complicates matters. Since the Armistice there has been a mania for clubs, associations, unions, and what not, all for some political purpose or other, usually based upon one of President Wilson's fourteen thorny points. The Kurdish Association is one of the most important of these formations, and although its ostensible object, as declared in official publications, was originally merely academic, it speedily became evident that the association had other aims besides that of educating an ignorant world in the language, customs, and history of Kurdistan. It was not long before the Government discovered that the true object of the association was the independence of Kurdistan, and promptly set to work to remedy the initial mistake of having given permission for the formation of the association. The result was first of all a split in the association itself, one side maintaining separatist opinions and the other favouring the maintenance of the Turkish dominion, and shortly afterwards a repudiation of separatist policy by several influential Kurdish sheikhs, who sent telegrams to the Sublime Porte expressing their devotion to the Khalif and the Turkish Empire. Obviously this result has been materially assisted by Government propaganda; but there is no doubt that Armenian claims to a considerable portion of Kurdish territory have made a certain section of the Kurds doubt the wisdom of separating entirely from the Turks.

Politics and—Gambling!

Apart from the Turkish political parties, of which there are a round dozen, there are innumerable Turkish clubs. Before the war there were three clubs in Constantinople—the Cercle d'Orient, the Petit Club de Constantinople, and the British Club. Many of the Turkish clubs that have sprung up since the Armistice are run for propaganda purposes combined with gambling, and officers of the Allied armies frequently receive discreetly worded invitations to honour the club with the light of their countenances for an hour or two. A good deal of money must have been spent in this direction, but, so far as can be judged, with very little success. For in social matters the Turk is badly handicapped in not being able to extend the same sort of hospitality as that offered by Greeks and Armenians, who can mobilise the female section of the household for purposes of entertainment—and instruction. Thus, although it is by no means uncommon to find a subaltern who has been here about a month declare that the Turks are the cream of the Near East, it is most unusual to hear the same opinion repeated by those who have had more experience.

Meanwhile, with the Armenians wanting Eastern Anatolia, the Greeks wanting Smyrna, the Italians wanting what the Greeks want, the Kurds wanting what the Armenians want, the Turks swearing that they will die to the last man rather than yield anything to anybody, and yet fighting among themselves, is it any wonder that even Mr. Balfour, that master of political subtleties, has not the faintest idea of what is going to become of Turkey?

Election Incidents.

The Turkish Press reports that while Enver and Talaat received one vote each, the urn in which were deposited the voted tickets of the Fatih electors of Stambul contained one vote for M. Venizelos!

Sabah ed Din Bey.

Sabah ed Din Bey arrived by the Italian steamer from Taranto yesterday, and was interviewed by a local reporter before he landed, but was exceedingly guarded in his statements. At the same time it is worthy of note that when questioned with regard to his opinion of the Nationalist movement in Anatolia he replied, "Everyone has a perfect right to defend his country. I am faithful to my principles, and I venture to think that if they had been applied in time, many misfortunes would have been avoided."

It will be remembered that Sabah ed Din Bey was the founder of the National Liberal Party in 1909, and opposed to the Unionist programme of extreme centralisation a policy of decentralisation which was regarded as nothing short of treason by the Committee. How far he really maintains his original opinions remains to be seen, as also the possibility of accommodating them to Unionist ideas, which will dominate the new Parliament—if and when it meets. At the same time, Sabah ed Din Bey denies all knowledge of having been offered a place in the present Cabinet of Ali Riza Pasha, and the Minister of the Interior denies all knowledge of a projected Sabah ed Din Cabinet. One would think Sabah ed Din Bey had merely come here to have a look at the bazaars.

General Rycroft Decorated.

On November 30, General Franchet d'Esperey decorated General Sir W. H. Rycroft, K.C.B., K.C.M.G., with the insignia of Commander of the Legion of Honour. The ceremony took place in the presence of a considerable number of French troops and British officers, and terminated with the customary accolade bestowed upon the recipient of the honour.

CYPRUS.

December 6.

The state of suspense and the existence of so many gaps in the ranks of officials are sources of growing complaints—some perhaps exaggerated, but not without foundation. The man who writes smart articles in the Greek papers attacking the Government generally belongs to a generation which has only known British administration and liberty, and has been brought up in an atmosphere widely different from that in which their fathers and grandfathers lived. It is only Cypriots of fifty years and more who can realise the change from the old order. Political gratitude is a rare plant, and some reformers expect too much on what was yesterday Turkish soil. This is one point of view. It must, however, be admitted that there is ground for a good deal of the present grumbling. One principal grievance relates to the congested state of judicial work in some of the Courts, owing to shortage in the number of judges. Serious complaint is made of the frequency of adjournments, which is inevitable where judges of busy districts have to preside also in other divisions besides their own. This involves unnecessary delays and expenses to litigants, and other evils. It may tend to weaken that respect for and confidence in the Courts which have never yet been shaken here. The fullest credit has always been given by Cypriots of all classes for the benefits introduced by the complete transformation effected in Cyprus by the establishment of British justice in the reformed law courts. It would be a great pity if inadequacy to meet present requirements were to undermine in any way this feeling. Personally, it should be added, all the judges are held in the highest estimation, and the new Chief Justice, Mr. Stanley Fisher, who has been so many years in the island, commands the complete confidence and respect of all.

Another complaint relates to public works, especially roads and bridges, the maintenance of which will always cause heavy expenditure in this mountainous island, if they are to be kept in anything like good order, especially

CROWE & STEVENS,

Steamship Agents and . . .
Commercial Representatives,

PATRAS, PIRÆUS, ATHENS, SALONICA.

Digitized by Google

in these days of motor traffic. This cannot be said of some of the main roads at present. Votes will have to be increased for upkeep of all works, seeing that ordinary labour, which for the greater part of forty years cost 1s., now costs from 2s. to 3s. a day, and that the wages of skilled labour have risen proportionately.

Inadequate Salaries.

A committee representing Government officials of all departments at Nicosia has waited on the Commissioner, requesting that he would receive all officials in a body, in order that they might urge the real need of increased salaries. The Commissioner replied that this was unnecessary, as he fully realised the justice of the complaints under present conditions of life, and would himself submit to Government all the necessary information on the subject.

Nicosia Winter Races.

The attendance at Nicosia Winter Races was disappointing to the promoters from all points of view, partly owing to the weather, which was cold and showery. Had it not been for officers and soldiers from the camp at Famagusta, the gathering would have been a rather miserable one. Experience seems to show that spring and summer meetings are sufficient for the year.

The London Deputation.

Opinions are divided in the Greek community regarding the decision of the London deputation to return to Cyprus. While everything is being done to keep up the hopes of the sanguine element, it is pretty generally recognised that, in view of the present state of the Levant and Asia, arguments for any political change can hardly carry much weight, and that any "Cyprus question" is bound up with very serious and complex considerations of British policy touching those vast and disturbed territories in an angle of which the island lies.

Miscellanea.

Dr. Max O. Richter, whose death in Germany has been made known, carried out excavations at several places in Cyprus during some years. He published various works recording the results of his painstaking explorations. His widow states that she intends to publish a volume on the history and archæology of the island, which will also deal with the present condition of Cyprus.

Owing to some damage to the cable connecting with Alexandria, telegraphic communication with the outer world is interrupted.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS

Turkey and the Near East. December 18.

Speaking on the Consolidated Fund Bill, Mr. Lloyd George made a lengthy announcement on Turkey and the Near East, but he had little fresh to add to the subject. The more important points of his speech are dealt with in "Notes of the Week."

Mr. LLOYD GEORGE, replying to Captain Ormsby-Gore, said: The situation in Syria is a part of the larger question of the future of Turkey, arrangements for the examination and settlement of which were discussed at the recent meetings in London. Conversations between the French Government and the Emir Feisal are proceeding in Paris, and have not yet reached a termination. I am happy to say that in consequence of these conversations and of the military arrangements between the British and French Governments the tension in Syria has sensibly relaxed.

Topics in Parliament.

The subjoined headings are those given in the official report:—

EGYPTIAN EXPEDITIONARY FORCE. INDIA: Riots at Amritsar. INDIAN ARMY (OFFICERS' PAY). MALTA (CONSTITUTION). (December 16).

INDIA: Bolshevist Intrigue.—Troop-Train Attack near Thal. TRANSYLVANIA: CHALDEAN CHRISTIAN COMMUNITY. (December 17.)

CAUCASIAN AND BALTIC STATES. S.S RIVER CLYDE. NEAR EAST (RAILWAY CONTROL). TREATY WITH TURKEY. HUNGARY (EVACUATION BY ROUMANIAN TROOPS). BATOUM (BRITISH OCCUPATION). MONTENEGRO (SERBIANS IN OCCUPATION). TURKEY (CHRISTIAN COMMUNITIES). ROUMANIA. INDIA: Army Medical Appeal Board, London.—Amritsar Disturbances. CEYLON. (December 18).

According to information received from Erivan dated December 13, the Presidents of the two Republics of Armenia and Azerbaijan met in Tiflis at the invitation of Colonel Haskell, the Allied High Commissioner in Transcaucasia, and arranged for a cessation of the hostilities which had broken out at Zangezur between troops of the two States. The questions in dispute, if not settled by mutual agreement, will be submitted to the arbitration of the High Commissioner, whose decision will be accepted.

YUGOSLAVS IN THE EAST.

(FROM OUR BELGRADE CORRESPONDENT.)

BELGRADE, December 7.

A curious by-product of the war is the appearance of a Serbian newspaper, *Yugoslovensko Uyedinienie*, "The Yugoslav Union," in far-off Siberia. One has read in the papers of the prowess of the Czecho-Slovaks in Russia and Siberia, but less has been heard of the Yugoslav detachment, partly perhaps because they are fewer in number, partly because mighty events have overshadowed them. This jetsam of the war, some fifteen or twenty thousand in number, are still stranded in Eastern Siberia and Manchuria, anxiously awaiting the appearance of a military mission to repatriate them. They consist, probably, for the most part of ex-Austrian troops, Yugoslav by blood, who were prisoners of war in Russia, and probably most of them are veterans of the Serbian detachment that fought so well in the Dobruja. It will be remembered how a division of Yugoslavs travelled from South Russia through Archangel to Scotland, passed through England as mysteriously as the phantom Russian army of 1914, camped for a short time near Winchester, and was finally shipped to Salonika, where, after their long odyssey, they performed prodigies in the liberation of Serbia.

In May, 1918, the Yugoslavs in Russia, following the example of their Czecho-Slovak brothers, organised themselves into a "Provisional Yugoslav National Committee in Russia," and formed the Volunteer Battalion of Serbs, Croats, and Slovenes, under the command of Major Blagotitch. They wished to avoid interfering in Russia's domestic problems, but were inevitably drawn into the whirlpool, recognised the anti-Bolshevist regime, and employed on garrison duty in various towns. They particularly distinguished themselves in the defence of Cheliabinsk, when the overwhelming force of the Bolshevists drove the loyal Russians over the Urals, and threatened that important town, where the Yugoslavs had their headquarters. On the night of July 23-24, when the Russian army retired, two battalions of Yugoslav troops remained to protect the town as long as possible, and to cover the Russians' retreat. The first, with a squadron of cavalry and a machine-gun detachment, took up a position some nine or ten kilometres in front of the town, but the front was very long, and liaison with the retreating Russians very feeble, and they were in danger of being cut off; they beat off an attack by three enemy battalions and actually advanced a couple of kilometres, but finally, overwhelmed by numbers, and under a merciless machine-gun fire, they were obliged to withdraw, and retired in order into the town, where they found their second battalion engaged in desperate street-fighting with the local Bolshevists. Finally, they succeeded in withdrawing and saving their colours, under overwhelming pressure, with the loss of seven officers and 150 men.

By Appointment *to H.M. the KING.*

Intending Visitors, and Gentlemen taking up permanent appointments in India, Egypt, or the Eastern Mediterranean should write to:—

THRESHER & GLENNY

for List "H" giving details of necessary clothing and kit.

Military Officers, Civil Servants and other Government Officials proceeding to England can have their kit overhauled and replenished at short notice.

Lists No. 1 (Mufti), 2 (Hunting Kit) with details of shirts, underwear, etc., and self-measurement form by return mail on application.

THRESHER & GLENNY, *MILITARY TAILORS.* Established 1755. Indian & General Eastern Outfitters. 152 & 153, STRAND, LONDON, W.C.2.

GREAT ROUMANIA.

(From a Bucharest Correspondent.)

II.

The assimilation of the Magyars who have become citizens of Great Roumania is the most serious problem with which the country is faced. These Magyars still hold ideas that are out of keeping with the changes caused by the war they brought about. They do not realise that they have been beaten, that their unjustified predominence by force is no longer in keeping with modern conceptions; they even entertain hopes that the present state of affairs is transitory, and that the Supreme Council will eventually restore the lost provinces to a reconstituted Hungary. This hope is no doubt without foundation, but it has been fostered by the treatment meted out to Roumania by the Supreme Council when Roumania freed Buda-Pesth of its Bolshevist incubus. Then, again, it was believed that at least one Great Power was assisting Bolshevist Hungary against one of its own Allies, a situation offering opportunities for intrigue well suited to the Magyar mentality. Be this as it may, the result is that the Magyars of the Roumanian Banat and of Ardeal are far from becoming politically assimilated, and the fervent hatred they entertain for the Roumanians makes that process still more difficult. The local government of Ardeal wisely retained a number of Hungarians in the public services —they are short-handed even now, and as old Roumania has no experts to spare no help can be expected from that quarter. But the Hungarians that remain are by no means satisfactory; their attitude seems to be one of passive resistance, which may become sabotage under little provocation. On the whole, the Transylvan Roumanians are dealing wisely with their old oppressors, and, as a ray of hope, it appears that the Szeklers are beginning to realise this. The Szeklers, a good number of whom are really Magyarised Roumanians, are stout, determined people, and they showed some interest in the recent elections, instead of sulking as did the other Magyars.

The Germans of Ardeal and the Bukovina offer another, but less difficult, problem. While retaining the traditions and ideals of the Germany of long ago smothered by the materialism which brought the Teutonic Empires to ruin, they consider themselves culturally far superior to any of their neighbours. They are industrious and self-centred, and, for all their eclecticism, are likely to make good citizens of the new State if allowed to continue along the line they have always held to. Their power of combination makes them a political factor of importance, and they will show skill in using their power. At present they are inclined to give the new order a trial; but their Press has already given some indications of the direction their policy may take; there have been warnings against "Orientalism" in home politics, and in discussions on foreign affairs a certain anti-Anglo-Saxon tendency is beginning to show itself. The majority of Hungarians and Germans live in the towns, in communities, whereas the native Roumanians are mostly scattered about the countryside. Therefore watchful tact is required in dealing with these two racial factors.

Roumania's relations to her neighbours will be influenced, if not dictated, by the progress of her inner development and consolidation. The great riches of the country place Great Roumania in a more favourable situation than that of her neighbours, but there is as yet a lack of coherent plan for the exploitation of the country's many resources, and, as already stated, the want of sufficient expert *personnel*, especially in the new territories, adds to the difficulties of the task. That Roumania cannot be coerced by economic pressure became apparent in course of the proceedings launched against her by the Supreme Council after the rout of Bela Kun's army on the Theiss. But Roumania recognises that she need not stand alone, and has been looking round, carefully choosing her future Allies. There was a tendency towards a Latin alliance, which was voiced chiefly in the French papers of the capital. The tendency was sufficiently obvious, as also was the inspiration, and it decreased as the noise of D'Annunzio's imperialistic *fantasia* increased, drowning what slight remonstrances, if any, may have wafted down from High Olympus. In fact, the inertia of the Supreme Council towards the latest of the *condottieri* as compared with its action against Roumania has begun to react on the latter country, and the result would seem to be a tendency towards a more definite understanding with her nearest neighbours, Czecho-Slovaks, Poles, and Ukrainians. This may be a "call of the blood," for there is a good deal of Slav in those Eastern Latins, the Roumanians, but it is certainly an economic call. The Czecho-Slovaks have manufactured goods to export, and the road down the Danube passes through countries the destinies of which are still on the knees of the gods, but there are alternative routes through Great Roumania. The Poles want to be sure of an outlet to the sea other than the somewhat dubious window on the Baltic, and the Ukrainians will welcome the support of an old-established and respectable firm.

So, while the Great Powers are still havering over the League of Nations, the young, smaller nations are acting, and may before long have arranged a League of Nations for themselves and in their own specific interests, a League, moreover, which, while facing Europe's dread enemy Bolshevism, will gather strength enough to afford to smile openly at the fulminations of "High Olympus."

MR. LLOYD GEORGE ON CYPRUS.

The *Voice of Cyprus* of December 5 publishes the following letter received by the Cypriot Mission in London:—

"The Office of the Prime Minister, Downing Street, November 14, 1919.—Dear Sir,—I am directed by the Prime Minister to reply to the letters you were so good to send him dated September 15 and October 21. The Prime Minister has given his careful attention to the considerations urged in these letters. He is fully aware of the sentiment which exists among the Greek population in Cyprus in favour of the union of the island with Greece. He directs me to make it clear to you that the wishes of the inhabitants of the Island of Cyprus will be taken into the most careful and sympathetic consideration by his Majesty's Government when they consider its future. He is unable, however, at the present time, owing to the uncertainty of the international situation in the Middle East, to give any definite reply to the petition of the Cypriot Mission. The Prime Minister greatly regrets that the great pressure of public business will make it impossible for him to receive the deputation in person; he understands, however, that Lord Milner has had the pleasure of an interview with the deputation, who laid before him the facts and considerations which they desire his Majesty's Government to take into consideration when they are determining the future of the island.

THE CARAVANSERAI.

Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultán after Sultán with his Pomp
Abode his Hour or two, and went his way.

A Belgrade correspondent writes:—"A young Serbian student, who was studying at Cambridge during the war, has raised a voice in protest at the way in which his compatriots are fleecing Englishmen now in Belgrade. He points out that one of his friends is paying 700 dinars a month for one small bedroom, while another is paying no less than 1,700 dinars a month for two furnished rooms. This is quite in accord with the present scarcity of accommodation in Belgrade and the outrageous prices at present obtaining, but the *Politika* rather humorously points out that this is nothing new in Anglo-Serbian relations; for our Consul here in 1837, Col. Hodges, paid Prince Milosh 900 florins for his lodgings in one of the Prince's houses. This, however, was no obstacle to their excellent relations, and in compensation the artful old Prince gave a military parade in the colonel's honour when the latter visited Posharevata."

***

The proposals for a British School of Archæology in Jerusalem remind me of a wicked little story connected with digging, which shows how even the "expert" may be led astray—shall I say?—by his own theories and his desire to "persuade" facts to fit in with them! At a certain site in what was the old Turkish Empire an archæological expedition had long and industriously been shifting tons of earth from the ruins of an ancient city, and had achieved very gratifying results in many directions. But the director was bent upon finding a particular architectural feature—I dare not be too explicit, for reasons that may be guessed—in a particular section of the ruins, and for a long time he was unable to do so. This annoyed him not a little, because it left some of his pet theories "up in the air," whereas the discovery of what he hoped, and expected, to find would lend them invaluable support. Naturally, he was not pleased. And very soon the native workmen observed that all was not well with their employer.

***

Now the big man was popular with his workers, being a genial soul, with a ready wit of the kind to appeal to them. So they decided to do their best to restore his equanimity, and one of their foremen collogued with one of the Great Man's lieutenants. The result was apparent a day or two later, when the delighted archæologist, going his rounds of the site, found the particular architectural feature for which his soul had yearned slowly emerging from the all-covering mud. As it was built in sun-dried mud brick, it was difficult to be sure about its precise dimensions at first, and it required extraordinary care on the part of the foreman to avoid cutting away the surface in clearing the mud off. However, there was the long-sought evidence, and the archæologist rejoiced as a mother rejoices over her first-born. But, alas and alack! as the mud gradually dried out, his suspicions were aroused. The "brickwork" had an odd appearance, and the pointing looked weird for such "early" work. And then . . . the truth came out. Anxious to please, the too-ardent foreman had "faked" the feature, and—— But, no! On second thoughts, the curtain had better come down at that point on an "ower-true" story.

CORSAIR.

BIBBY LINE

OF FAST TWIN SCREW STEAMERS SAILING FORTNIGHTLY FROM

LIVERPOOL

TO

CEYLON, BURMA, and SOUTHERN INDIA.

Special Dining and Sleeping Carriages are run by the South Indian Railway Co. in connection with the Bibby Line Service outwards and homewards.

MUSICAL NOTES.

One sign of the advent of Christmas is the decrease in the number of concerts. At every hall the bill of fare grows less and less. It is true that until the present we have feasted well, but now it is ended. Opera at Covent Garden and the Russian ballet at the Empire have both finished their respective seasons. They have had such success that their early return is certain; but, for the time being, man has to look inside, rather than outside, himself, for enjoyment.

Thus it is that I have been to but two concerts in the last few days—both on December 17. At the first Mr. Norman Wilks gave a pianoforte recital at the Wigmore Hall. Unfortunately (for these afternoon performances are rather unmanageable things), I did not hear Mr. Wilks in his first piece—Beethoven's Sonata in C Major—but the remainder of his programme I certainly did not enjoy. He played a couple of Brahms' Ballades, Chopin's Sonata in B flat minor, and two slight things by Rhené-Baton—a sufficient selection by which to judge him. There is little tenderness in his playing, and his intellectuality is, if I may use a word in the exact, and no more offensive, sense in which I should have used it before the war, Teutonic. He can make a tremendous noise, and seems rather to delight in the consequent unintelligibility. Chopin he attended to with brilliant mercilessness: in the Funeral March, for instance, there was no mere suggestion of drums—they were there on the piano—a most unhappy position. The Rhené-Baton went on quite straightforwardly, with no trace of guile or finesse; and in these again the tone was far too strong. The clarity that comes from restraint seems to be Mr. Wilks' most urgent need.

In the evening, at the Queen's Hall, Marguerite Nielka sang with the London Symphony Orchestra. She is a young British singer whom I had not previously heard. In her first item, two songs from "Le Nozze di Figaro," she was excellent, getting precisely the simple attack on the Italian phrases without which Mozart is nothing; in the second, the recitative and aria, "Iphigenie en Tauride" of Glück, she failed in a very wide trial—the music was altogether too big for her; but in her third—"The Nightingale" of Alabieff—she again did excellently. She has a range of two octaves, but her high notes are hard and her low notes passionless. The pieces she chose to sing make anything in the way of a certain judgment of her somewhat difficult, but I should think her future lies rather along the plane of soundness than up the plane of greatness.

The orchestra was conducted by Mr. Albert Coates, whose reputation has probably reached almost every reader of THE NEAR EAST. He is certainly one of our greatest conductors, and for modern Russian music he has no equal in this country. In Mozart and Glück he was very good, but we have plenty of conductors who can be so. It was in Rimsky-Korsakov and in Scriabin's "Poème de l'Extase" that he showed most his wonderful power of interpretation. The Scriabin was intensely interesting; he made the alarmingly unintelligible appear merely strange—a very great feat.

ANDANTE.

ALL SOULS' DAY.

(From the Serbian of Brana in *Epocha*, of November 9, 1919.)
Translated by Elizabeth Christitch.

(After the tramp through Albania, and the starvation entailed by delay on its inclement coast, the Serbian army was so extenuated that hundreds of victims were shipped daily from Corfu to the adjoining lazaret on Vid Island, whence the corpses were dropped into the sea.)

Towards the black massing clouds the wild hurricanes leap,
And tear down a veil on the waters to spread:
A pall for the myriad Serbian dead,
Near Vid's dismal island consigned to the deep.

'Tis the Day of the Dead, the Feast of All Souls.
For the regiments below is no epitaph writ;
But their candles of foam by the lightning are lit,
And low-booming thunder the Litany tolls.

A spectral priest rears out of the main;
By turbulent tide frothing censers are swung;
'Mid hissing of spray is the Requiem sung;
A wide cross he traces, and glides down again.

NEAR EAST BOOKSHELF.

TANKS.*

It was in July, 1915, that Colonel Swinton "discovered" our author and his "Tanks." "What on earth are you, Lieutenant Stern?" said he. "Are you a mechanic or chauffeur?" "A banker," was the reply. "This," said he, "makes it still more mysterious.'

We doubt whether Colonel Swinton's quick intelligence saw much mystery in the connection between "Tanks" and Lieutenant Stern after he had spent half-an-hour with him. To the present writer, who had the good fortune to see a good deal of our author's masterful ways between 1915 and 1918, the connection seemed clear enough, and the country may well consider itself fortunate that the connection was there. The fact is that he is the very embodiment of the "Tank" principle. His portrait in this volume will prepare the reader for this. A man of iron determination; a man who allowed nothing to stand in the way of the production of his beloved "Tanks," caring nothing for his own comfort (or for that of others), if only his "Tanks" prospered; a man who looked on "red-tape hurdles" as things not to be leapt over with the help of minutes, but as obstacles to be crushed down; a man who troubled little to argue with those whom he, perhaps too often, felt to be fools, preferring to ignore their orders, no matter how highly placed they were. And a man who "got there" in spite of hundreds of obstacles, any one of which might well have daunted a less suitable man. There never was the least mystery about the connection between Stern and his Tanks.

And this book is curiously like him. It is a record, perfectly plain and straightforward, of how "Tanks" came to be made and what they did. It is neither modest nor vainglorious. He is out to tell us all about "Tanks," and, in doing so, he tells us a lot about himself, simply because he and "Tanks" "go together." And a wonderful story it is. There is, we imagine, hardly another instance of a totally new war weapon being conceived and developed into a practical instrument of the first importance in so short a time and at a time when the whole energies of a country were so fully preoccupied. Even had he received all kinds of encouragement and help from every side, the achievement would have been wonderful. As a matter of fact, the contrary was too often his experience. But obstructions were nothing to him. He treated them as his "Tanks" did, and down they went while he moved on slowly but surely to his objective.

This book is more than a valuable historical record. With all its matter-of-fact statements of facts, it is a book of thrilling interest which it is difficult to lay down when once begun. Sir Albert Stern would be the last to claim for himself a fine literary style, but he has produced a live book. The numerous and excellent illustrations greatly add to its value.

C. S-W.

THE GOVERNMENT OF INDIA.†

It is not altogether easy to "place" this book. Certainly it is not mere political propaganda; it is much too good for that. On the other hand, it contains too many inaccuracies and misinterpretations to serve as a scientific treatise, and, speaking for ourselves, we find its chief interest in the unconscious revelation of the writer's development. We have an able man with a definite political creed brought into contact with a mass of unfamiliar facts, and we see him struggling to reach a satisfactory orientation; he tells us on several occasions that he has changed his mind, and his honesty of purpose is apparent throughout. The mischief is that he has not gone to the most important sources of knowledge of the past: he has studied the English period of Indian history with tolerable success, but he has got an entirely wrong view of the period which preceded it, and his whole field of vision is in consequence distorted, while he constantly attributes to English influence institutions and tendencies which existed before Englishmen set foot in the country. Thus he blames Englishmen for the tawdry internal fittings of palaces, "beautiful in all the traceries and designs of Moghul architecture"; apparently, he does not know that the taste for tawdry novelties was at least as characteristic of Moghul culture as the architecture he admires, and that under Akbar and his successors ability to supply "toys," or, as we might say, gimcracks, was the surest passport to favour at the Court. Again, he asserts that the English raised the standard of official salaries; it would probably surprise him to learn that, measured in commodities, the salary of one of Akbar's provincial Governors was about ten times as great as that which a Governor enjoys to-day, and that a not very dissimilar proportion holds good throughout the scale. In the same way ignorance of the real past, or a somewhat complacent acceptance of idealistic theories, vitiates his views on police, education, and other spheres of State activity, and English administration is sometimes blamed for introducing what it has struggled unsuccessfully to eliminate. Even on matters of current practice, the book is not an entirely safe guide: we are told, for instance, that the Viceroy's Council includes a member for Public Works, who disappeared long ago, and that the Secretaries at Delhi correspond to the Permanent Secretaries of Departments at home, whereas they have an entirely different status. In view of the defects we have indicated, the book cannot be recommended to students anxious to ascertain the position in India, but its merits are still substantial and it may be read with advantage by those who know the facts and are interested rather in studying the impressions which those facts may produce.

LYRA HEROICA?*

This slight volume of verse is of a constant quality, never rising above (or even to) the ordinary. Any stanza being typical, we select the following from "Holbrook's Feat":—

Ho! Britons, we are Britishers, compatriots we thrill
To know that in the midst of foes we rule the ocean still;
Though brutal Germans say to-day we are but broken reeds,
The pluck that won Trafalgar's fight still breeds the bravest deeds.

We regard comment as needless. Possession of this kind of patriotism may be desirable, but expression (and in verse of all things!) of it is quite another matter. The best thing that can be said of the book is to mention its purpose: the proceeds derived from its sale are to be devoted to Lady Carmichael's War Fund.

BOOK NOTES.

The Cambridge University Press announce "The Cambridge Ancient History," to be completed in eight volumes, under the general editorship of Professor J. B. Bury, Mr. S. A. Cook, and Mr. F. E. Adcock. The work, of which the general plan will be similar to that of the "Cambridge Modern History," will begin with an account of archæological discovery, tracing the history of Egypt and Babylonia, Assyria and Persia, Greece and Rome, to 324 A.D.

Messrs. Longmans have in the press a new work from the pen of Professor Patrick Geddes. It is a volume on the life and work of Sir Jagadis Chandra Bose.

Mr. Murray has nearly ready "Russia in Rule and Misrule," by General C. R. Ballard, British Military Attaché in Roumania. Sir William Robertson has written a foreword to the book.

PERSONAL AND GENERAL.

CALENDAR OF THE WEEK

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1919. December 26	1919. December 13	Friday	1338. Rabia II. 4	5680. Tebet. 4
27	14	Saturday.....	5	5
28	15	Sunday	6	6
29	16	Monday	7	7
30	17	Tuesday	8	8
31	18	Wednesday	9	9
1920. January 1	19	Thursday	10	10

H.H. Prince Fazil Pasha has passed into Woolwich.

The Emir Faisal was received by M. Clemenceau on December 20.

The Aga Khan, who came to London to attend the dinner to Mr. Montagu, has returned to Paris.

General Sir W. Birdwood arrived at Fremantle on December 19, and received a great welcome.

Mr. Alexander Part has left London for Egypt on business, and will probably be away for two months.

Viscountess Ebrington left England on December 16 in the s.s. Minnesota to join Lord Ebrington in India.

The Prince of Wales received Mr. N. D. A. Silva Wijayasinghe, Padikara Mudaliyar of Ceylon on December 22.

The Hon. Mr. Henry Sharp has been confirmed as Secretary to the Government of India, Education Department.

Sir Herbert Dering, British High Commissioner in Bulgaria, left London on December 20 for the British Legation, Sofia.

We understand that the Shah, who is staying in Paris, will pay an official visit to the King and Queen of the Belgians on January 15.

Prince Firooz Nosrat-ed-Dowleh, Persian Minister for Foreign Affairs, concluded his mission to London on December 21, and left for Paris.

The Belgian Ambassador and Baroness Moncheur returned to Brussels on December 18 from Constantinople, and will leave shortly for London.

The solemn consecration of the Most Rev. Alban Goodier, Roman Catholic Archbishop-Elect of Bombay, took place in Westminster Cathedral on December 22.

Nawab Sarwar Ali Khan of Korwai was received by the King on December 18. Mr. W. S. Davis (Political Officer) also had the honour of being received.

Princess Mavrocordato held an exhibition of Roumanian embroideries at Claridge's Hotel on December 22, 23, and 24, on behalf of the Anglo-Roumanian Guild of Art.

M. Venizelos was welcomed at Athens on his return from Paris by the heads of the Mussulman communities of Salonika, Drama, and Kavalla, who will thank him for his efforts on behalf of Macedonian Mussulmans.

M. Nicolas Misu, formerly Roumanian Minister to the Court of St. James, and recently Minister for Foreign Affairs, has been nominated Administrator of Crown Lands in succession to Prince Styrberg, who has undertaken other duties.

Sir Duncan Colvin Baillie, K.C.S.I., of the East India United Service Club, St. James's Square, S.W., and of Glenquoich Lodge, Amurlee, Perth, N.B., chairman of the British Empire Producers' Organisation, formerly Acting Lieutenant-Governor of United Provinces, India, who died in August, aged 63, left unsettled property in the United Kingdom of the gross value of £1,657, with net personalty £1,056.

Prince Nicolas of Roumania, accompanied by his sister, Princess Marie, and attended by Colonel Arion, Equerry, left London on December 19 for Paris. Prince Nicolas is proceeding to St. Moritz, on a visit to the Infante Alfonso Maria of Orleans, while Princess Marie will stay in Paris.

Mr. Athelstan Riley and Miss Riley gave a reception on December 18 at 2, Kensington Court, in honour of the Bishop of Zica, Serbia, and of Serbian Ministers. Among those present were Marie, Princess Serge Poutiatine and Prince Serge Poutiatine, the Greek Minister, the Serbian Chargé d'Affaires, the Armenian Vartoped Abel, Sir Edward and Lady Boyle, Count Cheddo Mijatovitch, Professor G. Thoumaian, and Mr. Frank Hastings.

Captain Stanley L. Willis, who has been serving in the battleship Emperor of India, flagship of Rear-Admiral M. Culme-Seymour, C.B., Second in Command of the Mediterranean Fleet, as Chief Staff Officer, took over duties on December 22 in the Naval Intelligence Division at the Admiralty, preparatory to commencing duty on New Year's Day as British Representative on the Inter-Allied Naval Commission of Control for Bulgarian Peace Terms.

APPOINTMENTS, ETC.

The King has given directions for the appointment of Mr. Stanley Fisher (Puisne Judge) to be the Chief Justice of the Supreme Court of Cyprus.

M. Dragomir Stefanovitch, the Serbian Minister to Portugal, has been appointed to take charge of the Press Department of the Ministry of Foreign Affairs.

A decree has been issued definitely nominating Mr. Sheldon Amos to be Judicial Adviser to the Egyptian Government in the place of Sir William Brunyate, resigned, and Brigadier-General Sir Gilbert Clayton to be Adviser to the Department of the Interior instead of Mr. J. Haines, resigned.

Mr. T. E. Peet, Lecturer in Egyptology in Manchester University, has been appointed to the Brunner Chair of Egyptology in Liverpool University. He is well known as a distinguished archæologist. In 1909 Mr. Peet assisted Professor Garstang's excavations in Egypt. The following season he was invited to excavate for the Egypt Exploration Fund at Abydos. The result of these investigations are published in the three volumes of the Exploration Fund Memoirs, "Cemeteries of Abydos."

The Secretary of State for India in Council has made the following appointments and promotions in the India Office:

Sir Malcolm Cotter Cariston Seton, K.C.B., to be an Assistant Under-Secretary of State and Clerk of the Council of India.

Mr. John Edward Ferard, C.B.E., to be Secretary in the Judicial and Public Department.

Mr. Percy Harold Dumbell to be an Assistant Secretary.

Mr. Cecil Hermann Kisch, C.B., to be an Assistant Secretary with the status of Deputy Secretary in the Financial Department.

OBITUARY.

Major William Leonard Addington died on December 15 at Exmouth, at the age of sixty-three. He was formerly in the 1st Battalion of the Queen's (Royal West Surrey) Regiment, and saw service in the Tirah Campaign in the late nineties, for which he had the medal and clasp.

Major-General Julius M. Boyd, an Indian Mutiny veteran, has died at his residence, Upton Dene, Coombe Road, South Croydon, at the age of eighty-two. Besides his Mutiny service, he took part in the Abyssinian Expedition and the Afghan War, and was mentioned in despatches and received the medal for both.

The death has occurred, from an accident while flying, of Sir John Alcock. Sir John will always be remembered as having been the first, with Sir A. Whitten Brown, to fly across the Atlantic. During the war he did much good service with the R.N.A.S. on the Turkish Front. There he gained the D.S.C. In 1917 he was made a prisoner by the Turks.

NEWS IN BRIEF.

Film production has already begun in Palestine.

Emir Said has left Marseilles for Nice, where he will spend the winter.

A decree has been signed adjourning the Skupshtina until February 15.

The River Front Hotel at Busreh, which was opened last January, has been completely gutted by fire.

A Serbian Military Mission has arrived at Odessa with instructions for the Commander-in-Chief from the Serbian Government.

M. Antonescu, Roumanian Minister in Paris, confirms the announcement of his resignation. He is returning to Roumania.

Foreign coins are to be accepted at the State Treasuries of Yugoslavia on the same terms as Serbian coins of corresponding value.

General Protogeroff, the leader of the Bulgarian komitalsjis, who was imprisoned on a charge of committing various crimes during the Bulgarian occupation of Serbia, has escaped.

It is estimated by the Palestine department of the Zionist organization that the preparations for the work to be done in Palestine in order to start colonization will cost £25,000,000.

At a military parade to celebrate the surrender of Jerusalem, the British colours were hoisted as General Bols, Chief Administrator of O.E.T.A. (South), drove up. The crowds enthusiastically cheered the British troops.

The leading Deputies of the Minorities, representing Saxons, Slovaks, Ruthenes, and Jews, declared in the Roumanian Parliament on December 1 that they were all content with the Roumanian administration and with the rights that had been given to them.

Sir George Barnes has received the British Guiana Colonization Deputation at Delhi. They propose the free emigration of Indian agricultural families, with free passages and eventual repatriation, and with grants of land on nominal terms, without any trace of the old indenture system.

The Postmaster-General announces that mails, containing correspondence addressed to civilians in Turkey (except Mesopotamia, Palestine, and Syria), which reached the General Post Office, London, between 5 p.m. on November 18 and 5 p.m. on November 19 last, have been destroyed by fire.

The Bishops of Transylvania have addressed a letter to the Council of Five begging them to appoint a permanent Commission for Transylvania, with the power of making unbiassed inquiries, and possessing full authority to end Roumanian terrorism, "which to-day obstructs the path of all justice."

"On the occasion of the Declaration of Afghanistan's independence," says a Moscow report, the Ambassadors of Great Britain and the Russian Republic were present, and the Ameer stated that Turkey, Germany, England, Russia, Austria, and Bokhara had recognized the complete independence of the country.

TIME AND CUPID.

By Kim.

(From the Greek of Athanasius Christopoulos, 1772-1847.)

Father Time, who knows no pity,
Led me up a mountain side,
With my love so young and pretty,
And with Cupid, laughing-eyed.

But my love began to falter,
On that road so rough and rude;
Time cared not his gait to alter,
Cupid left me where I stood.

"Cupid, stay!" I cried, despairing,
"Why run on so fast ahead?
See how ill my love is faring,
See how hard the path we tread!"

Cupid paused irresolutely,
Hoping Father Time would stay,
Then the pair their wings spread mutely
And began to fly away.

"Friend," I called, "but whither flying?
Why this haste to meet with Fate?
See, ah, see, my love is dying,
Will you not a moment wait?"

In his joyous, mocking fashion,
Cupid, flying, turned to cry,
"From its birth the tender passion,
With old Father Time must fly!"

(Note.—Athanasius Christopoulos, 1772-1847, has written many very beautiful songs in the common dialect of modern Greece. The foregoing is an attempt to render one of the most beautiful of his simple and dainty lyrics into English verse. The same metre as the original has been retained, although the English language does not lend itself to it with the same facility as Greek. Consequently this rendering cannot be considered as an accurate translation, but the general sense has been retained throughout.—KIM.)

THE ARAB HORSE SOCIETY.

A Council meeting was held on December 3 at the Grosvenor Hotel, London, Mr. S. G. Hough (Vice-President) being in the chair. There were also present:—Messrs. E. R. Calthrop, D. V. M. Clark, A. S. Cochrane, C. W. Laird, D. P. MacDougall, Col. W. A. MacDougall, D.S.O., Major G. B. Olivant, Capt. the Hon. George Savile, R. A. Willie, and the Secretary (the Rev. D. B. Montefiore, Islip, Oxon). The following sixteen new members were elected:—Lieut.-Col. Fredk. D. Murray Baillie, Gatehouse of Fleet, Scotland; Gerald Bloxsome, F.R.C.V.S., Davigdor Road, Hove, Sussex; Col. C. C. Clark, 107, Duke Street, Toronto, Canada; Rev. D. F. Clark, M.A., Dunterton Rectory, Tavistock; C. C. P. Clark, The Aerodrome, Renfrew, N.B.; E. V. Clark, Claremont, St. Anne's Crescent, Lewes, Sussex; Henry Clark, Constitutional Club, London, W.; Capt. L. L. S. Clark, Mining and Metallurgical Club, 3, London Wall Buildings, E.C.; Col. E. Hearne Cole, C.B., C.M.G., Coleyana, Okara, N.W.R., Punjab, India; Hon. S. Winter Cooke, Murndal, Hamilton, Victoria, Australia; G. A. Dutfield, Colonsay, Theydon Bois, Essex; S. S. Holmane, F.R.C.V.S., Park Lodge, Lee Green, S.E.; James MacQueen, F.R.C.V.S., Royal Veterinary College, Camden Town, N.W.; Col. B. W. Marlow, C.I.E., C.S.I., 61, Clarendon Road, Holland Park Avenue, W.; Lieut. Percy F. Thorn, Ansons Farm, Coopersale, Epping, Essex; Sydney Vincent, M.R.C.V.S., The Poplars, Brentwood, Essex. The final entries were accepted for the "Stud Book," Vol. I., which now goes to press. Further arrangements were made regarding the Arab classes and the Arab-bred classes at the London Show next March. The Secretary reported the generous gift of three Arab stallions from H.H. Emir Faisal of Arabia for the use of the Society. The Council adjourned till their next meeting in January at the Grosvenor Hotel, London.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO,
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

PEACE FOR THE NEAR EAST?

The Paris Conference has drawn up and imposed many treaties, but it has not been able to achieve for the world that measure of peace which was to be the goal of a protracted and devastating war. Indeed, it would seem as if it would be only when the last of the treaties for which the Supreme Council of the Allies is to be responsible is out of the way that the nations will be able to get on with the real work of peace. A year after the official termination of the great war at least three dark clouds obscure the horizon, apart from the blood-red patch which marks the chaos of Russia. Fiume, the Balkans, Syria—each embodies in varying degree the failure of the Allied Powers to rise to the responsibilities imposed upon them. They were charged with the task of adjusting principles and realities, and in these three directions they have abandoned principles, ignored realities, and have allowed themselves to flounder hopelessly in a slough of intimidation and weak opportunism. As soon as their paper attempts at settlement are brought up against the stern facts of actual conditions, the futility of their decisions is revealed. In regard to Fiume, the crucial test has already been applied. The two ports of Trieste and Fiume have flourished in the past side by side, because together they have served a vast area of Central Europe, and, as they were under one and the same jurisdiction, no attempt was made at discrimination between them. The Paris Conference proposed to allot Trieste to Italy and Fiume to the Yugoslavs, regardless of the fact that, as the hinterland of both is primarily Yugoslav, such an arrangement must sooner or later spell the doom of Trieste. The Italian Government saw only one way out of the difficulty—to insist that Fiume should also become Italian; and when the Paris Conference refused to agree to such a flagrant injustice to the Yugoslavs, d'Annunzio imagined that a *coup de théâtre* could take the place of a reasoned judgment of the Supreme Council. If the prosperity of Trieste and Fiume is to be maintained, there must be no opportunity of discrimination against either. The principle of nationality and the requirements of economic independence combine to prevent both being allotted either to Italy or to Yugoslavia. Thus the only solution of the difficulty is to place the two ports under some international authority which, while offering to each full scope for municipal development under the respective nationalities, will allow both to benefit impartially from the trade of the areas that geographically they serve.

Reluctance on the part of the Supreme Council or political considerations in Italy may prevent the adoption of such a solution for the Fiume problem; and if this should happen we may be certain that a final settlement has only been postponed at the expense of fresh trouble for Europe. It is noticeable that appreciation of the true position in regard to Fiume and Trieste is gaining ground in Yugoslavia, and, when it is realised that what is sauce for the Adriatic goose is sauce also for the Ægean gander, there will be some hope for a final settlement of the Balkan question. A Yugoslav writer has enunciated some pertinent truths in connection with the ultimate destiny of Trieste and Fiume. By the possession of both these ports, he points out, Italy would become absolute mistress of Central Europe and Yugoslavia as well. "Neither Germans, nor Slavs, nor Magyars can allow Italy to hold both gates of their prison. Force of circumstances, the necessity for self-preservation, will unite them against Italy . . . . Political liberty without economic independence is not worth having, and nations economically enslaved are entitled to defend themselves." If for Trieste and Fiume be substituted the Ægean littoral, we shall understand the unwisdom of trying to shut out the Bulgarians from the Mediterranean. The subject may not be pressing to-day, for Roumania, Greece, and Yugoslavia are together capable of dealing with Bulgaria. But the world knows quite well that nations, whether politically or economically enslaved, are going "to defend themselves"; in other words, that they will keep alive the seeds of unrest with the aim of ultimate emancipation. It is from no desire to challenge Greece's claims to the Ægean littoral that we urge the greater importance of lasting peace in the Balkans. Just as Yugoslavia would feel herself imprisoned economically with an Italian Fiume, and Roumania with a Bulgarian Constantza, Bulgaria must inevitably regard herself in a similar condition a few years hence, if she is cut off from access to the Mediterranean. To-day both Italians and Greeks are led astray by the glamour of immediate possession to ignore the potentialities of the future. They can promise with complete sincerity the most favoured treatment to their "prisoners" of the hinterland; but the instinct of the latter is sound, and no arrangement that shuts off large territories from their natural outlet on the sea can hope to be a lasting solution of an international problem. If d'Annunzio's escapade compels the Allied Powers to reconsider their blunder in regard to the Adriatic ports, we could wish that the fundamental truths lying behind the destiny of Trieste and Fiume could be applied in the interest of the lasting peace of Europe to other questions of which the Supreme Council has tried to rid itself by sheer opportunism.

The third cloud on the horizon differs essentially from the other two, for it is the method by which the Allied Powers have sought to give effect to their policy, rather than the policy itself, which is at fault. More by luck than by prescience Great Britain realised in time that the Arab race, as an outcome of the world war, has found its political manhood. France, lacking her Ally's opportunities for gauging the Arab mind, was inclined to look upon the Arabs as she did a decade ago, and was unwilling to credit them with more national experience than would be attributed to any other collection of independent tribes. They, however, have also drunk of the stream of constitutional knowledge, and although their statecraft may be defective, as judged by European standards, their aspirations have to be respected. The French Government, there is reason to suppose, has somewhat tardily conceded the point, but there has not yet been time for the change to become effective among French officials in Syria. The result is that, in spite of the joint assurances given by the British and French Governments, the Arabs mistrust the disinterestedness of France's intentions, and are up in arms against a French mandate for Syria and adjoining Arab territory. The unrest, as recent events prove, has spread to Mesopotamia, and threatens to take the form of hostility against Western control of any kind. There should be no delay in taking note of this symptom. Great Britain has made it clear that she regards any hold that she may be called upon to exercise over the Arabs as of the very lightest, and that she merely wishes to act as a co-ordinating link between the different, and often contending, sections of the Arab world until their own capacity for co-operation is more developed. The French Government must now recognise that the motives which prompted it to lay special stress on its Syrian "claims" were mistaken, and that the primary concern of the two Powers in their common interest is to gain jointly the confidence of the Arabs in regard to the scope of their mandates. If it should be too much to expect that the Supreme Council will correct its own mistakes, the best hope for the future lies in the speedy dissolution of the Paris Conference, in order that the League of Nations, or the States more immediately concerned, may take up afresh the three grave questions of Fiume, the Balkans, and Syria, with a view to laying more securely the foundations of peace in the Near East.

MOSLEM TALES FROM JERUSALEM.*

I.—The Story of the Sultan Mahmoud and the Beggar.

Long years ago, the Sultan Mahmoud (on whom be peace!) sat one day upon his throne, surrounded by the multitude of courtiers, advisers, suppliants, and flatterers of all sorts whose privilege it was daily and hourly to behold the august countenance of their Sovereign. A wonderful scene was this, full of life and colour and richness. Wise and aged counsellors were there, and swaggering soldiers who had fought in many wars, and silver-tongued fortune-hunters whose ways were as slippery as their words—a great crowd. But he who is poor is also bold, and presently an ill-clad man, with gaunt face and hungry eyes, forced his way through the crowd, regardless of looks of scorn, as of rough words and hands that sought to bar his way, and prostrated himself before the Sultan's throne.

The Sultan was the kindest of men, the most merciful, the father of his people. He graciously demanded of the wretched beggar what his errand might be. It was a very humble request the beggar made: he wanted only a purse of one hundred pieces of gold, and what was that to the Sultan, whose wealth was as boundless as his generosity? The beggar, it seemed, had neither food nor clothes, nor money wherewith to get them. The Sultan looked grave. A shadow came upon the royal face, as a raincloud will dim the glory of the sun. It grieved him that one of his people should descend to the shame of begging. Yet how could he shut his ears to so sad an appeal? The beggar should have the money, but he must first earn it, and in this way he would be raised from the low estate of a beggar to the honourable place of a worker. "As I work day and night for my people," said the Sultan, "so shall you work one night for love of me. You must spend the night upon the terrace of my palace, naked, and if you survive the cold you will well have earned the money which it will then be my joy to give you with my own hands."

Despair drove the beggar to agree to this hard condition; and at nightfall he was stripped of his rags and taken to the terrace, there to remain until the morning. It was winter, and the wind swept down from the mountains, as strong as a giant and as sharp as a sword.

When the Sultan had leisure the next morning he bethought him of the beggar, and ordered the man to be brought before him.

"Tell me," he said to the wretched creature, "what you saw during your night's vigil upon my terrace."

The beggar had seen nothing worthy to be told in the hearing of the Sultan; the moon had shone in heaven, and the stars had sparkled like the lights in his Majesty's windows.

"But was that *all* you saw?" pursued the Sultan.

"It is true, O Commander of the Faithful," answered the man, when he had thought a while, "that I saw some lights as of fires, a great way off upon the hills."

"Wretch!" cried the Sultan, in righteous anger, "those fires, then, warmed you last night! You have miserably failed in your part of the bargain I deigned to make with you. Get you hence, for never shall gold of mine touch the hands of him who cannot keep his word."

It is vain to argue with the great. The beggar was hunted from the palace, weeping, and the Sultan kept his gold.

Time passed on, and in its flight brought wealth and good fortune to him who had once begged at the Sultan's throne. At length there broke the happy day when he was able to carry out the dearest wish of his heart and to invite the Sultan to a feast in the open air. The Sultan dearly loved such entertainment, and he graciously gave his royal promise to attend. When the evening came, he rode to the place appointed, followed by many of his courtiers, who were now all eager to be friends with the new favourite of their lord.

The noble company gathered together and waited—and waited, but the dinner came not. An hour passed—two—and still they waited. The Sultan became restless, his manner just a shade less gracious than it was before. The sun set, and a cool wind began to stir the trees under which the feast was to be served. The Sultan at last reminded his host that they had waited long; night was falling, and they still fasted.

"It is strange, I confess, O Commander of the Faithful," answered the other. "See, over yonder are the lights of the cooking-fires, and they are great."

"We will go and see for ourselves," said the Sultan, who could no longer hide his hunger; "for our time is too precious to be wasted thus over a matter of food. Is it not dedicated to the service of our people?"

So the Sultan and his host went forth from the silken tent to solve the mystery, followed by those of the guests who felt a like keen interest in the matter. A thousand servants were busy preparing the feast, and a hundred great fires burned in an open space between the trees.

"Here, truly, are the fires," said the Sultan, looking about him; "but where is the food?"

"There, O my lord," answered his host, pointing to a number of large copper cooking-vessels which were hung high up in the trees.

"O brainless one!—O son of a thousand donkeys!" cried the Sultan in a fury, "how can a fire, howsoever great, cook meat which hangs so far beyond its reach?"

And the other answered, respectfully, folding his hands and bowing low: "As well, O Commander of the Faithful, as those distant lights warmed me on an occasion we both remember, when I had the high honour and privilege of spending the night on your Majesty's terrace."

"Friend," said the Sultan, laying his hand on the other's arm, "bid them serve us at once, and ten times the sum you then desired shall be yours ere we sleep this night."

"Your Majesty's word is my law: it shall be done," replied the man.

And this time both Sultan and subject kept their word.

ESTELLE BLYTH.

* These tales were told to the writer by a Moslem servant in Jerusalem.

MIGHT OF EMPIRE.

By Ignotus.

War, such as that from which we have but lately emerged, is rightly considered to have a debasing and saddening effect upon humanity: yet, even as poverty makes us acquainted with strange bedfellows, so does war throw out unexpected and inspiriting gleams of humour, which very greatly serve to cheer the general outlook. More particularly is this so when men of an independent, individualistic point of view, such as our Colonies of necessity breed, come face to face for the first time in their lives with discipline; and though the Australians have no greater admirer of their fighting prowess than the writer, it cannot be denied that in certain respects (*e.g.*, saluting) they rather deviate from than follow the normal. An amusing instance of this came to my notice last year.

Egyptian General Headquarters with Lord Allenby were then at Bir Salem, near Ludd, about twenty-five miles south of Jerusalem, and round about us were camped many Australian regiments of Light Horse, on the horsemanship of which Australians very rightly pride themselves. One of our young officers riding forth one afternoon chanced to meet an Australian trooper, who, looking him straight between the eyes, as man to man, made no attempt whatever to salute. The young officer was decidedly taken aback, and being a lad of considerable ingenuity, determined to bring the offender to book. Calling him over to him, he said, "Why didn't you salute me when you passed just now?" an inquiry to which the man had nothing to say. "Oh, well, never mind," continued A. "I daresay you couldn't, for fear of falling off!" and passing on, left the offender gasping.

Another instance of making the punishment fit the crime occurs to me as I write. Among the heterogeneous mass of troops composing the Egyptian Expeditionary Force was a large number of Indian regiments, which, owing to the exigencies of the military situation,

WHITE HORSE WHISKY.
GREAT AGE AND BOUQUET.

were largely composed of young soldiers, who under normal conditions would not have taken the field till later in their service; and with such men, with the best will in the world, unrehearsed incidents are bound to occur. One afternoon the sentry on the quarter-guard of one distinguished unit turned out the guard in the ordinary course of routine to a passing officer, and in the ensuing fluster one of the men of the guard, who happened to be smoking a *huka*, turned out and unfortunately presented arms with it!

This caught the eagle eye of the adjutant who was near by, and who at once interrogated the wretched culprit on the subject. Seeing that the matter was one of pure accident, and not of design, he nevertheless decided it should not happen again, and forthwith ordered the man to attend at "orderly-room," the regimental law court, every morning for the ensuing week and pay proper compliments with his *huka* instead of his rifle to every officer that passed, according to rank. This doubtless had the desired effect of sharpening the recruit's intelligence.

Syria and Palestine are invariably pictured as lands of sunshine, and so in the main no doubt they are. Sufficient allowance is, however, never made for the very heavy rainfall, which in the autumn of 1917, when Jerusalem fell, turned the whole countryside into one vast quagmire, an effect well reproduced in the Palestine pictures now being shown on the film. The wet and the cold depressed the men's spirits in many cases, but not in all, notably in one Territorial battalion of the Middlesex Regiment, of my acquaintance.

The battalion had been in the forward line, and, being relieved, was marching back to bivouac when it came on to rain hard, and in a few minutes all ranks were drenched. This was bad enough in itself, but rendered worse by the fact that when they got to their back area they knew they would have nothing but the now sodden ground on which to lie for the night—an unpleasant finale to their hardships of the past few days. Nevertheless, the C.O. at their head, they plodded doggedly along, when a voice was heard from the front of the column, searching for a pal in rear. "D'yer 'ear, 'Arry, are yer there?" it said in the purest Cockney. "Yus," replied a disgusted man in the rear, "nearly swep' awy." "Never mind, ole son," said the optimist. "Turn over on yer back; side-stroke ain't no use for this 'ere!" A roar of laughter rent the ranks; the joke passed down from man to man, and the situation was saved.

Humour, the blessed salt of life, was never far absent where Thomas Atkins was concerned, as witness the readiness with which he christened two German areoplanes that, invariably working in concert, made life round railhead hideous while the line was being laid—the "Heavenly Twins."

For sheer aplomb and presence of mind when facing almost certain death, the following deserves more than a passing record:—When the s.s. Ivernia, outward bound to Egypt, was torpedoed in the Mediterranean, and subsequently sank, an officer of my acquaintance was ordered into his boat with his men, all hands having fallen in at their appointed boat stations on the alarm being sounded. When in his boat he was directed to lower away and take the water and stand by to pick up anyone he could.

The men in the boat, all soldiers, started to lower away, but the boat falls stuck fast as they came abreast of the second deck, probably owing to the listing over of the great ship, and no efforts of the men could free them. At that precise moment a stoker, the customary piece of greasy waste about his neck, emerged from the alleyway, and one of the boat's crew hailed him as follows: "'Ere, you're a sailor; wot's the matter with these 'ere ruddy falls?" "Sailor? I ain't no sailor; I'm a stoker, that's wot I am." "Stoker, are yer?" said the soldier without a moment's hesitation. "Well, yer'll ruddy soon be adoin' yer job!" and with that the conversation closed. For contempt of death and absolutely cheery, dauntless courage the little incident would be hard to beat; indeed, in miniature, it is an example of the spirit that won the war.

CORRESPONDENCE.

THE PALESTINE CAMPAIGN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—While in England in October this year I took a relation to hear the lecture "With Allenby in Palestine." I had some knowledge of the lecturer's subject, having been with the Australian Light Horse during the Desert campaign, the Jerusalem "stunt," and the Damascus "stunt."

I would not quarrel with what he said about the drive which led to the capture of Jerusalem. Later in his lecture, however, he made two astonishing and erroneous statements:—(1) He said: "During the interval between the capture of Jerusalem and the victory which ended the campaign, most of the fighting on the Palestine front was done by the Royal Flying Corps!" (2) He made the assertion that the Arab troops under Colonel Lawrence were the first to enter Damascus, and that [they?] received the surrender of that city.

Taking No. 1 first:—During the period alluded to there took place the first attack and capture of Es Salt by the 60th Division, the Anzac Mounted Division, and the Camel Corps, followed, as everybody knows, by our retreat. From April 29 to May 4 occurred the second capture of Es Salt and the second retreat from that town. These operations were followed by summer in the Jordan Valley for the Australian troops. The horrors of this summer "spell" are too many to relate. Suffice it to say that the temperature reached 120 deg. F. in a bell tent for days at a time (taken at 3rd L.H. Field Amb.). This at a level of 1,290 ft. below that of the Mediterranean. During this period also took place the attack of 1,400 Germans and two Turkish divisions on Musselabah and Abu Tulleil. This attack was repulsed by the 1st Australian L.H. Brigade.

We were bombed by hostile aircraft numbers of times in "The Valley," air protection being very bad, as no planes could be kept there. The main aerodrome was at Ramleh, forty miles away.

I speak only of the sector on which I served. By common consent it was designated one of the worst sectors of any front of the war—possibly the worst.

Does this bear out the assertion that most of the fighting was done by the Royal Air Force? Certainly not in this sector!

With regard to (2):—I here quote from the official narrative of the 3rd L.H. Brigade, but would like to say that I was with this brigade at the time of the events detailed. "On entering the north-west suburbs a good deal of rifle shooting was indulged in by the inhabitants. Some of the shooting was sniping at the column. In a few cases the snipers were observed, and the fire was returned. To discourage the sniping the vanguard moved on at the gallop until it arrived in front of the Town Hall, where it halted. The time was now between 6.30 and 7.0. Major A. C. L. Olden, second in command of the 10th L.H. Regt., was up with the vanguard. Accompanied by Major Timperly, he entered the Town Hall. A large assembly of notables and persons in uniform was in attendance. The civil governor was asked for. Emir Said stepped forward and said: 'In the name of the civil population of Damascus I welcome the British,' and then made a speech of welcome."

(I arrived upon the spot only a few moments too late to witness this event.)

"A guide to the North-east or Aleppo road was asked for. Emir Said detailed an officer named Teki Bey to act as such."

The advanced guard moved on, followed by the rest of the brigade. The narrative continues:—

"The 3rd A.L.H. Brigade were thus the first Allied troops to enter Damascus. I understand that it has appeared in the press that the Sherifian forces were the first to enter. This is not so. His force had been moving up from Deraa with the 4th Cavalry Division. Colonel Lawrence of the Sherifian Army, with an escort, pushed on to Damascus on the morning of October 1. They were seen to enter the city a few minutes before 8 o'clock." [This I can corroborate as I saw them myself.] "As there were none of our troops left in the city at 8, their absence may have given rise in the minds of the Sherifians to the erroneous belief that they were the first to enter the city. Up to the time (about 7 o'clock) that this brigade completed its passage through the city, no member of the Sherifs' army was visible in any part of the town within view of this brigade."

Do these facts bear out the statement that the Sherifian troops captured Damascus? Personally, I don't think so. I believe the readers of THE NEAR EAST will be glad to know the facts, and to give honour where honour is due.—I am, etc.,

J. E. SHELLEY, M.B., B.S.,
Late M.D. to 9th A.L.H. Regt., 3rd Brigade.

Jerusalem, November 20, 1919.

INDIAN EDUCATION.

Mr. P. J. Hartog, Academic Registrar of the University of London and a member of the Calcutta University Commission of 1917-19, lectured on December 16 at the Society of Arts on problems of Indian Education. At present, he said, for the vast majority of Indians the only way to a career lay through the University, hence an increasing pressure on those institutions and on high schools. The serious element in the situation was that while the Government colleges and a few others resisted the pressure of numbers, the pressure was growing. Unless drastic measures were taken the education itself would grow not better, but worse. At this turning-point in the history of India the part that the Indian Universities would play could scarcely be exaggerated. India's political and social future depended on her Universities.

Sir William Duke, Permanent Under Secretary for India, presided.

PRESS ON THE NEAR EAST.

Old Baghdad.

In the *Treasury* of December, Mr. Donald Maxwell relates how he came upon Baghdad by night.

Suddenly we came upon a scene of strange beauty and dramatic effect. A turn in this narrow and cloister-like way brought us to an arched opening, with some steps leading to the water. It was a sheltered inlet from the surging and swirling stream of the Tigris, a kind of pocket built round by crazy old balconied buildings. This was filled with goufas, the weird round boat of the upper river, and the animated scene of people either embarking or disembarking, made a strange picture. We saw this scene for a few moments only, as we made our way through the crowd at this point. I have since wondered where all these goufas were going. They could not have intended to cross the river under present conditions. I think the rapidly rising river must have upset all calculations as to mooring boats at this point, and their owners were making sure that they were secure. The noise and apparent excitement was probably nothing but the usual Eastern custom of making a great fuss about nothing.

At last, after much marching and counter-marching, we struck the main thoroughfare leading to the Maude bridge, which we crossed. The thick, seething waters foamed and struggled against the pontoons and swept down between them like roaring devils. We were very glad to get over, for it looked as though a little more force would have carried the whole thing away. Once clear of the bridge, we found ourselves in New Street, the thoroughfare made since the British occupation, and incidentally we ran into a cheery naval officer, who picked us up and deposited us again at Navy House, whither he was bound. Had we not received this timely aid I think we should have gone on looking for Navy House all night. A more amazing situation for it could not have been found if you searched the world over. Wedged in, cheek by jowl, with buildings that might have figured in the tall streets of old London, it lay nowhere near the water, down a very narrow and crooked lane, where mules and men, camels and beggars, jostled each other on their lawful occasions.

When we had settled down there and had fine weather for several days, Brown, loath to waste the romance of old Baghdad during glorious moonlight nights, insisted on some mysterious expeditions, which were for the purpose of adventure, but ostensibly arranged to give me an opportunity of sketching. He produced an Arab, arrayed in strange garments, to carry a light, and generally act as a guide. We called him the slave of the lamp. I am quite certain that he thought Brown was mad, but this belief on the whole was rather an advantage, as he treated him with all the more respect because of his affliction, which he regarded as a special visitation of Allah.

I was surprised that he seemed to take great delight in my sketching, and several times, when I was making notes of some quaint latticed windows overhanging the narrow road, so that they nearly met, he became quite excited, chuckling and laughing to himself, as if in the enjoyment of some tremendous joke. I discovered afterwards that Brown's native servant had been pulling the leg of our worthy slave by telling him that these nightly expeditions were for the purpose of carrying off some ravishingly beautiful lady from one of the harems. No doubt he thought my sketching merely a blind. Measurements with a pencil were obviously part of some mystic language. Night after night we sallied forth and roamed about the narrow ways and tortuous turnings of old Baghdad. . . .

On one occasion we embarked in a goufa, and floated down the rapidly flowing river, keeping close to the left bank, and taking advantage of every eddy and corner of slack water made by projecting buildings, lest we should be swept down too far and lose control of our curious and difficult craft. The level of the water was far above the usual height, and came up to the very thresholds of these riverside houses. We floated on, sometimes under the walls of dark gardens, sometimes getting glimpses of interiors —interiors which in this glamour of night romance suggested something of the splendour of Baghdad's old glory:—

"By garden porches on the brim,
The costly doors flung open wide,
Gold glittering through lamplight dim."

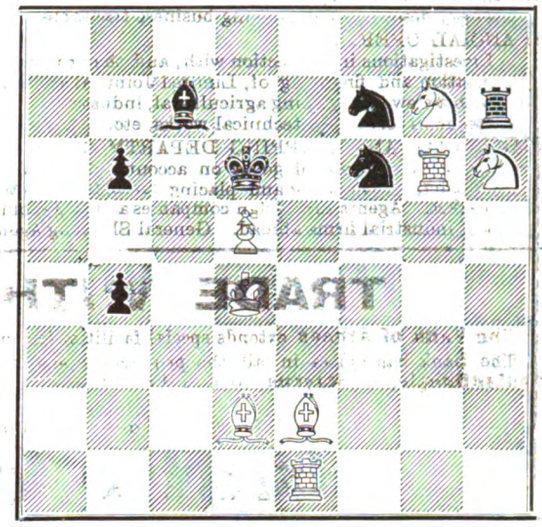
CHESS.

PROBLEM No. 7.

Black.

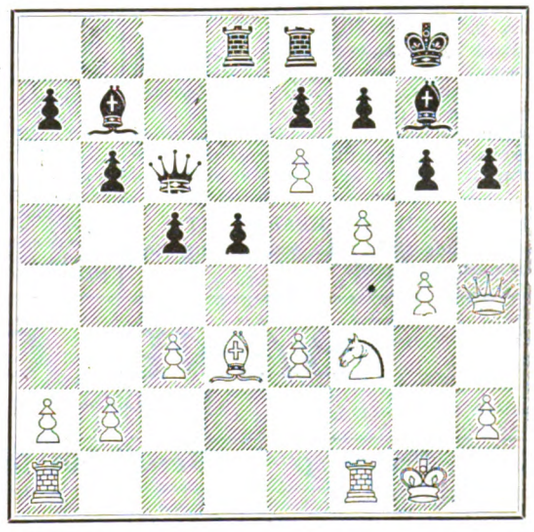


White.

White to mate in two.

The following game was played in the City of London championship last week. Opening, Queen's Pawn:—1, P—Q4; KKt—B3 (1); 2, P—K3, P—Q3; 3, P—KB4 (2), QKt—Q2; 4, Kt—KB3, P—B3 (3); 5, P—B3, P—KKt3; 6, Q—Kt3, B—Kt2; 7, B—B4, 0—0; 8, 0—0, Q—R4; 9, Kt—Kt5, P—Q4; 10, B—Q3, P—B4; 11, Q—Q (4), Q—B2; 12, Kt—Q2, P—Kt3; 13, Kt (Kt5)—B3, B—Kt2; 14, Kt—K5, QR—Q; 15, Kt (Q2)—B3, Kt—K5; 16, Q—K, Kt (Q2)—B3; 17, Q—R4, B—B; 18, B—Q2 Kt x B; 19, Kt x Kt, Q—Q3; 20, P—KKt4, Kt—Q2; 21, Kt (Q2)—B3, Kt x Kt; 22, QP x Kt (5), Q—QB3; 23, Kt—Kt5, P—KR3; 24, Kt—B3 (6), KR—K; 25, P—B5, B—Kt2.

Position after White's 26th move. P—K6.



26, P—K6, BP x P; 27, P x KtP, P—Q5 (7); 28, PB x P, P x P; 29, P—K4 (8), P—K4; 30, Kt x P (9), Q—K3; 31, B—B4, B—Q4; 32, B x B, R x B; 33, P x R, Q x Kt.; 34, QR—K (10), Q x P; 35, R x P, R—QB; 36, R x B (ch) (11) resigns.

(1) Tchigorin's Defence.

(2) The stonewall variation, which is not the least effective method of meeting this defence.

(3) Black wishes to play P—K4, and with that end in view concentrates on that square, but white, by attacking the king's bishop's pawn, is able to force him to play P—Q4 instead.

(4) Q—B2 would be followed by P—B5, and ultimately B—KB4, giving black a strong game.

(5) Much stronger than BP x Kt.

(6) R—B3 leads to very complicated positions, and just falls short of being sound.

(7) Black endeavours to break through in the centre.

(8) And black's queen's pawn is as good as an additional piece to white.

(9) If B x Kt, Q x P.

(10) The rook comes into play with decisive effect.

(11) There is a forced mate in five.

GENERAL BANK OF GREECE.

Paid-up Capital, Drs. 3,000,000.

Head Office - ATHENS.

BANKING OPERATIONS:
Every description of Banking business transacted.

FINANCIAL OPERATIONS:
Investigations in connection with, and the promotion, organisation and financing of, Limited Joint Stock Companies, with a view to exploiting agricultural, industrial and mineral resources, executing technical works, etc.

COMMERCIAL AND SHIPPING DEPARTMENT:
Purchase and sale of goods on account of clients. Warehousing, Advertising and placing foreign products on the market. Agents for foreign companies and large commercial and industrial firms abroad. General Shipping Agents.

POPULAR BANK OF GREECE.

Head Office, ATHENS. Branch, PIRÆUS.

Correspondents throughout Greece.

Established June, 1905, by the National Bank of Greece and a group of Capitalists.

CAPITAL - Drs. 1,500,000.
RESERVE FUND - Drs. 2,500,000.
Deposits and Credit Accounts, Drs. 100,000,000.

The Bank specialises in the collection of Bills payable in Greece; it accepts goods on consignment, and undertakes their sale, and transacts every kind of Banking business.

General Manager: D. LOVERDO.

TRADE WITH THE NEAR EAST.

The Bank of Athens extends special facilities for business with the Near **East** to manufacturers, exporters and importers.

The Bank has offices in all the principal towns in **Greece,** also in **Egypt,** Cairo and Alexandria, in **Cyprus,** Limassol, in **Constantinople,** in **Smyrna,** and in **France,** Marseilles.

Inquiries from interested parties are invited.

BANK OF ATHENS.

PAID-UP CAPITAL : £1,920,000. **HEAD OFFICE IN ATHENS.**

London Office: 22, Fenchurch Street, E.C. 3.

COMMERCIAL BANK OF GREECE, LIMITED.

CAPITAL PAID-UP - Drs. 15,000,000.
RESERVE FUNDS - Drs. 2,364,793.

Head Office: ATHENS.

Branches:—**Piræus, Salonika, Patras, Volo, Syra, Calamata, Corfu, Cephalonia, Candia, Chios, Argos, Pyrgos, Vostizza (Ægion), Nauplia.**

AGENTS IN ALL PARTS OF GREECE, THE LEVANT, AND ABROAD.

The Bank conducts every kind of Banking, Commercial and Stock Exchange business and extends special facilities to traders interested in business with Greece. It acts as Agent for many Foreign Banks. It is specially organised for Exchange, the execution of mail and cable transfers throughout Greece, and for the collection of clean and documentary Drafts.

MERCHANDISE DEPARTMENT:
The Bank undertakes the warehousing and sale of goods consigned.

GREECE.

Area 43,522 square miles. The cultivated area amounted to 5,745,300 acres, of which about 2,253,400 were under cereals, 518,900 under grapes and currants, 370,600 under oak trees, 295,500 under olives, and 2,223,900 were forests: Population (1914), 5,000,000 approximately.

Chief Products (with average annual production):—Currants, 142,000 tons; wines, 3,000,000 casks; tobacco, 9,000,000 lb.; cereals, 8,000,000 bushels; olive oil, 200,000 casks.

The **MINERALS** of Greece include:—Iron, Marble, Magnesite, Emery, Lead, Lignite.

IMPORTS (1914), Old Greece only:—Total value £7,000,000, of which £2,000,000 from the United Kingdom; £1,800,000 from Germany and Austria Hungary; £1,000,000 from Russia.

EXPORTS (1914), Old Greece only:—Total value £4,000,000, of which £3,000,000 came to the United Kingdom.

COINAGE.—The unit is the Drachmæ, equivalent to a Franc (10d.). The current rate of exchange is about 25·30 Drachmæ to £1.

FREIGHT.—From England, 160/- + 10 % primage.

WEIGHTS AND MEASURES.—It was decided in 1898 to introduce the metric system. The change is to be gradual from the old system, which is:—Oke = 2·82 lb., stater = 123·20 lb., livre (Venetian) = 1·05 lb., baril (wine) = 16·33 imperial gallons, kilo = 0·114 imperial quarter, pike = ⅓ of a yard, stremma = ·242 of an acre.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The announcement that Sir Henry Babington Smith, K.C.B., has been elected a director of the British Trade Corporation, and has been appointed deputy-governor as from January 1, is of special interest in view of the fact that Sir Henry has been closely associated with the Near East for a considerable part of his career. It may be taken, no doubt, as an indication of the expansion of the activities of the Corporation and of coming developments that peace conditions render possible. No better choice, I am sure, could have been made of a deputy for Lord Faringdon than Sir Henry, whose experience both in official and business capacities should enable him to render invaluable service to the Corporation.

***

Among the positions Sir Henry has filled in the course of his career was that of private secretary to the Viceroy of India from 1894 to 1899, while from 1903 to 1909 he was Secretary to the Post Office. He was appointed in 1900 British representative on the Council of the Ottoman Public Debt, and was president of that body in 1900, while in 1909 he became president of the National Bank of Turkey, which is now, of course, under the control of the Levant Company. He has frequently represented the Government on conferences on postal subjects, while during the war he was a member of the financial mission of 1915 to the United States, and in the same year was made chairman of the Royal Commission on the Civil Service, while he is the chairman of the Committee on Indian Currency, whose report is expected to be shortly forthcoming.

***

The rapid extension of the activities of the Abyssinian Corporation is indicated in the announcement that its agencies now cover Jibuti, Harrar, Jig-Jaggah, Dirre-Daua, Oulenketi, Hawash, Adis Abeba, Jimma, Nekempti, Gore, Bure, Sayo, Gambela, and Khartoum. This development is due, of course, to the acquisition of so many important businesses which has enabled the corporation to obtain a firm footing in the trade of Abyssinia. It may be noted that in acquiring these businesses the Corporation took over large stocks of cotton and other manufactured goods at prices very greatly below those at which they could now be bought. Extensive purchases of hides and coffee have been made in Abyssinia, and with a view to utilising to the best advantage the organisation that is being built up, the second call of 5s. per share is now being made, and the third, it is stated, will be made in March.

***

I am very glad to learn—from the *Times* special correspondent in the Middle East—that "there is no present intention of embarking on any ambitious scheme of irrigation in Mesopotamia which would involve large expenditure and heavy borrowing." My own view is that in regard to irrigation Mesopotamia should go easy—*yawash, yawash*, as the natives are so fond of saying. The engineers must consider not only the character of the land but that of its people; and though I am told that the regulation of the water supply would be a comparatively easy matter, it remains to be seen whether the people would turn it to the best advantage if they got practically unlimited quantities of it at once. The subject of "salting" of the land is perhaps not so troublesome *to the right engineer* as it is generally supposed to be; but if he cannot control the users of the water his delicate work may all be thrown away. And there are many other factors to be taken into account. Happily, the intention seems to be to "make haste slowly," and the works to be executed at once are clearly well chosen. It always seems to me that one of the most important things to do is to keep the Tigris between Baghdad and Busreh open to navigation; and that means keeping water *in* the river instead of letting it run to waste in the marshes. This, I suppose, is now being done. If not, the work should surely be put in hand at once.

***

As will be seen from the article which appears on page 736, Mr. Ainscough has some very interesting things to say regarding American and Japanese competition in the Indian market. Of the two countries he makes it clear that competition from America is likely to be much the more serious from the point of view of British manufacturers and exporters. The war, it seems, has awakened American manufacturers and export houses to the neglect of foreign trade in the past, owing to the value of the home market, and they have entered the Indian market in a spirit which is best exemplified in Mr. Ainscough's comment that they have adapted themselves to its requirements in a most remarkable way. His view is that American competition has come to stay, and that the course of the future depends on the ability of British makers to quote competitive rates, and that in turn means, of course, that labour has the solution in its hands.

***

With regard to Japan the case is very different. There is no question as to the energy with which Japan has taken advantage of the opportunity afforded by war conditions, but the methods and practices of Japanese traders have, it appears, been far from satisfactory, and the consequence is that they and their wares "have earned a rather unenviable reputation in the market." People are bound to look askance at traders when, as in the present case, there are "complaints on all sides" that shipments after the first one "are below the quality of the basis sample." It seems that, in addition, the Japanese have succeeded in gaining for themselves in general a reputation for extremely unbusinesslike methods. During the war Japanese trade with India went on increasing despite these things, because the conditions were such that buyers literally had to take goods where they could get them. But it will be another matter as regards the future when normal competition obtains. In the circumstances Mr. Ainscough's forecast of a considerable decline in the trade during the next few years is thoroughly justified.

***

It is not only in regard to the Indian market that there have been complaints with regard to Japan. During the war, as my readers are well aware, Japan attempted, with very considerable success, to develop trade with the Near East. But Japanese goods have not given satisfaction, and I do not think that her war-time markets in that region are much more satisfactory from her point of view than the Indian market.

***

One further point in regard to the first article on Mr. Ainscough's report requires reference, and that is his remarks on the trade of Germany and Austria with India. The extraordinary position which Germany was allowed to obtain in the Calcutta hides trade has been the subject of several articles in these columns, and it is stated that it appears to have been the profits made in this trade "which enabled the leading German houses to maintain such large establishments, and so to obtain a footing in the import trade." Happily, so far as can be judged, there is no likelihood that Germany or any other country will ever again be allowed to obtain such a commanding hold over one of the staple trades of the Empire.

***

On the whole, it seems to be clear that outside the hides trade Germany found the Indian trade unremunerative. According to Mr. Ainscough, there was nothing illuminating in the German methods in the case of Calcutta, and "they were doing business on conditions and for a remuneration which would have been held to be unsound and inadequate by any British firm of similar standing." In so doing they were no doubt merely preparing the ground for the time when they hoped to have a large share of the Indian trade. But in this case, unlike the Near East markets, it was fated that the time should not come.

The Indian Market.

Changed Methods Essential.

The position with regard to the import trade of India is a matter of vital concern to the manufacturers of the United Kingdom since our great Dependency provides the most important market in the world for British manufactures. Thus, in the last pre-war year of the total shipments of manufactured articles 16 per cent., of the value of £67,000,000, were exported to India. During the war very considerable changes have taken place in the character of the import trade; new factors have been introduced, and other countries have had an opportunity to establish a substantial footing in this market. The new position is the subject of a very able survey in the "Report on the Conditions and Prospects of British Trade in India," of H.M. Senior Trade Commissioner in India and Ceylon, Mr. T. M. Ainscough, O.B.E., which has just been published. The aim of the report is to impress upon British manufacturers and exporters the recent important and far-reaching alterations in the conditions, and the need for special efforts and revised methods and organisation in order to meet them. The report is divided into five sections, the first of which is a general survey of the present trade position and a study of the most important factors which have contributed to it. In the other sections changes in the leading import trades are examined, the methods of representation and distribution in India are reviewed, the development of Indian industries and its significance are discussed, and an account is given of the prospects for the sale of Canadian produce and manufactures in India. The present article will be devoted to some of the main features in Mr. Ainscough's general survey.

German Methods.

India's imports from Germany and Austria together for the pre-war year amounted to £11,000,000, a total which does not look very formidable compared with the figures for the United Kingdom, but Mr. Ainscough point out that there was some fear that, with the cheaper goods having gained a footing in the bazaars, increased competition would later be experienced in the staple articles of import from the United Kingdom. A small, but increasing share of the import and export trade, was also handled in India by German and Austrian merchants; and it is satisfactory to know that careful investigation has shown that the United Kingdom distributors have little to learn from German methods, except the example of their infinite capacity for taking pains. Their position in the hides trade was a great asset to German merchants in India, and it is stated that it appears to have been the profits which were made in the hides business which enabled the leading German houses to maintain such large establishments, and so to obtain a footing in the import trade! This did not prove particularly lucrative; indeed, in most cases, they took great risks for a totally inadequate remuneration. Speaking generally, the conclusion arrived at from the study of German methods in the case of Calcutta is that these methods should be avoided.

Mr. Ainscough makes a few suggestions, based largely on the methods of former German competitors, for United Kingdom makers and exporters who wish to secure a fair share of the miscellaneous bazaar trade in sundry articles, which may be summarised as follows: (1) Cheapness and outside appearance are far more important in the Indian market than quality and lasting properties; (2) in quoting import merchants or dealers for goods, it should be remembered that a price c.i.f. Indian port will be intelligible at once to nearly every trader; whereas a f.o.b. rate will convey but little to his mind as to the price of the goods by the time they reach his godown; (3) attempts should be made to manufacture what India requires, and if it is thought that the dealers who buy the goods require educating this should be done by means of fresh samples, after having established a name in the line for which they ask.

American Competition.

In 1913-14 American shipments to India amounted to no more than £3,000,000; for the past year the total was over £9,000,000. Mr. Ainscough points out that the primary reason for the increased shipments of American manufactures has been the inability of the established British exporters to supply the market owing to war conditions. Before the war there were practically no American merchant importers of high standing in India, but the last few years have witnessed the opening of a few large firms, who are already doing a considerable trade. Then the war has awakened American manufacturers and export houses to the fact that, owing to the value of their home market, they had neglected the possibilities of foreign trade in the past. Banks and shipping companies are giving greater facilities to the export trade, and every effort is being made to study the requirements of overseas buyers, while American manufacturers and merchants have recently adapted themselves to the requirements of the Indian market in a most remarkable way. In the motor-car trade the policy of standardisation of cars and spare parts, the personal attention given to importers by representatives and mechanics, and the allowances for advertising and general propaganda work have had a most favourable effect on sales.

There is no doubt whatever, Mr. Ainscough says, that American competition in India has come to stay, and he adds that it is impossible at present even to estimate the probable future success of American firms when the usual United Kingdom suppliers are in a position to quote normal prices and deliveries, and when the usual channels of trade are opened up. It will depend upon the ability of our makers to quote competitive rates.

Japan.

The enormous expansion in imports from Japan was the most remarkable and significant feature of India's import trade during the war. Commercial travellers and business men have visited India in large numbers, and have been very active in furthering the development of Japanese commerce. In 1911 there were only thirty-two male Japanese in India, but it is stated that to-day their number must considerably exceed 2,000. In every fair-sized town in India, Japanese retail stores are now noticeable, and individual Japanese are to be found in the most remote parts of India. It is further pointed out that not only are Japanese goods entering the country in large quantities, but Japanese merchant houses are taking up a prominent position as general distributors of imports from all over the world, and as shippers of Indian produce.

Mr. Ainscough states that one of the most remarkable features of Japanese organisation is the way in which all their branches of activity abroad pull together as one unit for the furtherance of the national cause, and, by means of preferential treatment to their own people, *vis-à-vis*, foreign competitors contrive to place business in the hands of each other and keep out competing interests. Despite the great increase in trade, the general impression is that Japan has not made the most of an unique opportunity. It is at least significant that complaints are heard on all sides regarding Japanese methods. The first shipments against orders, it is stated, are usually a fair tender, but succeeding shipments are below the quality of the basis sample. Then importers state that they have had endless trouble owing to late shipments, failure to comply with packing, marking, or shipping instructions, mistakes in drafts and documents, late arrivals of documents, failure to answer business letters, failure on the part of travellers to keep appointments, and, generally speaking, most unbusinesslike methods. The Trade Commissioner's opinion is that the figures for 1918 indicate the high-water mark of Japanese imports into India for some time, and that during the next year there will be a considerable decline in the trade.

CYPRUS WHEAT SHORTAGE.

FROM A CORRESPONDENT.

The shortage of wheat, both for food and seed corn, causes some uneasiness. Papers propose that the Government should direct that until more flour can be imported no bread should be made except in the proportion of half wheat and half barley flour. It is now generally sold with 75 per cent. of wheaten flour. As regards flour, the Receiver General, Mr. Bowring, called to his office some of the principal merchants who import it to ascertain why larger quantities were not imported. They replied that as regards India and Egypt exports were not allowed without Government permission, which was hard to obtain. With regard to Australian flour, it could only be obtained through England and Egypt in small quantities. To charter vessels with full cargoes would involve expenses beyond their powers in present circumstances. A request was made that Government would take measures to facilitate business in India and Egypt. Mr. Bowring agreed to represent the matter. Hopes are expressed that the authorities will undertake both the importation and control of prices in order that relief may be given for the supply of bread, which is reported as far too scarce in parts of the island, and a liberal supply of seed corn on equitable terms to the peasantry.

YUGOSLAV CURRENCY.

(FROM OUR OWN CORRESPONDENT.)

BELGRADE, December 6.

The restamping of krone is proceeding. It is watched in Serbia with a rather academic interest, for this currency is virtually out of circulation now south of the Save and the Danube, not by any official action, but owing to the attitude of the people themselves; for the past month or so, more and more peasants have refused to accept krone in payment for commodities, and to-day in Belgrade krone are scarcely negotiable. Krone are now officially banned in the Podrinje Province. North of the rivers, of course, they are still the current coinage, and in some districts have almost maintained their pre-war purchasing power. Two more wagon loads of the new paper dinars have arrived from Paris, and it is hoped that in a few weeks they will be issued and the old dinar and krone notes recalled.

The Egyptian Cotton Boom.

(From Our Own Correspondent.)

Cairo, December 8.

There have been remarkable happenings on the Alexandria Cotton Bourse, where cotton this week attained the unprecedented price of 100 dollars per kantar. Several landowners were fortunate enough to secure even higher prices for their crop, and Egypt stands to make something in the neighbourhood of one hundred millions from this one crop alone. It is surely without precedent that a country in one season should gain from even its most important crop an amount far in excess of its public debt.

It is, of course, very satisfactory that this country should find such a remunerative market for its staple crop, but there are two regrettable features about this great accession of wealth. In the first place, it is to be feared that it may have a bad moral and social effect on the population, and that it will bring in its train a further rise in the local cost of living, which is already at a very high level. The fact that the people, especially the rural population and the absentee landlords, will have in their hands so much more than they have ever obtained from their cotton crop will mean that they will not exercise the economy in consumption which the low level of cotton prices some four years ago compelled them to practise, and which is so essential at the present moment, when the world's output is still far below its requirements. As a consequence, local consumption of the necessaries of life will increase, and there will be still great stringency in supplies, with the inevitable result that prices will soar up during the coming months, to the detriment of the urban population, which will be very hard put to it to make both ends meet.

That is one unfortunate feature of the present rise. The other is that no part of this great accession of wealth will go to the State. It is true that while the foreign cotton firms will, as usual, make large profits, the people will also gain their share; but in view of the extra expenditure of the Government and the probable need of doing something more to assist the lower order of Government servants and to meet the shortage in supplies which will, it is to be feared, exist for some little time, it would have been more in keeping with things if the Government could have provided itself with the necessary funds by tapping the present increased wealth instead of having to content itself with the relatively small increment that will fall to it from Customs duties, etc.

A golden opportunity for the State to build up its financial position against the demands for capital expenditure which the future will bring is indeed being lost, owing to the inability of the Government to impose any further taxation than that already in force, which did not anticipate such an increase in national wealth as the present, and which for some time has been quite out of proportion to the taxable capacity of the people and the requirements of the country as a whole. Of course, when the international obstacles are removed, it will be possible for the Government to introduce the necessary taxation, etc.; but that eventuality is still far off, and even if it were to come within the realms of practical politics in the very near future, it is to be feared that the taxable income will meanwhile have been for a great part dissipated in unremunerative objects, as has been the case with previous accessions of wealth, and that by the time such taxation is imposed the new sources of revenue will have become very much shrunken by comparison with what they are to-day.

EGYPT'S TRADE IN AUGUST.

Increased Exports.

(From Our Own Correspondent.)

Cairo, December 4.

The August Customs returns, just published, show a further reduction in the volume of imports, but a corresponding increase in exports. During the month imports amounted to £E3,737,811 and exports to £E5,293,116, as compared with £E5,289,384 and £E3,615,416 respectively during the corresponding month the previous year. For the eight months the total imports came to £E26,842,444, and the exports to £E32,020,159; these figures are respectively a reduction of £E3,527,621 and £E540,522 on those for the same period of 1918, and in consequence there is a welcome swing round in the trade balance in favour of the country.

The principal imports during August were coffee, £E112,733; kerosene, £E117,130; bleached cotton piece goods, £E199,840; printed cotton piece goods, £E149,041; cotton piece goods dyed in the piece, £E284,534; cotton piece goods dyed in the yarn, £E140,335; jute sacks, £E116,594; tobacco, £E328,662; the most important decreases being in meat, £E305,126; benzine, £E106,340; coal, £E174,773; cotton piece goods, printed, £E173,750; cotton piece goods dyed in the piece, £E217,005; cotton piece goods dyed in the yarn, £E105,513.

Under exports the principal item was, of course, cotton, which accounted for £E4,621,586, as against £E3,131,737 during August, 1918, the quantity rising from 404,034 to 570,075 kantars. Cotton seed amounted to £E82,528, refined sugar to £E50,646, gum to £E34,916, and cigarettes to £E84,561.

Re-exports continue to expand, as a consequence of the resumption of trade with the adjoining countries in the Levant. During the month the value came to £E280,774, an increase of 60 per cent. on August, 1918, and bringing the total for the eight months to £E3,354,603, compared with only £E749,169 on August 31, 1918. The most important items are cotton piece goods, vegetable oils, kerosene, hosiery, woollen goods and sacks, of which large quantities are required by Syria and Turkey.

Great Britain's share of imports fell off by 30 per cent., but in exports it rose by over 100 per cent. In the former the decrease corresponds almost exactly with the general diminution, but in exports the expansion is, of course, very much in excess of the general rate. This latter feature is accounted for by cotton, of which Great Britain took over 70 per cent., as against only 50 per cent. a year ago. Other countries showed a reduction in imports, with the exception of China, whose share doubled, France, whose share rose slightly, and the United States, which jumped from £E33,000 to £E236,000; whilst the only countries to show any notable increases under exports were France, by 100 per cent., and the United States, from nil to £E918,990 (due to cotton). During the month Palestine made larger purchases and sent larger consignments than the previous year, and that country is, in fact, working up quite a considerable trade with Egypt.

The figures for traffic between the Sudan and Egypt continue to be satisfactory. During the months imports amounted to £E141,504 and exports to the Sudan to £E318,894; for the eight months the totals are £E1,120,264 and £E1,840,263. The chief imports into Egypt were livestock £E48,360, sesame £E23,431, gum £E15,439; whilst the main items in the opposite direction were wheat and wheat flour £E37,751, refined sugar £E77,454, cotton textiles £E88,292, and tobacco £E20,767.

Sir Christopher Thomas Needham, a director of the Manchester and Liverpool District Bank and the Manchester Ship Canal, has joined the board of the Guardian Eastern Insurance Company.

SWEDISH ORIENT LINE.

Direct regular steamship service with about weekly sailings outwards and homewards between

GOTHENBURG and ALGIERS, PIRÆUS, SMYRNA and SALONICA.
" " ALEXANDRIA, JAFFA and BEYROUTH.
" " CONSTANTINOPLE, ODESSA and other Black Sea Ports.

Also calling at other ports in Scandinavia, Levant and Black Sea (as inducement offers).

For further information apply to the following agents of the Line:

Engineering.

MOTOR SHOW REFLECTIONS. VI.

(From Our Own Correspondent.)

Another remarkably fine six-cylinder car, also typical of all that is best and most up-to-date in British automobile practice, was to be seen on the stand of the Lanchester Motor Co., Limited, one of the oldest and best-known of motor manufacturing firms. The pre-war design of Lanchester was familiar to every road user, but the new design has little in common with its predecessor. As a matter of fact, in outward appearance it is much the same as any other car of its size; it is in construction and essentials that it is replete with novel features.

The engine is of 40 horse-power, although here it should be explained that according to Royal Automobile Club rating it only develops 38.4 horse-power, the cylinders being 4-in. bore by 5-in. stroke. The Treasury rating is 38.7 horse-power, but, on the other hand, according to another equally well-known formula, the engine is of 47 horse-power, so that it may be taken that this car has an engine of ample power for its work.

The cylinders are cast in two blocks of three, and here we have distinct evidences of aero-engine design as the valves are of overhead type, actuated by means of rocking arms of small size and neat design, from an overhead cam-shaft. From an engineering point of view, it is interesting to note that both these valves, inlet and exhaust, are slightly inclined from the vertical. This design enables the cam-shaft to lie between them, which gives a very neat finish and adds in no small degree to the efficiency and appearance of the engine. The appearance is enhanced by enclosing all the valves and valve mechanism by an aluminium cover, which gives a very clean look to the engine.

The car exhibited on the Lanchester stand was a "V"-fronted limousine, which was painted in pale grey as far as the waist line and finished above in jet black. The bonnet, as shown, was of polished aluminium, but, of course, this could be enamelled or painted to suit the requirements of the owner, or the finish of the body. The wheels were in grey, and the interior was upholstered in black Morocco leather.

A very fine 4-cylinder and a handsome 6-cylinder car were shown by the Sunbeam Motor Car Co., Limited, and the comparatively long stroke of the engines adds greatly to their power and flexibility. The bore is 80 and the stroke 150 millimetres, sizes which have commended themselves to the firm for many years. It will be remembered that their 30-h.p. model 6-cylinder car of 1915 had engines of 90 by 160 stroke and bore, and proved itself quite the equal of any car on the road for general service. Personally, I have a decided preference for a fairly long-stroke engine, and have yet to be convinced that the "square," or nearly square, engine is its superior in any way. (A square engine is the trade term for an engine which has a bore equal to the length of its stroke.)

Of the Sunbeam models the smaller is rated at 16 and the larger at 24 h.p., and in the latter there are four speeds and reverse, and the final drive is helical bevel. The cooling water is pump circulated, and whilst the engine and chassis are as light as possible, in no respect has strength been sacrificed to secure reduced weight. The springing is by means of semi-elliptic springs, and the steering is by worm and sector. Brakes act on the transmission and rear wheels, and the propellor shaft is enclosed. The wheel base is 11 ft. 4½ ins., and electric lighting set and self-starter are included.

The smaller chassis, of 16 h.p., has also four speeds and reverse, with leather cone clutch. The springing is similar to that of the heavier model, and the propellor shaft is also enclosed, with helical bevel final drive. The brakes act in the same way and the steering is on the same principal. Electric lighting and starting is provided, and the wheels are fitted with Dunlop tyres, 880 by 120 mm.

A British firm who carried out an exceptional amount of research work during the years before the war, and who were engaged later in building cars which were called upon to undertake the most arduous of duties during the war, are Vauxhall Motors, Limited, and a close examination of their products at the show proved that whilst in general appearance their cars resembled the pre-war productions, in reality they had been considerably improved. Here, again, weight has been reduced without any sacrifice of strength; indeed, the chassis are, if anything, stronger than they were before.

The two types shown were both four-cylinder models, of 25 and 30 h.p. respectively, the engines being of four-cylinder, monobloc construction. In the smaller model the bore and stroke are 95 by 140 mm., and in the larger, 98 by 150 mm. Each of these engines has been designed to secure high efficiency and a large reserve of power, which can be brought into use when high speeds are required or stiff gradients have to be negotiated. The larger model, in particular, combines great power with exceptional speed, and possesses a power of smooth running and a freedom from vibration which places it almost in a class by itself.

The smaller model has fan and pump combination for cooling, Vauxhall plunger pump system lubrication, high-tension magneto with variable ignition, and a White and Poppe carburettor. The gear-box allows of four forward speeds and a reverse; there is a gate-change, multiple-disc-type clutch and spiral bevel final drive. The wheels take the usual 880 by 120 tyres, and the wheel base is 10 ft. 10 ins., and the wheel track 4 ft. 8 ins. The car is fitted with a C.A.V. dynamo lighting set and a starter by the same well-known firm. A particularly handsome model shown was the Vauxhall-Arundel car which had a cabriolet body with interior drive, seating five persons. Altogether, the Vauxhall had a very fine show, and I anticipate this firm doing a big overseas trade amongst buyers of discernment.

MISCELLANEOUS TOPICS.

An Air-Propelled Car.

In recent notes we referred to the experiments that were being carried out in Algiers, or elsewhere in North Africa, by French officers with a vehicle which, mounted on six wheels, and with a 50 h.p. engine, was propelled by air. It was called the "new ship of the desert." It is interesting to see in recent British patents the inclusion of a British air-propelled car, which, judging from descriptions, seems to be more practical and efficient than the "new ship of the desert." The British car's chassis is fitted with a tractor air screw, and is devoid of the usual automobile transmission. The inventor's scheme is that at low speeds the car shall run with all four wheels upon the road. As the engine is accelerated up to high revolutions, he considers sufficient lift will be obtainable for the front wheels to rise clear of the ground, when two side planes should be hoisted to an angle of incidence affording maximum lift. The car will then skim along with its front wheels in the air and its rear wheels on the ground, somewhat after the fashion of a hydroplane. It is calculated that the vehicle can be very lightly built, since the wheels are all trailers, and require no tractive adhesion, whilst contact with the ground at high speeds will be so light that a journey over rough ground will entail little shock or vibration.

Self-Cleaning Wind Screen.

Considerable interest is being taken by sea-captains, locomotive engineers, motorists, and others in an ingenious use of centrifugal force, which is seen in a revolving screen used in motor-cars, aeroplanes, locomotives, ships, motor-boats, etc., to protect the observer from the weather, and always give him a clear view in snow or rain. The screen is a glass disc driven at high speed by a tiny electric motor. Any snow, water, or dust that may settle on it is immediately thrown off. So efficient is the type used on sea that, if drenched with a bucketful of water, perfect definition is restored to a powerful pair of binoculars behind it in a couple of seconds.

Sugar from Sawdust.

In view of the scarcity of sugar, a few notes on a very interesting discovery may be of interest to some enterprising firms or others in the East. By a new process and a special plant, sugar can be manufactured from sawdust! In its natural state wood contains no sugar, but when sawdust has been submitted in a closed retort to treatment with a weak solution of sulphuric acid under pressure of six to seven atmospheres—that is, 90 to 100 lb. to the square inch—a very remarkable transformation takes place. The resulting product, which is termed "sacchulose," contains about 25 per cent. sugar, and a number of volatile products are formed in the process, including acetic acid, furfurol, and formaldehyde. It is claimed that the new product is a valuable fodder for horses, cattle, and sheep. Draught horses, in whose daily rations 4 lb. of "succhulose molasses" were substituted for 4 lb. of oats, were kept under observation for seven months, and were all found to have increased in weight; while a colt which was in so weak a condition that veterinary surgeons advised its destruction, was submitted to the same treatment, and put on 260 lb. in six months. Many other uses, it is stated, could be found for this converted wood substance, as, for instance, in the manufacture of spirits, explosives, margarine, and, in virtue of its characteristics as a non-conductor of heat, as packing for refrigerators, incubators, ice-chambers, and so on. A factory capable of treating 200 tons of sawdust per week could, it is claimed, turn out between 300,000 and 400,000 gallons of proof spirit per annum. This would also give by-products of 50 tons of acetic acid, ten tons of furfurol, and 2,000 gallons of methyl-alcohol for recovery. The spirit produced is of high quality, being free from fusel oil.

A Crossley Brochure.

Crossley Motors, Ltd., of Manchester, have just issued an illustrated brochure showing their productions from the "Manchester" touring car to their luxurious saloon limousines. Since this well-known company issued its last catalogue under peace conditions it has passed through a period of rapid development. There has been an increase in production from 30 cars per month to hundreds, an addition in works acreage from 2½ to 10 acres, and an increase in the number of hands from 500 in 1914 to 5,000. The brochure, which is in every way an admirable production, contains besides the illustrations of motor-cars, photographs of the engines, etc., and views of Crossley cars on active service with the R.A.F. in Arabia. "There were no roads except those we made ourselves," wrote a sergeant mechanic in charge of a fleet of Crossleys in the Arabian desert, "and we had to go over boulders and rough country day after day, not forgetting the soft sand, of which there was plenty, and I'll back a Crossley against any other car for getting across and out of it; they are marvels."

The Board of Trade are in receipt, through the Foreign Office, of a copy of a telegram from H.M. Ambassador at Paris reporting that, according to telegraphic information received from the Resident-General, the export of beans and lentils from the French Zone of Morocco is now free.

NEW COMPANIES.

Eastern Light Castings.

The Eastern Light Castings Company, Limited, has been registered as a private company, with a capital of £200,000, in £1 shares, to carry on in the United Kingdom, India, Burma, and elsewhere, the business of ironfounders, founders in brass and other metals, engineers, manufacturers of all kinds of light and heavy casting, forgings, stoves, etc. The subscribers (each with one share) are:—A. W. Steven, Laurieston Iron Works, Falkirk, ironfounder; T. M. Waugh, Grange Iron Works, Falkirk, ironfounder; J. Brown, Sunnyside Iron Works, Falkirk, ironfounder; J. Cameron, South Bank Iron Works, Kirkintilloch, ironfounder. The first directors are A. W. Steven, T. M. Waugh, J. Brown, J. Cameron and W. T. Maclellan. Qualification, £100. Registered office: 142, St. Vincent Street, Glasgow.

Sudan Cotton Fuel and Industrial Development.

The Sudan Cotton, Fuel, and Industrial Development Company (1919), Ltd., was registered on December 9 with a capital of £250,000. Objects: To acquire from Wells Vegetable Fuel Power Company, Ltd., the exclusive benefit for the Sudan of certain inventions relating to the carbonisation of wood and other substances and the generation of power; to carry on the business of planters, charcoal manufacturers, merchants, shipowners, etc. Subscribers (one ordinary share each):—T. J. Smith, 72, The Drive, Golders Green, N.W.; J. E. Ward, 44, Bedford Row, W.C., C.A.; G. F. Fawcett, 4, Rashleigh House, Thanet Street, W.C.1, chief draughtsman; W. J. Williams, 42, Osborne Road, Stroud Green, N.4, draughtsman; G. H. E. Goodman, Northesk, Carew Road, Wallington, Surrey, chartered secretary; F. T. Smith, 4, Trigon Road, S.W.8, clerk. Three of the first directors are to be appointed by the subscribers and two by the Wells Vegetable Fuel Power Company, Ltd.

Caucasian Trading.

The Caucasian Trading Company, Ltd., was registered as a private company on December 10, with a capital of £100,000. Objects: To carry on in Eastern Europe and Asia the business of general merchants, importers, and exporters of all kinds of goods and merchandise, shipowners, and builders, etc. Subscribers (one share each):—M. Skidelsky, 24, Holborn, E.C., merchant; W. E. Rickerd, 20, Gamage Buildings, Holborn, E.C., solicitor. First directors, M. Skidelsky and W. E. Rickerd. Registered office, 24, Holborn, E.C.

E.E. Pappadimitriou and Co., Ltd.

E. E. Pappadimitriou and Co., Ltd., was registered as a private company on December 10 with a capital of £50,000 (£10,000 seven per cent. cumulative preference). Objects: To take over the business of shipping merchants carried on by E. A. Eason and G. E. Pappadimitriou at 2 and 4, Beaver Street, Manchester, as E. E. Pappadimitriou and Co. Subscribers (one share each): E. A. Eason, 26, Dickinson Street, Manchester, merchant; W. H. Eason, 26, Dickinson Street, Manchester, merchant; G. E. Pappadimitriou, 2 and 4, Beaver Street, Manchester, merchant. First directors: E. A. Eason, W. H. Eason, and G. E. Pappadimitriou.

Bagdad Persia Transportation.

The Bagdad Persia Transportation Company, Ltd., was registered as a private company on December 17 with a capital of £50,000 (45,000 preferred ordinary shares of £1 each and 20,000 management shares of 5s. each). Objects: To carry on in Palestine, Mesopotamia, Persia, and other countries in the East the business of running a motor and other transport service, warehousemen, wharfingers, forwarding agents, etc. Subscribers (one share each):—C. S. Crosse, Kennans House, Crown Court, Cheapside, E.C., solicitor; E. J. White, Lismore, Rockleigh Avenue, Westcliff-on-Sea, solicitor's clerk. First directors to be appointed by subscribers.

Howden Overseas Trading.

The Howden Overseas Trading Company, Ltd., was registered as a private company at Edinburgh on November 22 with a capital of £100,000 in £1 shares. Objects: Commercial, shipping, engineering, financial, sales, commission and general agents, merchants and contractors, shipowners, etc. Subscribers (one share each): J. Wilson, 61, West Regent Street, Glasgow, accountant; D. Gardiner, 86, St Vincent Street, Glasgow, solicitor. First directors: J. H. Hume, Glasgow, engineer; W. H. Howden, Glasgow, engineer; and J. B. McGillivray, 195, Scotland Street, Glasgow, commercial manager. Secretary: A. E. Thewlis. Registered office: 105, St. Vincent Street, Glasgow.

ROUMANIAN OIL PRODUCTION.

H.M. Commercial Secretary at Bucharest reports that the petroleum pipe line from Ploesti to Constantza viâ Cernavoda has now been repaired and is in use. The best authority states that the capacity of the line is about fifty to sixty wagons daily, or five to six hundred tons of oil. For the present the line is being used to pump distilled oil—lampante—to Constantza for the purpose of completing the quantity sold to the Standard Oil Company of New Jersey by the Roumanian Government Bureau of Exportation (Birex). This is of good augury for the financial future of trade with Roumania (notwithstanding the fact that, according to the sale conditions, the whole of the foreign exchange resulting therefrom is to be handed to the Roumanian Government), as there is some hope that a part may find its way into commercial hands, and thus facilitate import trade.

GOODS "IN TRANSIT" AT SALONIKA.

It has been reported that goods shipped to Salonika in transit for Serbian destinations have been detained at the instance of the Greek customs authorities owing to the fact that the provisional manifests are frequently incomplete or incorrect in detail. In view of the irregularity of the mails, the original manifests of British steamers do not arrive at Salonika before the steamers, as would be the case under normal conditions, and the agents are therefore compelled to deposit with the customs authorities manifests drawn up in accordance with the provisional documents on board the vessel. It not infrequently happens that goods destined for Serbia are not so indicated on the provisional manifests, although all the other relevant documents confirm their Serbian destination. The customs authorities have declined to allow the necessary corrections to be made in the light of the complete and more precise information furnished by the original manifests when they are eventually received. In these circumstances, it is very necessary for shippers to provide, in the first instance, shipping documents correct in every detail and clearly indicating that the goods in question are being shipped to Salonika "in transit" to Serbian destinations; and it is also necessary that the cases should be addressed to the ultimate consignee in Serbia and marked "Transit pour la Serbie," with a view to obviating their detention and delay at the port upon arrival. Shippers should also take every precaution to advise their shipping agents at Salonika in advance in regard to all shipments made through that port for inland destinations.

SHIPPING INTELLIGENCE.

Forthcoming Sailings.

The Papayanni Line s.s. Austrian for Malta and Alexandria, leaves Liverpool on January 3. The same company's s.s. Serbino for Smyrna and Constantinople, will leave Liverpool on January 10.

The Bibby Line s.s. Derbyshire, leaves Liverpool for Rangoon on January 7.

The Anchor Line s.s. Olympia, leaves Liverpool for Bombay on January 2.

The Johnston Line s.s. Wingate for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza, closes for cargo at Liverpool on January 7.

The Moss Line s.s. Amasis sails on December 29 for Gibraltar, Algiers, and Malta.

The Papayanni Line s.s. Maronian, for Malta and Alexandria (taking cargo for Beyrout, Alexandretta, Mersina, Cyprus, etc), will leave Liverpool on January 3.

The Anchor Line s.s. Olympia, for Bombay, will leave Glasgow on December 23 and Liverpool on January 2.

Shipping Notes.

The s.s. Peshawar, built to the order of the Peninsular and Oriental Steam Navigation Company, ran successful trials on the Firth of Clyde on the 18th inst. This vessel has been built to the highest class at Lloyds' Register, and has a gross tonnage of 8,000. She is fitted with all the latest modern conveniences for loading and discharging, as well as refrigerating machinery.

At the annual staff dinner of the Anchor Line, which was held in Glasgow on December 12, after a lapse of six years owing to the war, it was mentioned that the steamers of the company carried during the war 10,564 officers and 285,582 troops. In order to replace lost tonnage the steamers building number seven, five of 14,200 tons each, and two of ten thousand tons each, the latter being for the Indian trade.

There was launched on December 9 from Messrs. Palmer's Shipbuilding and Iron Co.'s yard at Hebburn-on-Tyne, the ss. Gamaria, a "B" standard cargo steamer, originally ordered by the Shipping Controller, and taken over by the British India Steam Navigation Co. under Lord Inchcape's scheme. The Gamaria is 460 ft. in length between perpendiculars, her breadth, moulded, is 52 ft., and her depth, moulded, to upper deck 31 ft. Her carrying capacity is about 6,200 d.w. on a draught of 25 ft. 3 in. This is the third steamer put into the water since August last for the British India Steam Navigation Co., and the same builders have yet another building for that company, which vessel is in a forward state of completion.

The directors of the Dooars Tea Company have declared a dividend of 1s. per share on the Ordinary shares, less tax at 6s. in the £, payable January 1.

The directors of the Jetinga Valley Tea Company have declared an interim dividend of 5 per cent. (being at the rate of 10 per cent. per annum), free of income-tax, on the Ordinary shares, payable December 22, also the usual Preference dividend, less income-tax, payable December 31.

The directors of the Bogawantalawa District Tea Company have declared an interim dividend of 3 per cent. on the ordinary shares, less tax at 6s. in the £, payable January 7.

OAKEY'S
The Original Preparation for polishing Cutlery.
Canisters, 1d., 2d., 3d., 6d., 1s., 2s. 6d., and 4s. each.

SMYRNA FRUIT EXPORTS.

According to statistics published by the Smyrna Chamber of Commerce the quantity of raisins exported from Smyrna during the period May 22 to September 30, aggregated 16,992 metric tons valued at £T4,709,383; figs exported amounted to 5,324 metric tons, valued at £T1.135,875, and shipments of dried fruit totalled 180 metric tons, valued at £T105,570, says the Representative British High Commissioner at Smyrna, in a recent report. In view of the seasonal nature of the trade the major portion of these exports naturally took place in the latter part of the period reviewed above. Thus, shipments of raisins from August 14 to September 30 amounted to 10,208 metric tons of a value of £T3,249,527, those of figs totalled 2,692 metric tons, valued at £T985,229, and those of dried fruits 158 metric tons' weight and £T92,840 value. Thus, of the total weight of 22,507 metric tons of fruit, valued at £T5,950,828, exported from May 22 to September 30, 13,059 metric tons, valued at £T4,327,596, were shipped after August 13.

The United Kingdom took 7,858 metric tons, valued at £T2,479,010, of the 10,208 metric tons of raisins exported between August 13 and October 1, while 973 metric tons, valued at £T323,316, went to Trieste, 802 metric tons, valued at £T266,610, were sent to Holland, 435 metric tons, valued at £T141,305, to the United States, and 73 metric tons, valued at £T19,485, to Sweden, nearly half of the small remainder, or 29 metric tons, valued at £T8,760, going to Italy. The United States absorbed by far the heaviest proportion of the figs exported from August 14 to September 30, taking of the total of 2,692 metric tons no less than 2,488, valued at £T907,147. The United Kingdom was second, and its purchases covered only 66 metric tons, valued at £T25,345, Holland following closely with 64 metric tons valued at £T24,311. France bought 11 and Canada 10 metric tons, valued at £T4,137 and £T3,780 respectively. Trieste, Sweden and Russia each took smaller quantities.

IMPORT OF GOLD INTO INDIA.

When firms or institutions wish to import gold into India without incurring risks from possible variations in the acquisition rate they may enter into a contract for that purpose with the Controller of Currency, or, in the case of gold to be delivered at Bombay, with the Accountant-General, Bombay. The terms of the contract are as follows:—The Government of India will pay for gold on delivery at the acquisition rate prevailing at the time when the contract is entered into. Firms or institutions which take advantage of this arrangement must undertake to ship gold within thirty days of making contract, but failure to ship within thirty days will not operate to make a contract void or involve other penalty, provided it is shown to the satisfaction of the Controller of Currency that delay in shipping was due to no fault of importer.

Gold not ordered from India, but by offices in London or New York for branches or constituents in India, should be contracted for with the India Office, who will be prepared to make similar arrangements.

If no contract is made, gold will be paid for, as before, at the acquisition rate prevailing on the date of shipment on a through bill of lading.

Our Malta Correspondent writes (November 28):—The chief imports of the week have been cottonseed and carobs. The importation of general produce is approaching the normal, and prices show a falling tendency.

Sir Henry Babington Smith, K.C.B., C.S.I., has been elected a director of the British Trade Corporation, and has been appointed deputy-governor.

COMPANY NOTES & REPORTS

Roumanian Consolidated.

The report of the Roumanian Consolidated Oilfields to June 30 states that the proceedings at the annual general meeting convened for December 18, owing to the absence of accounts from Roumania, will necessarily be of a purely formal character. Possession of the company's oil properties was regained in February last, and during the four months ended June 30, 1919, there was a total production of 6,897 tons. Since that date the company's operations, in common with those of all other oil producers in Roumania, were suspended for six weeks by a general strike of the workers in the petroleum industry. The strike came to an end on August 22, and development work was actively resumed. Production for the present is restricted by the absence of export facilities. Storage accommodation throughout the country is full to overflowing, and the company's extensive tank reservoirs, which were destroyed by the British Military Mission in November, 1916, have not yet been replaced. Plans have been approved for the erection of a new refinery at Ploesti, and it is intended to push forward this important work with the least possible delay. In order to provide funds for the purchase of certain new machinery and plant and for proceeding with the work of development an issue of capital was made to existing shareholders in July, 1919, and 204,166 shares of £1 were subscribed and allotted.

Egyptian Salt and Soda.

The report of the Egyptian Salt and Soda Company for the year ended August 31 states that the restrictions imposed by the Government have been still more severe during the year under review. The quantity of cotton-seed allotted to the company by the Government has only been about half that crushed during a normal year, and consequently profits realised from that source were very limited. The directors have, however, continued to give every attention to the manufacture of products other than those obtainable from cotton-seed, and have been successful in increasing the profits substantially in this way. On the other hand, it has been found necessary to close the soda works at Wadi Natron temporarily and to reduce expenses there to the lowest minimum. Large stocks of soda have been accumulated during the war by our competitors in Europe, and these stocks, since transport facilities have again become available, are now thrown on the market at prices with which it is impossible to compete owing to the prohibitive cost of fuel compared with fuel in Europe. The gross profits are £E227,667,089. General administration expenses amounted to £E4,638,158, and interest on debentures £E3,209,375, leaving a net profit of £E219,819,556. The directors have set aside for depreciation £E19,303,696, leaving a profit of £E200,515,860, which, with balance carried forward, £E141,847,380, makes £E342,363,240. The directors propose a dividend representing 45 per cent. on the share capital (9s. per share), and that £E123,957 be carried forward.

Bombay Baroda and Central India Railway.

The report of the Bombay Baroda and Central India Railway Company includes the audited home accounts for half-year ended September 30, and detailed accounts of the working of the railways in India for the half-year ended March 31. The gross earnings for the half-year ended March 31 last were Rs.4,73,18,682, increase Rs.59,67,269; expenditure Rs.2,27,48,825, increase Rs. 40,85,721; net earning Rs.2,45,69,857, increase Rs.18,81,548. The result of working for the whole year, on cabled advice from India, show total net earnings amounted to Rs.5,33,39,700. From the company's share of these earnings the stockholders received a total payment, including the guaranteed interest of 6½ per cent. on the capital stock, comparing with 6½ per cent. for 1917-1913. As the profits of the undertaking are calculated on the results of working for the complete financial year, no statement of profits for the half-year ended September 30 can be made, but information from India justifies the directors in recommending the payment in January next of an interim dividend in respect of the current financial year of £1 per cent., in addition to the guaranteed interest then due.

Eastern Extension Telegraph.

The report of the Eastern Extension Australasia and China Telegraph Company for the year ended December 31, 1918, states that the revenue amounted to £2,070,111, from which are deducted £405,347 for the ordinary expenses and £214,009 for maintenance of cables and other special expenditure, leaving a balance of £1,449,762. After providing £250,511 for income-tax and excess profits duty payable in England and £30,000 for interest on Mortgage Debenture stock, there remains £559,055, to which is added £72,261 brought forward, making a total available balance of £631,316, out of which the directors have placed £350,000 to general reserve fund. Four dividends of 1½ per cent each and a bonus of 2 per cent. have been paid, making a total distribution for the year 1918 of 8 per cent., free of tax, leaving a balance of £41,316 to be carried forward.

Northumberland (Ceylon).

The report of the Northumberland (Ceylon) Rubber and Tea Estates for the year ended June 30 states that the balance at credit of profit and loss account, after writing 10 per cent. from values of machinery and buildings, is £4,810, with which the directors propose to pay a dividend of 4 per cent., to write off coast advances £1,000, and to carry forward £812.

East India Distilleries.

The directors of the East India Distilleries and Sugar Factories announce that, owing to the late arrival of the accounts from India, they will be unable to submit the profit and loss account for the year ended September 30, 1919, within the statutory limit. A proposal will be made at the meeting to adjourn to a convenient date. The directors state that the result of the year's working, after paying the interest on and providing for the redemption of debenture stock, will show a satisfactory margin of profit. In the circumstances they feel justified in recommending a distribution on the preference shares of 3½ per cent., payable January 1, to complete the payment of the preference dividend to September 30.

ABYSSINIAN CORPORATION.

The following circular letter is issued to the shareholders of the Abyssinian Corporation, Ltd.:—In making the second call of 5s. per share, the board are able to report that the agencies of the corporation now cover Jibuti, Harrar, Jig-Jiggah, Dirre-Daua, Oulenketi, Hawash, Adis Ababa Jimma, Nekempti, Gore, Bure, Sayo, Gamtela, Khartoum, and that in these centres trade is being actively carried on by the traders who built up the prosperous businesses which were taken over by the corporation. In acquiring these businesses large stocks of cotton and other manufactured goods have been taken over at prices very greatly below those at which they could now be bought. Extensive purchases of hides and coffee have been made in Abyssinia, and in order to utilise to the best advantage the organisation now being built up the board consider it necessary that the second call should be made now, and the third call in March. The corporation has been fortunate in acquiring the services of Mr. E. A. Pilcher, late joint manager of the Eastcheap branch of the London Joint City and Midland Bank, Ltd. Mr. Pilcher, who will take over the post of London manager on January 1, 1920, has had wide experience for many years in banking and merchandise, and will shortly proceed on a visit to Abyssinia to study the business of the corporation in that country.

TOBACCO CULTIVATION IN MOROCCO.

H.M. Representative at Tangier reports that the Bulletin Officiel of October 20 contained a Dahir, dated October 7, regulating the cultivation of tobacco in the French Zone of Morocco, the principal provisions being as follows:—No person may cultivate tobacco without first obtaining a special licence from the Régie Co-interessée des Tabacs. In granting these permits the Régie will take into consideration the necessities of its business, the results of previous cultivations, and the suitability of the applicant. The seeds to be sown will be supplied by the Régie, who will purchase the entire crop of a quality up to standard at a price fixed beforehand for each quality of leaf. Elaborate precautions are provided to prevent any of the leaves, plants, or seed getting into unauthorised hands, penalties being enacted for infractions of the regulations. According to the Morocco Order-in-Council, 1889, any person who, "without a proper licence, sells or attempts to sell, or offers for sale in Morocco, any goods whereof the Government of Morocco has by Moorish Law a monopoly," is guilty of a grave offence against the Order.

Swansea Harbour Trustees have granted a further lease of land to the Anglo-Persian Oil Company, who are expending six millions at Skewen and Swansea. It is expected the first oil cargo to arrive at Swansea will be about April. Crude oil will be pumped direct from the company's own steamers on arrival at Swansea through six miles of pipe track to Skewen, where extensive refineries are now nearing completion. The refined oil will then be pumped back to Swansea for distribution.

It is officially announced, says a Reuter message from Belgrade dated December 18, that in pursuance of a decree of the Cabinet of the 5th inst., the Minister of Finance orders that Bulgarian nickel coins of 5, 10, and 20 centimes and Greek coins of 5, 10, and 20 lepta shall be legal tender throughout the Kingdom of the Serbs, Croats and Slovenes until further notice on the same footing as Serbian nickel coins of the same nominal value. Foreign coins will be accepted at the State Treasuries and other public caisses on the same terms as Serbian coins of corresponding value.

The directors of the Del Rey Tea Company recommend a final dividend of 11 per cent., less tax at 6s. in the £ on the ordinary shares, making 15 per cent. for the year, transferring £2,000 to reserve, £2,000 to debenture redemption fund, and £60 to debenture premium account.

BRITISH TRADE CORPORATION.

(Incorporated by Royal Charter),

13, AUSTIN FRIARS, LONDON, E.C.2.

Telegrams: "Trabanque, London."

CAPITAL: Authorised - £10,000,000 Subscribed and Paid Up - £2,000,000

Governor - THE LORD FARINGDON.

Manager, A. G. M. DICKSON. London Manager, P. C. WEST. Secretary, G. De B. BROUNLIE.

The Corporation has been established with the object of developing the Trade of the British Empire in every part of the world, and brings to the notice of all interested that it is prepared to grant financial facilities to British Manufacturers and Merchants for the increase of their Import and Export Trade.

It will be prepared to assist in opening up new channels for enterprise, and will afford financial facilities for the enlargement of works and the extension of plant.

The Corporation is appointing representatives in the chief cities of the world, and will open credits at home and abroad. It invites inquiries, and will endeavour where necessary to put export advice at the disposal of correspondents regarding the financing of their foreign and overseas business. Moneys received on fixed deposit. Terms on application.

ON 'CHANGE.

THROGMORTON STREET, Tuesday.

The brighter tendency for Egyptian securities at the end of last week has continued this week, and in certain instances we have had some large buying orders from Egypt with a very fair improvement in prices. The buying is still by far in larger volume than the selling, and, in fact, in certain shares there is practically no supply at all.

In Government stocks some fairly large transactions have been carried through in Egyptian Unifieds and 3½ per cent. prefs., the former closing ½ higher to-night at 73½. There is a slight decline of half a point to be recorded in Turkish Fours, 1891, and 3½'s, to 68 and 58 respectively. Turkish Unifieds have also dropped a point to 39.

In Bank shares Nationals have kept steady, with some fair transactions, but Agriculturals have been in strong demand throughout the week, and are closing to-night ¼ higher at 5⅝. Anglo-Egyptian Banks are exceptionally ⅛ easier at 16⅛. Land Banks have almost recovered the dividend at 6 xd.

This company pays a final dividend of 6s., making 9s. for the year, as against 8s. 6d. for the previous year.

In Railways, Delta Lights finish strong at 6¼, after being easier.

Land shares have been active, and a fairly large business has been put through. Aboukirs are closing strong to-night at 32s., a rise of 2s. 3d., and the debentures are two points up at 110½. Some business has been done in Béhéras round the current level, with buyers still about and no sellers. Egyptian Agriculturals debentures are about a point higher at 71½, and are being quietly picked up. New Egyptians have been a very strong market; large transactions have taken place, and the shares are finishing 1s. up at 28s. 3d. Sudan Plantations, after dropping down to 7¼, are closing only ⅛ lower at 7½. Union Foncières have been a strong market, and just at the close have had a sharp jump of ¼ to 4¾, at which price some small business was put through, with buyers still about.

Among the Miscellaneous descriptions, Abyssinia Corporations are 6d. down at 6s. 6d. on the fresh call just made, and Alexandria Waters have relapsed 5-16 to 10 11-16. Egyptian Hotels are ¼ higher at 2. Salts and Sodas are ⅛ down at 2⅞, although the report is generally considered entirely satisfactory, and the dividend of 9s. gives the investor a very high yield at the present price.

In Oil shares, Anglo-Egyptian B have dropped back 3-16 to 4¾, and Roumanians are fractionally easier at 22s. 9d.

In Greek securities there has again been a further tumble all along the line, but at the close the floating supply of the old loans has been absorbed, and the market wears a much harder appearance. The 1881, 1884, Monopolies, and 1890 Loans are all closing at 49, a drop of one point, after business at lower prices. The 1889 Loan is four points lower at 39, after having been done at a still lower price. Funding has dropped three points to 47, after business as low as 46. The 1902 Loan is two points down at 56, and the 1910 Loan a point lower at 49.

The total gross sea and land Customs revenue of India, excluding the salt revenue, for the eight months April to November, amounted to 1,308 lakhs of rupees, compared with 1,197 lakhs of rupees for the corresponding period last year.

STRANGERS' HOME FOR ASIATICS,

WEST INDIA DOCK ROAD, LIMEHOUSE, LONDON, E.

"I was a stranger and ye took me in."

CONTRIBUTIONS ARE SOLICITED from the many who owe fortune or competence to India and China and will be thankfully received by the SECRETARY or by MESSRS. BARCLAY & CO., LTD; 4, LOMBARD STREET E.C.

AYAHS' HOME,

26, King Edward Rd., South Hackney, London.

ESTABLISHED 1825.

IN CONNECTION WITH THE LONDON CITY MISSION.

Hindustani spoken. Ayahs boarded and lodged at 18s. per week each until their Return Passage is paid or a Situation secured for them to return. Ayahs met at any Dock or Railway Station in London. Experienced, well-recommended Ayahs taken entirely off Ladies' hands for a certain payment, which differs according to time of year. Ladies proceeding to India or China requiring an Ayah can generally obtain one by applying to Mrs. FLETCHER, Matron.

The directors of the Galaha Ceylon Tea Estates and Agency Company, Ltd., have declared an interim dividend of 8 per cent., free of tax, on the Ordinary shares on account of year 1919.

The directors of the Associated Tea Estates of Ceylon have declared an interim dividend on the Preference share capital of 3 per cent. on account of the season ending June 30, 1920, payable December 31, less tax at 6s. in £.

The Eastern Telegraph Company announces a third quarterly interim dividend of 1½ per cent. on the ordinary stock, free of tax, in respect of profits for the year ending December 31, 1919.

Greek Loans.—The coupons falling due January 1, 1920, will be paid in gold at the stated percentage of their face value, in accordance with instructions received from the International Financial Commission, Athens:—Five per Cent. Loans of 1881 and 1884, 32 per cent.; Four per Cent. Monopoly Loan of 1887, 43 per cent.; Five per Cent. Funding Loan of 1893, 32 per cent.

Land Bank of Egypt.—The Comptoir National d'Escompte de Paris have received instructions to pay coupons due January 1, 1920, of the Four per Cent. and Three and a-Half per Cent. bonds.

Egyptian Markets.—An interim dividend of four per cent. (less income tax at 6s. in the £) for the year ended December 31 has been declared on the ordinary shares, payable on and after December 22, at the Anglo-Egyptian Bank, 27, Clements Lane, London, E.C.4.

The traffic receipts of the Smyrna-Aidin Railway for the week ended November 29 amounted to £7,456.
